REMARKS BY EUGENE M. ZUCKERT AT INDUSTRIAL NUCLEAR TECHNOLOGY CONFERENCE, COSPONSORED BY ARMOUR RESEARCH FOUNDATION AND NUCLEONICS MAGAZINE, CHICAGO, ILL., MAY 16, 1956

In acknowledging my appreciation for Mr. Luntz's introduction, I want additionally to express my admiration for the part that Nucleonics, under his editorship, is playing in the development of atomic energy.

The first issue of Nucleonics was published in September 1947. Recently, I had the privilege of inspecting a copy of that edition. The contrast with today's assured format and varied content, mirrors the progress of

atomic energy in a particularly striking way. The articles in that first issue were necessarily concerned with only the very fundamentals of isotope techniques, nuclear particle technology, prewar nucleonics literature.

There are highlighted in that interesting first effort two quotations, which signaled a concern upon which Nucleonics has concentrated consistently determined effort, and made so great a contribution. These quotations express the maxim that diffused and widespread and informed knowledge are basic to progress in atomic energy.

Nucleonics has capably pressed for that diffusion. When I was a member of the Atomic Energy Commission, I was charged with the necessary and difficult responsibility for maintaining the objective of security protection of information. At many points this inherently conflicted with the pressures for telling more. In that capacity and since, I have known how firmly and intelligently—and with a great consciousness of responsibility—the pressure for spreading information has been exerted by Nucleonics. The momentum of atomic energy development will steadily grow and its fruits will be magnified as more information achieves an ever wider circulation. Nucleonics' contribution toward that end, and Mr. Luntz's leadership, are a unique and proud addition to the tradition of our journalism.

The Armour Research Foundation and Nucleonics are performing a service to industry in sponsoring this conference. There are many reasons why this is true, but two appeal to me particularly.

First, I think that there is exemplified here the revolution that is taking place in American industrial research methods. There must be—particularly for the companies that are not giants of industry—an ever greater turning to centralized research organizations and facilities, such as the Armour Research Foundation. The company that wants to stay abreast cannot afford to support under its own roof, all the specialized skills and equipment required to do the technical searching that is becoming a greater task for more and more industries. There must be a willingness by individual companies to engage in more cooperative effort and cooperative support, and to create research instruments of common usefulness such as the Armour Research Foundation reactor. This joining together is vital, not only to the progress of research, but also the preservation of a truly competitive system. The alternative can only be a growing concentration of effective industrial research in fewer hands.

Secondly, I regard this conference on nuclear science in other than power uses, significant because of attention those uses deserve. This meeting reflects so vividly the surge of atomic energy into areas where, just a few years ago, the outlook was believed so modest. For example, it was less than 4 years ago that, as a member of the Atomic Energy Commission, I inquired about the future prospects of radiation in chemistry. I asked a lot of people in atomic energy, many highly expert. The response was almost uniformly cautious, often downright discouraging—and usually for seemingly unimpeachable reasons.

It has taken only a brief interval to prove how wrong they were, and many of you in this room are responsible for that progress. Looking back, it is inconceivable that the brief history of atomic energy could have proved so conclusively to the pessimists that things which had never been tried, could not be done. Now it is clear, of course, that in radiation we have a new mode of energy with a versatility yet untapped: Radiation as a catalyst, radiation to effect new chemical reactions, radiation to create new or improved chemical products. Already we see, or can foresee, better plastics, revolutionary techniques of food preservation, and a whole host of other exciting possibilities well known to you. As we search and try more, as more radiation sources become available, and as knowledge disseminates and proliferates, possibilities yet undreamed of will become realities. Even at this early date, we know that the nonpower uses of atomic energy will have a steadily increasing impact upon the revolution of our technology.

It is truly amazing that so much can have taken place in atomic energy in such a brief period of time. Certainly, the world has never seen such a compression of research and development to attain significant new advances.

It must seem strange, therefore, that a major issue emerging today is whether this country is moving fast enough in atomic energy. The question focuses about atomic power, and, indeed, there has been much soul searching concerning it within recent months.

A majority of the Atomic Energy Commission and the leading spokesmen for industry maintain that the United States program is proceeding at a proper pace. But there are many informed dissenters. Senator ALBERT GORE, of Tennessee, has proposed a Government reactor program based on the failure of private industry since the passage of the Atomic Energy Act of 1954 to make the necessary degree of progress. As the Senator stated recently:

"However laudable may have been the motives of the proponents of this act, 2 years of its operation offer conclusive evidence that we are simply not getting ahead with the job with proper efficiency and prompt development of atomic power."

Commissioned Murray goes a step further and has proposed that the Government undertake the construction of reactors producing a million kilowatts of electrical power here and overseas by 1960.

What these men have in mind has its principal impact upon the problem of our world leadership in supplying atomic power facilities for the other countries of the world.

The program for the peaceful use of atomic energy was nobly conceived. The President's address to the General Assembly of the United Nations on December 8, 1953, caught the imagination of all mankind. Here certainly was a bold attempt to overcome what was termed "the fearful atomic dilemma." The President's words were inspiring: "The United States pledges before you—and therefore the world—* * * to devote its entire heart and mind to find the way by which the miraculous inventiveness of man shall not be dedicated to his death but consecrated to his life."

The Congress in the Atomic Energy Act of 1954 broke the restrictions, which from the first had surrounded the field of atomic energy, and established the legal framework for a broad program of assistance and cooperation. It did this because it realized the need for leadership in bringing the benefits of this great force to the peoples of the world and the political advantage which would follow United States leadership.

That the world looked to the United States for leadership cannot be denied, nor can the fact that we held ourselves as willing to accept the responsibilities which accompany that leadership.

It would be unfair to say that only little has been accomplished in the period which has followed the President's historic address and the passage of the Atomic Energy Act of 1954. During that period there was convened the First International Conference on the Peaceful Uses of Atomic Energy, attended by representatives of some 73 nations and, during which, there was a heartening exchange of information on a broad scale. The United States Government has negotiated agreements for cooperation providing for assistance and collaboration and for a supply of reactor fuel with some 30 nations. A 12-nation working level group of the United Nations has agreed upon a draft charter with the creation and organization of an International Atomic Energy Agency. The President has allocated for distribution abroad in support of reactor projects 20,000 kilograms of valuable uranium 235.

Viewed in the light of attitudes and actions of just a few years ago, these accomplishments are indeed encouraging; but it is my heartfelt belief that even so, and considering further the difficulties of putting into operation and administering such a program, our words still outrun our deeds. It is my fear that the indications for the future portend that the responsibilities which we have accepted will exceed our accomplishments. Such can only defeat the high and noble intentions and expectations with which the atoms-for-peace program was conceived.

What is the difficulty, what has happened, and what is needed?

We have attempted to place the administration of this great program into the pattern of ordinary governmental operations. Any one familiar with the processes of our Government will understand the complexities which this has developed.

As a result, there is lacking a single authoritative responsible governmental unit dedicated to the fulfillment of the aims of the program, without redtape, and without the jurisdictional disputes and governmental infighting which inevitably follows.

The Atomic Energy Commission rightfully has assumed the lead in carrying the program forward, but it does not have that single authority and responsibility which is so essential. It must become involved, and thus the program must become involved, with the Department of State and with the various seemingly unrelated policies and programs of that Department. It must become involved with the International Cooperation Administration, with all of the entanglements, procedures, and inconsistencies which apply generally to our foreign aid program. As a result, the atoms-for-peace program stands in danger of becoming submerged by other programs.

I submit that the program should, to the utmost possible, stand alone as a simple, ambitious, and determined effort that would have as an immediate objective the construction and operation of power reactors abroad, with a definite near-term timetable as its core. Today the United States Government is not building nor planning to build a single power reactor abroad.

We cannot treat this great effort simply as another phase of technical assistance. As Senator PASTORE, of Rhode Island, who occupies a position of real eminence in the field, recently said before the Senate in connection with the proposed International Atomic Energy Agency:

"The only things that will make it work—and the only things that could make it work are the reactors which we are yet to build."

This applies to the whole atoms-for-peace program. Senator PASTORE said further:

"The international agreement is not worth the paper it is written on unless we build the reactors which will convert special nuclear material into electricity and power. The whole crux of the international agency idea lies in our ability to get on with the job to build these reactors."

This should be the basic approach—as I have said, simple, specific, and determined, carried forth by a clear, unmistakable command decision.

We have in this country on other occasions in history gone forth with great programs thought to be impossible. When we have succeeded, it was done because the program was uncomplicated in its essence,

direct and imaginative, because it had a priority understood throughout the Government, and because the organizational machinery to finish the job carried the necessary authority to do so.

Great programs accomplish the seemingly impossible and translate an idea into a reality. It is in the same spirit of single-mindedness and purpose that we should approach the problem of getting power reactors built abroad. Let us not diffuse responsibility, but rather let us give to one unit of our Government full authority to achieve the established objectives. And of crucial importance, let us assign to that task the dollars which will insure it can be done.

Toward this end, I recommend that the Congress give to the Atomic Energy Commission the authority to allocate up to a billion dollars to be made available, through any means at its command, for the construction, within the next 4 years, of at least 10 power reactors abroad, these to be followed within the following 6 years by another 40 reactors. I emphasize number of reactors rather than large numbers of kilowatts of installed power because in many places of the world, quite small amounts of power would be the proper way to accomplish the objectives of the program.

And let us not complicate the realization of this goal by entangling it in the difficulties of other phases of our foreign policy, or consider this simply as technical or financial assistance in the conventional sense.

We have spent many billions of dollars in developing an atomic-weapons program, designed to maintain peace throughout the world. It does not seem to me unreasonable to allocate $1 billion for a program of such importance for the same objective. The ultimate cost of the program will be considerably less. Even in the present uneconomic state of reactor-power technology, projects could be made partly recoverable. As we learn more, the economic self-sufficiency of the reactors will improve.

It is not my view that power reactors alone should be the sole objective of the program; but also that we should intensify our efforts in other fields, particularly in the matter of training technical personnel and in the humanitarian uses of isotopes. But power reactors abroad should be and can be the dramatic focal point of our effort.

We have spoken in clear tones to the world. Our program for action to implement our words should be as inspiring.

That the program I have suggested raises questions and difficult problems cannot be denied. The decisions that are to be made in carrying it out will make many people unhappy. But the hard fact is that time is slipping by, and we are talking of a wasting asset. Unless we move forward with an aggressive, tangible program, the advantage we seized in 1953 with the boldness of our conceptions will be diminished and, indeed, we may awake to find it gone. All the words that can be said about the importance of atomic energy as a force for survival have been said. God grant us boldness in meeting the challenges of atomic energy, for it may well be that our degree of boldness will determine the fate of life upon this earth.

Kennedy Lauds Magnuson Record

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, May 28, 1956

Mr. JACKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address paying a compliment to the record of the senior Senator from Washington [Mr. MAGNUSON], delivered by W. P. Kennedy, president of the Brotherhood of Railroad Trainmen, at the annual banquet of the Northwest Association of Brotherhood of Railroad Trainmen and Ladies Auxiliary Lodges, in Spokane, Wash., May 26, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

KENNEDY LAUDS MAGNUSON RECORD

(Address of W. P. Kennedy)

Here we are—and there you are—again in another enjoyable, friendly, and interesting annual meeting of the Northwest Association of Brotherhood of Railroad Trainmen and Ladies Auxiliary lodges.

The good, wholesome, fraternal spirit so prevalent in your wonderful meetings makes is difficult to miss one. When Secretary Patterson's cordial invitation arrived, its acceptance was made so easy by my previous enjoyable visits with you.

The Northwest Association has another unusual and unique feature. It is the only international association in our groups. It is good to have the brotherhood and auxiliary members of British Columbia join in with those of Washington, Oregon, and Montana. This is a splendid example of the good and friendly relations existing between our two great nations.

Association meetings are always valuable to our members for the opportunity to exchange ideas and compare notes on progress being made in the several areas represented.

From my first visit to the Northwest, I have always thrilled at the wonderful natural advantages—the climate, the fertile soil, the timber, and the potential for power development. The railroads opened the first real opportunity for agricultural and commercial expansion—that expansion was limited due to lack of power—power at reasonable rates. I marvel at the phenomenal change in this territory during the past 15 years. Large increases in brotherhood membership indicates there has ben an upsurge of rail transportation business. The unbelievable increase in population is another indication of the tremendous change.

We do not need to look very far to discover the reason for growth in industry, agriculture, and population. We will find that the great changes in the Northwest followed substantially the same patterns as that developed in the Tennessee River Valley following the construction and use of the multipurpose dams on the Tennessee River and its tributaries.

The inquiring person may ask why did it take so long to make use of the vast natural resources which have been with us, from the beginning. The only answer to that momentous question, is that private enterprise would not risk the capital investment necessary to build the dams large enough to serve the purposes of power, flood control, reclamation, conservation, irrigation, and recreation. It remained a job for the people to do through the Federal Government.

That TVA investment of the Government in the Tennessee Valley was not a waste of Federal funds—it was a Godsend to the people in that territory—it proved to be an important saviour to the Nation in its all-out effort to win World War II. It did not destroy or cripple free enterprise—on the contrary, there is more real free enterprise in the Tennessee Valley today by a hundredfold than before TVA. What about the Federal investment of taxpayers money? Well, that investment is being paid back into the Federal Treasury ahead of time.

When the farsighted and public-spirited Federal lawmakers of the northwestern States noted the transformation of the Tennessee Valley, they began the move to develop the Columbia River and its tributary valleys in the same manner. The powerful eastern capitalists did everything they could to prevent such a development in the Northwest. The newspaper they controlled carried items on fear of destroying free enterprise in the Northwest.

Despite the efforts made by the enemies of public power and public development of the Columbia River Valley for the benefit of all of the people, those gallant and determined Senators and Congressmen fought on and on until they succeeded in securing the enabling laws. The lawmakers were favored by a President, who also had the interest of the people in mind. That President and those Senators and Congressmen knew that America could not defend itself successfully without developing the power potential offered by the great Columbia River.

When I now visit the Northwest and especially Washington, I can see the tremendous improvements made possible by the Federal construction and operation of the great multipurpose dams—Grand Coulee, Bonneville, McNary, Chief Joseph, and others.

The low-cost electric power developed by the great dams has made possible an industrial expansion never dreamed of in the Northwest or in any similar location. Industrial growth has increased in proportion to the availability of low-cost electric power. Aluminum is a new industry to Washington. Its production alone has created 36,000 new jobs. The fabrication of aluminum into articles of commerce requires the employment of thousands of others. The new industrial workers require the service of additional thousands of others in the retail and service trades and professions. It all means a growing, prosperous Northwest.

I am convinced the Northwestern States will continue to grow and expand in industrial and agricultural production if the sane and wise program of utilizing the vast natural resources will be continued in the future.

The recent change in the national administration of our country has brought great concern to those of us who believe that the Federal Government should do for the people, that which is needed to be done, but is not being done by others.

In this territory you have a good example of that change in public policy. A previous administration by appropriate action had surveys and plans made to continue further development of the Columbia River Basin, which included the Snake River Valley. That proposed improvement included a high, large, multipurpose dam in Hells Canyon.

When President Eisenhower selected the Secretary of Interior, he chose a man who had consistently opposed development of the natural water resources by the Federal Government. As soon as Secretary McKay took office he began to follow the Eisenhower program of curtailing Federal dams under construction, authorized on being planned. The most outstanding act of the new Secretary of the Interior was to do everything within his power to give the Idaho Power Co., a corporation owned and controlled by financial interests in the State of Maine, rights to construct a series of three small dams in the Snake River Basin in lieu of the big multipurpose Hells Canyon Dam.

The Secretary and the Eisenhower administration did not seem to be interested in the future progress of the Northwest, and particularly of that portion available to be served by an abundance of low-cost electric power from the Snake and Columbia Rivers. To give you an idea of thinking prevalent in the Eisenhower group on the matter of low-cost public power, it is reported that the President termed the great beneficial TVA as creeping socialism when newsmen asked what he thought of it.

People who watched with admiring pride the miracle changes in the Columbia and Tennessee River Valleys became alarmed at the President's words and at the attitude of his Secretary of the Interior.

It looked terribly bad for a while. The Nation had elected a President who was ready to give the utility interests all they wanted in curbing or destroying the ability of the people to use the natural resources for the public good.

Following the attempt to give the Hells Canyon to the Idaho Power Co. came the smelly rotten fiasco to destroy the future effectiveness of TVA through Dixon-Yates deal of providing Federal funds to finance a gigantic privately owned electric plant.

The big giveaway boys overlooked the effective roadblocks in their pathway. The roadblocks were stalwart statesmen, elected by the people—who believed in the people and who were willing to fight against all odds in protecting the people's interests.

From the State of Washington there was WARREN MAGNUSON, of Seattle, and HENRY JACKSON, of Everett, United States Senators, and in the House of Representatives DON MAGNUSON, the Congressman at Large. All three of them stood firmly and steadfastly against the giveaways—against the powerful utilities and the eastern bankers—against the administration's Secretary of the Interior. May I add that all three of them have excellent voting records in the interest of the people.

We are now in the midst of a critical and important campaign. The forces of reaction are working hard to defeat Senator WARREN MAGNUSON. He is up for election this year. The same reactionary forces fighting MAGNUSON in Washington are also fighting WAYNE MORSE in Oregon. Both of these courageous Senators are opposed because they have dared to stand up in support of the people's interests.

Who is this man, the big utilities, the eastern bankers and other reactionaries are fighting? What's his record? WARREN MAGNUSON first came to the notice of the brotherhood when he was serving as a member in the Washington Legislature. While serving in that body, he drafted the General Welfare Act which later became the State's first pension law. During his first term he was author of the first Unemployment Compensation Act to be adopted by the State of Washington.

When MAGNUSON was a candidate for Congress in 1936 he had the full support of the brotherhood. He was elected. He was reelected each 2 years until he became a candidate for United States Senator in 1944, when he was elected and reelected in 1950.

As Congressman and as Senator, WARREN MAGNUSON has actively supported every piece of liberal and public interest legislation. He was one of the first supporters of legislation to develop the Columbia River Valley. He has consistently supported the appropriations for the urgently needed projects. He has opposed the Eisenhower administration's attempts to cripple, slow down, or destroy those valuable public improvements.

Senator MAGNUSON has supported the farmers' ideas of farm relief legislation. He believes it is impossible to have real prosperity with the farmers receiving less and less each year for the products they sell. Prosperity should be for all.

The Senator has stood foursquare in the fight for adequate aid to the schools. He was the original sponsor of the National Science Foundation—an institution devoted to bringing about the training of more scientists, so sorely needed in this fast developing scientific age. He sponsored the bill for the National Cancer Institute which has grown into the National Institutes of Health with extensive research facilities.

Senator MAGNUSON has supported labor unions in their efforts to secure favorable labor relations laws. He vigorously opposed the Taft-Hartley Act and did all he could to prevent the inclusion of section 14–b, giving States the right to enact the so-called right-to-work laws.

The Senator has been a good friend of the railroad workers throughout his legislative career. As chairman of the Committee on Interstate and Foreign Commerce he is in a powerful position to make his desires effective. He supported the 1951 amendments to the Railway Labor Act. He has worked hard for the several amendments to the Railroad Retirement and Railroad Unemployment Insurance Acts. He is coauthor of S. 3654 amendments to the Retirement Act providing for 15-percent increase in annuities and deduction of retirement taxes from the Federal income tax. He is the author of S. 2420 reducing the limitation of the hours of service to 14 hours with 10 hours off duty.

The Senator's record in behalf of the people and in behalf of the workers in labor unions is such that I could go on for considerable time in giving detail accounts of his services to you and to the other workers of your State and of the Nation. I am fearful of the Republican candidate opposing Senator MAGNUSON. That candidate would support the Eisenhower administration in its efforts against adequate farm supports, in its efforts to crush labor unions, through appointments of antilabor members of the National Labor Relations Board, in its efforts to curtail, slowdown, and destroy the public-power programs of developing our natural-water resources. The workers throughout the Nation are hopefully watching what you in Washington, and you in Oregon do on election day—in keeping the militant, progressive Senators in office.

Keep the splendid teams of MORSE and NEUBERGER, of Oregon, and MAGNUSON and JACKSON, of Washington, in the Nation's Capital. They would serve your interests.

In the State of Washington you also have Congressman at Large DON MAGNUSON—with an excellent record. Send him back to Washington, D. C., where he can help WARREN MAGNUSON and HENRY JACKSON.

It's great to be living in democratic America where we have the right to vote. It's a right we should always exercise. We should realize how valuable that vote of ours can be to us, if we will use it in our own behalf. I am happy to inform that Grand President Mary Gorman, of the ladies auxiliary, cooperates fully with the brotherhood in our legislative and political activities. I am sorry she could not be with us on this joyous occasion. It is good that we could have Vice President Margaret Donahue with us, in her district and also as representing Sister Gorman.

In the State of Washington you have another big fight—the enemies of union labor are taking advantage of section 14-b of the Taft-Hartley Act. Their cleverly devised scheme is officially known as initiative No. 198. It has been advertised as the right-to-work amendment. Do not vote for it—vote against it. The proposed amendment does not give anyone a right to work—it is only a device to cripple the effectiveness of labor unions in your State.

It is important that all of you become qualified voters—register—if that is necessary—have all members of your family to also register—urge your friends to do the same. Then each and every one of you—vote—vote against initiative No. 198. Keep the labor unions of Washington strong and militant. Strong labor unions are the surest guaranties of keeping our Nation free from all vestiges of communism and totalitarianism.

A strong, alert Brotherhood of Railroad Trainmen is the best assurance train service and bus employees can have. Prepare now for the primary election September 11 and for the general election November 6. The best preparation you can make—for yourselves and for your brotherhood's future is in support of Senator WARREN MAGNUSON and those who will stand with him.

Really it will give you a glorious feeling to exercise your right to participate in your Government by voting in the elections and then you can join all those who do in singing God Bless America.

Fiscal Responsibility

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. PELLY. Mr. Speaker, for the first time in 5 years and for the fourth time since the depression the Federal budget will be in balance when the Government's fiscal year ends this coming June 30, 1956.

Tax rates since the Eisenhower administration came into power have been cut substantially, but due to higher individual incomes and business prosperity generally the Federal revenue has been larger.

There is reason to believe the Federal surplus will amount to $1.8 billion or perhaps even $2 billion, and if there is continued prosperity and no great changes in the international situation the 1957 surplus ought to exceed the 1956 figure.

I have wondered, Mr. Speaker, if this situation justified a tax cut this year or perhaps if rather than risk a preelection tax reduction bill it might not be wiser to delay consideration until next January.

As the Representative of the congressional district which has the highest ratio of organized union labor in the United States, I submitted a questionnaire to union leaders on this subject. Some of the replies mentioned the opinion expressed was of the individual officer of the union. A few responses indicated the question had been submitted to the membership before answering.

A tabulation of viewpoint showed a divided opinion:

Sixteen labor leaders favored immediate tax reduction, and eight of them took special pains to write in that it should be for low-income groups.

Nine labor leaders favored waiting until the President's recommendation after the next election. Two of these nine wrote in a specification that any relief at that time should be for low-income individuals.

Seventeen labor leaders answered in support of reducing the national debt.

The questionnaires returned are from the officials of unions representing, I would estimate, about 20 percent of the population of my district, and I rather imagine the thinking of these replies reflects pretty closely the views of the union membership.

Incidentally, to clarify the previous statistical statement, this is the way I phrased the inquiry in a personal letter to each union official:

DEAR ———: I would greatly appreciate your views on an important Federal policy affecting the members of your organization.

As you know, there is every indication that the United States Treasury for the fiscal year ending this coming June 30 will show a $2 billion budget surplus, and also a cash surplus for the first time in several years.

Mr. David Lawrence, writing in U. S. News & World Report, advises:

"Politicians will be seeking to give away that surplus to those in low-income brackets on the mistaken theory that this will be of

real benefit to them. Yet this would be the very group hit by inflation.

"What would be of more benefit to more people would be to reduce the national debt by $2 billion."

My questions have to do with your views on tax reduction. Would you mark them in the proper spaces below, and return this to me in the enclosed self-addressed envelope?

Thanking you for your favor, I am

Sincerely,

THOMAS M. PELLY,
Representative in Congress.

------ I favor tax reduction now.
------ I favor delay until President's recommendations in 1957.
------ I favor reduction of national debt.
Comments: ----------

In a few instances I wrote officers of international unions with headquarters either here in the Nation's Capital or outside of my district. Of the 9 responses from this group, 6 favored immediate tax reduction, of which 4 wrote in that it should be for low-income groups. One favored a delay and two supported reduction of national debt.

To me, Mr. Speaker, the greatest contribution of the Eisenhower administration and in which I share some pride, is the halting of inflation which had been destroying the buying power of the working man's wages. In one 6-month period in 1950, according to a statement of the present majority leader made to the House on February 26, 1953, the consumers of this country suffered a loss of more than $16 billion. Food prices alone rose 11½ percent. And that comes from a Member of the party in control of Congress at the time.

As a member of the Eisenhower team during 1953 and 1954 when the Republicans controlled the Congress, I sat and listened to various Democratic Members attacking our program. The then minority Members fought our attempts to hold the line to a moderate spending program. I remember one instance when a supplementary appropriation was before the House; the statement was made that certain requested funds were included in the bill although it was believed more money could not be spent before June 30 and there would be an unexpended balance at the end of the fiscal year. Nevertheless, the minority party insisted on increasing the amount of that appropriation. Every means was used to embarrass and thwart the endeavors of the Republicans to control expenditures.

Meanwhile we were continually charged with failing to keep our preelection promises to work toward a balanced budget. We were called fiscally irresponsible.

Now, Mr. Speaker, we hear no more of such charges. We do not hear, either, about the depression which the Democrats tried to talk the country into just prior to the 1954 election.

The present 1956 Federal budget surplus has quieted a great deal of partisan shouting and demagoguery.

For myself, Mr. Speaker, I frankly get much satisfaction from being associated with a sound program and with, for example, a man like the Secretary of the Treasury. Mr. Humphrey knows what the problem is and what policies are needed to protect the finances of the country. He believes in fiscal responsibility and practices it.

We Republicans, I admit, are not inclined to be politically expedient. For example, right now certain Democrats from the Pacific Northwest are trying to label the Republicans as a giveaway party. In that connection, when President Eisenhower and his administration recommended against a tax cut in an election year in the face of a budget surplus, it certainly does not reflect a policy of political expediency or fiscal irresponsibility.

A prime example of "giveaway" was on May 24 in a House vote on the conference report on Senate Joint Resolution 135, providing payment to the Crow Indian Tribe for transfer of right-of-way for the Yellowtail Dam unit in the Missouri River Basin project. It was typical of political expediency.

As the gentleman from Nebraska [Mr. MILLER] said in explaining why the Republican conferees did not sign the conference report:

It was a political vote, pure and simple. I understand the Indians vote in Montana. They carry some political weight and many groups back them.

Under this legislation, it was proposed to buy, except for the mineral and recreational rights which the Indians would retain, less than 6,000 acres. The Department of Interior estimated the value of this land at $36,000. The Democratic House committee agreed to $1,500,000, which the House in turn voted. The Democratic-controlled Senate changed this to $5 million.

The Democratic members of the conference committee did not offer any resistance to the Senate figure of $5 million. There was no effort to compromise the difference between the $1.5 million and $5 million.

One excuse given the House was that the funds came from existing appropriations for the project and are reimbursable from the sale of power.

I do not think there is any difference whether this Democratic giveaway of $5 million eventually comes from future power revenues or from the general government revenues; it is the peoples' money.

Only one Democrat voted with 125 Republicans against this giveaway. In campaign years the Democratic Party may lack funds, but it does not lack resourcefulness in using Federal appropriations for campaign purposes.

This is only one example of the free-spending political party that has tried to falsely lable its opposition with its own crime. I mention this giveaway in the interest of accuracy in order that the record may be clear as to which political party is fiscally responsible with the taxpayers' money.

In conclusion, Mr. Speaker, I say President Eisenhower's slogan is the one to follow. He says, "Doing the right thing is good politics."

Personally I believe with the President that the right thing today is to refrain from the temptation of trying to write a tax reduction just before the election. If Democratic political enthusiasm runs away, like its inflation and giveaway programs in the past have run away, it would be unfortunate for the citizens of this country. There will be ample opportunity to reduce rates next January. And then, Mr. Speaker, let us not forget, as union leadership obviously has not forgotten, that low-income groups need relief from present high taxes. I suggest low-income family groups in particular.

Meanwhile, all due credit and praise to the Republican leadership for this fiscal program which has produced a Federal surplus.

C. Ray Miller: Man of Year

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. BEAMER. Mr. Speaker, the Nation and the world has been vitally interested in the development of the Salk polio vaccine that is proving to be a marvelous deterrent for one of the scourges of mankind.

Our Interstate and Foreign Commerce Committee has made continuing studies on this important subject. One of these studies included a trip to Indianapolis where a visit was made to the Eli Lilly & Co. plant where most of this famous vaccine is being produced.

Many individuals have contributed to the development and production of this product. One of these men, Mr. C. Ray Miller, recently was honored as the man of the year by the Alpha Pi Chapter of Kappa Sigma, Wabash College, Crawfordsville, Ind. I had the privilege of being in college and in the fraternity with Ray Miller.

For these reasons, under unanimous consent, I include a news story from the Kappa Sigma Caveman of May 15, 1956, in the Appendix of the CONGRESSIONAL RECORD:

C. RAY MILLER: MAN OF YEAR

C. Ray Miller, 1921, has been voted Alpha Pi's man of the year for 1956.

Brother Miller, 57, achieved national distinction last year in the supervision of the production of the Salk polio vaccine at Eli Lilly & Co., Indianapolis, where he is vice president in charge of production. Eli Lilly was the only major company producing the vaccine constantly, never having taken it off the market during governmental checking.

A native of Crawfordsville, Brother Miller was a junior Phi Beta Kappa at Wabash, as well as serving on the Glee Club and Bachelor staff. He served as G. M. of Alpha Pi during his senior year.

After graduation, he studied chemistry with an assistantship at Cornell. He passed the Indiana Pharmacy Board examinations in 1922, and became manager of a Hook's drugstore in Indianapolis. He went to work for Eli Lilly in 1923 as a medical service representative.

In 1938, he was promoted to manager of the merchandise development and control department, and during World War II he assisted the Armed Forces in developing a package for blood plasma.

He has served as Lilly's director of production since 1944. He was named vice president of the production component (which employs 40 percent of Lilly's force)

in 1948, and has increased unit production to record levels in 1955. Last year he was named to the board of directors of Eli Lilly & Co.

Two nephews are members of the Alpha Pi alumni group. W. R. Kirtley, M. D., 1936 is also associated with the Lilly Co., and J. M. Kirtley, M. D., 1932 is alumnus adviser of Alpha Pi.

Antarctic Claims

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1956

Mr. HOSMER. Mr. Speaker, House Resolutions 207, 209, and 245 were introduced by myself and others calling upon the Secretary of the Interior to furnish the House with information in his possession respecting Antarctic, both physical, historical, and legal. In view of the very large sums spent and being spent by the United States in this region, it is deemed prudent to have such information readily available. Notwithstanding, the Secretary has not viewed these measures with favor. The following letter to the editor appearing in a recent edition of the Christian Science Monitor indicates why the objectives of these House Resolutions should be attained:

ANTARCTIC CLAIMS

To the Christian Science Monitor:

Reference is made to an article, Teams Map Grahamland, British Push Survey of Antarctic Sector by Air, by one of your staff in London, in your March 5 issue.

This article contains numerous references to Antarctic place names and territorial claims not recognized by the Government of the United States. Since your staff correspondent may not have realized this, the following information is supplied.

Teams Map Grahamland (headline).

According to the United States Board on Geographical Names (BGN), which determines the names to be used in official United States documents and maps, this area is properly called the Palmer Peninsula after its discoverer, the American sealing captain, Nathan Palmer.

"Slices radiating from the South Pole are carved up between Australia, New Zealand, Norway, France, and Great Britain."

The fact that the United Kingdom does not recognize the claims of Argentina and Chile (which conflict with those of the United Kingdom) should not cause the names of these countries to be eliminated from a list of claimants.

"With a large unclaimed slice to which American exploration might give the United States prior claim should she care to accept it."

The only exploration in the unclaimed area is by Americans. But United States nationals have originally explored (i. e., seen for the first time) more of the areas claimed by other countries than the nationals of all the other countries added together.

"New claims are being staked to these southern polar regions."

This office knows of no such new claims.

"Although many photographs have been taken by previous explorers in the Antarctic, these have been mostly obliques snapped at random."

The United States Navy Operation High Jump took 75,000 trimetrogon reconnaissance mapping air photos on one expedition, more than all the air photos of Antarctica made by all nations on all previous expeditions. The American Ronne expedition took another 14,000 such air photos. Thousands of vertical photos were made on other United States expeditions.

"The Hunting Air Survey is the first attempt ever to give three-dimensional coverage over so large an area in the Antarctic."

United States air photos of a single expedition a decade ago produced many times more three-dimensional coverage of Antarctica than the Hunting Air Survey will.

JOHN H. ROSCOE,
Scientific Adviser, United States Antarctic Programs.

WASHINGTON.

Mystic and Magic Numbers

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1956

Mr. BEAMER. Mr. Speaker, under unanimous consent, I wish to insert in the Appendix of the CONGRESSIONAL RECORD the attached editorial, Mystic and Magic Numbers, which appeared in the Wall Street Journal of May 24, 1956:

MYSTIC AND MAGIC NUMBERS

To the ancients, 7 and 5 were mystic numbers and legend tells us quite persuasively of their powers. Even nowadays there is some magic about them; the Supreme Court the other day backed up a Federal Communications Commission ruling and endowed 7 and 5 with legal power.

The FCC has a rule which says that it is perfectly all right for an individual or a company to own 7 standard radio stations, 7 FM stations and 5 TV stations. To own more than that, the FCC says, would do injury to the public interest. Thus the Storer Broadcasting Co., which already owns 5 TV stations, was denied a hearing on its application to acquire a sixth. The case went to the Supreme Court and the Justices said Storer should have had a hearing but that the FCC had a right to choose any numbers it wanted to anyway.

Now we aren't disposed to quarrel with the FCC's position that the public interest could be affected by what goes on in the broadcasting business. Five TV stations owned by one man certainly could adversely affect that interest. But it would not be the act of ownership that affected the public interest; it would be the activities of the five TV stations. That same man could damage the public interest if he owned only one station—except, of course, that there are already sufficient laws and FCC rules governing the conduct of broadcasting stations.

Radio and TV stations differ in size, location, financial assets and influence all over the country. Even if all were exactly alike in those respects, it would be difficult to understand how the FCC chose the particular number it uses. If ownership of 7 standard and 7 FM stations is acceptable, why not also 7 TV stations? Why not seven TV stations and nothing else?

There is, indeed, something mystical about this choice of magic numbers—7 and 5 serve the public interest; 8 and 6 do not—and we are as mystified as the next person.

Even the Supreme Court didn't try to explain why some numbers are good numbers and other numbers are bad numbers. In fact we doubt if it can be explained except, maybe, by a seventh son of a seventh son.

Our Mutual Security Program

EXTENSION OF REMARKS
OF
HON. WILLIAM E. McVEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1956

Mr. McVEY. Mr. Speaker, we shall soon have before us for consideration the Mutual Security Agency appropriation bill which, in more understandable terms to the public, means our foreign aid spending program. The amount of aid extended to foreign countries since the inception of this program has reached staggering proportions. It seems appropriate that we reexamine our commitments thus far and attempt to arrive at the correct position in regard to a continuance of these expenditures.

The aid which this Government has extended to all countries and international organizations for the period covering World War II and the postwar period ending June 30, 1955, amounts to $108,847,779,000. This total does not include United States capital investments in the International Bank for Reconstruction and Development, $635 million, and the International Monetary Fund, $2,750 million.

Summary of aid

Lend-lease, July 1, 1940, to June 30, 1955	$48,767,777,000
Grants in aid, July 1, 1940, to June 30, 1955	43,459,158,000
Net loans, July 1, 1940, to June 30, 1955	16,620,844,000
Summary total	108,847,779,000

The foreign aid program began with the lend-lease shipments on July 1, 1940. In the postwar years, one appropriation after another has followed in rapid succession.

The extension of these huge sums during World War II in foreign aid is understandable. We were engaged in an all-out war, and we felt the need of winning it at any cost. But let us look at the aid extended since the close of the war.

Between July 1, 1945, and June 30, 1955, the United States disbursed gross foreign aid in the amount of $60,719,482,000. It is difficult for the average individual to understand the impact upon our economy of such huge sums. If we were to spread this postwar cost over the householders of the Nation, it would be found this program will cost every householder of the Nation $1,277.

There is a general impression that the corporations and the rich pay the bulk of these expenditures. This, however, is not the case. The President in his budget for 1957 gives the following estimate of receipts:

[In billions]

Individual income taxes	$35.1
Corporation income taxes	20.3
Excise taxes	9.9
Other taxes	2.1
Miscellaneous receipts	2.8
Refund of receipts	—3.9

Does not the average family play an important part in the support of our financial structure? The answer is

"Yes." The working men and women, as well as the corporations, carry this burdensome load. In the budget estimates listed above, it is seen that the individual income taxes account for more than half of our total tax collections. There are 50 million Federal taxpayers whose net yearly incomes are below $5,000. This large group pays about 60 percent of the total income taxes collected by the Federal Treasury. There are only 2 million Federal taxpayers whose net incomes are above $5,000.

Our income-tax rates run from 22 percent in the lowest bracket to 92 percent in the highest bracket. If we should confiscate all incomes over $10,000 by levying a 100-percent tax, it would not raise enough money to run the Government for more than 2 months. So, in spite of the fact that we are "soaking the rich" for about all we can get, the brunt of support for this spending spree is falling upon the individual with a salary under $5,000.

It should be remembered, too, that a considerable sum is collected in hidden taxes. Taxes upon about every purchase made: Theater tickets, transportation, purses, jewelry, alarm clocks, hand lotions, and many other articles. Telephone companies have calculated that taxes on each telephone installed in the home amount to more than $3 per telephone. Yes, we meet these taxes at every turn, and it is time the working men and women become conscious of the inroads of taxes upon their economy.

The belief held by some that our foreign-aid spending program is solely for the purpose of rebuilding the free nations of Europe, and assisting them to rearm with modern weapons is erroneous. The fact of the matter is our foreign-aid program has encompassed most of the nations of the world. It is believed that the taxpayers have a right to know where their money has gone, and, with this in mind, the following information has been gathered from authoritative sources.

Lend-lease, July 1, 1945–June 30, 1955

Brazil	$3,616,000
Colombia	11,000
Dominican Republic	3,000
Guatemala	1,347,000
Mexico	553,000
Paraguay	2,000
Peru	237,000
Belgium	59,480,000
United Kingdom	341,462,000
Australia	12,300,000
India	3,000,000
New Zealand	2,300,000
China (Formosa)	729,418,000
Czechoslovakia	2,000
France	372,441,000
Greece	5,956,000
Iran	750,000
Italy (civilian supplies)	134,444,000
Netherlands	64,344,000
Poland	92,000
Saudi Arabia	1,591,000
U. S. S. R	277,254,000
Yugoslavia	76,000
Unspecified	29,364,000
Total	2,039,490,000

Grants in aid, July 1, 1945–June 30, 1955

Argentina	$198,000
Bolivia	30,833,000
Brazil	17,432,000
Chile	9,499,000
Colombia	6,105,000
Costa Rica	5,953,000
Cuba	1,249,000
Dominican Republic	1,675,000
Ecuador	7,547,000
El Salvador	3,708,000
Guatemala	7,364,000
Haiti	9,367,000
Honduras	4,569,000
Mexico	104,105,000
Nicaragua	2,896,000
Panama	5,216,000
Paraguay	7,243,000
Peru	13,157,000
Uruguay	1,892,000
Venezuela	2,069,000
Unspecified Latin America	288,792,000
Afghanistan	2,909,000
Albania	20,444,000
Austria	1,054,315,000
Belgium	521,863,000
United Kingdom	3,396,096,000
Australia	239,000
North Borneo	43,000
British Guiana	75,000
British Honduras	80,000
Leeward and Windward Islands	101,000
Canada	3,964,000
Ceylon	107,000
Federation of Malaya	354,000
Federation of Rhodesia	1,000
Gold Coast	10,000
Hong Kong	1,808,000
India	128,459,000
Jamaica	3,000
Malta	331,000
Nigeria	8,000
Pakistan	121,639,000
Sierra Leone	1,000
Singapore	9,000
Burma	20,505,000
China	1,209,077,000
Czechoslovakia	185,825,000
Denmark	247,524,000
Egypt	21,451,000
Ethiopia	6,932,000
Finland	2,544,000
France	3,746,883,000
Algeria	107,000
French Morocco	552,000
Tunisia	274,000
Germany, East	17,351,000
Germany, Federal Republic	3,753,147,000
Greece	1,627,954,000
Hungary	5,856,000
Iceland	29,571,000
Indochina	305,246,000
Indonesia	109,218,000
Iran	157,134,000
Iraq	5,945,000
Ireland	18,346,000
Israel	231,363,000
Italy-Trieste	2,421,889,000
Japan and Ryukyu	2,537,675,000
Jordan	21,038,000
Korea	1,166,632,000
Lebanon	11,926,000
Liberia	5,609,000
Libya	15,370,000
Nepal	2,216,000
Netherlands and Surin	846,020,000
Norway	234,541,000
Palestine	175,000
Philippines	745,462,000
Poland	364,886,000
Portugal	15,833,000
Saudi Arabia	2,792,000
Spain	37,548,000
Sweden	87,143,000
Switzerland	1,803,000
Syria	$949,000
Tangier	17,000
Thailand	26,103,000
Turkey	421,748,000
U. S. S. R	188,180,000
Yugoslavia	688,288,000
Trust Territories in Pacific	4,444,000
International organizations	1,072,154,000
Unspecified areas:	
Asia and Pacific	2,467,417,000
Europe	9,495,196,000
Near East and Africa	1,356,547,000
South Asia	15,094,000
Other	317,165,000
Total	42,059,148,000

In addition to the above, authorized loans and credits have been granted in a substantial amount. These loans and credits granted to nations all over the globe amounted to $16,620,844,000 during the period beginning July 1, 1940 and ending June 30, 1955.

No one would challenge for one moment the motives behind this giveaway program. The nations of Europe had been devastated by the ravages of war. Their industrial potential had been largely destroyed. In the rebuilding process, our aid was badly needed. However, this program began, 1948, supposedly, for a 5-year period, but it has continued in force until the present day—notwithstanding the fact that many of the original recipients of aid have been balancing their budgets and reducing taxes. This situation has occurred in recent years when our own budget was running a deficit.

During these years, we have piled upon our people a taxload about equal to that of the free nations of the world combined, and a Federal debt almost twice as great as the other nations of the free world put together. For many years, we have indulged in an unsound fiscal policy. During that time, we have piled up a Federal debt of approximately $275 billion—the greatest debt load that any nation has been called upon to bear since the dawn of history. We have seen the purchasing power of our dollar decline to a little more than 50 percent of its prewar value.

This decline of the American dollar has had a great impact upon the lives and fortunes of the American people. The value of life-insurance policies, time deposits, E, F, and G savings bonds has just about been cut in half. The misery caused the old-age pensioner and those, who with thrift, had saved something for their declining years is sad to relate. The question today is, Will the United States adopt a policy consistent with its resources and taxing power, or will it continue to distribute its largess to the entire world?

In the light of facts here presented, it seems that, in addition to our efforts to make our Nation secure, we must make certain that we keep our economy strong and our currency sound. Would it not be better to think more of the homefront for awhile and take a vacation from foreign-aid grants? We may be surprised how well other nations can get along without us.

The chances of a third world war are very remote. With the nuclear weapons now available, no nation could expect to win in a world struggle. There would be devastation no end. Russia understands this situation and has no intention of starting a world conflagration.

When one is trying to reach a decision relative to his vote on the mutual-security-aid legislation, he is faced with many crosscurrents of opinion. Just about everyone feels there are nations in the world which deserve our assistance. This program, however, is just about all-inclusive. We have extended help to many nations which are in better fiscal position than we are. Not only that, we have extended help to nations which have never aided us in a military conflict and which have profited from our own involvement. Examples in this category are Brazil, which has received $381,686,000, and Sweden, $116,220,000.

An analysis of our foreign aid spending program reveals that through our lend-lease program from July 1, 1940, to June 30, 1945, 62 nations and territories were assisted by this program. In the years that followed, July 1, 1945, to July 30, 1955, 24 nations participated in our lend-lease program. The grants-in-aid during this postwar period reached a total of 88 nations and territories.

It should be noted that not all of these nations are friendly. The following countries which are certainly not allies have benefited by our mutual security program:

China	$2,861,376,000
Czechoslovakia	1,211,837,000
Yugoslavia	750,730,000
Russia	11,241,614,000

Most of the aid received by Yugoslavia has been extended during recent years while that country has been under a Communist dictatorship. The aid extended to Yugoslavia amounts to more than $44 for every man, woman, and child in that country.

The mutual security bill is an omnibus measure. When it reaches the House, the Congress will be asked to pass upon an additional appropriation of approximately $3½ billion. No one knows where all of this money will eventually be spent. One cannot support a program of this nature—although there are certain countries of the world he would like to assist. It is believed that the foreign aid spending program is wasteful and most unfair to the taxpayers who have to shoulder this burden.

Calling the Game

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks, I would like to submit the following editorial, which appeared in one of the largest weeklies in our district, the Lynden Tribune.

Dairy farmers in the Lynden, Wash., area have supported the self-help dairy plan which I introduced, from the beginning. The editorial from the Tribune reveals that Minnesota dairymen are now beginning to see the merits of the self-help plan. As this editorial points out, the farmer will receive no real relief until the whistle is blown on the political maneuvering and the dairyman has a chance to run his own business. The text of the editorial is as follows:

A DAIRY'S VIEW ON SUPPORTS

In one of the recent issues of the Tribune, an editorial appeared condemning politicians' regular routine of campaigning for office by kicking around the farm program. We stated that if the three major farm organizations, the Grange, Farmers Union, and Farm Bureau would pull together and not buck each other, that a workable stable price program could be established faster and much more easily.

In support of this, the editorial from May edition of the Land O' Lakes News, published monthly by the Land O' Lakes Creameries in Minneapolis, Minn., is reprinted as follows:

"Let's get this off of the football field.

"More and more it should become evident to all dairymen that the only way they will be able to have a stable price-support program is to get it out of politics and have their own self-help program.

"Each 4 years the dairy prices become a political football. This causes instability and uncertainty for the dairyman.

"Congress included in the farm bill support prices for manufacturing milk at $3.25. The bill has been vetoed. However, through presidential order it has been provided that manufacturing milk shall be supported at $3.25. This is good.

"However, the dairy industry certainly would be in a much better position over the long pull if it were running its own self-help program and did not have to depend on the changing ideas and tides of government.

"Dairy farmers should do all possible to get Congress to pass enabling legislation making it possible for farmers to operate their own self-help program."

The Drum Controversy

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Syracuse, N. Y., Post Standard entitled "The Drum Controversy." I think this editorial sets forth clearly some of the tortured reasoning employed by the Army these days:

Next month some 78,000 National Guardsmen and Army Reservists will begin training at Camp Drum, using facilities at the best all purpose Army installation in the Northeast.

But after the summer training the camp will be silent and deserted, because the Army refuses to place it on permanent status.

Secretary of the Army Wilber M. Brucker has given Representative CLARENCE E. KILBURN, of Malone, a detailed explanation of why Camp Drum is on a standby basis. It adds nothing to reasons already given, most of which are questionable.

The fact that Exercise Snowdrop had to be postponed 6 weeks in 1948 because of insufficient snow means nothing in the long-range weather picture.

The statement that high maintenance costs are no factor because "depreciation occurs whether an installation is active or inactive" needs clarifying. Depreciation is much more rapid on the latter basis.

Mr. Brucker say that the area "offers no outstanding or peculiar terrain or weather conditions which require its use for specialized training." Then why was it chosen in the first place?

As for the denied saving on transportation costs by keeping the camp open all year comparative figures should be presented. Camp Drum is undeniably near large centers of population in the northeast.

The practice of building huge military installations and then abandoning or maintaining them on a costly semi-active basis requires a better defense than Secretary Brucker has presented.

Patents and Monopoly

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I wish to insert an address delivered by me on May 24, 1956, in New York City, before the New York Patent Law Association entitled "Patents and Monopoly":

I was particularly pleased to receive and accept the kind invitation to appear before you at this annual dinner meeting for at least two reasons. To begin with, my official duties serve as a constant reminder of the vital relationship between the patent laws which have their fountainhead in the Constitution itself and the antitrust laws which are likewise fundamental to the American way of industrial and business life.

The House Committee on the Judiciary has a subcommittee with special jurisdiction over patents, trademarks, and copyrights, as well as appropriate revision of the law in this area. As you know, this subcommittee has had occasion in the past to consider important patent measures including the comparatively recent codification of the patent law, in connection with which able witnesses have appeared on behalf of your association. Legislation that is referred to our patent subcommittee must next, of course, go to the full Judiciary Committee where it receives further careful consideration before action is taken which helps determine whether or not it will finally appear on the statute books.

To deal with monopoly problems, the House Judiciary Committee established a special committee concerned exclusively with antitrust matters and the concentration of economic power. The Antitrust Subcommittee during this Congress has conducted extensive hearings into current antitrust problems facing the country and is presently engaged in an inquiry involving key industries which fall within the jurisdiction of Federal regulatory agencies.

This brings me to the other reason why I particularly welcome the opportunity to address you tonight. I have in mind a brand of dire and alarmist statements concerning patent-antitrust problems that have cur-

rently come to the fore. For example, one distinguished lawyer and friend, for whose ability I have great admiration, said this to you at your annual dinner last year:

"The judicial assaults on the patent system in the late thirties and forties are reminiscent of the hurricanes that pounded the eastern seaboard early last fall. * * * By injecting into the general patent law antitrust principles in the guise of unclean hands, by expanding the concept of patent misuse, by eliminating the estoppel between patentee and licensee where the license agreement contains a price-fixing stipulation, by invalidating customary license restrictions, and by obliterating the remedy of contributory infringement, the courts effected radical changes in doctrine, leaving this branch of the law in a state of turmoil." [1]

Another distinguished patent practitioner makes these even more sweeping allegations—and I quote:

"During the last 30 years an antipatent movement has developed in the United States. It is clearly depicted in events that have occurred in all three branches of the Government, and never more noticeably than in several legal decisions and legislative proposals that have been made in recent months. Principally by means of the antitrust laws, which were not originally intended for this purpose, our patent system is being deliberately emasculated. Large corporations have, in effect, been put on notice that their research laboratories can be raided." [2]

On the basis of this diagnosis, what remedy do these critics advance? Some would stop at nothing short of making patents wholly exempt from the antitrust laws, and restricting defenses in patent suits solely to traditional questions of validity and infringement.[3]

As one who sincerely believes in and appreciates the vital role that a healthy patent system must play in our economy, I challenge the interpretation of these gentlemen. If there has been such a nefarious scheme afoot—a plot to destroy the patent system by means of the antitrust laws—it has certainly escaped my attention during my 33 years of legislative service in Washington.

Could it be that these distinguished gentlemen simply long for a return to the good old days of the 1920's when the inhibitions on patent antitrust abuses were few?

What is the true meaning of the proposal to completely exempt patents from the application of the antitrust laws? As you well know, patents when legitimately used raise no question of antitrust infringement. Trouble begins only when they are subverted to accomplish purposes which our lawmakers never intended to sanction.

I take it that what the proposal really contemplates is antitrust immunity for the patentee no matter what his course of conduct in utilizing his patents. Frankly, I find the suggestion shocking. It would seriously confuse and impair antitrust enforcement; it would open a veritable Pandora's box for the revival of a great many evils that we have fought hard over the years to wipe out, even the participation of American concerns in international cartels. Large industrial organizations would be free to use the patent grant as a means for engaging in activities that would otherwise be illegal. In short, it would permit patents to be used as a device to restrain competition and perpetuate monopoly.[4]

Even apart from the costly lessons that the great depression and the last war have taught us, the vastly changed world in which we now live makes it not only undesirable but impossible to turn back the pages of time. Instead, the patent system must be adapted and accommodated to our altered industrial structure in an age that has now harnessed the atom and the H-bomb.

Footnotes at end of speech.

I know that as patent practitioners you have had frequent occasion to appraise the relationship between the patent laws and the antitrust laws. Let me make clear my own philosophy on this score. I share the view of those who believe that there is no basic conflict or incompatability between the patent and the antitrust laws. I think it is a fair generalization to say, as one analyst does, that "so long as a patent owner stays within his patent grant he has no antitrust problems and when he goes outside the terms of his grant, he has no patent protection. The many so-called patent antitrust cases do not resolve or decide conflicts between the patent laws and the antitrust laws but rather define the line at which one steps outside the protection of the patent laws into the prohibitions of the antitrust laws." [5]

I think you will agree that many of the so-called patent-antitrust cases illustrate attempts to use a patent to accomplish a result for which the patent is not adapted. Familiar examples come to mind, such as patents on salt-dispensing machines being used to monopolize salt [6] or a patent on a domestic heating system used to monopolize switches.[7] Condemnation by the courts of such practices does not by the same token restrict the patent right and raises no conflict between patent law and antitrust law. Rather, the so-called patent-antitrust decisions serve to delineate the two laws and keep each in its proper sphere.

I would hazard the opinion that the majority of patent owners throughout the United States find it both possible and profitable to handle their affairs in a way that is completely consistent with the objectives of both the patent laws and the antitrust laws. These law-abiding citizens and corporations have every right to expect that their associates and rivals in the industrial world will likewise abide by the rules of the game.

As good lawyers, watchful over your clients' interests, you know that no matter how valuable the patent may be, its value may be jeopardized if it is abused or made the basis for an antitrust violation. You will, therefore, wish to guide your clients in such a way that they may enjoy the full benefit of their patent assets and exploit them in a manner consistent with the antitrust and other laws enacted in the public interest.

This makes good legal sense and it makes good business sense. As the law now stands—and there have been some notable decisions over the past two decades that have contributed to this development—it is well for the patent-owning corporation to heed the practical admonition that its patents are less likely to be tested for validity or to be infringed by others if it abides by the antitrust laws. It is the violator that runs a greater risk of having its patents either tested and declared invalid or infringed with impunity. The net result is that patents lose their legal effectiveness when used in violation of antitrust laws.[8]

Beyond these practical considerations, I believe that as good citizens we should oppose the use of patents in ways that Congress never intended that they be used, where the effect is to imperil the competitive and free enterprise system to which this country is dedicated. Indeed, it might be well to take a moment at this point to epitomize the basic objective of our antitrust laws. The goal is the preservation of a system in which economic activity is controlled so far as possible by the market and not by men. Those who enacted our antitrust laws strove to safeguard and preserve the freedom to compete effectively so that prices, output, wages, and other rewards depend not on the decisions of a few but result from the day-to-day actions of rival business firms, independently motivated. This decentralized kind of decision-making insures a maximum not only of individual opportunity, but of political liberty.

Footnotes at end of speech.

Familiar hallmarks of monopoly are the power to control prices and the power to determine who enters into or remains in an industry.

Turning to the nature of the patent grant, it secures to the patent owner the right to exclude others from making, using, or selling the patented invention for the limited 17-year period.[9] There was nothing in the common law to prevent the appropriation of another's designs or inventions. The creator of a better mousetrap might see his competitor copy it, detail for detail, and have no remedy. Thus the patent grant from the Congress constitutes a special instrument of public purpose to promote the progress of science and useful arts in furtherance of the constitutional authorization (contained in art. 1, sec. 8). Important public policy is at stake: to provide incentive to inventors, reward them for their contributions, and stimulate further effort. The inventive genius of Americans has responded well.

In a sense, a patent may be considered as the translation of a specific, physical invention into a precise legal document. Exactness, particularity, and distinctness are essential characteristics of a patent so that the patentee, licensees, competitors, and the public may know with certainty the extent of the patentee's right to exclude.[10] While these characteristics are limitations on a patent, they are also among its greatest virtues. So long as a patent is confined to its proper sphere, the integrity of the patent system is maintained and antitrust involvements are avoided.

Why do many of us differ with the critics who view with alarm legal developments in the patent-antitrust field over the past 25 or 30 years. I am persuaded that the evolution of the case law demonstrates a natural and normal response to the problems posed by a changing industrial environment. Here again we find a reassuring evidence of the dynamic capacity of our legal system to respond to the demands of the modern age. A very brief historical sketch provides a useful frame of reference for this point of view. In looking back, it is well to bear in mind the fact that the vast majority of antitrust problems have arisen when the patent owner sought to exploit his patent by licensing others.

For about a half century after passage of the Sherman Act in 1890, relatively few cases involving patent-antitrust questions reached the Supreme Court. Since many of these cases were infringement or contract suits between private litigants, decided on specific and limited facts, the economic effects of various patent practices went largely unnoticed. In the first Supreme Court decision forbidding the tying of unpatented supplies to the use of a patented machine, the Court found the practice illegal because "the patent laws furnish no warrant for such a practice." While reference was made to "the cost, inconvenience and annoyance to the public" of the practice and the decision contains general references to the public interest," there is no indication that the Court had more than a vague appreciation of the economic consequences of the practice on competition.[11]

In this bygone era of comparative simplicity, inventions usually consisted of self-contained complete articles, which were ordinarily exploited by the inventor himself with the result that a new industry might be developed. This happened when someone thought of putting an eraser on a pencil.[12]

When a specific situation was considered apart from its economic consequences, the courts were prone to uphold restrictions based upon patents on the theory that if the patentee could prevent infringement entirely, he could impose any condition he wished in a license. For almost 30 years, after passage of the Sherman Act, even tying con-

Footnotes at end of speech.

tracts were legal and patentees were permitted to control unpatented articles. Thus there was little appreciation of the relative functions of the patent system and the antitrust laws in the national economy.

In this favorable climate, restrictive patent practices multiplied and by the 1930's whole industries were regimented under patent license agreements. This regimentation was not only national in scope, it was perhaps even more widespread and more complete in international trade. As business competition expanded geographically, patents were sometimes used by industrial giants to divide world markets into exclusive trade areas.[13]

It was not enough that patent restrictions increased in number and scope, ingenious counsel sought ways to overcome the effects of the few decisions which limited the patentee's right to restrict. For example, while the law clearly prohibited fixing the resale price of patented products, prices were fixed by the manufacturer at the retail level by securing patent coverage at the retail as well as the manufacturing level; restrictive practices were continued after the patents supporting the restriction had expired; or licensors and licensees met to impose license restrictions for the benefit of all.[14]

When the Temporary National Economic Committee was set up in 1937 to investigate factors bearing on the great depression of the early thirties, the patent sytsem and patent practices formed one of its major fields of inquiry. This was the first time that there had been a thorough and comprehensive investigation of the nature and extent of restrictive patent practices and their effect on the national economy. The facts developed in the TNEC studies [15] led to the investigations which resulted in numerous antitrust suits brought by the Department of Justice in the late thirties and in the forties.

By this time, of course, the industrial pattern had undergone radical change in contrast to its appearance at the turn of the century. Inventions now consisted of narrow improvements on existing devices, or a single element in a complicated machine not usable except in connection with an existing device. Usually, too, the vast number of patents on these inventions found their way into the corporate portfolio, since they were the product of technicians working in well staffed research laboratories. As someone has said, patents were removed by assignment from the inventors' world to the executives' world. They become a part of the corporate assets to be exploited in the manner that best suited the corporations' interest. As you know, this might or might not involve use of the invention or the licensing of the invention to others for use.

It is, of course, impossible to explore this evening all of the various avenues of improper patent use which have resulted in unwarranted elimination of competition. I am sure that you are familiar with these practices and how the pendulum has swung in the course of the Court decisions, which now generally condemn them as illegal. Consider, for example, the judicial narrowing of the scope of restraint which may be imposed upon the licensee. For many years the courts interpreted license agreements primarily from the standpoint of the historic right of the patentee to grant a license with restrictions on the making, using and selling of his inventions. Licenses that limited the method of sales and the price of former competitors were approved in 1926 in the General Electric decision.[16] In that case the Supreme Court held that provisions in the license agreement whereby the licensor controlled prices at which the licensee sold light bulbs manufactured under the license, did not violate the Sherman Act. This authorization gave rise to patent licensing arrangements which served as a device for achieving uniformity and avoiding price competition in entire industries. Since licensing could thus be used as an instrument of coercive control, efforts were made to prevail upon Congress to amend the antitrust laws so that manufacturing licensees could no longer be legally required to observe certain price restrictions.

But it was not until 1948 that the Supreme Court in the Line Material case[17] cast doubt upon the General Electric doctrine, and seriously undermined its authority. The Court, after dividing 4 to 4 on the question of whether to flatly overrule the General Electric Co. doctrine, held, in any event, that the owners of separate patents may not by cross-licensing fix the price to be charged by themselves and their licensees.[18]

I have had frequent occasion to differ with the views expressed by the Attorney General's National Committee to Study the Antitrust Laws and I fear that in some respects the patent-antitrust section of the report is no exception. The Committee recommends a reaffirmance of the General Electric doctrine and would give the patentee the green light to fix his licensee's selling price.[19] The recommendation apparently contemplates situations where multiple as well as single licenses are involved. It is my view that price fixing clauses in patent licenses should be forbidden by the antitrust laws under any circumstances.

I am persuaded by the logic of the dissenting member who said that it "has never been shown that this dangerous power must be added to the other benefits of a patent in order to provide adequate incentives for invention, disclosure or licensing. A patentee obtains the exact value of his lawful monopoly on the invention when he exacts all the traffic will bear in the way of royalties, or by exercising his privilege to be the sole maker or seller. * * * there is no justification for depriving the public of the benefits of competition in * * * other aspects of production and distribution merely because the patentee is entitled to a protected price for his inventive contribution." [20]

In another area, the law today is clear-cut in prohibiting the use of tying clauses to give the owner of the patent a competitive advantage in the sale of unpatented products. The rule of thumb is that any attempt by agreement or course of conduct to use a patent to restrain or monopolize parts, materials, or supplies not covered by the patent is illegal per se and subjects the patentee to civil and criminal liability.[21] Here again it was not until 1944 that the Supreme Court made it unmistakably clear in the Mercoid case that a patent cannot be used to extend monopoly control over products not covered by the patent as such. This case involved an attempt to use a combination patent to control the sale of switches. It is significant that it would have made no difference in the outcome of the case if the switch itself had been patented. Whatever might have been done to monopolize the sale of switches under a switch patent could not be done under a patent to a combination including the switch.[22]

Contrast this state of affairs with the doctrine of the Leeds and Catlin case, decided in 1909, where the Supreme Court held that the owner of a patent on a phonograph, of which the record was an element of the combination, could require licensees to use only records furnished by the patentee.[23] While this decision was circumscribed by the Court itself in a 1931 case,[24] the law on the subject was not finally reversed until the High Court handed down the Mercoid decision some 13 years later.

The majority of the Attorney General's Committee does not approve the trend of Supreme Court opinions in the so-called tying cases. The Committee recommends instead that "where the tying product is patented, the patentee should be permitted to show that in the entire factual setting, including the scope of the patent in relation to other patented or unpatented products, the patent does not create the market power requisite to illegality of the tying clause." [25]

Again I must take sharp issue with the report. The recommendation on this score is based on the premise advanced by the Committee that "a tying clause in a patent contract is like a tying clause in any other contract." As one critic has pointed out, this overlooks economic and business realities.[26] Disregard of a tying restriction would also involve the issue of infringement. The mere threat of a costly infringement suit by the patentee may be enough to prevent the purchaser from questioning the tying arrangement. This form of coercive control would not be available to the patentee if any other type of contract were involved.

Before concluding, I want to return to the charge that is being made in some quarters that antitrust enforcement imperils our patent system with the result that large and powerful corporations have become fearful. They are threatened, we are told, with raids on their research laboratories and disruption of their entire patent pattern. We are warned that if this trend continues, it will "dam up the steady stream of progress" [27] and that the rate of technological advance in this country will be slowed down.[28] These are serious assertions ineed when the role of the United States in world politics demands that we preserve our industrial vitality and military defense posture.

Exponents of this position are particularly concerned about the developments like the recent consent decree settling the Government's antitrust action in the case against the American Telephone & Telegraph Co. and its subsidiary, the Western Electric Co. The A. T. & T. has allegedly been stripped of its patent rights with all of its existing and future patents thrown open.[29] A closer examination of the patent effects of the decree will show, I believe, that the lament on behalf of this dominant firm in the communications field consists of crocodile tears.

The story of how American Telephone & Telegraph Co. has utilized patents to maintain its dominance and leadership in key areas of the communications field has been well documented.[30] This organization with the aid of its subsidiaries controls the manufacture of equipment and research. It has always maintained a controlling patent position in long distance telephone service. By reason of its patent position, it has a virtual monopoly in furnishing transmission service for national radio programs. Not only this, but A. T. & T. has acquired important patents in other fields of communication. For example, its ownership of important patents on the teletypewriter gives it substantial control over Western Union, its chief rival. In addition it furnishes the wire facilities to which this machine is attached; and a subsidiary of A. T. & T. is the principal manufacturer of this device. In short, by amassing thousands of patents cutting across the whole field of communication, A. T. & T. not only dominates the telephone but also controls the exploitation of potentially competitive and emerging forms of communication.[31] Would-be rivals may enter and remain as licensees only under restrictive conditions.

In order that there may be no misunderstanding about my position, let me make it clear that aside from patents, I regard the consent decree as falling dismally short of what the Government sought in filing its original action. And by immunizing American Telephone from further antitrust action, the decree serves to perpetuate rather than

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

destroy its monopoly. However, these antitrust aspects are the subject of another evening's discussion.

With respect to the patent relief contained in the decree, A. T. & T. and Western Electric Co. are required to license some 8,600 patents on a royalty-free basis. It is well known that a requirement to license seldom, if ever, places the licensee on an equal footing with the licensor in the sale of the patented product. By having been the first in the field, the licensor generally has such a head start on the licensees that he retains a commercial advantage despite any judgment provision requiring him to license others.

Aside from this, corporation officials have admitted that any loss of royalties will not have a significant effect on the company's future revenues. Moreover, under the decree, licensees may still be charged for know-how and technical information, costs that could be equivalent to royalty charges.

Finally, with respect to that part of the consent decree that calls for compulsory licensing of future patents on a reasonable royalty basis, some large concerns have deliberately adopted licensing systems which contemplate both the exploitation of patents by the manufacture of the patented product and the collection of royalties from licensees who are making the same products.[32]

I am sure that counsel for American Telephone had many of these considerations in mind [33] when they agreed to accept the patent relief provisions of the consent decree instead of standing trial, and that the business world is neither genuinely alarmed nor disturbed by the consequences.

Our present framework of law provides adequate means for correcting patent abuses and renewing competitive opportunity in industry. To the extent that it is successful in so doing, both the patent system and our free economy benefit.

[4] Advocates of this school of thought would apparently not only wipe out such defenses as patent misuse, but would even go so far as to legalize deliberate, planned monopolization of patents in its most naked form. As the law now stands, patents like any other form of property, may be monopolized; and a monopolization of patents is as illegal as any other form.

Most patent antitrust cases have arisen under sec. 1 of the Sherman Act, which forbids contracts in restraint of trade; however, a patent monopolization action would invoke sec. 2 of the act which prohibits monopoly. In *United States* v. *Vehicular Parking, Ltd.* (No. 61 USPG 102), deliberate planned acts in acquiring by purchase and otherwise, substantially all of the parking meter patents, were held to result in an illegal monopoly of patents. In *Kobe, Inc.* v. *Dempsey Pump Co.* (97 F Supp. 342), the court found that the acquisition of substantially all of the patents on deep-well pumps had been with the purpose and intent of illegal monopolization.

[32] It has been the policy of the Bell System Co. since 1949 to license anyone for any purpose.

[33] It should be pointed out, too, that Radio Corporation of America has the unrestricted right to sublicense, retain royalties, and sue for infringement on a substantial number of these patents. These are rights that remain unaffected by the consent decree. Also, an RCA package license would be required before a licensee could manufacture and sell FM and TV commercial broadcast transmitters or receivers, manufactured under patents affected by the decree.

Be Not Deceived by the Russian Smile

EXTENSION OF REMARKS
OF
HON. J. T. RUTHERFORD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. RUTHERFORD. Mr. Speaker, within recent months the self-styled leaders of the Soviet Union have turned disarming smiles on the free world.

They would have us believe that all evil has ceased to exist in the communistic form of government; they would have us believe that they are rapidly striding with firm steps of faith toward that high-sounding goal of peaceful coexistence. They would have us believe they mean no harm, and they would give us the false impression that the dove of peace is permanently billeted in Moscow.

There is no one more desirous of a true and lasting peace than I. Like many Americans, I know the horrors of war from experience. I know, too, the bitter, tense struggle of the cold war has stretched the nerves of freedom-loving peoples throughout the world to the breaking point. And having two small children of my own, I would spare them the awful catastrophe of a third world conflict.

Yet, we must never, in our urge for peace, be lulled into a dangerous sense of false security. We must not turn our back on the fact that the Red spider of communism continues to creep across the world. We must not be taken in by the smiles and smirks of the Soviet Russia leaders.

Communism has but one goal, that of world conquest, and it has ever been so. And when we gaze upon the face of the smiling Russian, we should remember that time and time again the Communists have warned us of the course they have charted.

Marx, Lenin, and Stalin have warned of the dangers we face from communism. The present Russian leaders even lost their smile long enough recently to thunder, on foreign soil, "Never shake your fist at a Russian."

Lenin said, and we would do well to recall his words:

> The existence of the Soviet Republic, side by side with imperialist states, for a long time is unthinkable. One or the other must triumph in the end; and before that end * * * a series of frightful collisions between the Soviet Republic and the capitalistic states will be inevitable.

And Stalin said:

> A great deal of our success depends in delaying war with the capitalistic countries. The object of peaceful relations is obligatory to us all * * * until the people of the capitalistic states arise to help us conquer.

So the Communist goal is easily determined. It has been stated over and over by their leaders. By one way or another they seek world conquest, and God help us the day we forget it.

In keeping with these words, under unanimous consent, I insert in the RECORD at this point an editorial entitled "Right or Wrong," appearing in the May 13 issue of Our Sunday Visitor, a religious publication edited by Francis A. Fisk and published in Huntington, Ind.

The article follows:

RIGHT OR WRONG—THE KISS OF DEATH

"The visit of Khruschev and Bulganin in England is transparently a venture in experimental psychology"—thus the National Review; "can the Western World be acclimated by the technique of injecting slightly larger quantities of toxin over a considerable period, to normal social intercourse with slavemasters?

"There is no other reason for the trip. Discussions bout disarmament, or about hydrogen bomb tests, or about strife in the Middle East could far more easily have taken place in neutral, and concededly amoral chancelleries, such as the United Nations. In any case, they need not, to minimize the chances of success, have been held in Chequers, or Windsor Castle. Nor can any serious person suggest that social contact will soften obdurate hearts. The hand that clasped the hand of Elibazeth (or did they kiss her hand? As they might have done that of her great-aunt, the Czarina Alexandra?) had shaken the hand of Stalin more vigorously, and the hand of Roosevelt just as ingratiatingly.

"The leaders of East and West have not met to settle affairs of state, but to test the temper of the people. If the people can be calloused to the physical presence of the leaders of communism, does it not follow that they can be calloused to communism itself? And if so, could the leaders of the West (assuming they were disposed to do so) ever succeed in mobilizing the people to heroic efforts to resist communism? This, we suggest, is what Khrushchev and Bulganin will talk about, on their return, at their first meeting with the Politburo. No one will think to ask, it is our guess, what was decided about arms to Egypt, or anything else so relatively trivial."

It would seem that America is losing its capacity for indignation. That is what so puzzles men like Bishop O'Gara, Bishop Lane, Father Rigney, and the many others with firsthand experience of Communist barbarism. Let a child fall down a well in California, let a miner be trapped by a landfall in Kentucky, and hourly bulletins are flashed over the radio.

Yet Bishop O'Gara steps out on a platform and recounts his observations in China: American boys held captive and tortured by the Communists and the audience remains numb, apathetic.

The greatest danger confronting the world today is peaceful coexistence: Acceptance of the Communist murderers on their own terms, the fatalistic recognition of slavery for half of mankind as an accomplished fact about which nothing can be done, the blinking of Red kidnaping, armtwisting, starvation, treason, treachery, fraud, slavery, and murder as the normal ethos of other peoples, its dismissal with a shrug of the shoulders as though, mysteriously, it were part of a philosophy which one does not understand but which one must nonetheless tolerate.

One foresees an armed truce, lasting possibly for decades, just as the 16th century wars of religion worked themselves out. Protestants and Catholics passed through a period of a deadly and bloody enmity. Then certain areas were roped off which were safe exclusively for Protestants or Catholics. Then came tolerance.

The Russians are in quest of just such a lull. We would stop trying to stir up revolution behind their borders. We would provide them many pictures of their leaders having tea at Buckingham Palace and in the White House so that they could show them to their slaves as proof that there is no sympathy nor hope of help for them in the West. They would have a decade or so in which to digest and assimilate the fruits of our bungling at Yalta, to raise up a new generation of fanatics with no knowledge of civilization as we know it, to build their steel mills and strengthen their government. All the while, in this era of good feeling, they would be more free to chew out by espionage the foundations of the free governments in the West.

Such is the real meaning of peaceful coexistence. It is an abomination.

Northeast Offers More

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. McINTIRE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I insert an article that appeared on the editorial page of the May 21 issue of the Bangor Daily News, a daily newspaper in my congressional district:

NORTHEAST OFFERS MORE

A committee representing New England's congressional delegation is preparing a statement urging the Civil Aeronautics Board to approve Northeast Airlines' petition for a New York-Florida route. The committee will have no trouble in presenting what should be a convincing case. Commonsense and fair play are on the side of Northeast.

The issue is not simply a matter of which airline should be given a chance to share the business of this busy and profitable seaboard air haul. Also involved is the matter of tieing in New England with the South by direct plane service. Further, award of the route to Northeast would give New England better regional service, which is something Northeast cannot provide while limited to unprofitable short-haul flights.

CAB Examiner Thomas Wrenn, who has recommended that the South's Delta Airlines get the extra seaboard route overlooks New England's legitimate desire for improved air service. Delta would simply get another money making long-haul franchise. New England would be no better off than before.

Wrenn goes out of his way in an unfair attempt to belittle Northeast Airlines in his report. He observed that awarding the route to Northeast would be "almost the same as commissioning a new carrier to enter the highly competitive market."

New carrier? Northeast for 23 years has battled New England's rugged winters and coastal fogs. It has been forced to operate with a minimum of airport facilities and navigational aids. Yet it has done so successfully and with an enviable safety record.

During World War II the able fliers of Northeast extended themselves and their equipment beyond ordinary endurance in order to establish for the Allies the vital North Atlantic air route.

Northeast last year carried 500,000 passengers and probably will carry 750,000 this year, although its flights are confined to regional operation north of New York.

How can an airline with such accomplishments be looked upon as a "new carrier"?

What the issue boils down to is this: As far as the New York-Florida route is concerned, Northeast would provide the extra service as well as any other bidding airline. In addition, it alone would give New England the improved service it deserves.

Democracy

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks, it is my pleasure to submit herewith for the RECORD the speech, "Bill of Rights," by Miss Alicia Jacobus, of the Vero Beach High School in Vero Beach, Fla. Miss Jacobus won the public speaking contest sponsored by the Vero Beach Exchange Club, and I feel that her speech is a good example of the interest of the young people today in their country and what it means to be an American.

THE BILL OF RIGHTS

Imagine yourself to be an average citizen, sitting in your livingroom at 111 Any Street in Normal American City. Suddenly there is a knock at the door and your heart leaps in expectation; maybe it's sister's boy friend calling for a date, perhaps it is the mailman with a special delivery package, or maybe even an income tax return for father. Whatever that knock heralds, friend, relatives, or business acquaintances, we are waiting for the happy surprise of finding what lies beyond the door.

Now, move yourself a few thousand miles into the livingroom of 111 Any Street in normal Yugoslavian, Russian, Czechoslovakian, Hungarian, or countless other cities, and hear that same knock at the door. Not only your heart but your whole being fills with dread and fear. Hands and tongues stop, eyes dart from one to another of the people in the room; each is wondering if that knock means that this is the last time this group will be together. Will the house be ransacked for seemingly no reason? Will one of the family be taken away without any visible wrong being done? Who will be the next to go? Or another possibility, will a few soldiers move in?

In those countries there is no bill of rights to protect the people from anything that the government wants to force upon them.

The Bill of Rights is one of the shortest, yet one of the most powerful, of all the foundations upon which our Nation is built. The Bill of Rights is close to us all, for the 10 freedoms that it gives to us are used every day by every citizen.

Have you today said that you do not agree with the way President Eisenhower is handling our foreign policy? Have you said that one of the Democratic candidates is really all wet with his ideas on parity for the Middle West farmer? The fact that you are still sitting in this room attests to the proof that the first amendment in our Bill of Rights is still working. Because of the wisdom of men who lived almost 200 years ago, you are saying what you please to say today. You are learning what your teachers please to teach you.

The American has the opportunity to see both sides of the story if he cares to look.

And he should care.

If any one of several boys or men I know were deprived of their right to hunt over the weekend, I am sure that they would let their small world know of it. That subject touches some men in the spot closest to their hearts. Yet in some European countries it is worth your life to own a gun. Again the Bill of Rights gives us not only a right but a pleasure that is taken for granted by many sportsmen—the right to keep and bear arms.

I would like to repeat a few lines I hear frequently from various people. In childhood one might say, "I hate Mommy, she isn't fair. Gee whiz, she never lets me do anything I want to do." You progress a few years (in age anyway) and then some are heard to say, "Golly, this school is gettin' just like a prison—you gotta have passes to go any place. And they say Lincoln freed the slaves."

We really don't know what it is to be slaved and oppressed, and I hope that we never do. I am sure that all of you hope the same thing. And, as Thomas Paine said, "Those who expect to reap the blessings of freedom must, like men, undergo the fatigues of supporting it."

You know, the Constitution was written many years ago by men who fought for their country. So, too, was the Declaration of Independence, and in the same line were the amendments added to the Constitution. All these things were given to us by those who have gone before. Now what are we going to give? Criticism, only, of some of these things? Speeches of what they mean to us? No. We must show in our living what they mean to us, and carry on the great work done by the past citizens of the United States. Especially let us fatigue ourselves by supporting the Bill of Rights. By exercising the first amendment to the Constitution, we will strengthen it. Freedom of speech, press, religion, assembly, and petition. I put the freedom, privilege, and duty of the vote in with these also. The vote is the strongest weapon of the people. If you don't like what some form of your Government is doing, get out and vote at election time and let the leaders know that you do not agree with the things they are doing. Or, on the other hand, if you do concur, back them up at voting time to show them that they have the full support of the people. If you are under 21 and a student, your duty is to learn about the Government so that when you are old enough to vote you will know what you are voting for. The students of today are the citizens, Senators, Representatives, governors, and Presidents of tomorrow.

Here, in America, you can form opinions yourself and in the way you see fit. You are not told that the President is superhuman, can do no wrong, and that what the teacher says is always right. The leaders of this country are only human and they make mistakes, too. But the majority of the people thought that they would make the least mistakes, that should be why they were voted into office. Not because the wife or husband of the voter liked the way the candidate tied his tie, or because their next door neighbor liked his looks.

I know we all know the Ten Commandments. Our Bill of Rights is the Ten Commandments of the law of a good land just as the Ten Commandments in the Bible are the law of a good life. One of the laws of a good and just land should always be the right of a trial by an impartial jury. We have 3 amendments in the 10 that compose the Bill of Rights that give us that opportunity to speak in our defense. Contrary to the theories in many other countries, here you are innocent until proven guilty. In America you may face your accusers and have a chance to witness against them. You and everyone else may know all the facts and accusations in your case. No undercover, sneaky witnesses here; witnesses that the State pays to say something and that you never see. There is protection for us from the days when we were ruled by others and the Government was too absolute. And yet we have people in the United States who use their rights as something dirty, and degrade them by taking these, the protection of the common citizen, and using them to tie up illegal or illicit affairs.

If we abuse our privileges we can't expect to keep them. Yearly so many people seek entrance in our country because of the very thing that many of us take for granted, and some abuse. I do not want to say that all take for granted our freedoms. That is not so. There are many wonderful people who are good citizens, but—to keep our Nation as strong as it must be in these troubled times it is necessary to have a great love for your country. A strong, abiding faith and love in your country are the ingredients for a wonderful thing that many have lost—patriotism.

Do you recall the saying, "Faith can work wonders"? Faith in God is first and foremost, but with that go faith in your country, and faith in your fellow man. Faith—that makes the power of our country grow; faith—that keeps our country a friend to all, and faith—to hold fast to your ideals for you and your land.

One ideal of Americans is the sovereignty of the people. Because the people are sovereign, they are given every opportunity to voice their opinions. A safeguard to keep the people sovereign is the ninth amendment to the Constitution, which assures us that we shall always keep the rights, written and unwritten, which have been our unless we want them changed. We are protected from the danger of the Federal Government becoming too powerful because the Federal Government is not one being. It is compased of 48 State. Each State is an important part of all the rest and each contributes something. We work on the adage that "In unity there is strength." That is why there are amendments protecting the rights of the States separately. In reality, not only the nondelegated powers, but all the powers are given to the people because it is the people's representatives that make up the Federal Government. We, you and I, are those people whose business it is to elect the representatives. So, become well acquainted with your Government—how it works, and especially who is in it and what they are doing. Don't be like the girl who, when asked what she thought the Democratic Party was, said:

"One where the girls let the boys do the kissing."

Each of us has a responsibility to ourselves and our country. Let's be intelligent enough to assume it.

Our country is a free country, a strong country, and it's a wonderful country. It's up to every one of us to keep it that way by living within, and protecting the Bill of Rights and every other document in our legacy of freedom.

Texas' Man Johnson

EXTENSION OF REMARKS

OF

HON. JIM WRIGHT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1956

Mr. WRIGHT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington News of May 7, 1956:

TEXAS' MAN JOHNSON

Now, more than ever, Senator LYNDON JOHNSON, of Texas, stacks up as a major factor in the Democratic presidential convention to be held in Chicago in August.

Senator JOHNSON'S decisive victory over Gov. Allan Shivers—hitherto undefeated—in Saturday's Democratic precinct conventions promises him control of the big Texas delegation at the national convention.

He now is almost certain to be a favorite-son candidate, and whether or not he becomes a serious contender for the presidential nomination he will be in a position of strong influence on the convention's decisions—both as to the choice of a candidate and the writing of the platform.

LYNDON JOHNSON, as majority leader in the Senate and as a force in the Democratic Party, not only is a skilled politician but consistently has been an exponent of moderation—in contrast to some of the extremists (in both directions) who have sought to dominate the party.

The Senator's victory in his home state vastly enhances the outlook for the moderate policies he symbolizes.

Our National Reclamation Program

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, May 28, 1956

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject "Our National Reclamation Program," delivered by United States Commissioner of Reclamation W. A. Dexheimer, before the 23d annual convention of the National Rivers and Harbors Congress, in Washington, D. C., May 11, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR NATIONAL RECLAMATION PROGRAM

(Address by United States Commissioner of Reclamation W. A. Dexheimer before the 43d Annual Convention of the National Rivers and Harbors Congress at the Mayflower Hotel, Washington, D. C., May 11, 1956)

It is an honor and a privilege to address this gathering this afternoon. There is a great community of interest between the reclamation work in the Western States and the larger geographic area represented in the National Rivers and Harbors Congress.

The overriding interest of all of us, of course, is the control and use of water. We can all benefit from an exchange of ideas and a clearer understanding of the purposes behind the various water policies enunciated by the Congress. My purpose this afternoon will be to give you a brief explanation of the reclamation phases of national water law and what we are accomplishing within that framework.

There has developed in the last decade a great national awareness of the importance of water in our daily lives. No longer are people taking the wonder of our great municipal supply systems for granted. Industries are looking first to an available water supply in locating new or expanded opera-

tions. And farmers the Nation over are seeking means of supplying by irrigation that 2 or 3 inches of additional moisture at critical times which is more often than not the difference between crop success and failure.

The whole national emphasis now more and more is on conservation and use. Of course, there is concern over protective measures, such as flood control, as there always has been. But more and more thinking people are asking how we can best establish control and at the same time multiple use of our rivers and streams. How can we put them to full use as well as maintain protective control?

The positive philosophy of conservation and use has been long established in the Western States. From the time the first pioneering settlers established themselves in the valleys of the western mountains the availability of water has been a decisive factor in their economic lives and, indeed, in their actual survival.

That is why most western water law is based on the theory of prior appropriative right for beneficial use. In the West a man must use his water in order to establish a right. With rare exceptions he cannot establish a riparian right merely to insure the flow of a stream past his door. He must put it to use. Once the right is established it becomes more precious than gold and silver. With it, farmland becomes rich and productive and a continuing source of wealth. Without it, the land more often than not is valueless. With it, cities and industries can grow and prosper. Without an assured water supply the parade of progress will pass them by.

Putting water to use has become an involved process. The first diversion and irrigation works which the early settlers in the West developed by themselves were comparatively simple. However, the supply which could be developed in that manner was small and uncertain since it was dependent on fluctuating streamflows. Too often a late summer drought left irrigation systems dry even though early summer floods often inundated farmlands. The obvious answer was storage works which would catch the floods and use them in the late summer when the average western stream dropped to a comparative trickle. I might explain that our floods in the West come principally from melting snow in the spring and early summer. Rarely is there sufficient summer precipitation to cause a flood of more than local consequence.

The construction of storage works and distribution systems became an expensive proposition. It was more costly than many farmers or groups of farmers could manage, yet it was clearly in the public interest to put that water to work. There was a need, too, for engineering services in this field to design and construct the involved water-control structures which would be necessary.

Out of these needs was born the Federal Reclamation Act of 1902 and subsequent legislation under which the Bureau of Reclamation operates today. Our program has been developed on a showing of need for the water and a clear demonstration of economic benefit and ability to repay the reimbursable costs.

This reimbursability extends to more than 91.6 percent of our total program, exclusive of the Missouri River Basin development where we are on a cooperative basis with the Corps of Engineers. In the early days, a wholly unrealistic repayment period of 10 years was adopted. This has been gradually extended until now most farmer water-users have 40 years to repay, after a 10-year maximum development period when their expenses in bringing new land under irrigation are necessarily rather high. I am happy to say we have less than one-tenth of 1 percent delinquency in wateruser repayments.

That portion of Federal money used for the irrigation phases of our projects is interest free, the farmer users simply repaying the principal through their organized water districts.

More than half of our present appropriations comes from the reclamation fund. This fund has been built up over the years from the sale of public lands, mineral royalties, revenue from federally constructed hydroelectric plants, and other sources. Virtually all of it comes from the 17 Western States.

Thus the people of the west look upon the use of this fund as simply a return of monies which have been accumulated by the Federal Government from its interests in the public land States.

All other reimbursable funds, such as those expended for the construction of hydroelectric facilities and for municipal and industrial water, are repaid with interest. As I have mentioned, we have a minimum of funds for those phases of multipurpose development which, as a matter of national policy, has been declared nonreimbursable.

It is within this policy that the Bureau of Reclamation during the last 54 years has been able to construct facilities which are currently capable of supplying water to over 7 million acres of land in the Western States. Even this is only about one-fourth of the irrigated lands in the Western States. Private enterprise has accounted for the remainder.

We have sufficient storage capacity in reclamation reservoirs for 90.7 million acre-feet of water. If the District of Columbia could be turned into a giant water tank, it would require a wall 2,040 feet high, over one-third of a mile, to hold this amount of water.

Beneficial consumptive use of water has always been the primary purpose of reclamation project construction. But in the process of multipurpose planning and operation, other benefits have been realized which are making a distinct contribution to the welfare and economic well-being of our Nation.

For instance, in the process of building multipurpose reclamation reservoirs, we have brought the restless energy of white water under control with hydro-electric plants having a total capacity of 4.9 million kilowatts. The sale of power is repaying not only project costs chargeable to power but is also helping to repay irrigation costs.

A minimum of project costs is charged to flood control. We operate many of our structures cooperatively for flood control with the Corps of Engineers. The benefits, when the need for flood control develops, are very real indeed. A most recent example was in the central valley of California. In December, a combination of a record heavy snow pack and a spell of warm rain started the streams draining into the valley to flowing in unprecedented volume.

Anticipating the heavy runoff sometime during the winter, the principal storage reservoirs in the valley, Shasta and Millerton Lakes, had been drawn down. Folsom Reservoir, which had just been completed by the Corps of Engineers and which is being integrated into the Central Valley project system, was also nearly empty.

When the peak flows hit just before Christmas, these three reservoirs completely controlled the three principal streams in the valley, the Sacramento, San Joaquin, and American Rivers. Other reservoirs, both publicly and privately owned, controlled some of the lesser streams, but the Yuba and Feather Rivers, with no control to speak of, poured out death and destruction in the vicinity of their outlets from the mountains and put much of the delta region under water. It was a sad Christmas for thousands in the path of the uncontrolled floods.

The floods were critical even as they were. However, there is little question but that Sacramento and other major cities of the delta region would have been inundated were it not for the reservoirs operating as flood control structures. At the same time those reservoirs are now brimful in anticipation of the summer growing season when rain is a rarity in the Central Valley. That is multiple-purpose use in its best sense.

Then there are other benefits which reserve more credit and attention than they are getting under present reclamation law. Principal ones are navigation, municipal water, pollution control, and fish and wildlife and other recreation aspects. Within the last several months, leading sportsmen's periodicals have contained stories of the great increase in game fish and wildlife resources which have resulted from the construction of such structures as Shasta Dam on the Central Valley project, Grand Coulee Dam on the Columbia, Owyhee Dam in eastern Oregon, and Arrowrock and Anderson Ranch Dams on the Boise project in Idaho. We have approximately 9.5 million sportsmen, tourists, and other recreation seekers visiting our facilities annually.

Yet, almost without exception, construction of these structures has been opposed by outdoor groups who are fearful of them destroying some fish and wildlife or other outdoor values. There is no question that construction of reclamation reservoirs sometimes alters these values, although Bureau of Reclamation planners investigate all possible means of development carefully. We recommend the plan with maximum total benefits for all purposes.

There is also no question but that the pressures of an increasing population and expanding economy are going to result in further Reclamation development. The reasonable approach is to recognize these inevitable changes. Those who oppose for opposition's sake would be better advised to join in exploring the numerous possibilities for future development. They would thus insure that there will be a minimum of damage to existing resources and a maximum of potential benefits. This has been and will continue to be the policy of the Bureau of Reclamation.

Reclamation experienced a dearth of authorizations for new projects during the decade between 1945 and 1954. This was understandable in the light of a constantly recurring series of national emergencies which made unprecedented drains on the Nation's treasury. At the same time, the Bureau of Reclamation was kept busy completing work on several major projects which had been previously authorized. However, a further delay in new authorizations this year would have meant a serious slowdown in the orderly process of reclaiming our western land and water resources.

I am pleased to be able to report to you that this has not happened. The present Congress has accepted the challenge of the future in authorizing seven new projects for future construction. Funds were appropriated for the current fiscal year to initiate work on 4 new projects, 2 new units of the Missouri River Basin project, and 4 new divisions of other existing projects. The 1957 fiscal year budget contains fund requests to start 5 new projects and 1 new feature of an existing project.

Notable among the several new projects which have been authorized by action of this Congress is the Colorado River storage project which was signed into law by President Eisenhower only a month ago. This is a monumental authorization which will rank with the Missouri River Basin project in importance to the area and to the Nation.

It will permit the economic expansion of sections of four States in an area of rich resources which is now virtually untapped. Coupled with the existing development in

the lower Colorado River Basin, it will have established the most complete control and utilization of the water resources of any major river basin in America, and quite possibly of the world.

The Colorado River has a long record as a bad actor. Back just after the turn of the century it burst its bounds and flooded into the Imperial Valley of California. For 16 months the farmers, highway officials, and railroad staged a running battle with the elements of nature before they got it turned back into its channel to the sea.

Today, with the construction of Hoover Dam and other river-control structures which are designed primarily to put the river to use, these floods have been completely controlled. The upper basin plan is a further refinement which will permit the upper basin States of Colorado, Utah, Wyoming, and New Mexico to use their share of water. The development of the Colorado River is a true basin-wide approach for maximum beneficial use.

In the growing pressures of civilization, man is having to push farther and farther afield for his water supply. Many metropolitan areas are going hundreds of miles for their domestic water supply. The same holds true of irrigated farming areas in the West. The All-American and Coachella Canals take water from the Colorado River at Imperial Dam and transport it, in river-size quantities, more than 200 miles.

The same is true on the Columbia Basin project where great pumps lift the water 280 feet out of the Columbia River to start it on a 100-mile journey to irrigate several hundred thousand acres of land. On the Colorado-Big Thompson project we have even gone so far as to dig a 13-mile tunnel under the Continental Divide to divert water from the Pacific to the Atlantic watershed.

This transbasin diversion of water is also the principal feature of a new addition which we are starting this year in California. Congress has authorized the construction of works which will divert water from the Trinity coastal basin into the Central Valley. One of the participating irrigation units of the Colorado River project will permit the diversion of water out of the Colorado River Basin into the Great Salt Lake Basin.

I mention these projects in order to show you the extraordinary steps which are being taken in the West to keep the water supply ahead of the demand. There are literally no possible means of supply which are not being investigated.

There is within the Deparment of the Interior a unit which is spearheading an investigation to reclaim salt and brackish water for domestic and possibly irrigation use.

As you know, there is a Government committee investigating the ins and outs of cloud seeding and other schemes to induce precipitation artificially. If they are successful our problems will be eased somewhat although success in this field will put even greater emphasis on control structures to put water to use, regardless of how it reaches the earth.

In the light of these constant needs and the extraordinary measures which are obviously ncessary to satisfy them, there is a place of leadership in water resources development for men of vision. We are fortunate to have such leadership in the Congress and in the White House.

They have seen the future. They are aware of the crisis we are heading into if we do not maintain an orderly process of water development. They have been undeterred by false arguments and distorted statistics. They have not delayed action while knotty problems of national water policy are completely resolved. They have fitted the need for authorization to the existing framework or they have enlarged or modified that framework where necessary to meet changing circumstances.

Future generations will have cause to be grateful to the men of vision for projects which the Bureau of Reclamation and others are now undertaking. We look to the future as years of positive accomplishment in reclamation, conservation, and maximum beneficial use of our water.

Shaping the Democratic Nomination

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. WRIGHT. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following article from the New York Herald Tribune of May 14, 1956:

SHAPING THE DEMOCRATIC NOMINATION

(By Roscoe Drummond)

WASHINGTON.—In the wake of the recent Texas voting the two national tickets most frequently mentioned by many Democratic leaders are:

Adlai Stevenson for President and Senate Majority Leader LYNDON JOHNSON, of Texas, for Vice President.

Or Senator STUART SYMINGTON, of Missouri, for President, and Gov. Robert B. Meyner, of New Jersey, for Vice President.

The increasing frequency with which these possible tickets come into the political conversation is not surprising. It is the direct result of the significant Texas balloting. Its impact on every aspect of the Democratic convention will be very great.

The fact that Texas Democrats voted overwhelmingly to reject Gov. Allan Shivers as the chairman and key figure of the 56-vote Texas delegation and to put Senator JOHNSON in his place means three things.

It means an immeasurable increase in the strength of all the middle-road forces within the Democratic Party.

It means that Senator JOHNSON, the party's most acceptable mediator and moderator, has been given new authority and new prestige to bring about a platform and a nomination acceptable to both the nonbolting southern conservatives and the northern New Dealers.

It means that Senator JOHNSON, his standing already high as the skillful Democratic leader of the upper House, will very likely become the most poweful single voice at the Chicago convention.

There are two reasons why the Texas voting enhances the cause of the middle-road Democrats.

It puts the leadership of the moderates in the hands of a Democrat of unquestioned party loyalty and party regularity. There could be no secure bridge between the southern conservatives and the northern New Dealers as long as men like Governor Shivers held over the convention the threat of a bolt to the Republican Party.

The convention leadership of Senator JOHNSON, trusted alike by Democratic liberals such as Senators HUBERT HUMPHREY, of Minnesota, and JOHN SPARKMAN, of Alabama, and by Democratic conservatives such as Senators HARRY BYRD and WILLIS ROBERTSON, of Virginia, can rally the maximum resistance to the more leftwing presidential aspirants, such as Governor Harriman, of New York, and Senator KEFAUVER, of Tennessee.

When you combine these two factors you can see how the beneficiaries inevitably become Mr. Stevenson and Mr. SYMINGTON.

Unless Mr. Stevenson is defeated by Senator KEFAUVER in the Florida and California primaries, he will, it seems to me, remain the front-running Democratic candidate, the men who will have to be defeated before anybody else is nominated.

Mr. Stevenson may or may not be Senator JOHNSON's first choice, but he is not unacceptable to Senator JOHNSON—as he would have been to Governor Shivers. The danger that his nomination would lead to a serious States rights revolt in the parity is vastly reduced.

If Mr. Stevenson is defeated in Florida and California, the prospect of nomination of any Democrat to the left of Mr. Stevenson is decreased. If anyone can marshal enough middle-road Democrats to deflect Governor Harriman and Senator KEFAUVER it is LYNDON JOHNSON, whose influence will be at its peak at Chicago and whose second choice, under these circumstances, would certainly be Senator SYMINGTON.

I am not at all suggesting that it is not the right and even the conscientious duty of men like Governor Shivers to support the Republican nominee instead of the Democratic nominee if that is their personal convictim. I am simply saying that the Democrats of Texas have voted overwhelmingly against having their party in their State led by a Democrat who puts an advance price tag on his party loyalty. They are prepared to accept government by majority in the party as well as government by majority in the Nation.

Actually, as I see it, Senator JOHNSON is going to serve the middle-road Democratic viewpoint more effectively because he is putting no price tag on his party loyalty.

Obviously, Senator JOHNSON will not alone decide the Democratic nomination, but he is on the way to being the most influential single force. Every political reporter at Chicago who wants to know what's going to happen before it happens will want to be in touch with the Senate majority leader.

The 20th Year of Nationwide Flood Control

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Monday, May 28, 1956

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject The 20th Year of Nationwide Flood Control, delivered by Lt. Gen. S. D. Sturgis, Jr., Chief of Engineers, United States Army, before the National Rivers and Harbors Congress, in Washington, D. C., May 11, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE 20TH YEAR OF NATIONWIDE FLOOD CONTROL

(Address by Lt. Gen. S. D. Sturgis, Jr., Chief of Engineers, U. S. Army, before the National Rivers and Harbors Congress, Washington, D. C., May 11, 1956)

Year before last, when I had the pleasant experience of addressing the National Rivers and Harbors Congress, I emphasized in my report to you the status of our navigation projects and their ever-growing importance in the national economy. Last year I especially brought to your attention the serious situation facing the Nation with respect to

water supplies for all purposes—agriculture, industry, domestic consumption, and the like. Since it is impossible for me to cover all fields in the limited amount of time to which I am privileged, it seems to me that this year I should concentrate on the problems of flood control. I believe this subject is particularly appropos because of the two great disasters which have occurred within the past year, one on each coast—just about as far apart as they could be. The occurrence of those floods was, in my opinion, the outstanding event of the past year in the field of water resources, and one which had a most important impact upon the Corps of Engineers' civil-works program. Furthermore, it helped to make the people of the United States aware of the national flood danger. Many of our people appeared to be surprised to learn that despite the progress of the past 20 years, most of our major river basins still lack adequate protection.

It was in 1936, just 2 decades ago, that the Federal Government assumed national responsibility for flood control. Prior to then, as you know, it had exercised only limited responsibility in the Sacramento and Mississippi River Valleys, for flood control was generally considered to be a responsibility of local and private agencies. The shift from local to Federal responsibility marked the acceptance of the comprehensive river-basin approach to flood control and related problems—a new concept in our history if not that of the world. It is appropriate that we should now take stock of our experience to date under this concept.

The Corps of Engineers has estimated that the potential average annual flood damage for the main river valleys of the country, if there were no Federal flood-control program at all, would approach a billion dollars. Work completed or under construction will prevent, it is estimated, only about half of that potential flood damage.

However, the flood problem is still a most urgent matter and minimum adequate protection is not yet available in many areas. The Corps of Engineers' program for the alluvial valley of the Mississippi is dollarwise about two-thirds complete. By contrast, our program for New England is less than a quarter complete. That region has been tragically awakened to the need for flood control, and it is likely that progress there will be faster henceforward. The Ohio River Basin's program is about one-third complete and the situation there is still dangerous. The high degree of industrial and urban development on the riverbanks, and the proven tendency of the Ohio River to amass terrible floods, make it imperative, in my opinion, to intensify the flood-control program in that valley. The program for the Central Valley of California is something over a third complete. That area, too, has received one of nature's merciless lessons and as a result is pushing flood-control programs with renewed vigor on both Federal and State levels. In the Columbia Basin little of significance has been done in the flood control field since the disaster of 1948, while the area has been developing and potential damage increasing. If anything, we have gone backward in that region, for much of the flood-control storage envisaged by the control plan set forth in 1948 in House document 531 now appears improbable of realization. That plan had provided approximately 27 million acre-feet of usable storage, but alternate schemes subsequently advanced, seem likely to reduce the storage to 14 million acre-feet. Yet even as we meet, an extremely heavy snowpack hangs over that basin, and whether or not it will be scourged by a disastrous flood depends entirely upon the suddenness of the melt. The predicted threat of unusually high water was sufficiently serious that, as an emergency matter, I have authorized advanced flood fight work of a temporary nature as feasible and warranted to strengthen flood control structures. This work was undertaken upon request by responsible local interests in each case, and was designed to supplement their resources and capabilities.

Yet where flood-control works have been constructed they have abundantly proven their worth. It is well known that there has been no major flood disaster in the Mississippi Valley since the launching of the alluvial valley project in 1927. With the completion of Fort Randall, Garrison, and Gavins Point Dams, a flood like that of 1952 could never again cause as much damage on the Missouri. Last winter the city of Sacramento was saved, and much damage was prevented, by such works as had been completed in the California plan. Two years ago rainfall associated with Hurricane Hazel struck the upper Ohio Valley with relatively little effect, because the main force of the storm fortunately occurred in areas where protective works had been built, although the overall Ohio program is less than 40 percent complete leaving that valley still subject to a disaster. Many, many other instances of similar kind could be cited to prove that our plans are sound and our structures are well fulfilling their intended tasks.

In short, the principal lesson learned during the past 20 years of Federal flood control is this: The main trouble with the program is that not enough of it has been translated into finished work. We have learned that our major valleys can be protected from disaster-type floods. But we have not yet provided adequate protection in any major valley—not even the Mississippi.

How long will it be before such protection can be provided? At the rate of $223 million a year, which is the amount appropriated for flood-control construction in the current fiscal year 1956, it would take about 25 years to complete the present program. But long before the 25 years have passed the requirements will have expanded with our accelerating population and economy. Flood control is a field geared directly into the dynamics of national economic expansion. The constant general increase in the value of river-valley improvements continually augments the justification for flood-control work brings more projects over the margin of feasibility, and increases the urgency of projects already feasible. Hence every omnibus river and harbor bill passed by Congress adds to the Federal flood-control program. The last such bill, in 1954, authorized an additional $300 million worth of new flood-control projects, and since then, we have had the major floods of 1955 to stimulate the demand for still more protection. So we may safely assume that the present Federal flood-control program, with its $5 billion active backlog of authorized unperformed construction, represents but a tentative goal. The ultimate goal will be greater and take longer, but I do not believe anyone now can foresee its limits.

Though our flood-protection systems are far from complete, there is, I believe, a real danger that benefits achieved thus far may tempt us into a sense of false security, and lead us either to slacken the rate of construction of protective works, or to take unwarranted chances in building in areas still subject to inundation. Let me remind you that only last winter, at Yuba City, Calif., we had a tragic demonstration of the faulty and unreliable protection provided by a development which is only half finished. The levees there looked strong and imposing when the river was low. But those levees had been designed as part of a system for operation in connection with Oroville Dam, and Oroville Dam had not yet been built. Hence, when the Feather River went on a rampage, more water was hurled against the levees than they had been built to withstand, and they gave way, not by overtopping but by erosion due to velocity, with tragic loss of life and property.

Many other rich and populous areas are similarly living under concealed hazard—lulled by the sight of some imposing levee or floodwall into forgetting that that barrier is itself not adequately protected.

I believe the matter of false security must also be borne in mind in considering flood-insurance proposals. If a practical way to establish flood insurance can be found, we of the Corps of Engineers favor it as a means of helping spread the impact of flood losses while flood-control programs remain incomplete—always bearing in mind that the construction of adequate flood-control systems is the only real and permanent form of flood insurance. But we believe that any insurance program should be accompanied by safeguards to prevent people from feeling encouraged to build in unsafe areas, or from feeling that further construction is unnecessary.

Flood control is a tremendous job, a long-haul job, and necessarily an expensive job, for it deals with mighty natural forces and is aimed at eliminating vast and widespread losses. It is all too easy to seek ways of lightening the task or to find excuses for believing that parts of it may not be necessary, after all. If we succumb to such temptations nature will punish us heavily. There will, and should, be changes and improvements in the Federal flood-control program. In particular, I believe there should be a constant improvement in the coordination between flood control and other programs aimed at conserving, controlling, and using our water resources. But innovations must be carefully scrutinized and constructively built as parts of integrated and tested programs, in such a way as to further our progress toward our long-range goal of comprehensive flood protection.

Since flood-control and navigation are so closely linked in many river valleys, it is appropriate, even in a talk devoted mainly to flood control, briefly to review the status and progress of Federal waterway programs. The rapid progress of recent years has continued and gathered impetus. The long-needed modernization of the Ohio River waterway has at last been begun. Construction of the St. Lawrence seaway is proceeding, and deepening of the connecting channels between the lakes has been authorized. The closure of Gavins Point Dam provides a substantial measure of control over the stability of stream flow on the lower Missouri—a necessary prelude to the further development of navigation on that important stream. Ground has been broken for the vital Calumet-Sag channel, which will link the Mississippi River navigation system with the Great Lakes. The completion of Algiers Lock and Canal provides a better link between the Mississippi and the Gulf Intracoastal Waterway, at the other end of our midcontinental system. The dedication of Demopolis Dam marked another important step forward on the Warrior-Tombigbee waterway. The great dredge *Essayons* has been brought temporarily from the east coast to the west to help speed up the work of dredging the troublesome bar at the mouth of the Columbia. Thus, in all parts of the country our waterways are being improved to carry the vastly increased traffic that is being brought to them, and connected to form a more closely interwoven, money-saving network.

The small-projects program begun last year deserves especial mention. Under this program the Corps was given about $4½ million to use on projects which can be completed for less than $150,000—virtually all of them navigation projects. Within the past fiscal year we have been able to complete some 60 small harbor projects ranging in cost from $5,000 to $147,000, and geographically from Maine to Alaska. This year $2 million more have been requested for this

work in the President's budget—a sum which would go a long way toward enabling us to get rid of our authorized backlog of these small projects.

Yet in our navigation program, like our flood-control program, enormous amounts of work remain to be done. Dollarwise the active backlog of authorized navigation projects is not quite as large as the backlog of flood-control projects—$4 billion as against $5 billion—but percentagewise it is about the same. The navigation program is about 40 percent complete while the flood-control program is almost 45 percent complete.

Naturally not all our needed projects can be built at once. It is not my intention today to try to analyze all the many factors outside the Corps' scope of responsibility which affect the progress of our programs. Within the Corps we are doing everything possible to make the process of transforming authorizations into completed projects as swift, smooth, efficient, and economical as possible.

But we are constantly hampered by operating problems beyond our control, the foremost of which is the shortage of skilled personnel. In fiscal year 1955 each of our civil-works employees had on the average five times as big a load of program to handle, measured by expenditures, as he did in 1946; and in fiscal 1956 the load per man will be more than six times as great as in 1946. Our staff is good, but I doubt that it is six times as good as it was in 1946. The problem of even maintaining efficiency—let alone increasing it—under such circumstances is thus all but insuperable. For instance, one of the critical stages in the process of transforming projects from report state to reality is the stage of planning and review surveys. This stage threatens to become a bottleneck. Yet we could not speed up this process, no matter how much more planning money we were given—because we do not have, and at the present Government schedules of grades and salaries cannot procure, enough trained personnel to carry a bigger planning program than we now have. Let me add that it is most important that our planning work does not fall below the present level. Anything less would impose a drag in our race to meet the Nation's flood-control, navigation, and other water-resource needs.

Outside the corps, I believe the greatest present handicap to orderly water-resource development is dissention and selfish conflict among various groups affected by water-resource programs. Once local interests become well entangled in disputes, serious and indefinite delay is inevitable.

Many important programs throughout the Nation are being held up because of local disunity or apathy. To a considerable degree, it was this factor which left the New England area exposed to last year's floods. Right now it is halting progress in the Columbia Basin. In addition to the perennial arguments over power, we now have disputes over fish and wildlife values blocking important flood-control and multiple-purpose reservoirs—this in valleys where the 1954 count showed only 9,000 salmon and steelhead combined coming up the river all year, and where despite all the talk of elk, helicopter searches have failed to reveal a single specimen. The old argument between upstream and downstream interests continues to blight developments for either group and to leave rich and populous areas vulnerable to the death and destruction of disastrous floods. Whatever the merits of these disputes, insofar as they prolong stalemates which prevent the construction of anything for anybody, they are destructive in their effects.

Hence in my opinion, the reconciliation of local interests is one of the most appropriate and important tasks to which the associations represented at this Congress can devote themselves. Unity is literally as important as money and comes ahead of money in the project process. The flood menace will continue to hang over our heads, and navigation and water supply and other important benefits will continue to go unrealized, as long as our programs remain incomplete. The advancement of those programs requires not only continued work and expenditure at all levels, but a continuous effort to remove obstacles. I submit that the latter task is as important as the former, and deserves equal consideration by this Congress.

Man's Power To Destroy Himself

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. O'HARA of Illinois. Mr. Speaker, this is my notion of reading that should go on everyone's "must" list. It is an editorialized news story by Edwin A. Lahey, chief of the Washington bureau of the Chicago Daily News. Eddie Lahey, as usual, pulls no punches. If man hankers to wipe himself out of existence, all he has to do is to go ahead. Nobody except man himself and a little commonsense can stop him.

Here is Mr. Lahey's article from the Chicago Daily News of May 26, 1956:

HONOLULU, T. H.—Guess I'm a little slow on the draw in the presence of unfolding history.

I watched the detonation of the air-dropped hydrogen bomb at Bikini Atoll, but it was at least 18 hours before I did a double take, at which time I sat bolt upright in my bunk in the U. S. S. *Mount McKinley*.

"My God," shrieked my slow-working brain, "this thing is for dropping on people."

It is futile to try to describe the fullness of the bomb's voracious orbit.

The newspaper charts showing how much metropolitan area would be devastated by an H-bomb of given megaton yield simply do not give the picture.

TOO HORRIBLE FOR CHARTS

How can you draw a chart or paint a word picture of a fleeting instant in which millions of men and women and children would die, with their lungs, their veins, their ear drums, their intestines exploding, even while their bodies become coated with carbon made from their own flesh?

If we passed laws authorizing local police to pull out the fingernails of suspects while questioning them, it could seem no more inhuman than the thought of civilized people stacking up thermonuclear weapons to be used against one another.

And surely if enough people on both sides of the Iron Curtain could see a hydrogen bomb light up the predawn sky in an unholy luminescence, the pressure on all political leaders for peace would be most compulsive.

The President of the United States had better not witness one of these detonations. He alone must make the decision if we ever drop the H-bomb on people and his decision would certainly be "sicklied o'er with the pale cast of thought" if he could see hydrogen isotopes release their energy in thermonuclear fusion.

STORY FOR PRESS: WE MUST DO IT

The hydrogen bomb drop at Bikini, which a few newspapermen were permitted to witness, was an international political story, rather than a science report.

The most important political fact in the world today is that we have a B–52 jet bomber that can go anyplace in the world at speeds close to that of sound, with a hydrogen weapon neatly tucked in its belly.

In addition to helping our officials rattle the hydrogen bomb, the newspapermen on the trip were also urged to point out that the United States had no choice but to continue development and research in the art of total destruction so long as the Soviet Union drags its feet on disarmament proposals.

ASIANS REMEMBERER FIRST BOMB

A more subtle and difficult political aspect of the 1956 nuclear tests at the Pacific proving ground is the job of mollifying the apprehensions of the peoples of Asia.

The United States Information Service had two men at the tests, Joe Evans from the embassy in Tokyo and Mark Lewis, a reporter for the Voice of America.

They could, in all honesty, report the great care we exercised to see that the people of the Marshall Islands were protected against fallout, and to make sure that no Japanese tuna boats wandered into the danger zone, as one did in 1954.

Despite our best efforts to soothe the fears of Asians, there is still a recollection in the Far East that the first nuclear weapon ever dropped in combat was deposited on Asians. It might help if we announced that if ever another nuclear bomb is dropped in anger, it would be directed against other Caucasians, but this would hardly be practical.

New Jersey Observes 50th Anniversary of Food and Drug Law

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, by proclamation Gov. Robert B. Meyner declared the week of January 20–26, 1956, as New Jersey Food and Drug Law Week to commemorate the enactment of the Federal pure food and drug law of 1906 as well as the complementary New Jersey Pure Food Act.

The abiding concern of New Jersey with pure food and drugs and its leadership in this field has been a constant source of encouragement to officials of other States in this matter as well as to the Federal Government. I am very interested in this myself and wish to take this occasion to commend the officials of my State for the fine work they are doing.

As you know, Mr. Speaker, serious consideration is being given at this time to the problem of affording the consumer the same protection against bad poultry which he has had against bad beef and pork for the past 50 years. Charges have been made that in some areas diseased, filthy, or rotten poultry is being shipped to market and that the present voluntary controls are inadequate. At this time poultry is the only major meat item which does not have compulsory inspection. It is kept clean by voluntary methods, and all evidence supports the conclusion that 99 percent of poultry reaching the consumer today is perfectly wholesome. It is the remaining 1 percent that is giving the trouble. Even

this 1 percent is a large factor, because the processing and sale of chickens and turkeys has grown into a vast industry involving about 1 billion birds a year.

A number of New Jerseyites testified on this matter before the Committee on Labor and Public Welfare of the United States Senate on May 10, 1956, along with other witnesses. These New Jersey spokesmen were Dr. Aaron H. Haskin, health officer, department of health, Newark; Joseph Hurl, chief meat inspector, meat inspection service, Newark Department of Health; and Dr. Oscar Sussman, for the New Jersey Health Officers Association. These leaders pointed out that over a quarter of a million pounds of poultry has been rejected as unfit for human consumption during the past 2 years.

Dr. Sussman made the telling point that when the consumer has confidence in the product, and is confident that it is not diseased or poisoned, then he will buy it in ever larger amounts.

The Newark area services not only Newark but all of the surrounding district, within a 25-mile radius, and along the Jersey coast, and even into New York State. This includes several millions of consumers who are protected by the inspection which New Jersey enforces.

The Department of Agriculture agrees that compulsory inspection of poultry is a major need and a Hoover Commission task force recommended compulsory inspection last year.

Excellent legislation has been introduced in the House of Representatives by Representative J. PERCY PRIEST—H. R. 8599—and by Representative DON HAYWORTH—H. R. 9006—to protect the consumer, and to provide the needed inspection.

Testifying in support of the companion measure in the Senate, S. 3176, introduced by Senator JAMES E. MURRAY, Democrat, of Montana, in addition to the New Jersey spokesmen mentioned earlier, were spokesmen for some two dozen major national consumer, women, health, and labor organizations. These groups included the General Federation of Women's Clubs, the American Association of University Women, the AFL–CIO, the Association of State and Territorial Health Officers, the Association of Food and Drug Officials of the United States, the American Nurses Association, the National Board, YWCA, and the Association of State Public Health Veterinarians.

I include as part of my remarks an article by Dick Preston, of the Washington Daily News, and the proclamation by Gov. Robert B. Meyner marking the 50th anniversary of the enactment of the Federal pure food and drug law:

[From the Washington Daily News of May 18, 1956]

CONGRESS IS IN STEW OVER DISEASED POULTRY

A drive is on in Congress to give you the same protection against polluted chickens that you've had against bad beef and pork for 50 years.

It may succeed in bringing a compulsory inspection system—if Congress can settle a squabble over which agency should do the job.

The drive is sparked by charges that in some areas diseased, filthy, or rotten birds are being shipped to market, and that present voluntary controls are inadequate.

As of now, poultry is the only major meat item which does not have compulsory protection. It is kept clean by voluntary methods—and all evidence is that 99 percent of poultry today is perfectly wholesome.

TESTIMONY

But testimony just completed before a Senate Labor and Public Welfare Subcommittee by members of the Amalgamated Meat Cutters Union, which wants the inspection, showed such happenings in some markets as these:

Workers in processing plants who had to handle sick birds, which were dressed and sold.

Filthy conditions, birds not fully cleaned, primitive sanitary facilities.

Poultry workers and consumers killed or made ill by psittacosis and other poultry ailments.

"One-third of all reported cases of food poisoning are traced each year to poultry or poultry dishes," Senator JAMES E. MURRAY, Democrat, of Montana, pointed out.

"We have a new saying around here: 'Give us this day our daily poison'."

EXAGGERATED

The Agriculture Department says such charges are exaggerated. Even so, Agriculture, along with health officials, consumer groups and a large part of the poultry industry, now agree that compulsory inspection is a major need. A Hoover Commission task force recommended it last year.

All point out that processing and sale of chickens and turkeys, once a farm-to-user operation, has now reached 1 billion birds a year.

On the ticklish question of who does the job, there's no such agreement.

The Labor Subcommittee's bill would assign inspection to the Food and Drug Administration on grounds the basic problem is one of health. The association of State and territorial public-health officers has endorsed this plan. But Food and Drug says it doesn't want the job.

DECIDE

A second bill would give it to the Agriculture Department and let the Secretary decide how to enforce the rules. He'd probably put the work in the hands of the Agricultural Marketing Service, which now handles the voluntary program used by one-fourth of processors.

Opponents say this would be a blow to consumers. The Agricultural Marketing Service, they say, is primarily an agency designed to promote the sale of farm goods, and works closely with producers.

Both sides agree that one division of Agriculture could do a satisfactory job. That is the Agriculture Research Service, which already checks all red meat moving in interstate commerce.

If a compromise can be reached, that is probably where the safeguarding of your chickens will be done.

STATE OF NEW JERSEY.

Whereas the year 1956 marks the 50th anniversary of the enactment of the Federal pure food and drug law; and the splendid achievements of the American food processing industry under that law are to be celebrated nationally and by the peoples of each State; and

Whereas throughout the past 5 decades the canners and other food processors of New Jersey, with the guidance of the Department of Health of the State of New Jersey, have played an important role in the development of higher food standards in the interest of the cunsumers; and

Whereas, there will be held during the week of January 20th to 26th, 1956, at Atlantic City in this State, the 49th annual convention of the National Canners Association, the organization that originally sponsored the enactment of the Federal pure food and drug law of 1906, as well as the complementary New Jersey Pure Food Act:

Now therefore, I, Robert B. Meyner, Governor of the State of New Jersey, do hereby proclaim the week of January 20 to 26, 1956 as New Jersey Food and Drug Law Week, and I direct that the Department of Health of the State of New Jersey and other State agencies join with the National Canners Association and all other professional, scientific, industrial, agricultural, labor, and civic organizations in the commemoration of the enactment of the Federal pure food and drug law, and of the achievements of the food processing industry of this State and all other States in the development of the present high levels of safety and quality of all processed foods.

Given, under my hand and the Great Seal of the State of New Jersey, this 16th day of January in the year of Our Lord, 1956, and in the Independence of the United States the 180th.

By the governor:

ROBERT B. MEYNER,
Governor.
EDWARD J. PATTEN,
Secretary of State.

Importation of Scientists

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1956

Mr. O'HARA of Illinois. Mr. Speaker, my colleagues who frequently have voiced the concern we all feel over the undersupply of scientists that is coming from our universities will be interested in the following article in the Chicago Sunday Tribune of May 27, 1956:

ZENITH GOING TO EUROPE FOR ITS SCIENTISTS—ADS IN LONDON FOLLOW SUCCESS ABROAD

The search for technical help has been expanded overseas by Zenith Radio corporation.

This came to light yesterday with a news dispatch from London that big advertisements offering jobs to British scientists had appeared in two national newspapers.

The ads required that applicants be willing to consider American citizenship, for which Zenith was prepared to sponsor them. They invited job applications from graduate physicists, physical chemists, and physical metallurgists.

Zenith officials in Chicago said yesterday the ads were part of a program including Holland, France, and Belgium.

HOLLAND FIRST SUGGESTED

Dr. Alexander Ellett, Zenith vice president of research, said the program really started 2 years ago with a suggestion that the company consider Holland as a source for the scarce supply of scientists.

Ads were run in Holland, and as a result, 10 engineers, physicists, or chemists were brought to Zenith, 8 from Holland, 1 from France, and 1 from Belgium.

"They have worked out very well," Ellett said. "Their education and training was equal to that in the United States. With scientists in such short supply, it's not unusual that we should try overseas sources again."

Asked about the American citizenship requirement, he said Zenith was not interested in paying the transportation to America of someone who may be coming over just to look around for a year or so.

REPLIES ARE ATTRACTED

A second set of ads has appeared in Holland recently, and brought a number of replies. He said Zenith interviewers will go to that country this summer to question applicants.

Yesterday's British ads followed a warning Friday by Robert S. T. Chorley, a baron, secretary of the Association of University Teachers, of a serious drain on Britains' supply of scientists. He said if England is not "very careful a large part of the cream [of scientists] will be skimmed off and deposited in America."

A factor is the salary difference. American salaries start at about $5,000 annually. A young British scientist can expect the equivalent of $2,800 if he starts industrial work.

Washington, D. C., Has Unique Opportunity To Obtain an Art Gallery and Preserve Historic Lafayette Park Unchanged

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, the citizens of the Nation's Capital have a unique opportunity at this very moment to obtain a great art gallery intimately associated with the early life of their city, and, at the same time, to preserve the character of historic Lafayette Park unchanged.

Washington, unless its citizens move decisively now, will lose a venerable landmark if Congress dooms the old Court of Claims Building at 17th Street and Pennsylvania Avenue NW., and the present character of Lafayette Park may be lost forever.

The old red brick Renaissance-style building with brownstone facings and ornaments adjacent to the Blair House and Lafayette Park, and across from the White House and the Old State Department Building, was built by William W. Corcoran as an art gallery and he deeded it to the city of Washington in 1869. Architect of the original Corcoran Gallery was James Renwick, one of the country's foremost architects of that time, who also designed the Smithsonian Institute Building.

Washington architects say the building is well worth preserving for its intrinsic value as an example of early building and that it represents a phase of development of American architecture.

Extremely interesting is the fact that the building was constructed "for the perpetual establishment and encouragement of painting, sculpture, and the fine arts generally." Mr. Corcoran desired his trustees always to show special interest in the productions of American artists. Down through the years, the best examples of the work of native painters and sculptors were displayed in the old gallery.

Under legislation pending before the Senate and House Public Works Committees the Architect of the Capitol would be empowered to construct a modern building on the present site of the Court of Claims Building. Tentative plans call for a five-story building with the exterior of limestone. Many people feel that if the Old Court of Claims Building is razed and a modern building put in its place it will be only a matter of time until the present character of Lafayette Park is changed beyond recognition.

New York City, rich beyond all other American cities in cultural facilities, obtained its great civic center almost free because of tax delinquency on the part of its previous owners. The citizens of the Nation's Capital have a similar, unique, once-in-a-lifetime, opportunity to obtain a great art center almost without cost. I hope they will have the courage and the vision to seize this opportunity in the same way that any other community would.

I include here an address I gave to the Federal City Council on May 24, 1956, in which I discussed this and related matters:

ADDRESS OF REPRESENTATIVE FRANK THOMPSON, JR., OPENING THE SPRING MEETING OF THE FEDERAL CITY COUNCIL, WASHINGTON, D. C., THURSDAY, MAY 24, 5 P. M., SOUTH AMERICAN ROOM, STATLER HOTEL

Ambassador Garrett, Chairman Addison, and distinguished members and guests of the Federal City Council, I'm delighted to have an opportunity to talk with you this afternoon and to think out loud with you about the future of Washington as the cultural center of our Nation and of the world. It's a subject which, in my opinion, has received far too little attention in our Capital City although it is just as important from a community development standpoint as the economic and civic problems with which all of us here work so closely.

I am especially glad to be able to discuss this subject at this time and before this group. As the name of your organization indicates, you are particularly concerned with Washington as the Federal City—a concept which, as I shall presently show, our Founding Fathers intended to be synonomous with that of a cultural capital. And the indispensable role played by your group and your president, George Garrett, in such projects as the Southwest redevelopment plan for beautifying our Nation's Capital demonstrates that you are well qualified to play a leading role in moulding Washington's cultural future. It is my deep conviction that Washington can attain its place in the sun as a leading cultural center of the world only through the active and close cooperation of the Congress, local government officials, and of civic organizations such as the Federal City Council and the Washington Board of Trade.

WHAT IS HONORED IN A COUNTRY IS CULTIVATED THERE

This is why I shall take as my text for this afternoon Plato's well-known statement in the Republic that "What is honored in a country is cultivated there." Cultivation of anything, be it a corn or wheatfield, or a cultural center, involves active participation and hard work.

THE FEDERAL CITY AS A CULTURAL CENTER

But first, let's consider for a moment the artistic heritage of our Nation's Capital. It is one which goes back to our Founding Fathers, who intended the Capital City to be a focal point for learning and the cultivation of the fine arts.

Washington and Jefferson and others knew the purpose of the liberal and fine arts is to mould capable and cultivated human beings and, therefore, to help build better citizens and better communities. The desire to make the Nation's Capital a great center of art and learning was evidenced by our first President, George Washington, in many ways and he worked hard to translate this vision into reality. He provided funds in his will for a national university in the District of Columbia "to which the youth might be sent for the completion of their education in all the branches of polite literature, in arts and sciences, in acquiring knowledge in the principles of politics and good government." Such an education, he maintained, "would have the tendency to spread systematic ideas through all parts of this rising empire, thereby to do away local attachments and State prejudices, as far as the nature of things would, or indeed ought to admit, from our national councils."

JEFFERSON'S BILL FOR A DEPARTMENT OF FINE ARTS

Jefferson, a renaissance man as Albert Schweitzer is today, was a brilliant statesman, author, architect, and musician. As third President Jefferson became, by virtue of his office, a manager and chief superintendent charged with the construction and completion of the United States Capitol Building. He brought to this task a well-equipped mind, architecture having formed a portion of his education. Like Washington, Jefferson considered the fine arts to be as necessary as the other disciplines to a knowledge of the State. Consequently, his bill for a system of public education provided for a public art gallery and a Department of Fine Arts.

WASHINGTON'S CULTURE IMPORTED AND "PASTED ON," SAYS KIPLINGER

All this was, you'll agree, a good beginning for the National Capital which, in the course of time, as the Washington Star predicted in 1852, was "destined to be the most powerful and brilliant capital in the world." Despite the best intentions in the world, however, we still have a long way to go—after 157 years—before these dreams are realized. Powerful our Capital City certainly is, but how far we have yet to go before it may be held to be brilliant may be clear from a statement by one of your own council members, W. M. Kiplinger, who said in his book, Washington Is Like That, published in 1942, that "despite the wealth of national tradition attached to Washington there is very little native culture. The city has never been a notable breeding place for art, or music, or literature. Unlike other great capitals of world thought, such as prewar London and Vienna and Paris, where the native-born leaders of the cities shaped the intellectual patterns which influenced the nation, Washington as a city has no homegrown culture. Its influence in cultural matters is not by Washington but rather via Washington. Whatever culture there is here was started elsewhere and brought in and pasted on."

OUR COUNTRY HOLDS CREATIVE ARTISTS IN LOW ESTEEM, SAYS KENNAN

If this is a correct analysis, we must ask ourselves the question, Why has Washington failed to develop into the breeding place for the arts that our Founding Fathers obviously intended it to be? A second question might be, Why is it that after 157 years a shrewd world traveler like my constituent, Former Russian Ambassador George F. Kennan, can say with truth that "I can think of few countries in the world where the artist, the writer, the composer, or the thinker is held in such general low esteem as he is here in our country."

CULTURAL LEADERS LACK THE AGGRESSIVENESS OF BUSINESSMEN

I am convinced that the answer does not lie in any lack of interest or ability among the citizens at large. Rather, it is simply

that we lack on the art front of American life the aggressiveness and the habit of attack and success we have so brilliantly cultivated in our commercial, industrial, and financial levels of action. Certainly mere civic pride in imported cultural events—which Washington has plenty of—is not enough. What counts in cultural matters, as in all other kinds of progress, is civic action at the grass roots—the kind of well-coordinated, hard-hitting action which can break through lethargy on a dozen fronts and make and keep Washington a truly dynamic city. In particular, it is the work done by organizations such as the Federal City Council, the American Institute of Architects, the National Symphony Orchestra, and, surprisingly, the District of Columbia Recreation Department, which is developing music and fine arts programs that are attracting national attention, which keeps the fires of community progress burning brightly here.

RESPONSIBILITY OF CONGRESS FOR WASHINGTON'S CULTURAL BACKWARDNESS

As I indicated earlier, the responsibility for improving Washington as a cultural city is three-pronged. It must be shouldered by Congress, by the District government, and by civic groups such as your own. I need hardly elaborate for the members of this council, who know the facts of political life here better than most, the critical role played by Congress in our Capital City. The citizens of Washington are deprived of virtually all voice or representation in local or national government, and the District Commissioners are appointed by the President. Washington can't build a sewer, collect garbage, or put a dog in the pound without a prior O. K. by the Congress.

A BALANCED RECREATION PROGRAM INCLUDES ARTS AND SPORTS

This is why it is up to Congress, in its role as the City Council of Washington—which is what the District Committees of the House and Senate are—to sympathetically consider the needs of the residents of the Federal city for creative art programs in which they can participate. It is extremely encouraging that the Recreation Department of the District of Columbia has begun to move in this direction. Their National Music Week observance, with Sherman Adams and Robert E. McLaughlin as honorary chairman and vice chairman, respectively, which included the distinguished production of an opera in the classic tradition is to be highly commended. Music and the arts cost money, however, just like playgrounds and sports, and must be included in any balanced recreation program. Your support and encouragement is absolutely vital to Milo Christiansen and his fine staff at District of Columbia Recreation.

THE 1935 ACT OF CONGRESS TO PRESERVE HISTORIC BUILDINGS

The revived interest of Congress in Washington's cultural status is taking a variety of forms, of course. There is recognition, for example, that progress can be made sometimes by holding tightly to our cultural heritage. I made a determined effort to keep the Civil Service Building here from being destroyed and, as a result, am happy to be able to say that the General Services Administration and the National Park Service have just this week established review procedures pursuant to a 1935 act of the Congress which will prevent the thoughtless razing of any structure of national significance.

The rate of destruction of notable buildings in this country is so dangerously high that many are concerned lest we be largely despoiled of the structures which identify the historic achievements of our people. In establishing the review procedures we are at long last joining the ranks of the great nations of Europe which have maintained national lists of sites, buildings, and objects which are declared a part of the national treasure and are designated for careful preservation.

But if Washington is to become the cultural center of light and learning envisioned by Washington and Jefferson we must not only jealously guard and preserve our cultural heritage, we have a most solemn obligation to add to it and to blaze new trails. Bold ideas are required, and legislative action to carry some of them out is essential.

BIPARTISAN POLICY ESSENTIAL IN THE ARTS AS WELL AS FOREIGN POLICY

There is a growing realization at the highest levels of government, just in time it turns out, of the importance of the arts both at home and in our foreign policy.

Upon the recommendation of President Eisenhower the Congress in 1954 and again in 1955 appropriated $5 million to send our leading orchestras, plays, performing artists, and athletes abroad. This fund, known as the President's Emergency Fund for Participation in International Affairs, also covers trade fairs, and in both these fields the Communist bloc is spending enormous sums and devoting much effort—$38 million for trade fairs alone last year.

The bipartisan interest of Congress in the fine arts does not arise because the Communist leaders charge us before the world with being cultureless materialists. The interest is broader and deeper than that, and members of both parties are sponsors of legislative proposals of great importance to the arts and our cultural status as a nation.

THE PRESIDENT URGED CONGRESS TO ENACT ART LEGISLATION

You will recall that the President in his 1955 message on the state of the Union told the Congress that "in the advancement of the various activities which will make our civilization endure and flourish, the Federal Government should do more to give official recognition to the importance of the arts and other cultural activities. I shall recommend the establishment of a Federal Advisory Commission on the Arts within the Department of Health, Education, and Welfare, to advise the Federal Government on ways to encourage artistic and cultural endeavor and appreciation."

This statement has had a terrific impact throughout our country in cultural circles. It is a great statement on the arts regardless of the fact that the President as an amateur artist is about on a par with former President Truman as a musician.

With this foreword, I would like to talk briefly about a very ambitious project which is underway in the Nation's Capital, one for which I solicit the active and enthusistic support of every member of your council.

SMITHSONIAN GALLERY OF ART LONG OVERDUE

This project, authorized by Public Law 128, 84th Congress, calls for the formulation of plans for the construction in the District of Columbia of a civic auditorium, including an Inaugural Hall of Presidents, and a music, fine arts, and mass communications center. As I testified at the hearings on this legislation last year, the fine arts section of my H. R. 21, which some 15 of my colleagues from both parties joined me in sponsoring, referred to the Smithsonian Gallery of Art authorized by the Congress in 1938 to house the $10 million National Collection of Fine Arts.

TEN MILLION DOLLARS NATIONAL COLLECTION BADLY HOUSED

In its 1953 report to President Eisenhower on art and Government the Commission of Fine Arts headed by David E. Finley strongly recommended the early establishment of this gallery. And Dr. Carmichael, brilliant secretary of the Smithsonian Institution, advises me that this great gallery has the very highest priority, ranking besides the air museum and the Museum of History and Technology.

With some help from an administration which clearly is aware of the value of the fine arts, and with hard-hitting support of community-action groups such as yours, the music and fine arts center could soon become a reality.

COURT OF CLAIMS BUILDING URGED AS MUNICIPAL ART GALLERY

In this connection I would like to suggest that the Court of Claims Building at 17th Street and Pennsylvania Avenue, NW., near the White House, Lafayette Park, the old State Department Building, and adjacent to the Blair House, be used either as a temporary home for the national collection or as a municipal gallery. The Court of Claims Building was the original Corcoran Gallery of Art—as the Washington Star told us recently in a moving article entitled "Few Can Spare a Tear for Venerable Landmark." This old gallery, its contents, the ground, and the endowment were valued at $1,600,000 in 1869 when William W. Corcoran gave them all to Washington. New York City got its great civic center almost free because of tax delinquency. The residents of the Nation's Capitol have a similar unique once-in-a-lifetime opportunity to obtain a great art center—and one intimately connected with the early life of Washington—almost without cost. I hope they will have the courage and the vision to seize this opportunity in the same way that any other community would.

FEDERAL CITY COUNCIL COMPARABLE TO ALLEGHENY CONFERENCE

I would like to urge you to make the establishment of the proposed civic and cultural center a council project along with those other important civic undertakings in which you are engaged.

Individually, many of your distinguished members are already making great contributions to Washington's cultural renascence. You now have the opportunity to support such important cultural projects as the proposed stadium and the civic and cultural center, and to take the same vital part in the reawakening of Washington as the Allegheny Conference is taking in the growth of Pittsburgh.

Remembering Plato's classic dictum that "what is honored in a country is cultivated there," you can and you must, I think, demonstrate to freemen everywhere that nowhere else in the world are learning and the fine arts more highly honored than in the Capital of the free world. Let us work together, then, to complete the task so ably begun by our Founding Fathers.

This spring meeting, with its distinguished representation from the legislative, administrative, and civic elements of our city is ample proof that you are ready to accept this basic challenge. Working together we can bring the unique heritage of the Federal city as a center of art and learning to triumphant realization.

Memorial Day, 1956

EXTENSION OF REMARKS
OF
HON. HAROLD O. LOVRE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. LOVRE. Mr. Speaker, Wednesday, May 30, is Memorial Day. On this day in 1956, the guns of war are silent and the battlefields are still. But even as the soft winds caress the hallowed ground where the poppies grow and our American heroes sleep, we cannot forget the agonizing hours of yesterday. No,

it would be a shallow thing indeed, if we were to forget that the comforts and pleasures that we enjoy today were gained only through the supreme sacrifice of those who fought and died to protect and preserve this great Republic. Our brightest, and yet our saddest pages of history are those that tell of the deeds of our men and women who fought and died for the liberty of this country. When we join hands in paying tribute to the memory of those great Americans, let us truly honor them by resolving to continually work for that which they fought, a permanent peace.

I wish to place into the RECORD several Memorial Day editorials which appeared in South Dakota newspapers this past week:

[From the De Smet (S. Dak.) News]

MEMORIAL DAY AN OCCASION "TO HERE DEDICATE * * *" FOR A BETTER COMMUNITY AND WORLD

(By Aubrey S. Sherwood)

We have a date—each of us. The day is Wednesday, May 30—Memorial Day. The place is any public service of memorial to our Nation's honored dead, if at all possible for us to attend. For the veterans and the one not called upon to give his or her service to our country, there is the remembrance of those we knew, whose lives, like ours, were young and hopeful but to whom came the call of death in uniform while on duty. These men we must never forget.

As customary, on May 30, we will pause to honor the war dead of our Nation, make the occasion also a memorial to our own loved ones who have left this earth. As Lincoln said: "It is altogether fitting and proper that we do this," though each one to whom we pay honor with his or her death hallowed the ground in which they sleep far more than we who live can do for them.

And so, continuing with the thought of this great leader of our Nation, it is for us the living to consecrate ourselves to the unfinished work they left behind them, to the personal tasks, the community, State, and Nation, yes, and now even the world.

Those tasks are all about us, good works, in word and in deed. As the greatest of all leaders taught, they are tasks of service: "He that would be the greatest among you, let him be the servant of others." It was He who showed simple, common folk how to be great through service—showing, teaching, scolding at times—to leave a lesson for all future generations of men.

So Memorial Day is more than occasion to present ourselves at a public gathering, to decorate graves, to bow our heads in prayer, and in some solemnity to reflect upon life and death and shed a tear for those who have gone before. More than these, we may make it a day of review of our own lives, still given us, a rededication of our lives—our time, our thought, our service, our money—to the end that we may build for ourselves that which we both take with us and leave behind, the honor of those who remain.

The day is Wednesday and all over America, those who do not forget the sacrifices made by our war dead will gather in groups, large and small, at cemeteries in country, town, and city, for that observance.

[From the Miner County Pioneer, Howard, S. Dak.]

(By Imogene E. Davison)

Memorial Day next Wednesday; a day that calls us not only in reverence to the shrine of the dead, but in enthusiasm to the service of our country. We are the sharers of a great glory. Let us renew again our resolution by the graves of fallen comrades, that this Nation owes an eternal debt to all soldiers, sailors, and other defenders of its shores.

[From the Hamlin County Republican, Castlewood, S. Dak.]

(By Jack Dorman)

Wednesday will give us a chance to pay tribute to the men who gave their lives and services to their country during the wars in which our great country has participated. It shouldn't be asking too much for us to take off a few hours to attend the services at the school and at the cemetery. After all the men we will be honoring either paid with their lives, or gave important years of their lives to help keep our country free. The least we can do for them it to help pay tribute at these services.

[From the Clear Lake (S. Dak.) Courier]

(By T. R. Burges)

Next Wednesday is Memorial Day and the local post of the American Legion has again gone to a good deal of effort in preparing a fitting program for the occasion. It is so easy to make the day a Roman holiday, to be used for everything except its purpose, and I think the Legion here is to be commended for their continual efforts every year to bring to our people a fitting meaning of the day. Picnics, fishing, and other activities are all good but at the same time everyone should reserve part of their day to pay respects for those who have gone on, those who gave their lives that we might and do enjoy the many blessings which are ours today. We cannot begin to do the honor so richly deserved by those who today lie asleep but we can remember. Attend the exercises here next Wednesday forenoon, or at some other program, and you will feel better for it.

Teacher of the Year

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1956

Mr. METCALF. Mr. Speaker, among the thousands of visitors to Washington today are three outstanding young men from Kalispell, Mont.

They are Mr. Richard M. Nelson, science teacher at the Flathead County High School, and two of his students, Everett O'Hare and Gerald Miller.

Mr. Nelson has just been designated teacher of the year by McCall's magazine.

The article in the current issue of McCall's begins with this quotation from President Eisenhower:

It is undeniable * * * that with science assuming a role of ever-increasing importance in our lives, the science teacher of today exercises an extraordinary influence.

Tomorrow President Eisenhower will get to meet one of the outstanding science teachers in the United States. He will receive gifts from the students. O'Hare is bringing a solar-powered transistor radio which he made himself. Miller has a decision meter for the President.

Today they visited the Smithsonian Institution and the Bureau of Standards. They had lunch with Senator MURRAY, Senator MANSFIELD, and me. Our guests also included Miss Barbara Lyman, of Montana, queen of this year's Washington Cherry Blossom Festival.

Selection of Mr. Nelson as McCall's fifth teacher of the year is particularly timely. It comes when government and industry are calling for more qualified science teachers to insure our continued national safety and industrial strength.

Montana is proud of this recognition of our teachers and schools—especially since the McCall honor roll of teachers includes Mr. Russell Bay, of Corvallis, Mont. The McCall's article follows:

MCCALL'S TEACHER OF THE YEAR

Not long ago, when 300 high school seniors, chosen most likely to succeed as research scientists of the future, were asked to name "the one person most influential in the development of my career," almost two-thirds of them answered, "My science teacher."

The significance of that fact is worth marking in a period of education that has been termed "the cold war of the science classrooms." In naming Richard M. Nelson, of Kalispell, Mont., as teacher of the year, McCall's proudly pays tribute to the science-teaching profession and its vital contributions to our national welfare and growth—present, past, and future.

Mr. Nelson, a bachelor of 30, has dynamically demonstrated that his responsibilities toward his students are governed by his responsibilities toward society as a whole. It is his conviction that to teach is to make a subject a current experience, one that a teen-ager can become intensely interested in and develop an affection for.

As a high school student in Denver, Richard Nelson had decided to major in drama when he entered the University of Denver, but he was guided to a love for science by his father, Dr. Alfred C. Nelson, a professor of chemical engineering at the university. As far as Flathead County, Mont., is concerned, Richard became a science evangelist as well.

Mr. Nelson practically writes his own laboratory manuals for a new Flathead County High School course in Earth Science, photographing local examples of geological and geographical phenomena from an airplane piloted by a friend.

Some of the science department's expansion has been due to the increase in total enrollment in the school, but much of it, it is presently felt by the faculty, is due to a newly generated student interest in science subjects. A rewarding number of recently graduated science students from F. C. H. S. have gone on to prepare for chemical, mining and civil engineering, medical, dental and laboratory careers. Mr. Nelson is well aware that industry is at present pouring money into science scholarships and is searching for students with scientific leanings.

The flourishing Science Club, sponsored by Mr. Nelson, has organized and presented an annual local science fair for the past 3 years. The first fair was held in the physics laboratory at the high school, and 800 citizens crowded in to look with astonishment upon the 60-odd creations of their teen-agers. In the spring of 1955, 15 student projects were selected for exhibition at the 4-State Inland Empire Science Fair held in Spokane, Wash. The projects varied from handmade "geometric" jewelry to a hand-built jet engine. The first grand prize was awarded to one of Mr. Nelson's students, Everett O'Hare. O'Hare's project, one of 360 competing, was a working model illus-

trating the principles of microwave communications. This year the overgrown science project will exhibit first at the Montana Science Fair, the first ever to be held. Mr. Nelson will serve as district chairman.

Mr. Nelson's classroom technique preserves discipline with humor, invites informal but controlled discussion among his students. A forthright individual himself, Mr. Nelson enjoys being challenged. "He is a teacher who tempers a bawling-out with a word of encouragement after class," says Principal Kenneth A. Rawson. "The students like him and have confidence in him."

The community which supplies Mr. Nelson with students is fully conscious of his high value as a teacher. When it was learned that Mr. Nelson had been named by the State Superintendent of Public Instruction, Mary M. Condon, as a Montana nominee for Teacher of the Year, parents volunteered by the dozens to provide testimonials in his behalf. "His work," wrote one admiring father of a Nelson student, "has brought to the attention of this agricultural and lumbering community the world of science." The townspeople loyally credit Mr. Nelson's thorough instruction, enthusiasm, patience, and assistance for the high ratings the Flathead exhibits have received at the science fairs. Community-wise, Mr. Nelson enjoys the prestige that in another scholastic climate a successful football coach would enjoy.

Mr. Nelson is conscientious in keeping abreast of the need for scientists in industry. No textbook theorist, he has worked summers for the Bureau of Reclamation at Hungry Horse Reservoir, as an instrument man for a civil engineer, and in construction work at a nearby Anaconda Aluminum plant. A man who earns $4,120 a year as a teacher, he constantly points out to his science students the shortages, needs, and opportunities in scientific and engineering vocations. As for his personal ambition, he wants only to continue teaching science students on the high-school level.

"The primary objective of a high-school physics course," asserts Mr. Nelson, "is to lay the foundation for the eventual understanding of the atomic era by the layman."

Men like Richard Nelson, who deny themselves extra material comforts that could be had for the asking outside the teaching profession, are the unsung national heroes. Often they have to fight apathetic communities and backward school systems for the admission of science courses into the curriculum. Last year, as Mr. Nelson knows, the Soviet Union, which can compel its youth to enter scientific careers, graduated twice as many engineers as did the United States.

According to David Sarnoff of the Radio Corporation of America, "a lack of qualified teachers has developed at grade levels for subjects like physics, chemistry, and mathematics * * *. Our safety and our industrial strength rest upon our success in expanding the Nation's reservoir of physicists and scientists, trained engineers and technicians * * *. Science and technology are the very hallmarks of American civilization."

Mr. Sarnoff's plea for more students and teachers imbued with the inquiring mind and the love of facts is, in its way, a fitting salute to Richard M. Nelson.

McCall's Honor Roll of Teachers

These teachers earned special mention in 1956 for their significant contributions to the improvement of national teaching standards:

Mr. Russell Bay, Corvallis School, Corvallis, Mont. His eighth-grade pupils learn the satisfactions of citizenship through community participation: taking the village census and public-opinion polls, constructing a model house, writing editorials for their class newspaper and working on a 160-acre conservation project.

Miss Anne Gibbs, Churchill County High School, Fallon Nev. Her warm and sound relationships with the students in her English classes have encouraged a number of them to become teachers. School-community understanding has been fostered through her class news items.

Mrs. Maude A. Hudson, Greenwood High School, Greenwood, S. C. An energetic, resourceful teacher, mother, citizen and church leader, her distributive-education classes aim toward adjusting the future of her students, most of whom will not attend college.

Miss Frances L. Johnson, Windom High School, Windom, Minn. Her enthusiasm enhances her students' respect for English as a living language. She works consistently for professional improvement and teacher welfare, and she sets high standards of scholarship for her pupils.

Mrs. Kathryn Stagge Marr, Goshen Elementary School, Goshen, Ohio. She brings to young elementary teachers a helpful variety of lively, challenging practices of good teaching. Her immediate rewards are the affection and respect of pupils, parents and fellow teachers.

Miss Velora Reed, Mesilla School, Las Cruces, N. Mex. Her pre-first-grade boys and girls, who come from Spanish-speaking homes, sense her unusual sympathy, understanding, patience and affection as they learn their first English words along with the three R's.

Mr. John P. Shaw, Concord Senior High School, Concord, N. H. His dedication to the total welfare of high-school youth has expanded his role of outstanding social studies teacher and debate coach to that of guidance counselor. He promoted a statewide social studies program.

How We Found the Teacher of the Year

Mr. Nelson was selected by McCall's from teachers nominated by state departments of education in all parts of the Nation at the invitation of Dr. Samuel M. Brownell, United States Commissioner of Education, and Dr. Edgar Fuller, Executive Secretary of the Council of Chief State School Officers. Representatives approved by the Office of Education and McCall's studied and observed the nominees at work over a period of several months. From the recommendations, the editors selected Mr. Nelson, who is the fifth cited in McCall's annual project honoring teachers.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Clements, Humphrey, Scott, Symington, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Johnson of Texas, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Anderson, Douglas, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Wofford, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Laird, ———, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Wofford, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Neely, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Lehman, Kennedy, McNamara, ———, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Pastore, Monroney, Hennings, Scott, Neuberger, Laird, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Scott, Wofford, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.
Deputy Clerk—Reginald C. Dilli, 1329 Hemlock St.
Deputy Clerk—Hugh W. Barr, 4701 Connecticut Ave.
Marshal—T. Perry Lippitt, 6004 Corbin Road.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED

TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, New Hampshire, Massachusetts, Rhode Island, Puerto Rico.

Second judicial circuit: Mr. Justice Harlan. Vermont, Connecticut, New York.

Third judicial circuit: Mr. Justice Burton, Pennsylvania, New Jersey, Delaware, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, Virginia, West Virginia, North Carolina, South Carolina.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Sixth judicial circuit: Mr. Justice Reed. Ohio, Michigan, Kentucky, Tennessee.

Seventh judicial circuit: Mr. Justice Minton. Indiana, Illinois, Wisconsin.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

Appendix

The Work of the United States Information Agency

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 29, 1956

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared indicating the importance of the work of the United States Information Agency in carrying on the fight for freedom in the world today.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR DOUGLAS

Last year I offered an amendment in the Senate to the Interstate Oil Compact when it was before the Senate. Article V of the compact states:

"It is not the purpose of this compact to authorize the States joining herein to limit the production of oil or gas for the purpose of stabilizing or fixing the price thereof, or create or perpetuate monopoly, or to promote regimentation, but is limited to the purpose of conserving oil and gas and preventing the avoidable waste thereof within reasonable limitations."

My amendment to the Interstate Oil Compact merely asked that the Justice Department make a study and annual report to the Congress as to whether or not the clear purpose of the compact, as stated by the compact States themselves in article V was being carried out.

The reason for my amendment was simple. The Constitution of the United States says:

"No State shall, without the consent of Congress * * * enter into any agreement or compact with another State."

Therefore, Mr. President, the Interstate Oil Compact, could only come about and exist by the express permission of the Congress of the United States. The right for States to organize in a compact is that of Congress to grant or withhold, and there is no issue of States rights involved.

The interstate oil compact allows the States to get together to set production levels and prices, etc., for the express purpose of conserving gas and oil. This is an unusual grant of power and one which neither States nor businesses enjoy except where specifically sanctioned by Congress. Article V of the compact itself states that the setting of prices and the limiting of production, etc., shall be done for no other purpose than for conservation. All my amendment did was to ask the Justice Department to make a yearly report as to whether or not the clear language of article V, agreed to by the States themselves, was being carried out. Without my amendment, Congress has no check or any yearly report on the activities of the compact in this respect.

When the Justice Department submitted its request this year, it asked for $763,090 and for 147 additional positions to carry out the purposes of my amendment. The House committee passed this amount. The Senate committee, however, recognized that this was an absurd request and that the Justice Department had no real grounds, either in the legislative intent or the job to be done, to justify such a request. As it was my amendment to the oil compact, and as my remarks in the Senate make up the only substantive legislative record, I want to say that I concur with the committee's feeling. I believe the Justice Department's request was an attempt to reduce the real purpose of my amendment to absurdity and to kill any effort to carry out the reasonable intent of the amendment.

I wrote to Senator JOHNSON to this effect on May 18, but I believe that the bill had been marked up before he or his committee had an opportunity to consider my letter.

The committee cut the amount from $763,090 to $25,000. I believe that if the Department really carries out the intent of Congress and goes about this task in a reasonable way, that the $25,000 granted by the committee is quite adequate for the job. This amount is enough to insure that the Justice Department can have no excuse whatsoever to get on with their clear duty and responsibility under the law and under the clear language and intent of my amendment to the oil compact.

The original Justice Department request was ridiculous. When pressed before the Senate committee to support the amount, they fell back on the legislative intent of Congress. I believe I know as much about that as anyone else, and I can say that there certainly is nothing in the history of the amendment in the Senate to justify $763,090.

It is a clear principle of Government, that the Congress and the legislative branch should be able to secure, as a matter of right, that the spirit of the acts of the executive are suffused with the clear purposes and intents of the Congress. In this case the Justice Department is trying to kill the amendment to the oil compact by asking for an absurd amount. I want them to have no excuse for failing to carry out the clear intent of the Congress and I believe that as the author of the original amendment I can say that the amount the committee has given them is enough to do a workmanlike job and to carry out the legislative intent of the Congress.

I ask that a letter which I sent to the Appropriations Subcommittee on the Justice Department Appropriations, and addressed to its chairman, Senator LYNDON B. JOHNSON, be inserted in the RECORD at this point. I wish to say that this letter probably arrived too late for the committee to consider it before this bill was marked up, and that I ask that it be included in the RECORD because it could not be included in the hearings, and because it is self-explanatory.

I attach hereto the complete contents of the letter from the Department of Justice to the Honorable PERCY PRIEST commenting on my amendment when it was before the House committee last year and which I quote in my letter to Senator JOHNSON be included in the RECORD at this point.

This latter insertion especially shows very clearly that from the beginning the Justice Department has been less than reasonable in their attitude toward this amendment.

I am happy that the Senate committee saw through their request and has acted as it has. Further, I want to say that I expect, and I believe the Congress has a right to expect, that the Justice Department get on with its job and stop trying to kill or make ridiculous the amendment to the oil compact. The first report, if the Justice Department has done its job, shoud be ready very soon.

MAY 18, 1956.

The Honorable LYNDON B. JOHNSON,
Chairman, Subcommittee on Justice Department Appropriations, Senate Office Building, Washington, D. C.

DEAR SENATON JOHNSON: My attention has been called to the request of the Department of Justice for $700,000 to carry out the legislative intent of the amendment to the Interstate Oil Compact which I introduced and which was carried in the Senate during the last sesison. I understand that the Justice Department contemplates hiring something like 110 investigators, opening 3 new offices, and increasing the Antitrust Division by something like 25 percent in order to carry out the legislative intent of my amendment.

May I say that this request by the Justice Department is absurd. I can only think it was done in an attempt to reduce the real purpose of my amendment to absurdity and to kill any effort to carry out the reasonable intent of the amendment. I am convinced that a staff of 2 to 4 competent economists, 1 to 2 lawyers, and perhaps 1 to 2 investigators, at most, would be adequate to carry out the legislative intent of my amendment. I am at a loss to find anything in the legislative record of my amendment from which the Department could possibly request the sum of money and the new staff it has asked for. As it was my amendment, and as my statement was the only statement of substance about the amendment in the Senate, I believe that I am in a position to state the legislative intent.

The purpose of my amendment was simple. The Constitution of the United States says:

"No State shall, without the consent of Congress * * * enter into any agreement or compact with another State."

Therefore, the Interstate Oil Compact, like other compacts, can only come about and exist by the express permission of the Congress of the United States. There is no issue of States' rights involved, for the right is that of Congress to grant or withhold.

Article V of the Interstate Compact to Conserve Oil and Gas is worded as follows:

"It is not the purpose of this compact to authorize the States joining herein to limit the production of oil or gas for the purpose of stabilizing or fixing the price thereof, or create or perpetuate monopoly, or to promote regimentation, but is limited to the purpose of conserving oil and gas and preventing the avoidable waste thereof within reasonable limitations."

My purpose in offering the amendment was to make certain that the clear intent of the States entering the compact under article V was being carried out. The Congress makes the grant of power to the States involved in the compact but until my amendment, there was no agency of the Congress or Federal Government which reported to the Congress whether or not the clear language of the compact was adhered to.

The interstate oil compact meets only occasionally. I am reasonably certain that the records of the compact are kept where they are accessible. Further, the compact invited a representative of the Antitrust Division to attend one of its recent meetings. For some reason, the Justice Department did not even send a representative. I must say that the Department of Justice has acted in a most curious way in this as in other situations affecting my amendment.

After the compact was agreed to by the Senate, it went to the House committee. The House asked the Department of Justice for its opinion on my amendment. The reply received by the Justice Department was an amazing one—it was signed by Deputy Attorney General Rogers. I shall quote the relevant part:

"The general purpose of this provision seems unobjectionable. However, the investigation into the operation of the compact contemplated under the provision would apparently involve, among other matters, questions in the field of economics. Such functions do not properly come within the activities of the Department of Justice which is the chief litigating arm of the Government. It is believed, therefore, that it would be inappropriate for the Attorney General and the Department of Justice to be designated to perform such functions."

This quotation is the entire substance of any reference in the Justice Department's letter concerning my amendment.

At a later date, I questioned the head of the Antitrust Division, Judge Barnes, concerning this letter. He admitted before the Banking and Currency Committee that the Antitrust Division did hire numerous economists, that it did have an economics division or section, that this was a legitimate function of the Antitrust Division, and that the subjects of limiting production, stabilizing or fixing prices, creating or perpetuating a monopoly, etc., were ones they dealt with regularly in the normal course of events. Thus, the statement that questitons in the field of economics are not functions which properly come within the activities of the Department of Justice is one which does not bear examination. When the Assistant Attorney General, by any clear meaning of his own words, admitted that the Justice Department's contention was ridiculous, I think it is clear that the provision was unobjectionable to them.

We all know that for conservation purposes, the compact is allowed to set prices, limit production, etc. As this is an unusual grant to any group, private or public, Congress should have a regular report on such activities. The compact itself, I understand, has given the Justice Department every cooperation. Thus, I am convinced that the Attorney General, in making his request, is attempting to reduce what is a simple and straightforward amendment, requiring the use of a small group of competent people and the writing of a yearly report, to absudity.

I sincerely hope that the Appropriations Committee will appropriate funds in the amount necessary to carry out the simple provisions of the amendment. It is difficult to make an exact estimate of the amount needed but it would probably be in the neighborhood of $100,000, which would be enough to pay the salaries of a half dozen competent lawyers and economists and the secretarial help and printing costs, etc., which such a staff would need. Certainly, no new offices or 100 investigators are needed.

I wish to state again that I can find no evidence whatsoever in the legislative history of my amendment to support the Justice Department's request, and I believe that as it was my amendment, I am as competent to interpret the legislative intent as anyone.

I hope that this letter will be useful to the committee and if the committee so desires, I see no reason why it should not be made a part of the RECORD.

With best wishes.

Faithfully yours,

PAUL H. DOUGLAS.

DEPARTMENT OF JUSTICE,
Washington, D. C., June 14, 1955.

Hon. J. PERCY PRIEST,
Chairman, Committee on Interstate and Foreign Commerce,
House of Representatives,
Washington, D. C.

DEAR MR. CHAIRMAN: This is in response to your requests for the views of the Department of Justice concerning House Joint Resolution 143 and Senate Joint Resolution 38, consenting to an interstate compact to conserve oil and gas.

The Interstate Compact to Conserve Oil and Gas was originally executed at Dallas, Tex. on February 16, 1935, by representatives of the oil-producing States (Oklahoma, Texas, California, and New Mexico), with recommendations to other States for ratification. The States of Kansas, Illinois and Colorado subsequently ratified the original compact. House Joint Resolution 407 was introduced in the 74th Congress for the purpose of giving consent to the compact under the provisions of article I, section 10 of the Constitution. It was passed on August 27, 1935 (Public Res. 64, 74th Cong., 49 Stat. 939). The approval was for a period of two years, expiring September 1, 1937. The compact has continued in effect since that time through periodic enactments by the Congress similar to House Joint Resolution 407 of the 74th Congress. The last enactment (Public Law 128, 82d Cong., Aug. 28, 1951) continued Congressional consent to the compact until September 1, 1955. The joint resolutions would give Congressional consent to a further extension and renewal of the compact until September 1, 1959.

Whether the proposd extension and renewal of the compact should be approved involves a question of policy concerning which this Department prefers to make no recommendation. However, there is one provision of Senate Joint Resolution 38, as passed by the Senate, which this Department deems objectionable. Section 2 of that joint resolution reads:

SEC. 2. The Attorney General of the United States shall, within one year from September 1, 1955, and annually thereafter for the duration of the Interstate Compact to Conserve Oil and Gas, make a report to the Congress as to whether or not in his opinion the activities of the States under the provisions of such compact (1) have remained within the purpose of such compact as set out in article V thereof, and (2) have resulted in the stabilizing or fixing of prices of oil or gas, the creation or perpetuation of any monopoly, or the promotion of any regimentation in the production or sale of oil or gas, with the understanding that conservation and the protection of the small producer are the paramount purposes of any rules and regulations issued under the compact."

The general purpose of this provision seems unobjectionable. However, the investigation into the operation of the compact contemplated under the provision would apparently involve, among other matters, questions in the field of economics. Such functions do not properly come within the activities of the Department of Justice which is the chief litigating arm of the Government. It is believed, therefore, that it would be inappropriate for the Attorney General and the Department of Justice to be designated to perform such functions.

The Bureau of the Budget has advised that there is no objection to the submission of this report.

Sincerely,

WILLIAM P. ROGERS,
Deputy Attorney General.

Memorial Day Address by Woodley Carr, Department Commander, the American Legion of Mississippi

---

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include an address by Mr. Woodley Carr, of Moorhead, Miss., in tribute to the valiant men who have given their lives in defense of our beloved country. Mr. Carr was State commander of the American Legion when he delivered this address on Memorial Day, 1955:

Memorial Day, which we are observing throughout our beloved land as a day of remembrance, must be far more than that. It should be a day of rededication. A rededication of our hearts and lives to God and country, for which the brave men we honor this Memorial Day have given their all.

Flags and flowers speak more eloquently than any words we may recite. The valiant little flags that appear on these patriot's graves are the symbol of the freedom they gave their lives to defend and preserve. The flowers strewn upon the final resting place of their mortal remains are the symbol of spring, the season of life and fulfillment.

For God and country, these men lived and gave up lifetimes of living; but are they dead? It has been said that "they that die for a good cause are redeemed from death." Do not the lives they offered on the altar of liberty prove the unreality of death? They "hover as a cloud of witnesses above this Nation."

Today the dead speak to us and say: "Is this world better for our sacrifice?" They speak to us, but do we hear? Have we kept faith with them?

It was their sacrifice that made this Nation great. They have gone to their God. Let us not forsake them or Him.

It was at the dedication of the national cemetery at Gettysburg that Abraham Lincoln uttered these immortal words:

"The world will little note, nor long remember, what we say here; but it can never forget what they did here. It is for us, the living, rather to be dedicated to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us; that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion; that we here highly resolve that these dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom, and that government of the people, by the people, and for the people, shall not perish from the earth."

We of the American Legion believe that many of our Nation's wars were unnecessary

and that many of our war dead were sacrificed by our Nation's unpreparedness.

Since George Washington's days America has suffered from the perpetual disease of fighting its wars with untrained men. Unpreparedness in this respect has levied a heavy toll upon our national life. The tragic results of this disease are visible in every cemetery where lie the remains of our soldier dead, in every hospital where the maimed and the sick are suffering from battle-caused afflictions; and even in our streets where the crippled and the handicapped depict the casualties of war. We know that many of these casualties could have been prevented by adequate training.

Since World War I the American Legion has kept the torch burning for peace through strength. We have been called militaristic by the pacifist and subversive elements of our country, but we have not faltered in our efforts to provide for the common defense. We are proud that in all of our 36 years of demanding adequate protection for our country, we have never been wrong in any of our major recommendations.

Whence came the inspiration of Memorial Day? And how many know the significance of the spirit of unity and love of our fellowmen that brought it into being? Was it Lincoln's deathless Gettysburg address? Or was it perhaps a too little known and far too little appreciated expression of love demonstrated by a group of southern women in the middays of the War Between the States?

On an April morning in 1863, a small group of compassionate women in Columbus, Miss., went together to lay spring flowers upon the graves of their soldier dead. The war already had been raging for 2 devastating years, but love and sorrow were in the hearts of those ladies, and their tears washed away any bitterness toward even the enemy who had fallen.

Their flowers of remembrance were placed by those devoted women on the graves of their own dead and on the resting places of two Union soldiers who lay in the same burial ground with their own husbands, sons, brothers, and fathers.

Each following April through the remaining years of the War Between the States and thereafter, these Mississippi women repeated the ceremony, laying garlands of remembrance on the graves of northern and southern heroes alike.

Soon other communities followed the example set in Columbus and selected their day in spring upon which the citizens would gather and go to the cemeteries for the purpose of honoring those from their communities who had fallen in battle.

By the passage of law, Memorial Day has been made official. May 30 is the legal date in most States. In a number of Southern States some other date is official; April 26 in some, May 10 in others, and June 3 in a few. But though there is a difference in dates, there is no difference in the spirit of the day, nor in the hearts of those who commemorate it.

The bitterness of civil strife, first washed out of the hearts of the gracious women in Columbus, Miss., now has gone from the hearts of all. There is no North or South today, thank God. "Under the laurel the blue. Under the willow the gray. Love and tears for the blue. Tears and love for the gray."

Through divine love and faith in God's guidance, our Nation is more closely united than it has ever been since it was founded upon the principles of providence.

This Memorial Day, therefore, we consecrate to the memory of those known and unknown dead of all wars; those who met their destiny in battle on land, on the seas, and under the seas, and in the flaming skies.

Our heroic fallen have emblazoned upon the pages of everlasting history such names as Concord, Bunker Hill, and Valley Forge. Fort McHenry and the Battle of New Orleans. Of the Alamo, Monterey, and the Little Bighorn. Bull Run, Shiloh, and Gettysburg. Of Manila Bay and San Juan Hill. The Philippines and the Boxer Rebellion. Of the Marne, Chateau Thierry, Belleau Wood, and the Argonne. Of Pearl Harbor and Wake Island, Bataan and Corregidor, Guadalcanal and the Coral Sea, Saipan and Iwo Jima. Of Kassarine Pass and Salerno, Omaha Beach and Bastogne, of bomb-shattered Tokyo, and the subpens of Bremerhaven and finally of Porkchop Hill, Heartbreak Ridge, and Old Baldy.

Great and imposing monuments have been built to many of those fateful moments. Others will rise in years to come. Granite, marble, and bronze have been fashioned into memorials for armies and divisions and regiments, fleets and squadrons. But the flowers strewn on Memorial Day are our tribute to the individual men and women who have helped through those brilliant chapters of American history to keep forever burning the enternal torch of freedom.

These brave men and women sleep in their final resting place and we should let them know that we come here today not alone to weep in mourning, but to prove to them that we shall keep the faith.

The inscription on the Confederate memorial in Arlington Cemetery behind the great mansion that was once Robert E. Lee's might well have been written for the dead of all American wars:

> "Not for fame or reward
> Not for place or for rank
> Not lured by ambition
> Or goaded by necessity
> But in simple obedience to duty
> As they understood it
> These men suffered all
> Sacrified all, dared all,
> And died."

Civil Air Patrol

EXTENSION OF REMARKS
OF

HON. CHARLES RAPER JONAS

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 29, 1956

Mr. JONAS. Mr. Speaker, at the Civil Air Patrol congressional dinner of May 24 in Washington, a very fine speech was given by Cadet Edwin V. Hord, of Concord, N. C. Cadet Hord told how high-school students feel about strengthening our defenses through airpower. I was so impressed with his address that I felt it should be preserved in the CONGRESSIONAL RECORD where others might benefit from his excellent remarks.

Cadet Hord was selected by Col. James L. Hamilton, Civil Air Patrol wing commander for North Carolina, to represent our State as 1 of the 52 cadets who were honored at the dinner this year. Further honor was bestowed upon Cadet Hord when he was selected, from the group of 52, to be 1 of 2 cadets to deliver speeches at the dinner.

With its 2,594 units located in 48 States, the District of Columbia, Alaska, Hawaii, and Puerto Rico, the CAP is teaching basic aviation to thousands of young high-school students and adults. They help the civil defense programs, air rescue, and disaster missions.

The indoctrination of the vast number of men and women who later enter the Air Force to become pilots, navigators, observers, and crew members, is a boon to national defense.

CAP is a group of voluntary auxiliary USAF members, 90,000 strong, who are assisted in their training by active-duty Air Force personnel. These groups, working together for our security through airpower, deserve our support and commendation for the work they are doing.

Cadet Hord's full speech at the congressional dinner May 24 follows:

Some of the young people all over America—perhaps someone who goes to high school with me—will be leaders of the free world a few years from now.

Some boy now in a high school graduating class will be sworn in at the White House in 40 years. Another boy will take over as Air Force Chief of Staff—in less than 40 years.

I hope things will have changed a lot by then. I hope the biggest problems these classmates of mine will face will be the everyday problems of our country's housekeeping * * * roads, schools, and airports.

I hope their day-to-day decisions do not constantly involve crises and emergencies * * * and treading the difficult path between war and peace * * * with honor.

I hope all this changes, as I said, but I have no way of knowing it will.

But even if things have changed by then * * * and war is not a constant threat always within range of enemy bombers or missiles * * * even then these same classmates of mine will have to furnish leadership for most difficult and challenging times. They will be taking an important part in our national life.

They'll be flying our newest aircraft as pilots, or building them as craftsmen, or paying for them as taxpayers.

What I want to emphasize is that no matter what kind of suit or uniform they wear, they'll be up to their necks in the age of aviation. They'll have to be qualified to know both the airplane and the opportunities of the air age * * * and how to use them well. Our national survival and well-being depend on it.

Since I feel it's so important for these young people—who are my friends—to learn to think in terms of airpower both for defense and for peace, I'm glad we have an organization like the Civil Air Patrol.

I'm glad we have it and I'm glad I have the opportunity of being a part of it.

Certainly I'm no expert on either airpower or world strategy, but Sir Winston Churchill—whose qualifications command respect—has said today's world peace depends on American dominance in the field of atomic weapons * * * along with our ability to deliver these weapons across the air ocean around us.

If this is true today—if America's strength is freedom's guaranty of survival, then we must continue to remain strong. And that strength must be in the air.

That means CAP's primary mission—the training of youth to meet their oportunities and responsibilities in the air age—is important to my classmates and me.

Because of the decisions which these same classmates of mine will make in the years ahead, this mission of CAP's is also very important to our country.

Civil Air Patrol pilots last year flew more than 50,000 hours giving flight orientation rides to young people * * * to teach them in the air about the air age.

The work these pilots did was a highly important part of air education.

In addition, those who are CAP cadets have had an opportunity to participate in

summer encampments at Air Force bases * * * to enter drill teams in CAP competition * * * to compete for a chance to take part in CAP's renowned International Cadet Exchange * * * and to benefit—with other high-school students—from the results of Civil Air Patrol's summer workshops for teachers of aviation education in high schools.

This air education is a highly important part of America's long-range security. It must go forward.

The people I know in high school back in Carolina live in the State where the airplane was born * * * a State where more than a hundred years earlier men stood up for freedom * * * even if it meant the king's men shot at them. My friends are also used to plain, hometown talk. But they understand about freedom, no matter how it's stated.

I think my classmates—all over America—understand what a group of men—who signed this country's Declaration of Independence—meant when they declared they stood for liberty * * * and in support of their stand said:

"We mutually pledge to each other our lives, our fortunes, and our sacred honor."

This also is America's pledge today * * * our lives, our fortunes, and our honor—for freedom.

If—in the years which lie ahead—our freedom again is threatened by aggression, then this pledge will be redeemed * * * by these classmates of mine.

I promise you that.

And the work of the Civil Air Patrol—today and in the years ahead—will continue to be a vital contributor to the strength which guards freedom in the world.

Thank you.

Tree Farm Dedication at Council, Idaho

EXTENSION OF REMARKS
OF
HON. HERMAN WELKER
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Tuesday, May 29, 1956

Mr. WELKER. Mr. President, a few days ago I had the honor of witnessing a tree farm dedication at Council, Idaho, a little hamlet near where I was born. There I saw many individual farmers dedicating portions of their land in order to assure a growth of timber in the future. It was a very wholesome occasion. I saw America at work in helping to preserve a natural resource for the future.

One of the important speeches made at that dedication ceremony was delivered by a dear friend of mine, Mr. Warren H. Brown, of McCall, Idaho. I ask unanimous consent that his address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH GIVEN BY WARREN H. BROWN AT COUNCIL, IDAHO, TREE FARM DEDICATION, MAY 16, 1956

Representatives of the Western Pine Association, members of the Grange, Commissioners, and distinguished guests, it is a real pleasure to appear before you on behalf of the Southern Idaho Forestry Association and as an individual operator. It is a wonderful opportunity to geet old friends and neighbors and, at the same time, to be a part of a new forestry venture in this area. Everyone here, I am sure, understands how satisfying an experience it is to participate in modern methods of conservation and to help nature create new and better resources for our use. By the operation of these so-called tree farms, we can and do enhance that which is already actually or potentially there. It has been said that you can't improve on nature, but we have proven that you can and proof of it can be seen in many places and in a reasonably short time the proof can be seen here. We are and will be building better trees by proper pruning, by proper cutting and by improved methods of logging. The timber will not only be improved but the land, too, will be made more productive and better forage and feed for livestock will result. Modern logging methods and a better knowledge of erosion control will ultimately give us control of a situation that has been costly and somewhat ineffective in the past. We will prevent the shifting of valuable soils and we will prevent flood damage and the uncontrolled wasting of one of our most precious assets—water.

Frankly, it is very satisfying to see the small woodlot owners become a part of this program—not because it adds to the number of dots on a map showing where such farms are located—nor because it increases the number of pretty signs saying that a given area is a dedicated and certified tree farm—but because it will sooner or later make that person and his neighbors aware of the fact that timber is an asset and that where he has always visualized lands free of trees, planted to grain or hay, the picture can be replaced by one of fast growing trees that will, with proper planning and care, return more revenue dollar for dollar, than would the crops from the area cleared. Further, he will have the land during the years before timber harvesting begins, to use as a lucrative feed area or for other purposes. Timber is a crop and the growth each year, converted to board feet and therefore dollars, would amaze many of those who now think of it only as something to be cut and cleared from the land so that they can raise annual crops where the product is a little more tangible and the profits, if any, can be pocketed each year.

It is not too unreasonable to assume that an outfit like the Circle "C" Ranch, one of the really large livestock raisers of the country, can make as much net profit from timber on their extensive acreage as they can from the raising of livestock. Too, the important thing about that is that they can still raise as many or more cows on the improved forage area. In actuality then, two industries thrive where only one and a part of another existed before. It is worthy of thought and action.

When you view the trees that are around you in the light of economics—past, present, and future—you can hardly help but be struck with the tremendous impact they have on our lives. Each tree, to most observers, is simply a fibrous growth consisting of roots, trunk, branches, and leaves. Looking at it through the average persons eyes, it becomes something which, when cut up, will provide boards for the building of their homes or will provide heat for the home after it is built. Some, but not all, will see it as the pulp that is used to provide them with a daily newspaper.

In actuality its use starts a long way ahead of most peoples' concept and its usefulness practically never ends. Consider the shelter it may have provided some trapper or freighter, or the fuel its fallen branches provided for someone's fire, or the seeds it produced to create other trees in other areas. Think of the vast quantities of wood that was used by the pioneers in establishing the great country which now produces for us an economic way of life second to none. Even more, consider the part that each tree has in your life today. It still provides you with shelter, it gives you the material for your home, it is the substance from which your newspaper is made. A small part of each tree may be a part of the production of most of the things that you consider necessary for your existence, including a part of the synthetics that you wear.

In a larger measure, consider the number of people whose income is dependent on a tree. We all know of the foresters, the loggers, and the mill men. We know that they are well-paid, well-adjusted members of their communities, and that they add considerable to the purchasing power within their towns, and that this in turn enhances the success of the merchants, the bankers, and other tradesmen of the area. But beyond this, consider the transportation people, railroads, trucks, airlines, and even the ships at sea, the equipment industry that provides the tools with which we work, the remanufacturers, the brokers, the real-estate people, and even the professional people. All of these and more derive a part of their income from some part of these trees. Think of the countless products that are made from wood and think of the great industries that have been built upon or from the timber industry. From the day you are born and all through your life you will enjoy benefits of living that can be traced back, in a large part, to the timber around you. And then when you die you will be placed in a casket made of wood.

I am certainly glad to be a part of an industry that for so little effort to create the basic product, provides so many benefits for so many people. In better utilization and awareness through tree farms, we simply put forth a little more effort to make much better products for more and more people. At the same time better grazing lands are produced, the possibility of damage by floods and erosion are lessened, considerable waste is eliminated, and the future economy of the country is made more secure by assuring a better supply of natural resources.

Hog Farmers Seen Taken

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. MARSHALL. Mr. Speaker, some interesting facts and figures on what happened to farmers during the hog-price slump are revealed in an article by Alfred D. Stedman in the St. Paul Sunday Pioneer Press of May 27, 1956.

Because this story has great significance for every Member of the House interested in the problems facing farm families, I include it under leave to extend my remarks:

DEALERS POCKET HOG-SLUMP CASH
(By Alfred D. Stedman)

Midwest hog farmers were taken for a multimillion-dollar buggyride by middlemen who cashed in on the biggest swine-price slump in history.

That's the gist of a United States Department of Agriculture report entitled "Who Gets the Money?" which was being received Saturday in South St. Paul and other meat-industry centers.

Instead of all of last fall's record-breaking hog-price slump going fully to consumers to induce a speedup in consumption of pork, a substantial part amounting to about $1.50 a hundredweight was going as an increased charge into the pockets of meat handlers, processors, and sellers, the Government report stated.

No Federal total was given as to this increased middleman's take at the expense of hog farmers. But, on the large volume of hogs sold during the autumn and winter price slump, unofficial figures ran into the hundred-million-dollar category.

Meat packers and retailers, however, blamed increasing wage, transportation, fuel, and material costs. Meatpackers said net profits, while in some instances improved over earlier low returns, have a long-run record that's the lowest among farm processing industries, averaging after taxes only four-fifths of a cent per dollar of sales.

The United Packinghouse Workers of America, CIO, contrasted a $50 million increase in packinghouse wages with a $700 million drop in farmers' cash receipts from sales of livestock including hogs, from 1954 to 1955, and declared Secretary Benson's Department all wet in blaming the farmers' loss on labor.

The Government's story on who got the money came out in the May Agricultural Situation, issued by the Agricultural Marketing Service. In it the Government doesn't pin the blame specifically on anybody, and competing groups tend in a competitive system to get what they can. But as to the $9 a hundredweight slump in live hog prices, down nearly to a $10 level from last June to December, it finds:

1. That $2.50 of that $9 slump was accounted for "by failure of retail pork prices to fall as rapidly as farm prices of hogs."

2. That during the record hog price drop, marketing charges jumped from 2.5 to 25.8 cents a pound on pork at retail, a record high.

3. That a little less than half of the increase in middlemen's costs was accounted for by the packer and wholesaler, and a little more than half at the retail level.

4. That since the margin usually widens about $1 in the heavy marketing season, the margin during the slump "widened approximately $1.50 more per hundred pounds of live weight from the second to the fourth quarter than would usually be expected."

5. The hog price slump that hit farmers late in 1955 was "about 50 percent greater than would usually be expected with a 12-percent increase in marketings."

While not getting full benefit of the price drops, consumers did get substantial benefits, the Government said. It gave as an example a 14-cent drop in New York retail pork prices, in the year ending in March 1955, while producer prices were going down 16 cents and marketing charges were increasing from 18.2 to 18.9 cents. In percentages of the consumer's pork dollar, the shares going to each group changed this way:

	Percent	
	March 1954	March 1955
Hog farmer	68.7	56
Packer-wholesaler	18.7	28.6
Retailer	11.9	15.5
Selling and shipping	.7	.9

Thus lower hog prices were associated with and, in part, caused by widening market margins in that period, the report indicates.

However, with the spectacular recovery which recently has sent live hog prices back up to above $19 a hundredweight, indications are that marketing margins are now taking a trend toward normal.

Remarks of Hon. Herbert H. Lehman, of New York, on Receiving Philip Murray Award of the NAACP

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, May 29, 1956

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the remarks I made on receiving the Philip Murray award of the NAACP at the Waldorf-Astoria Hotel on Thursday, May 17, 1956.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR HERBERT H. LEHMAN ON RECEIVING PHILIP MURRAY AWARD OF THE NAACP AT THE STARLIGHT ROOF OF THE WALDORF IN NEW YORK CITY ON MAY 17, 1956

I accept your award which I shall always treasure among the most cherished honors I have received. I am deeply grateful for the distinction which you have conferred on me. I ask that the proceeds of the check which you were good enough to hand to me be given to the North Side Center for Child Development whose fine work has, I know, made a great contribution to the community.

I accept the award with pride in the name of all who work and strive this day, as in the past, for that goal which has beckoned mankind since the first glint of consciousness began to light up the mind of man—the goal of brotherhood and equality of all, under law.

It makes me very proud to receive an award in the name of the late, great, beloved Philip Murray, a man whose deep human compassion was united with an unshakable resolve to achieve justice for all, and especially for those to whom social and economic justice was denied in whole or in part.

The life of Philip Murray was an illuminating life. He was a man gifted above all with the power for leadership, for inspiring confidence in his fellows, for instilling courage, for finding hope, and for holding faith.

The story of Philip Murray, the immigrant who arrived in this country at the age of 16 and who became one of the most influential figures in the United States, cannot be told too often. He was 25 years old before he became a naturalized American citizen, but he embraced the country of his adoption with such zeal and dedicated himself to the cause of labor with such fervor that he became one of the first citizens of America and a power for good to be reckoned with throughout the length and breadth of this land.

But the success story that was Philip Murray's is not the one on which I shall dwell tonight. There is a deeper and richer aspect of Philip Murray's life which is more pertinent to this occasion. I speak, of course, of Philip Murray's devotion to the cause of human rights.

In a true sense, Philip Murray's mature life was dedicated primarily to the struggle for human rights. In this struggle his battlefield expanded with his horizon, beginning with his local union and spreading out in ever-widening sweeps until it embraced all America and even the world.

The stamp of his ideology is clearly marked today on the great united labor organization—the AFL-CIO. And that organization is today one of the principal forces in the continuing battle for justice and equality, under law, for all Americans.

That organization, too, has its problem with its southern membership and with those whom it seeks to organize in the South. Within the councils of that organization, too, are heard the voices of those who plead for delay in grappling with the problem of equal rights for all citizens alike, regardless of race or color or creed.

And as within the councils of the Democratic Party, for instance, and in the inner councils of the Senate and the Congress itself, reasons are cited in justification of the plea for postponement of the issue, on the plea of concentration on other problems and in the name of so-called unity.

As far as organized labor is concerned, I am sure that the ideological heritage of Philip Murray has served to strengthen the resolve of the present leadership of the AFL-CIO in setting a course of determined advance toward the goal of equality, and of determined resistance to the forces of discrimination and nullification.

So must we do, in the Democratic Party, in the Republican Party, and in the Nation.

For this is no partisan matter, although it necessarily is and should be a political issue. It is an issue above party, but it is an issue on which candidates for public office should be tested, and it is an issue on which the people should be asked for their mandate.

I believe that in this year of 1956, whether some like it or not, or whether some wish it or not, the question of equal rights and of the abolition of legally-sanctioned second-class citizenship based on race or color, is the great issue which dominates all others.

It is not only the issue of this day and hour. It is the issue of this generation, which has come into critical focus in 1956.

Even if we would, we could not escape it. It is foolish to try to do so.

Let us rather grapple with it, admitting its difficulties, its vast complexities, and its obviously great delicacy. Let us move upon it with deliberate restraint but with unqualified determination and unflagging zeal.

Our tempo must be that defined by the Supreme Court as deliberate speed. An understanding of the complexity of the problem does not require that we postpone for even a moment any single thing that can and must be done to speed its solution.

There has been on the part of some, including, I regret to say, the top leadership of our Government, a regrettable tendency to identify themselves as a kind of third force in the area of struggle. They seem to consider themselves as neutralists in the cold war over civil rights.

Speaking certainly only for myself, but hopefully also for the majority of the American people, I cannot either be or pretend to be a neutral in this struggle.

This is not a battle between two equal and opposite forces in our country. This is a struggle against oppression. It is a struggle to uphold not only the letter of the Constitution, but its spirit, and the spirit of the Declaration of Independence as well. And what is even more, the spirit of America.

How can I be a neutral in this situation? How can any who hold a role of public leadership be neutral in the face of oppression of some of our citizens and nullification of the law?

I identify myself with the victims of oppression and with the upholders of the law. Is that an extremist position? I do not think so.

The NAACP has come to be unfairly considered in some quarters—and I am thinking of responsible quarters which should know better—as the spokesman of an extremist viewpoint. In my judgment, this is a false depiction and I am glad to brand it so. In my judgment, the NAACP is the spokesman for a truly moderate viewpoint. And it is, above all, a responsible champion of the law,

an amicus curiae in the truest sense of that classic Latin phrase.

The NAACP does not speak only for Negroes. It speaks also for that vast number of white people in our country, both north and south of the so-called Mason and Dixon's line, who advocate no more and no less than equal justice under law for all Americans.

It is important that this be understood. It is important that the victims of oppression know that they are not being left to their own devices of struggle, that they are not isolated and alone.

It is important, vitally important, that the struggle for justice be carried on, not primarily by the victims of injustice, but on their behalf.

Let us each and all remember the classic dictum that when we struggle for the rights of others, we struggle to maintain our own rights as well.

I have been talking about struggle, and about the necessity of championing the rights of the victims of discrimination and segregation. In carrying on this struggle—and again, I speak only for myself, but hopefully for the majority of the American people as well—I believe that we must bear constantly and considerately in mind the problems of the oppressors as well as the oppressed.

Many, if not most of them, are, in my judgment, unwilling oppressors. Consciously or unconsciously, most of them will, I believe, rejoice when freed from their end of the chains.

Identifying myself with the victims of segregation does not preclude me, and should not preclude the rest of us, from sympathizing with and trying to understand the problems and points of view of those on the other side of the wall.

They carry a heavy burden, too. They must be helped to free themselves of it, and as Dr. King, that young and inspiring spiritual leader of Montgomery, has so movingly said on so many occasions, they must be loved.

Hate will not accomplish our ends. Love and the spirit of brotherhood—even for erring brothers—will.

There are many in the South—I do not know how many, but I believe very, very many—who are men of truly good will. They do not know how to extricate themselves from their present dilemma. Let us help show them the way.

Firmness in our resolve, enlightenment in our approach, certainly in our cause, and dedication to our purposes, will help us through the difficult months ahead and will enable us to meet the present crisis.

It is unnecessary to magnify the crisis. Nor is it wise, or possible, to minimize it.

We move in what we hope and believe to be God's way, to solve one of the fundamental problems of human existence—the problem of achieving brotherhood in the midst of conflict.

If we have faith, we will have strength and courage. With strength and courage, born of faith, we will not fail.

Building a Prosperous Peace

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 29, 1956

Mr. MUNDT. Mr. President, South Dakota recently had a distinguished visitor, who came to visit our people fresh from the International Disarmament Conference in London to give them a stirring message of hope for continued peace. That visitor was the Honorable Harold Stassen, Special Assistant to the President, who spoke before the fundraising dinner of the Brown County Republican organization in Aberdeen, S. Dak.

Mr. Stassen outlined the successes enjoyed by the Eisenhower administration in the field of foreign policy. He presented the picture of domestic prosperity, and he predicted a safe and sound future for our country under the continuing leadership of Dwight D. Eisenhower.

I ask permission to have this splendid speech printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

BUILDING A PROSPEROUS PEACE

Our Republican Party should be humbly thankful for the privilege of being the vehicle through which President Dwight David Eisenhower serves all of the people of America.

In this regard our party has a special responsibility to so conduct itself during the coming campaign so as to help and not to hinder his brilliant leadership of the Nation and in the world.

I know full well that our party will face a very heavy barrage from the opposition. Certainly the attacks now being made will not recede in the next months. It is plainly evident that we should be prepared for mounting oratorical onslaughts, unmistakably designed to becloud issues, distort facts, and by the deliberate route of feeding cynicism and fear, do all that can be done to attempt to bury beneath an avalanche of demogogery the most brilliant record of constructive accomplishment since the time of Abraham Lincoln.

The Republican Party, through the dedicated and earnest efforts of the men and women who uphold its banner across the length and breadth of America, will furnish the effective answer, not by responding in kind but, instead, by conducting a campaign that is comprehensive, continuous, and constructive—a campaign that is so skillfully organized and so enthusiastically carried on as to assure that the outstanding record that is manifest in our message will successfully penetrate the opposition cacophony, to be heard in every home and to reach every voter in the Nation.

It will be necessary to explain again and again to the people that the prosperous peace which they now enjoy and acknowledge is not an effortless and automatic happenchance. Without engaging in divisive name calling and narrow bitterness, let us carry the President's program and principles to the people with a clarifying description of the alert and intelligent action taken week after week, month after month, to bring about the most prosperous age in our entire history.

For example, the opposition, in a desperate and unavailing search for solid criticism, has again resurrected the dusty diatribe that our party favors Big Business. A few undisputed facts, taken directly from the official statistics, clearly repudiates this malicious charge.

Labor has actually gained more than business under the Eisenhower administration. This can be proven in many different ways by an objective analysis of the facts. The official statistics will show, for example, that in the 3 Eisenhower years the average wage of factory workers has increased 30 percent over the 7 Truman years. In other words, every workingman, on the average, has received 30 cents more on each dollar of wages compared to the 7 Truman years.

Corporation profits, on the average, have also increased, but their increase in the 3 Eisenhower years has been just 6 percent compared to the average corporation profits in the 7 Truman years.

The details are as follows: The average weekly earnings for factory workers in the 7 Truman years was $56.41. The average weekly earnings for factory workers in the 3 Eisenhower years is $74.35.

The total labor income of all the workers in America averaged $147.2 billion in the 7 Truman years. It averaged $207.2 billion in the 3 Eisenhower years. This is an increase of 40 percent.

The total corporate profits after taxes in the 7 Truman years averaged $17.8 billion. The total corporate profits after taxes in the 3 Eisenhower years averaged $18.8 billion.

Despite these incontrovertible figures, the opposition smoothly endeavors to spin a network of falsehood around the dangerous claim to workingmen that profits should be held down and wages should be pushed up.

The gross infirmity of such an attitude is self-evident. The worker and the businessman and the farmer alike, know that continued growth of our country requires that each interdependent ingredient—wages, profits, and farm income, must climb together.

The President has at no time minimized the magnitude of the problems which confronted this administration. For example, he has never misleadingly declared that the objective of 100-percent parity for agriculture in the market place could be achieved overnight.

May I also urge that in considering this exceedingly difficult problem, a fair analysis of these 3 years under President Eisenhower, be brought to the people. In this regard, it should never be forgotten that in the last 3 years before World War II, under the opposition party, the years 1938, 1939, and 1940, agricultural prices were 78 percent, 77 percent, and 81 percent of parity, in contrast to these 3 Eisenhower years of peace in which the prices were 92 percent, 89 percent, and 82 percent of parity.

It is my view that agriculture has now leveled off from its decline, and that agricultural income will increase significantly next year if the President's program is adopted, even as employment and wages, notwithstanding the prophets of doom, moved upward in late 1954, after successfully completing their post-Korean war adjustment.

In foreign affairs, the President has considered just one preeminent goal—the supreme objective of an honorable, just and safe peace. The administration is dedicated to work for such a peace day after day, week after week, year after year. No one knows better than President Eisenhower that such a peaceful and secure world will not be found in wishful thinking, in timid stances, or in recoiling from realities of the thermonuclear age.

These 3 Eisenhower years stand out in bold relief as an era in which a foreign policy worthy of the great country it represents was established.

Again, the results speak eloquently for themselves. No other statesman in history has been more firmly dedicated to the great aspiration for peace. No other leader on the contemporary scene has given more earnest, more painstaking and more constructive efforts to the achievement of this goal.

A summary of significant developments would include this list:

1. A worldwide movement for and rising appreciation of the peaceful uses of atomic energy was successfully initiated, scientists of 72 nations conferred at Geneva, and an International Atomic Energy Agency was approved without a dissenting vote in the United Nations General Assembly.

2. The people of Guatemala in this hemisphere removed a Communist dominated

government and established new leadership opposed to communism and friendly to the United States.

3. The Korean war was brought to a close on an honorable basis and the Republic of Korea was assisted in rebuilding its economy and strengthening its own defenses.

4. A rapprochement was achieved between the Republic of France and the German Federal Republic through which a Western European Union was established and Germany was admitted to NATO.

5. The Trieste issue was settled between Italy and Yugoslavia, and economic and cultural relationships were resumed between these Mediterranean neighbors.

6. An agreement was reached with Spain for mutual cooperation which includes valuable base rights for the United States in a strategic position.

7. The complete sovereignty of Austria was restored, the Red Army and United States troops were withdrawn, and a solvent, democratic, happy nation emerged in the center of Europe.

8. The 8-year Indochina war was ended, sovereign states of Cambodia, Laos, and South Vietnam moved forward in independence and were strengthened economically and militarily, thus checking the Communist Southeast Asia drive at the border of North Vietnam, which was taken over by the Communists in the settlement.

9. The ruling leaders of the Soviet Union were told directly and plainly at the Summit Conference that the objective of the United States was and would continue to be a just and lasting peace, a dramatic and sound proposal for exchange of military information and aerial reconnaissance was made, and increased contacts between East and West were initiated.

10. The people of Iran installed a new government to take the place of the instable former government and the Communist infiltration of this important Near East nation was cleared up.

11. More than 40 nations were assisted in advancing their economic well-being to a record high point.

12. We are now living through the 21st consecutive month, the longest period in a generation, in which no wars were being waged anywhere in the world.

I would not undervalue the enormous task which lies ahead. The world is still an uneasy place in which to live, because the shadow of thermonuclear devastation still hovers menacingly over us, even as the prospects for peace have been brightened.

In dealing with the question of safeguarded disarmament, the President has expressed his determination to continue to seek solutions founded on the most effective inspection and enforcement measures presently known to assure that the possibility of surprise attack is eliminated.

In this regard, no effort will be spared to find such methods as are mutually agreeable, and mutually advantageous to every participant.

I am convinced that the overwhelming majority of Americans want to see this record preserved and advanced. I am equally convinced that 1956 will become the midmark of Eisenhower leadership, and the Republican Party can look forward to a majority in Congress and an increased number of Governorships throughout the 48 States.

I say this because election victories in 1956 will presage 10 years of growth and prosperity for the American people and because I am certain that the Republican Party—in the lasting imprint of President Eisenhower—will clearly demonstrate once again, that it is worthy of the President's confidence and of the people's support for the good of America.

Farm Income and Prices—GTA Daily Radio Roundup

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 29, 1956

Mr. LANGER. Mr. President, I ask unanimous consent that a radio broadcast dealing with the farm situation be printed in the Appendix of the RECORD.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP, THURSDAY, MAY 24, 1956

Farm prices are being made in Washington this week. Congress has strengthened price supports. It has told the Secretary of Agriculture to get busy—find a sensible way to figure parity. Now it will be up to the President to take the bill Congress sent him and sign it—or veto the farm bill a second time. If he does, it will be the first time since Calvin Coolidge that a President has vetoed two farm bills.

You city folks may wonder what this has to do with your take-home pay—with the money you earn. That's why we've had the editors of U. S. News tell you about the unrest they found in the farm States. When cash registers don't ring, that's a farm depression on Main Street. When 150,000 auto workers are out of jobs, that's a farm depression in Detroit. What the U. S. News reported on May 18, should help city folks understand what farmers are up against, and should help you understand what good farm laws mean, not only to farmers, but to the Nation. Here is what one farmer said about politics: "I think $1.50 corn is a political price for farmers in an election year," says Harold Kennedy. He's a young tenant farmer in Livingston County in the rich, black loam country of Illinois. "What happens next year when there isn't an election?" he wants to know. "Do they let some of it come out of the bins to force prices down like they did this winter?" In southwestern Indiana, the farmers in traditionally Democratic Dubois County are ready, in the language of one farmer, "to go back to a proper way of thinking."

"Shrinking of farm income has hit Main Streets in this area, just as it has in many others," the magazine says. Here's the answer of a Dodge-Plymouth salesman when asked by U. S. News if farmers are buying as many new cars: "Are you kidding? We usually do about 50 percent of our business with farmers, but we've sold only one new car that went to the country so far this year. At this time last year, we'd sold 8 or 10." In the little town of Ferdinand, Ind., a Ford dealer is just as unhappy. He has sold only one 1956 model to a farmer. "This whole town's dead," he says, waving a hand at the Main Street. "First 3 days of this week, you could have sprayed that street with a machine gun and not hurt a soul."

The U. S. News reporters got the same story from other merchants on the street. Only one businessman, an appliance dealer, reports sales holding even with 1955. Strings are being tightened on farm purses all over the Midwest. A farmer in Kossuth County, northwestern Iowa, broke a tine on his manure fork. He went to buy a new fork. He found the price of a fork had gone up to $4.50. Still brooding over the money he'd lost in the recent slump of hog prices, he stalked out of the store, muttering that he would go right on using his broken fork. In southwestern Iowa, few farmers drive new cars. Harry Coulter, a veteran dealer in that area, estimates that sales of new cars have fallen off 40 percent from a year ago. If there's anything in the political axiom that people with declining incomes are prone to vote against the party in power, then Republicans have reason to be alarmed over the outcome of the polling next November.

The editors of U. S. News report some businessmen who lean heavily on trade with farmers are outspoken in their criticism of the Eisenhower administration. "'I'm for 90 percent of parity for farmers. If they don't make money, we don't make money.' That blunt statement is by Harold Thomas. He runs a farm-machinery business that employs 15 men in Lincoln, Ill. Right now, he says, 'our trouble is that when a farmer takes a load of hogs or cattle to town he lacks a corn planter or a disc of getting what he should for them.' Nobody questions but what farm income is down sharply in nearly every area of the Midwest," says U. S. News. "Account books kept by the better-than-average farmers under the direction of State agricultural colleges reveal how severe the income drops are. In eastern Iowa, where records were kept on 156 farms, net income per farm sagged from $9,303 in 1954, to $2,967 in 1955. These are bigger, more efficient farms than the average. Net income on the average commercial farm in Iowa, according to the estimates by economists at Iowa State College, dropped from $4,720 in 1954, to around $2,000 in 1955—a 58-percent reduction.

"It is this big cut in take-home pay felt by farmers throughout the Midwest, that is cutting down the flow of money from farmers' bank accounts to the merchants in farm communities. Business hummed right along in 1955, as farmers kept spending for machinery, tools, and the supplies that they used to produce. But, when they totted up their records for the year, they got a jolt. Now, with a bearish outlook for farm prices they are cutting back—some because they have to, others because they are afraid to risk high production costs for the return from an uncertain market. To sum it up, farm-income troubles are cutting deep into the six States covered by the survey.

"Although some farm communities seem little affected, in many cases it is found that shrinking farm income is hurting farmers, and merchants, who depend upon farmers' buying power. Most farmers are found to be uneasy about the present—bearish about the future. Farmers are frustrated by their failure to share in the Nation's prosperity." The editors of U. S. News let a Minnesota farmer sum up the case in these words: 'Sometimes at night, I check everything over," he told them. "I've kept my land up, fertilized well, kept improving my cattle, looked after my machinery—done everything I know is right. Then I count the money that is coming in and think: 'Gee-whiz, Joe, you're not very sharp. You ought to be doing better than this. Something's wrong.' Something, definitely is wrong. Few of them, however, know exactly what's to be done about it."

That's what the editors of U. S. News, who visited farmers and people on Main Street in these six Midwest farm States, believe. However, as they say, few of these folks know "exactly what's to be done about it."

Maybe so. That may be true in some parts of the country. But we're sure you people on Main Street know that here at GTA and in the Farmers Union, we are trying to do something about it. We're fighting for better farm prices all the time. Thanks for listening.

Cathedral of the Pines, Rindge, N. H.

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, May 29, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Cathedral of the Pines," written by Norman M. Lobsenz, and published in the Sunday picture magazine, Parade, of May 27, 1956.

The article describes the Cathedral of the Pines in Rindge, N. H., which was established by its founder, Mr. Douglas Sloane, as a memorial to his son, Sanderson Sloane, who was killed in action during World War II. Within the Cathedral of the Pines is located the Altar of the Nation, which has been dedicated to all the war dead of this country. I have introduced a bill, S. 3063, which would recognize the Altar of the Nation as a national shrine.

I believe the article will be of interest not only to Members of Congress, but to the American public as well.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOR ALL AMERICANS ON MEMORIAL DAY: CATHEDRAL OF THE PINES

(By Norman M. Lobsenz)

RINDGE, N. H.—Next Wednesday, rain or shine, more than 25,000 people from all over the United States will make a Memorial Day pilgrimage to a pine-shaded knoll near this small New Hampshire town. There, in America's most unusual place of worship, each in his own way will pay tribute to the country's war dead. Indirectly, they also will be honoring the memory of the young man whose death was responsible for the creation of the Cathedral of the Pines.

His name was Sanderson Sloane. He died 12 years ago, when his bomber crashed in Germany. Before going overseas, Sandy Sloane had chosen this knoll as the site of the home he and his wife planned to build. Originally, giant pines pressed close upon the trail that led to the brow of the hill. Then the great hurricane of 1938 toppled most of them.

But one spring afternoon, Sandy and his father climbed the trail again. With the trees gone, they could look out across the valley and its glistening necklace of lakes to Mt. Monadnock, miles away, and the whole brilliant, rolling Wachusett Divide. It was, Sandy said, "the most beautiful view God ever put together."

After their son's death, Douglas and Sibyl Sloane often visited "Sandy's knoll"; eventually they were moved to build a modest memorial to him. Boughs and rock were cleared away, and a cross of New Hampshire granite erected. But the first small memorial service awakened such a widespread response that the Sloanes felt perhaps the Cathedral of the Pines could become a symbol of the sacrifice made by all—women as well as men—who gave their lives in America's battles. And so it has.

First, an altar of the Nation was built; then a lectern, a pulpit, a baptismal font; and Hilltop House, a retreat for visiting clergymen. Uniquely, each structure is built of stones contributed from all over the world, many from famous personalities.

President Eisenhower, for example, sent 2 stones: 1 from the Normandy beach where United States forces landed on D-Day, and 1 from his Kansas home. General MacArthur's stone comes from Japan's Atsugi airfield, where he landed to occupy that country; Adm. William Halsey sent coral from the Pacific Islands his forces reconquered.

FROM THE PARTHENON—AND HIROSHIMA

There are bits of soil or rock from Jerusalem's Mount Zion; from Lincoln's birthplace; from Valley Forge, Plymouth Rock, the Parthenon in Athens, ground zero at Hiroshima—from historic sites in every American State and virtually every country in the world.

By 1946 a few pastors were asking to hold special services at the Cathedral. The Sloanes, who by now had set up a trust to oversee their efforts, installed benches, a small organ, a public-address system, a parking area.

Soon, on Sundays, and special holy days, various religions were holding services in this outdoor cathedral. All told, 35 different denominations have conducted over 600 ceremonies in the past decade. In addition countless civic, fraternal, patriotic, and youth organizations have held religious and patriotic services there. The Cathedral, incidentally, is maintained entirely by voluntary donations.

Today it is not unusual for as many as 60,000 people to make the pilgrimage to the Cathedral of the Pines on a single weekend. Many come to worship; but even those who come just as tourists leave with a new sense of reverence for things spiritual.

"Outdoor churches," says Douglas Sloane, "exert a subtly different sort of influence. Many who come to the cathedral are nonchurchgoers who are troubled because they cannot find a real faith. For many of them, a few services at the Cathedral of the Pines are a steppingstone to new religious inspriration."

One couple who came merely to sightsee agree.

"My husband and I aren't formally religious," the young wife says. "But we walked through the arches of pines, and heard the delicate organ music, and then suddenly we came to the brow of the hill and saw the cross hanging in what seemed like midair, surrounded only by the sky, and the mountains in the distance. My husband and I looked at each other, and we both had tears in our eyes.

"It was as close to Heaven as we'll ever get in this life."

The Cathedral, says Adm. Chester Nimitz, is "truly a memorial to all those who gave their lives in the service of our country." And by next Memorial Day this may be a literal as well as spiritual fact. New Hampshire's Senator H. STYLES BRIDGES and Representative PERKINS BASS have introduced a resolution in Congress to have the cathedral designated as a national shrine. The legislation is now in committee.

Meanwhile, the Cathedral of the Pines remains a spiritual haven for every American.

The Sorry Story of Pine Ridge

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 29, 1956

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Sorry Story of Pine Ridge," written by Josephine Ripley, and published in the Christian Science Monitor.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SORRY STORY OF PINE RIDGE—AN INTIMATE MESSAGE FROM WASHINGTON

(By Josephine Ripley)

WASHINGTON.—With smoke from the explosions at Pearl Harbor still spiraling into the sky, the War Department in 1941 rushed to locate suitable land for gunnery ranges and other military training purposes.

For an aerial gunnery range, the Department selected a strip of land 45 miles long and 14 miles wide in the middle of the Pine Ridge Indian Reservation in South Dakota.

Living on that territory were 125 Indian families of the Sioux tribe. They were ranchers. They kept cattle, poultry, and raised crops. Some of them lived in substantial homes and had considerable money invested in farm buildings and equipment. Others lived in dilapidated buildings and had little in the way of property.

All received the same 10-day notice to evacuate; all received small compensation for their confiscated property; all suffered losses in livestock and belongings in the ensuing panic.

Some moved in with relatives on other parts of the reservation where there was already hardly enough from the land to support former occupants. Others pitched tents wherever they could find room. Poultry strayed away in the scramble; some fell prey to coyotes, and rattlesnakes were a constant menace.

The story has been told many times to Congress and repeated in recent weeks. For these Indian families as a result of their misfortunes are still in want. They still feel that the Government compensated them inadequately for their possessions. They still feel the Government should make good.

The story of their enforced flight is an almost incredible one, looking back on it. There is no doubt that they were given extremely strong encouragement to move, as one official put it. According to the Indians, they were told that the Japanese were just over the hill ready to shoot them if they didn't get a move on.

One family of 14 moved into a small 1-room log cabin. Only a week after this evacuation, the eldest son was called into the Army. Two months later the second son went into uniform. Five months after this the third eldest son enlisted, and 8 months later the fourth boy went into the Navy.

Mrs. Ellen Janis, here to testify before the House Subcommittee on Indian Affairs, observed: "Six of our boys have served their country. For what? Our home was taken away from us. We are now landless and homeless because we cooperated with the War Department only to be let down."

Jake Herman with his wife and four children pitched a tent on the banks of a creek where he finally built a small log cabin. He killed over 100 rattlers in the vicinity. His eldest son was called into the Army about a year later. The boy was killed in action in Holland. A second son went into the Navy and their youngest boy fought on Heartbreak Ridge in Korea.

These are some of the stories of what happened on a "Heartbreak Ridge" right here in the United States. The Indians were told then that they would get their land back after the war. The site is still being used for aerial gunnery practice, and with the development of jet fighters an even longer strip of land is needed for the swift target sweeps, according to Army authorities.

"Today," Congress has been told by tribal spokesmen, "almost 14 years since the taking, most of our families are homeless; some are destitute."

The Justice Department says that the property was acquired by the Government in full compliance with the law. Compensation was determined by the court, and additional compensation now would establish an undesirable precedent. It would, they claim, open up the prospect of all kinds of new damage suits against the Government.

The Army contends that, as far as it is concerned, all action was taken with legal propriety and the question of what is done for the Indians now is a matter of Federal, not military policy.

The Indian Bureau of the Department of the Interior supports the proposal for a compensatory payment to these Indian families for loss of income while moving and for the cost of this enforced relocation. It does not endorse the proposal for a $13 million rehabilitation program—not because it disapproves such activity, but because the program proposed is not specific or detailed enough in form.

As a result, the bill just reported out by the subcommittee includes only the provision for the $3,500 per family compensation. The rehabilitation program, which would have applied not only to the evacuated Indians, but to the whole Pine Ridge Indian population, was dropped.

It was thought by the subcommittee that the questions raised by the broader program might block the whole measure and that it would be better to have a small amount for the distressed families than nothing at all.

The bill now comes before the full committee. This is the third try for aid in this special case, and there is hope it will not fail.

Highway Safety

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, May 29, 1956

Mr. NEUBERGER. Mr. President, if one desires to learn about the problems of highway safety, there is no better source of information than bus and truck drivers. A letter I received recently from an Oregon bus driver illustrates exactly what I mean. The writer presents several acute problems and offers specific remedies.

In writing to this driver, I commended him for his constructive approach to the safety problem, his forthrightness, and his sense of responsibility toward the public, reflected by his letter.

Manufacturers, bus companies, and trucking firms, which should be equally dedicated to the problem of improving highway safety, would be well advised to heed the counsel of these drivers.

I ask unanimous consent, Mr. President, to have my constituent's letter reprinted in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

Senator RICHARD L. NEUBERGER,
Senate Office Building,
Washington, D. C.

DEAR SIR: I wish to call to your attention a situation I feel should be rectified.

I am a bus driver employed by the Pacific Greyhound Lines, and have driven buses for a period of 17 years and also trucks for a period of 3 years.

As you are probably aware the United States Interstate Commerce Commission has jurisdiction over buses and trucks operated in interstate commerce. There seems to me to be a lack of interest in this body pertaining to the safety of operation, or else the ICC does not have sufficient authority to enforce its rules.

I do not believe any bus or truck under ICC jurisdiction should be permitted to operate under conditions of ice or snow unless it is equipped with a modern sanding device. This should be particularly true of a bus hauling passengers for hire.

Greyhound has had two accidents in this area this past winter where a bus has gone out of control due to icy pavement. In both cases the bus turned over and resulted in serious injuries to passengers. Both of these accidents could have been prevented had the bus been equipped with a sanding device.

I have brought this matter up in our safety meetings and the only valid argument the company has regarding the installation of sanders is that they cost too much. If the various companies operating in interstate commerce refuse to install necessary safety devices voluntarily then I think they should be compelled by law to do so. This can be done by granting the ICC similar authority that Civil Aeronautics Authority has over the aviation industry.

I would like to call to your attention 1 accident Pacific Greyhound has had in which damage claims of over $200,000 were paid. A like sum would have purchased a lot of sanders.

Also I believe all heavy trucks and buses should have two separate and independent braking systems. In the course of 20 years of driving I have had 3 cases where the brakes on a bus have failed. While the modern airbrake is very reliable, it is like anything mechanical, subject to failure. There should be a separate and independent braking system in event of failure of airbrakes. I would like to suggest a hydraulic brake with the fluid under pressure from an engine driven pump or an electric brake through the use of electric solenoids. While these types of brakes might be severe at least the vehicle would be brought to a safe stop. The average hand or emergency brake on a truck or a bus is practically useless and cannot be depended upon to stop the vehicle.

I would like to remind you of a recent accident in San Francisco where the airbrakes on a truck failed and the truck plunged down a hill killing several people. A secondary braking system would have prevented this.

With traffic conditions as they are nowadays every possible safety device should be employed. I would also like to call to your attention the deliberate violation of ICC rule No. 192.6 (schedules to conform to speed limits) by the various bus companies.

If you have ever followed a Greyhound bus or rode one you are probably aware that it was traveling faster than the posted speed limits (55 miles per hour for buses in Oregon and California). This is particularly true of our express buses. When this is called to the attention of our company they tell us competition demands these fast schedules. I don't believe competition should be used as an excuse to deliberately violate the law. With traffic conditions as they now exist it is impossible to maintain these schedules and still obey the speed laws. While the company periodically puts out bulletins that we drive within the speed limits, they have various ways and means to see that we maintain these schedules.

I would like to suggest that any time a truck or bus driver receives a speeding ticket that a report be made to the ICC and give the ICC power to fine the company hiring the driver a like amount. I believe if such action be taken that it wouldn't be very long until we had some realistic schedules. This can be done as I would like to point out that in case of an accident in which the company is deemed at fault both the driver and the company are cited to appear in court and in case of payment of a claim it is always the company that pays the claim and not the driver.

I would appreciate your serious consideration of this matter.

Claude L. Draper

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 29, 1956

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Hard Job To Fill," from the Denver Post for May 6, 1956. This editorial pays a well-deserved tribute to the Honorable Claude L. Draper, whose long, able, and honorable service on the Federal Power Commission is nearing an end, and it properly emphasizes the urgent need for the appointment of a competent successor who, like Commissioner Draper, will be consumer or public minded. Consumers across the country will be hoping that the White House will keep this good editorial advice in mind in selecting the new Commissioner.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HARD JOBS TO FILL

Claude L. Draper, of Wyoming, is retiring next month after a long and distinguished career as a member of the Federal Power Commission. He has asked that he not be considered for reappointment by the President.

Mr. Draper is the last of the thoroughly experienced members of the FPC, the agency which is supposed to protect the public interest in matters relating to the regulation of the electric and natural gas businesses in interstate commerce. He will be sorely missed.

During his service, Mr. Draper has seen the Commission undergo philosophical changes. Zeal to provide the lowest possible rates for consumers has been replaced in recent years by a point of view more favorable to the companies that come under FPC jurisdiction.

In the gas field in particular this has resulted in numerous actions raising gas charges to consumers by hundreds of millions of dollars. Illustrative of this new attitude of the Commission was the decision of a few months ago in the Panhandle Eastern Pipe Line Co. case, in which the FPC abandoned traditional regulatory methods and sought to give the company a "fair field price" for gas without even waiting for the legal authorization for a field price as contained in the Harris-Fulbright bill.

Commissioner Draper was a dissenter in the Panhandle Eastern case and objected to the abandonment of standard regulatory methods. We hope the President in selecting a successor for Mr. Draper will take cognizance of the fact that the Commission is now well packed with business-minded members. It would seem appropriate to have at least one consumer-minded member on a Commission which is supported to determine the public interest.

We also believe the new Commissioner should be from the Rocky Mountain region. It has been customary to have geographical representation on the Commission. The four remaining Commissioners are from

Connecticut, Louisiana, Missouri, and Washington State.

Unless Mr. Draper is succeeded by an appointee from the Mountain States this will be the only important consuming and producing area without a representative on FPC.

The Recently Passed Agricultural Bill

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, May 29, 1956

Mr. NEUBERGER. Mr. President, in the Pendleton East Oregonian of May 24, 1956, I read a news story by the paper's Heppner correspondent, reporting a grass roots farm meeting, addressed by Floyd Root and Kenneth Fridley of the Oregon Wheat League. This news story makes reference to so many significant events, from the latest model farm bill to the export market for wheat being cultivated in Japan, that it impressed me as being of more than passing interest.

Mr. President, I ask unanimous consent to have this news story printed in the Appendix of the RECORD.

There being no objection, the news story was ordered to be printed in the RECORD, as follows:

NEW FARM BILL CRITICIZED BY WHEATGROWERS' VEEP

HEPPNER.—The new agricultural bill which passed Friday in the United States Senate does not contain substantial benefits to wheat farmers and the soil bank would be of little financial help to Pacific Northwest wheat growers, according to Floyd Root, vice president of the National Association of Wheat Growers and Sherman County wheat rancher, who spoke at the anual spring meeting of the Morrow County Wheat Growers association Tuesday night at the Lexington Grange hall.

Root, who has been in Washington, D. C., since January representing the State and national wheatgrowers, stated that Ezra Benson, Secretary of Agriculture, has announced that wheat production should be cut from the present 55 million acres to from 12½ to 15 million acres.

Pendleton should become the soil and water research center for the Pacific Northwest with Federal appropriations of between $75,000 and $100,000 allocated for soil and water research in Oregon for the next fiscal year, Kenneth Fridley, president of the OWGL, Wasco, reported. In addition the funds should make available more pilot farms, similar to those functioning in Umatilla county, throughout the State and a soils and water research man at the Moro Experiment station.

Fridley announced that the league is working on improved facilities for unloading barges at wheat terminals in an effort to keep barge rates down.

The educational program for wheat disposal in Japan handled solely by the OWGL was discussed by Fridley who pointed out that if the program was a success the League may receive other similar responsibilities from funds appropriated by Federal law 480. Richard Baum, executive secretary and Joe Spiruta, market analyst of the League, are now in Japan working on the wheat disposal program.

Oscar Peterson, Ione, was selected by the Morrow County group as a candidate for the Oregon wheat commission vacancy effective July 1 when the term of Marion Weatherford, Arlington, expires.

Appointment will be made by the Governor from a list of county selections.

Committee reports were given by Kenneth Peck, Lexington, chairman of wheat disposal and market development, who announced that action was being taken by the League to alleviate a boxcar shortage at harvest time which is expected to be worse this year than ever before.

The Crop Insurance program will be returned to local agricultural and stabilization committee offices in counties requesting the change, Max Barclay, Lexington, Federal agricultural programs chairman, reported. Private insurance companies were delegated to handle the insurance in 1953.

Approval of the domestic parity plan for wheat which would allow 100 percent subsidy for wheat used for food and the remainder competing in the open market, was approved by the county group.

Application for the distribution of two new wheats, Omar and Columbia, will be taken until June 30 at the county agent's office, Milton Morgan, Ione, production and land use committee, reported.

Elderly, Perhaps, but Not Old

EXTENSION OF REMARKS
OF
HON. FREDERICK G. PAYNE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Tuesday, May 29, 1956

Mr. PAYNE. Mr. President, on Friday, May 25, there appeared a very excellent editorial, entitled "Elderly, Perhaps, but Not Old," in the Bangor (Maine) Daily News. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ELDERLY, PERHAPS, BUT NOT OLD

"The skills, wisdom, and experience of our older citizens are traits which our country needs fully as much as the energy and boldness of youth."

These recent words by President Eisenhower are important for two reasons:

Because they are true. And because their truth is still not fully recognized.

The President made the observation in a letter to Congressman HOSMER, of California, sponsor of various measures designed to help elderly folks find employment and otherwise improve their lot.

Older people should not be relegated to the rocking chair while they are still able and desirous of doing productive work. Yet many find themselves sidelined and unable to find new jobs, even part-time ones.

One of the principal handicaps faced by job-hunting elderly people is the habit of arbitrarily judging a person to be old on the basis of his years of life. The age of 60, for example, is very commonly considered the milestone at which a person suddenly becomes old. Yet many people are still young at 80, some even at 90.

Senator GREEN, of Rhode Island, is active on Capitol Hill at 88. Senator GEORGE, of Georgia, at 78, is about to quit the Senate and take on a new task as United States Ambassador to NATO. Similar examples can be found in all fields of endeavor. Doctors, lawyers, farmers, old salts on the seacoast, and businessmen, in considerable numbers, are alert and active in their seventies and eighties. Why, then, think of the rank-and-file of elderly people as old and therefore not useful?

A vast reservoir of skills, wisdom, and experience lies idle and stagnating because of a national attitude. Once we realize that people live longer these days and have additional years of usefulness, ways will be found to tap the reservoir. And this will benefit both the elderly people and the Nation.

Low Blows at High Dams

EXTENSION OF REMARKS
OF
HON. BARRY M. GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 29, 1956

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting article entitled "Low Blows at High Dams," written by Raymond Moley and published in the May 21, 1956, issue of Newsweek.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOW BLOWS AT HIGH DAMS

(By Raymond Moley)

In August 1951 I presented in this space my first article about the Hells Canyon controversy. I have commented on the subject from time to time since. Meanwhile, Congress has repeatedly refused to authorize the Federal dam proposed by public-power zealots; the Eisenhower administration has withdrawn its objections to the alternative plan of the Idaho Power Co.; and the Federal Power Commission has decided against the Federal dam and has given Idaho Power license to proceed. For nearly 6 months the company has been at work in the canyon. Nevertheless, Senator MORSE and others are pressing for a bill which would upset the commission's decision and would authorize the Federal dam.

Messrs. Truman, Stevenson, Kefauver, and Harriman insist upon making this a major issue in the 1956 campaign. Therefore, in various versions they recklessly charge (a) that President Eisenhower has given away something, (b) that the Idaho Power dams will foreclose the proper developemnt of the Snake River, (c) that the Idaho Power plan will produce inadequate power at a high price.

I am foreclosed by the time and patience of readers from matching words and statistics with the torrential effusions of Senators like MORSE in the CONGRESSIONAL RECORD. For details I refer any inquiring reader to an analysis of the issue published by the American Enterprise Association, 1912 14th Street NW., Washington, D. C.

Here, however, are factual answers to the main charges:

1. Mr. Eisenhower gave away nothing. His Interior Department merely abandoned the dog-in-the-manger policy of blocking a judicial hearing of the matter by the body properly constituted for such a purpose, the Federal Power Commission. The Commissioner's examiner began hearings in July 1953 and continued for an entire year. Then the examiner spent nearly another year considering the case and rendered his opinion favorable to the application of Idaho Power a year ago. The Commission itself pondered the case for 3 months more, and rendered its decision in August 1955.

2. The three dams of the Idaho Power Co. will not be midgets. The lowest is twice as high as Bonneville. The next is higher than Niagara Falls. The third, 107 feet higher than the Capitol dome in Washington. The Idaho Power dams will not foreclose the last good hydro site in the United States or even on the Snake River. The authoritative plan of the Army engineers for the Columbia Basin shows 3 more good sites downstream from Hells Canyon and 3 more authorized sites still farther down. It was the conclusion of the FPC examiner and the Commission that the Idaho Power dams, with smaller dams on the two main tributaries of the Snake, would so regulate the flow of the entire river as to provide just as much power and flood control at all the dams, built and unbuilt, as the Federal high dam.

3. The FPC found that the Idaho Power dams would produce directly 783,400 kilowatts initially, and that provision could be made for 391,700 more. The high Federal dam would produce 800,000 initially and 100,000 additional. The absurdity in the argument about cost per kilowatt is that the Idaho Power dams would cost one-third of the high Federal dam. Unless there were a hidden subsidy by the Government in the latter (which there no doubt would be), the cost per kilowatt should be much less.

The cost of the high Federal dam was estimated by the examiner at about $388.6 million, and the Idaho Power dams about $191 million. The Nation's taxpayers would pay the Federal dam figure. Private investors would pay for the Idaho Power dams.

The high Federal dam would pay back, in lieu of taxes, $97 million over a period of 50 years. Idaho Power would pay in actual cash to the various taxing units of government, at present rates, $490 million in 50 years. The high Federal dam would take much longer to build.

This issue, blown up by false statements and inferences, is a pretty poor stick with which to beat the President.

Cleveland Cap Screw Company's Boltmaker Is World's Largest Cold-Forging Machine

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. VANIK. Mr. Speaker, I want to take this opportunity to call the attention of Congress to the installation of the world's largest cold-forging machine, a boltmaker, now being built for the Cleveland Cap Screw Co. in my district.

The following article in the Garfield Heights Leader on May 24, 1956, fully describes this modern equipment:

CLEVELAND CAP SCREW CO.'S BOLTMAKER IS WORLD'S LARGEST COLD-FORGING MACHINE

The world's largest boltmaker, the biggest cold-forging machine ever designed, is being built for the Cleveland Cap Screw Co.

A 196-ton monster standing twice as high as a man, the boltmaker will draw raw stock 1 7/16-inch hot rolled steel rod, down to size and produce giant cap screws 1¼ inches in diameter, 10 inches long, at rates up to 40 a minute. The screws will weigh about 5 pounds each.

Cleveland Cap, which developed the Kaufman double extrusion process, frequently used in the operation of the boltmaker, said the big cap screws will be the largest product ever made automatically by the cold-forging method.

The largest boltmaker now is a ¾ inch machine, weighing only about one-fourth as much as the new giant. The big machine will consume a ton of steel every 10 minutes.

Delivery of the mammoth boltmaker, whose length exclusive of feed parts, is 22 feet, is expected before the end of the year. It will be housed in Cleveland Cap's $4,500,000 showplace plant now being pushed to completion in southeast Cleveland.

While the machine is rated to make cap screws 1¼ inches in diameter, it may be tooled up to produce screws of even larger diameters, Cleveland Cap said. The company is a specialist in the manufacture of cap screws in the big sizes.

The new boltmaker—to cost over $400,000—will permit Cleveland Cap to turn out large finished sizes of better quality than by the hot-heading method now used on screws above ¾ of an inch in diameter.

The new machine, the company said, will probably be used in the cold-forging—for the first time—of many large-size special products, in addition to fasteners.

Drawing the steel rod to size, the big boltmaker cuts off the stock in proper lengths, extrudes the blank, heads, trims the head, points the end and rolls the threads on—all automatically.

It marks the first time since 1940 that increased size capacity has been designed.

Boltmakers, which are made only by National Machinery Co., date but from 1935. Between then and 1940, the following sizes were designed and built—3/16 inch, ¼, 5/16, ⅜, ½, ⅝, and ¾.

And now, after 16 years, a jump to a 1¼-inch boltmaker. The jump has been a tremendous one, imposing—as is always true in a first of anything—many design and construction problems. The machine has 1,800 parts. There is no precedent for such a machine as this.

In operation, the boltmaker will be tended by three men at as many control positions—one at the wire-drawing end, where 2,800-pound coils of 1 7/16-inch steel rod will be fed, a second at the conventional mid-machine post, and the third at the thread-rolling end.

The machine will have specially designed electronic variable-speed controls, the first ever to be installed on a boltmaker. The machine will have a special 150-horsepower electric motor and its own automatic lubricating and cutting-oil systems.

The Power of Memorial Day

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mrs. KEE. Mr. Speaker, as we celebrate Memorial Day tomorrow and honor those brave men who fought and died to save our country and our liberties, let us not forget to honor also those equally brave men who fought and lived—many of whom will bear throughout their lives the scars of battle. In many cases we can do nothing more for those who died, except to decorate their graves and remember them with grateful hearts. But for the living we can do much, and perhaps it is by what we do for them that we can best honor those who died.

Mr. Speaker, I should like to include in the RECORD the following article by Dr. Norman Vincent Peale entitled "The Power of Memorial Day," which expresses very beautifully our debt to all of those who have fought for our country. This article appeared in the Pineville (W. Va.) Independent-Herald for Friday, May 25, 1956, and is as follows:

THE POWER OF MEMORIAL DAY
(By Dr. Norman Vincent Peale)

I had the privilege of growing up in small Ohio communities in the early part of this century, and one of my most inspirational memories centers around Memorial Day and the old soldiers of the Civil War.

To me, Memorial Day was one of the most moving of all the national holidays, I was stirred by the speeches and martial music from the bandstand or cemetery on what we called Decoration Day. There was something about the newness of life that the spring had brought; soft sunshine falling on the fresh green grass of early summer, the misty hills in the distance, the sound of stirring national songs, and above all, the softly flapping flag in the gentle breeze as the speaker told us of our country, the deep devotion of its heroes, and recounted once more the stirring episodes of our heroic past.

And many a lazy summer afternoon, I sat on the coping around the old courthouse listening to the veterans of the Civil War tell of their experiences in the epic struggle between the States. A boy's imagination quickly sent him off behind long columns of blue or gray, and to him, such names as Antietam, the Wilderness, Shiloh, and Gettysburg became very real and meaningful.

Those old soldiers used to talk gratefully of Lincoln's insistence that those who had borne the heat of the battle and the burden of the struggle, the widow and the orphan, were to be given not charity, but their rightful due as the dependents of those brave men who had fought to preserve liberty and to keep the Union intact. It was regarded as a sacred duty of the Nation, and the Nation kept faith with its veterans.

In those days, as now, were many who had been disabled by the struggle. Their ability to compete in life had been reduced by wounds suffered in battle. Even as a boy I remember hearing how it seemed they were thought of only on such days as Memorial Day, when orators, fervent in their patriotism, remembered, if only for a day, the long, continuing sacrifice made not by those who had died in battle, but by the disabled who were to live for many years following the great struggle.

The heroes of World War I and World War II and the Korean war are, of course, men who, with no concern for themselves, gave their lives that freedom might live. We can never do them adequate honor. And, we must never forget them. They died in their young life, forsaking the opportunities of the years that the rest of us might live and develop our highest hopes and dreams.

However, there are other living heroes who deprived themselves of either physical, emotional, or mental health for us and for their fellow countrymen. It would be as wrong for us to neglect or forget them as their buddies who today sleep on some Pacific Island or in a European cemetery. A hero dead or a hero maimed and disabled are both due our equal gratitude and our unceasing devotion.

We must never forget that the most effective way of honoring those who have died is to remember the living disabled, that their lives may be rich and full. They are a great asset to our country as the living embodiment of devotion to freedom. A country is recreant indeed which does not everlastingly keep alive grateful appreciation to those who

suffered disability to perpetuate everything that we Americans hold dear.

There could be no better time than on Memorial Day to resolve that we shall gratefully support the honored men and women who have suffered disability from the wars of the United States.

Government Programs and Agricultural Production

EXTENSION OF REMARKS
OF

HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1956

Mr. ADAIR. Mr. Speaker, Earl L. Butz, Assistant Secretary of Agriculture, recently delivered an address at Purdue University, Lafayette, Ind., before the Sixth National Institute of Animal Agriculture. Because of the importance of what he said and under leave to extend my remarks, I include a copy of that address:

GOVERNMENT PROGRAMS AND AGRICULTURAL PRODUCTION

(Address by Earl L. Butz, Assistant Secretary of Agriculture, U. S. Department of Agriculture, before Sixth National Institute of Animal Agriculture, Purdue University, Lafayette, Ind., April 19, 1956)

This is a land of abundance. All about us in this great midwestern breadbasket, we see evidence of the productive strength of American agriculture.

It's good to have a land of plenty. But in the case of some of our farm products, we seem to have too much plenty. We have abundance over and beyond all reasonable current needs. Indeed, abundance has become one of our major problems in agriculture.

Yet it must be said that, burdensome and price depressing as our farm surplus may be, it is far more pleasant to wrestle with the problem of surplus than with the problem of not enough. Tonight over one-half of the world's population will go to bed undernourished, many of them downright hungry. How fortunate we are that in the United States we have an agriculture so productive and so versatile that no American need go to bed hungry or need even fear hunger in the foreseeable future. For this all America must be eternally grateful.

Although our problems of farm surplus are perplexing and complex, they are far more welcome than the problems of chronic shortage, undernourishment, hunger, and starvation.

From our early Colonial history to the present moment, Government has encouraged increased agricultural production. This has been true of both Federal and State Governments. This encouragement has ranged all the way from free seeds to public supported research and to price guaranties at incentive levels.

From time to time Government has attempted to discourage farm production through various types of acreage and marketing controls. At the very time such attempts were being made to discourage production on the one hand, our long-time efforts to increase output on the other hand continued unabated—often at an accelerated rate. Indeed, many of the schemes to curtail output have transferred additional quick liquid resources into agriculture, and have themselves resulted in increased output both in the short-run and in the long-run. In this respect they were self-defeating.

RESEARCH AND EDUCATION INCREASE OUTPUT

The United States Department of Agriculture was created in 1862, the same year in which President Abraham Lincoln signed the Morrill Act establishing the land-grant colleges. A primary purpose of both of these actions was to increase the production of food and fiber. In the words of an early Secretary of Agriculture, their job was "to make 2 blades of grass grow where 1 grew before." That continues to be a primary goal of both USDA and the State agricultural-experiment stations.

We must ever strive, through research and education, to increase production per unit of input, to reduce costs, to expand efficiency, and through proper pricing and effective promotion, to translate these benefits into expanded markets.

On the whole, the impact of these governmental programs on agriculture has been good. American agriculture is now feeding our growing population on science and technology.

We have increased our total agricultural output in the decade and one-half since the beginning of World War II by some 35 percent, on roughly the same acres we had previously, and with substantially fewer workers.

Production per man-hour in agriculture has more than doubled in the last 2 decades. A part of this increase in efficiency came from the substitution of mechanical power for horses, and the release of substantial acreages for net production for sale. The bulk of the expansion, however, and the increase in efficiency resulted from the rapid adoption of new technological and scientific developments. These took the form of new varieties, disease control, antibiotics, mechanization, plant food practices, nutritive developments, and a whole host of other advances.

An important effect of these developments was to make acres of land, in and of themselves, a relatively less important factor of production year after year. Indeed, in recent years it has been possible increasingly to substitute capital for labor and for land.

This has had two results. In the first place, guaranteed unit prices at incentive levels called forth greater production responses than had been indicated by historical production records. In the second place, efforts to curb production by acreage limitation had less than the anticipated effect because acres in themselves were no longer the most important single factor of production. Indeed, under the new technologies, when cash payments were transferred to agriculture in return for acreage limitation on specific crops, those cash transfers were often used to increase inputs of science and technology on the remaining acres, with the result that total production increased even in the short-run. In the long-run, it almost always increased.

PRICE SUPPORTS AND PRODUCTION CONTROLS

Price fixing, particularly at minimum levels, is not new in America. The principle is as old as the colonies themselves; only the form and the extent are new. The Virginia Colony, as early as the first half of the 1600's, experienced such English mercantilistic practices as tariffs and rebates, subsidies, price regulation, and in the case of tobacco, even production control.

We learned under the OPA of World War II that whenever we set the price of any commodity very far below its competitive level, we must also put controls on the demand side of the market. The result is rationing of goods to consumers. By the same token, whenever we fix the price too high, we must control on the supply side of the market. The result is subsidy to producers. This is inevitable.

Artificially high prices and rigid controls are the Siamese twins of agricultural policy. They cannot be separated, except in time of war, when an insatiable demand sops up surpluses that accumulate between war periods.

Unfortunately, our war-free intervals of the last 20 years have been so brief that many of our people have not learned this important lesson very well. Even in the five years since the Korean war, the Commodity Credit Corporation has absorbed some $9 billion of this problem and has partially camouflaged the lesson that otherwise would have been taught.

CONTROLS GO WITH HIGH SUPPORTS

High support prices develop "surpluses" on two counts: they discourage consumption and they encourage increased production. Output is then curtailed in an effort to "balance" supply with demand. Controls become part of an intricate system to allocate production quotas to individual farmers on designated crops and livestock. More rigid marketing quotas follow when acreage allotments fail to do the job. When this situation occurs, there can be no voluntary compliance. Everything must be compulsory. Witness marketing quotas today in connection with tobacco, wheat, cotton, rice, and peanuts. These controls are not mere "production adjustments." They have teeth in them!

Effective curbs on production raise a myriad of questions. Shall efficient farmers be held back so as to provide a market at higher prices for the less efficient? Shall excess resources be retained in agriculture, when ample opportunity for their effective use is available outside agriculture? Shall top grade land be held idle while second grade land is given a production base? Can a central planning agency in Government, with its broad and uniform directives, get more efficient use of farm resources than would be true if well informed individual farmers made their own decisions? How do you provide for desirable geographic shifts in production areas for a particular crop? How can a beginning farmer acquire his base without taking over from Dad, or perhaps acquiring it with his bride, herself a daughter of a base owner?

What can be done to prevent supported prices from being capitalized into the value of the land itself? In many tobacco producing areas today, for example, 1 acre of tobacco base sells from $1,500 to $2,000. In this case, the higher land price is a cost to the new operator rather than a gain.

PRICE FIXING HINDERS EFFICIENT USE OF RESOURCES

If rigid price supports at incentive levels persist over any length of time, the resulting rigidity in relative prices will bring lowered effectiveness in the use of our resources. Technology is always changing in a dynamic economy, but at different rates for different products. Such changes cannot be predicted accurately.

Fixed prices, whether ceiling prices or support prices, are essentially backward looking in their operation. Price levels are nearly always fixed with reference to a historical base. Hence, it is difficult, if not impossible, to maintain the flexibility in fixed prices necessary to permit desirable adjustments to changing technology and shifting demands. This nearly always means less efficient utilization of resources than would occur under a system with less governmental control.

If price manipulations and production controls are of relatively short duration, the resulting maluse of our resources will not be serious. However, if they are maintained for more than a couple of years, they must be constantly restudied and readjusted so as to recognize changes in technology and demand. Otherwise, general production patterns will

develop, or will be maintained, which will not best utilize the real capabilities of our economy to produce goods and services most needed and desired by consumers.

NO SELF-CORRECTING ERRORS UNDER PRICE FIXING

When some three million commercial farmers in the United States plan their production and marketing programs on the basis of their individual price forecasts, some make wise decisions and some do not. But these errors tend to be compensating. The bulk of them make approximately the right decision, in line with what consumers desire most.

Aggregate errors in production judgments tend to be self-correcting, as economic ratios change and dictate such corrections. If the price of hogs is high relative to corn, for example, farmers produce more hogs. As hog production and marketings increase, the ratio between hog and corn prices narrows, inducing farmers to shift to other kinds of livestock.

If prices of hogs and corn are effectively fixed by a governmental agency, the farmer must try to forecast changes in Government edicts affecting relative prices of the two commodities, rather than to forecast economic changes in consumer demand and cost relationships. The former is much more difficult to predict than the latter.

At the time a price is fixed, it may be at such a level as to call for the proper amount of production. But economic relationships don't stay put. Administrative rulings are not as flexible as the marketplace. The price administrator moves slowly, and discovers belatedly that the support level is wrong. It takes still longer to admit the error and correct it.

LIVESTOCK IS ADVERSELY AFFECTED

The way in which historical rigidities of this kind adversely affect economic production and consumption may be illustrated by comparing animal products with our major crops. In any realistic comparison of productivity per man-hour in crops and livestock, it is apparent that crops have forged steadily ahead of livestock. Crop production per man-hour of farm labor has more than doubled in the last two decades, while livestock production per man-hour of farm labor has increased only about 70 percent. Moreover, there are substantial differences within commodities which are particularly significant. Because of widespread mechanization, among other reasons, wheat, feed grains, and cotton, among the crops, and broiler production among livestock, have shown the greatest increase in productivity. Forage-consuming livestock have tended to lag behind.

It is at once apparent that commodities which have experienced the greatest expansion in productive efficiency are in best position to meet competitive price pressures. Thus if Government, through rigid price supporting techniques on a historical base, attempts to maintain historical price ratios between livestock and crops, we soon discover that the competitive position of animal products is adversely affected and of crops favorably affected.

This is a potent reason why the Government now either owns or has loans on over 1 billion bushels of wheat, over 1 billion bushels of corn, and nearly 14 million bales of cotton. Government price manipulation has placed a premium on excessive production of such commodities because the rigid support mechanism did not take into account relative changes which had occurred in productive efficiency and demand. By the same token, in the case of feed grains and to the lesser extent in the case of wheat, these products were channeled into Government warehouses rather than into animal products primarily because of the substantial lag in the adjustment of price ratios inherent in governmental price fixing.

About three-fourths of the total CCC investment of some $9 billion centers in 3 commodities—cotton, wheat, and corn. In the case of each of these commodities, we have experienced phenomenal increases in production per man-hour in the last couple of decades. A price-support system at incentive levels, based on price relationships four decades old, even with the modest adjustment provided by modernized parity, is unable to cope effectively with relative changes among commodities in cost relationships and demand conditions that occur with amazing rapidity.

ACREAGE CONTROLS MERELY SHIFT THE PROBLEM

Stringent acreage controls on cotton and wheat—our two crops in most chronic surplus—have not brought the surplus situation under control. Indeed, in 1955 our total stocks in both cotton and wheat have increased, although cotton acreage had been reduced from 25.2 million acres in 1953 to 17.5 million acres in 1955, and wheat had been reduced from 78.8 million acres in 1953 to 58 million acres in 1955.

But more than that, the acres taken out of cotton and wheat, in the main, did not remain idle. They were shifted to other crops, and entered into competition with other long-established production areas. In the main, these acres went either into grass or feed grains. This shift accounted in large part for the increase in total feed-grain production, and contributed substantially to the surplus of corn now in Government hands. The resultant low price of corn and feed grains no doubt encouraged added livestock production, which helped to bring on last winter's low prices for hogs and feed cattle.

This illustration of how the cotton and wheat problems were shifted, in part at least, to feed grains and thence to hog producers clear outside the Cotton and Wheat Belts, demonstrates the interlocking nature of American agriculture. It is difficult, if not impossible, to impose an artificial adjustment on one sector of American agriculture without its ultimate impact showing up elsewhere in completely unexpected places.

There are other important and undesirable consequences of this system of uneconomic price manipulation which we should note. It stimulated excess production abroad as well as at home. It encouraged substitute products to rob our markets both in this country and in other lands. It helped destroy our export outlets, as expanded production abroad robbed us of traditional markets. It even attracted foreign production to our shores to compete with domestic output. These things together brought upon our farmers the most stringent of production and marketing controls in the history of American agriculture.

These controls are unpalatable to us in Government, just as they are to the men who operate our farms and our marketing institutions. They are the undesirable product of an uneconomic system of price manipulation.

These irritating and uneconomic controls are the inevitable aftermath of a price-support system conceived in short-run politics. They portray the futility of seeking solution in expediency rather than in integrity.

Producers of our basic crops have been cut back on production quotas to the point that many of them are nearly forced out of business.

Midwestern corngrowers, if they were to comply with their acreage allotments in 1956, would in many cases find it difficult to have sufficient volume to operate efficiently. In 1955, for example, only about 40 percent of the corn grown in commercial areas was within acreage allotments and was therefore eligible for price support. With the corn carryover in excess of 1 billion bushels, existing law has forced a further cut of 15 percent in acreage allotments for 1956. With so unattractive a prospect, compliance in 1956 probably will be low.

Most Corn Belt farmers have voted with their corn planters that they do not want acreage allotments for their corn crop. They foresee the futility of pursuing further a price support and control program which would lead them ever closer to forced liquidation.

On the other hand, producers of other basic crops with compulsory controls, as is true of cotton, tobacco, wheat, and rice, have so small an allotment that many of them find it difficult to meet operating and living costs with production so curtailed.

A cotton farmer with a 3-acre allotment, a tobacco farmer with his 1-acre allotment, or a wheat farmer with an allotment only 60 percent of what he used to grow, needs something besides 90 percent of parity. One hundred percent of parity would not solve his problem. There isn't much that any kind of price-support program can do for him. His crying need is for an opportunity to expand his production.

When a commodity gets itself into the fix of producing for the Government rather than producing for a growing market, it almost inevitably finds a ceiling placed on opportunity.

Burley tobacco provides an excellent illustration of where you ultimately get with production controls. The Congress has established five-tenths acre as a minimum allotment for any individual burley tobacco farm. When acreage reductions were called for, the cut fell most heavily on larger farms. No farm is reduced below five-tenths acre.

TOWARD A NATION OF PEASANT FARMERS

But it is impossible to make any kind of decent living for self and family on five-tenths acre of tobacco. Indeed, it is very difficult even to be an efficient producer on an allotment that size.

Yet last year, of a total of 317,000 burley tobacco farms in the United States, more than 60 percent of them were at the minimum level.

This means that your Department of Agriculture is now in the business of rationing poverty among burley tobacco producers.

The same trend is taking place, although to a less marked extent, among flue-cured tobacco producers in the Southeast. Interestingly enough, just in the last couple of years, the world's largest market for flue-cured tobacco moved from Wilson, N. C., to Salisbury, Southern Rhodesia. We have no control over Southern Rhodesia producers, who are moving into the European markets our farmers once supplied. And while this takes place, American farmers are being severely curtailed by Government in their opportunity to exercise their God-given right of initiative, imagination, and production in a healthy atmosphere of economic freedom.

There is no Government program that can provide a decent living for a family with a cotton allotment of 4 acres, a tobacco allotment of less than 1 acre, a wheat allotment so small that necessary equipment can't be used efficiently, or a corn allotment cut down to the size that the rigid price-support program would impose upon your midwestern farmers.

GOVERNMENT CONTROLS ARE BACKWARD LOOKING

Few if any agricultural commodity groups have ever expanded after accepting the favor of Government high-price supports, and the necessary production and marketing controls which follow. On the contrary, the production of many price-supported commodities has shrunk in recent years. When the benevolent hand of Government is called upon to control prices and direct the flow of goods, opportunity to produce and market is usually rationed among producers. The farmers are limited to a percentage of some historic base of what they have produced in the past.

Government production and marketing controls are essentially backward looking—not forward looking. Under these circumstances, producers with above average managerial capacity and ambition are severely limited in what they can do. They suffer, consumers suffer, and all America suffers.

HORSESENSE IN THE HOG LOT

The method in which farmers make their own adjustments is clearly illustrated with what is happening in the hog production and marketing situation. Hogs have been in the political news in recent months. Last winter there was much politically inspired pressure for the Government to place a price floor under live hogs. Some groups pressed for a price floor of $20, others $18, and still others $15. There was no question that something needed to be done to improve the hog situation. The question revolved around the kind of program that should be undertaken.

The Government chose the route that would bring temporary relief and at the same time work toward sound long-time solution.

It participated actively in the extensive pork promotional campaign. This paid off. In recent months our people have been eating pork at the rate of nearly 80 pounds per person per year. This compares with 66 pounds in 1955, 60 pounds in 1954, and 56 pounds in the 5 years before the war.

We purchased more than 197 million pounds of pork and lard since mid-November. These items are in full distribution to our school lunch program in sufficient quantity to provide an average of three meals of pork per week. Distribution is also underway to institutions and to needy persons here at home.

In excess of 100 million pounds of lard have been sold to foreign countries for foreign currency. We are pressing for still more such sales. Commercial export sales of lard are running about 100 million pounds ahead of last year.

As you know, hog prices have been fluctuating at a level of about $4 above the January low, and have shown continued strength.

I think you will be interested to know that the average farm price of all hogs was 90 cents per hundredweight higher during the first 3 years of the Eisenhower administration than it was during the last 3 years of the Truman administration. And there was not a Korean war during the Eisenhower administration to boost high prices either.

Last winter and spring we received much mail and many telegrams from hog farmers, farm organization leaders, and other people interested in agriculture urging us not to place a price floor under live hogs. These people were aware that any such action would result in production and marketing controls that would be contrary to the best interests of hog producers.

The hog production and marketing situation is already adjusting. Four months ago it was indicated that farmers' intention to breed for spring farrow this year was 2 percent below a year ago. A recent report from 9 Cornbelt States indicates a reduction of about 7 percent. This means, therefore, that marketings should drop below last year's levels during this summer, and prices will begin the upward phase of the price cycle. Producers who "know their stuff" and are efficient will be free to plan hog production on their individual farms in keeping with sound management and good husbandry. No Government planner will tell them how many sows they may breed, how heavy they can make their hogs, or when or where they must market their hogs.

And yet there are those who would perpetuate the present system of farm controls still further, with the obvious thought that the hope of continued high price supports would be popular among producers, even though they are being gradually squeezed out of business.

AGRICULTURE IN THE POLITICAL AUCTION RING

This is a political year. It is a season when hungry politicians feed on unrest. Promises are made which defy performance. Legislation passes Congress which defies effective administration.

In the months immediately ahead, frequent attempts will be made to place agriculture on the political auction block. This is unfortunate. American agriculture is not for sale to irresponsible bidders in the political auction ring. American agriculture is neither Republican nor Democrat, and its welfare must not be sacrificed on the altar of partisan politics.

The answers to our farm problems must be sought more in the company of statesmen than in the arena of the politicians.

We must chart an economically sound course of action, even though it doesn't promise any white rabbits out of a hat, any nostrums, any patent medicine panaceas.

We must recognize that the combination of incentive price and production control program we have been following leads only to further imbalance between production and consumption, to uneconomic patterns of production, to vanishing markets, to still further production restrictions, to the politics of equal shares among producers, and toward a peasant agriculture.

This is not the road that will lead our great agricultural industry toward increasing prosperity, progress, and freedom for millions of Americans who choose to live in close communion with the soil.

Home Rule for Washington

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. WIDNALL. Mr. Speaker, one of my first acts as a Member of Congress was to sign a petition to provide for the discharge of a bill establishing home rule in the District of Columbia.

I will never feel that we are living up to our constant profession of freedom and liberty until all of our citizens have the right to vote. When hundreds of thousands do not enjoy that privilege and live in the Nation's Capital, it is extremely poor propaganda for the United States.

Under leave to extend my remarks, I am including editorial statements from some of the Nation's largest and most influential newspapers supporting home rule for the District of Columbia:

[From the Washington Post of May 28, 1956]

NATION'S PAPERS URGE HOME RULE FOR WASHINGTON—EDITORIALS DEMAND HOUSE COMMITTEE REPORT OUT BILL PASSED BY SENATE

Some of the Nation's largest and most influential newspapers have lent their editorial support recently to the District's long effort to gain home rule and the right to vote.

Among the words they used to describe the plight of the Nation's Capital and its citizens are ridiculous, grotesque, senseless, ignoble, undesirable, and absurd.

The bill has been gathering dust in a House District Committee pigeonhole since its passage by a vote of 59 to 15 last year in the Senate. The measure has been endorsed, with some proposed changes, by President Eisenhower.

The most widely circulated newspaper in the country, the New York Daily News, with a circulation of more than 2,100,000, is among papers backing home rule and supporting a House petition by Representative HARLEY O. STAGGERS, Democrat, of West Virginia, to pry the measure loose from the District Committee.

Describing the end of home rule in 1874 as a temporary measure, the News continues: "Congress is still running Washington—and very badly—with Members of Congress doubling in brass as aldermen. The whole business is grotesque."

A Texas newspaper, the Houston Post, calls the home-rule bill a good cause. Continues the Post: "The right to vote is a great American privilege. The citizens of Washington are denied it. Aside from the tragic aspects of their political situation, there are many absurdities."

The evening newspaper in the capital of Kansas, the Topeka State Journal, poses a question: "Will you imagine what it would be like if Topeka * * * were governed not by a municipal administration of its own choice, but by the State legislature? * * * Then you can imagine the feelings of the people of voteless Washington, D. C., whose municipal affairs—weed cutting and all—are managed by the Congress of the United States, no less."

Home rule, observes the State Journal, is being blocked by a "stubborn, contrary little clique" on the District Committee.

The New York Herald Tribune says the recent primary election is a noteworthy event, but adds that the privilege of voting should be extended. "Now, more than ever," says the Herald Tribune, "it is time for Congress to give up its powers over the District, which it does not employ too well anyway, and allow Washingtonians the rights enjoyed by all other Americans."

The New York Times notes: "It isn't pleasant to say it, but one of the main reasons why a modern home-rule bill has never seen the light of day in the House is the unreasoning fear that Washington's large Negro population might control local government in case suffrage were granted. That is an unworthy as well as an ill-founded one."

More than 75 favorable editorials were collected by the Washington Home Rule Committee. More excerpts follow:

Cleveland Plain Dealer: "It seems to us only fair that the whole House have the right to vote on the measure, and that Washington citizens have their right to vote on whether they want the charter in force should the bill be enacted. This is the democratic way of doing things."

Seattle Times: "The American Colonies fought the War of the Revolution to escape the burdens of taxation without representation. Almost 2 centuries later, residents of the District of Columbia are in that undesirable situation."

Christian Science Monitor (Boston): "If there is anything more ridiculous in the structure of American Government than the provision current laws make or fail to make for governing the city of Washington, it would be difficult to find it."

St. Louis Post-Dispatch: "Few bills in Congress are more thoroughly meritorious than the one to give home rule to the District of Columbia."

San Francisco Chronicle: "The present system whereby Congress serves as a city council for the National Capital is an affront to the 850,000 residents of Washington; it is a needless expense to the payers of Federal taxes, and it imposes time-consuming duties and responsibilities upon Members of Congress."

Chicago Daily News: "We hope every Illinois Congressman will sign this petition and help to obtain justice for the hapless Washingtonians."

Philadelphia Inquirer: "The people who live in the heart city of the world's number one democracy do not themselves possess the basic privilege of democracy. * * * Like odd customs of other lands, this one is founded neither in logic nor political commonsense."

Hartford Courant: "This (pigeonholing of the home-rule bill) is a ridiculous demonstration of democracy, and one that the House leadership, Democrat and Republican, ought to take special pride in upsetting."

The National Small Business Men's Association

EXTENSION OF REMARKS
OF
HON. DeWITT S. HYDE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. HYDE. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include the attached letter from Mr. Paul A. Heideke, who is answering the response of the gentleman from New York [Mr. ROOSEVELT], to my remarks of April 30 on the political program supported by small-business men:

THE WASHINGTON PLANOGRAPH CO., INC.,
Washington, D. C., May 22, 1956.
Hon. DEWITT S. HYDE,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN HYDE: I noticed in the CONGRESSIONAL RECORD of May 7, 1956 (p. 6865) that Congressman ROOSEVELT in response to your remarks in the RECORD of April 30, 1956 (p. 6540) had attacked the legislative program of the National Small Business Men's Association, of which I am a member, as being a front for big business.

I recognize that Mr. ROOSEVELT's disparagement of our program is merely the familiar and worn political gambit of trying to create an artificial breach between large and small business, but his remarks include some misstatements that require comment.

The program of the NSBMA need no defense except to the extent that it has been misrepresented by Mr. ROOSEVELT. We are in favor of fair tax treatment. We believe that the small business man is entitled to grow by accumulation of earnings. We have supported the recommendations for reasonable curbs on the life-or-death power of labor unions, against the abuse of which small business cannot survive. We are in favor of economy in Government, and a sound currency. We are opposed to random expansion of Government control and to socialistic efforts of big Government to reduce all men to a common level.

Mr. ROOSEVELT calls this anarchy. According to Mr. ROOSEVELT, it is in order to complain about the antitrust abuses of big business, but not about the misuse of power by the unions. We are not against the unions, and we have not made any recommendation that means destruction of or undue constriction of any organizations or institutions whatsoever.

Let us not be deceived by political sham. This is a big and prosperous Nation, made big by the American spirit of independence, by opportunity and incentive, by individual initiative and integrity. If we continue to prosper, it is imperative that we safeguard the processes by which we have become what we are. There has never been any likelihood that the people of this country would subscribe to the false doctrines of communism, but there is a very real danger that the American drive can be stifled by big government, by regulation, by redtape, and by subsidies and other forms of paternalistic socialism.

Mr. ROOSEVELT has made a big point of the fact that 24 large companies are members of the Small Business Economic Foundation. I have been a member of the National Small Business Men's Association for many years, and I know as a matter of fact that the National Small Business Men's Association and the Small Business Economic Foundation are two separate, distinct entities having no financial connection.

Let's not kid ourselves. Business is the economic backbone of the Nation—small business and big business; the two are indivisible. Mr. ROOSEVELT implies that business morality is dependent on size. The fact is that morality in business, labor, or government, is the morality of the individual.

Let us face the facts. Our prosperity and our national security require big business and big government, and human nature being what it is, we also have to have ground rules that apply to everybody—business, labor, and government. Ours is a complicated society, and it may be difficult to maintain balance and perspective, but all we have to do is to keep a steady hand on the helm and not be deluded by the Roosevelt refrain about class distinctions and feudal barons long since expired.

Very truly yours,

PAUL A. HEIDEKE.

My Country's Flag

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. BEAMER. Mr. Speaker, under unanimous consent, I wish to include in the Appendix of the CONGRESSIONAL RECORD, the attached poems My Country's Flag and Requiem. These poems were written by Mr. Charles R. Stump, of Marion, Ind.

In keeping with the spirit of Memorial Day and those we honor, I feel that it is most appropriate to include these poems that so aptly express the thoughts of millions of Americans at this time:

MY COUNTRY'S FLAG

My country's flag!
Long may it wave on high,
Emblem of freedom's mighty cause,
Born on the wings of time,
Holding sacred our precious destiny,
Our love and our loyalty.

My country's flag!
May it in eternal glory shine
As the stars in the firmament.
And all its living hours blend
The beauty of the sun
Till time's calendar is done.

My country's flag!
And may its colors rich and true,
The red, the white, the blue,
Be lifted high on wings of peace
Till all strife and warfare cease,
And blest is all humanity.

—Charles R. Stump.

MARION, IND.

REQUIEM

Let muffled drums be beating,
As feet are softly treading
And memory pauses with host
Where poppies are blooming.

The bugle calls to them in vain,
The martial strains now flowing,
As colors wave across the main
And heads are reverently bowing.

In Flander's Field sleep the brave,
The ground with ashes hallowing;
On land, in sea, on foreign strands
Our valiant sons are resting.

The world, full of dire distress,
Its need they went heeding;
With high courage gave their all;
No coward's cause were pleading.

Should they today be waking,
This army host be rising.
Would they not pray with one accord
For peace and understanding?

—Charles R. Stump.

Giveaway to Whom?

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. WIDNALL. Mr. Speaker, in the current issue of Newsweek magazine there is an article by Raymond Moley entitled "Giveaway to Whom?"

I have asked leave to extend my remarks and include the same in the Appendix of the CONGRESSIONAL RECORD, as I believe it fairly and squarely answers some current attacks on the Eisenhower administration:

A thin, shrill complaining theme runs through most of the political discourse opposed to the Eisenhower administration. It is the accusation that this administration is giving away the great natural resources, minerals, timber, waterpower—the heritage of the people—to certain people who because they are in business are therefore rascals. The assets involved are thus lost to the people foever. A conservative administration, it is asserted, does not conserve. It dissipates and destroys.

This political routine is an effort to raise the ghosts of long ago, when there were real rascals and when our resources were truly wasted and given away. Government then was not only wayward but wayless.

CONSERVE, NOT HOARD

Back there, at the turn of the century, the conservation movement was born, and Theodore Roosevelt became its major exponent. The presentation of the public domain became a major concern of the Federal Government. Over the years hundreds of laws were made to regulate the use of our resources by private persons and agencies who sought ligitmately to develop them. The conservation movement was not designed to keep these resources in sterile hoarding, with an expensive bureaucrracy to guard them. Nor did anyone then propose that the Government itself go into the mining, electric-power, timber, or grazing businesses.

The rewards for Government through regulated private use are very considerable. There are the prices paid in the form of royalties or other forms of compensation. There are the vacant spots in the vast domain to be occupied by farmers, workers, industries, towns, and cities. There is the

property created and the people drawn to the region on which the various governments, local, State, and Federal, levy taxes.

However, for two decades after the great depression politicians made business and businessmen the objects of derision and attack. Many members of the Roosevelt-Truman administrations and their supporters in Congress leaned toward Federal collectivism. Notable among these were men such as Harold Ickes and Henry Wallace, who occupied key positions in the administration of natural resources. Under them there grew up a bureaucracy impregnated with the Ickes-Wallace philosophy. Despite the change of party control in 1953 and the declaration in the new, Eisenhower philosophy that the cold war between business and government should end, the old bureaucracy held over. Many members of that bureaucracy have found common cause with collectivist, public-ownership politicians in Congress, and a number of "giveaway" charges have emerged which are being actively exploited by the various aspirants for the Democratic nomination and by former President Truman.

In a number of previous articles in this space I have indicated in some detail the frivolous nature of these charges. In the Hells Canyon case Congress had repeatedly refused to build a Federal dam, and after a year and a half of hearings the Federal Power Commission granted a license to the Idaho Power Co. to build three dams, the cost to go to private investors. The Al Sarena case has apparently blown up on the face of the Senate subcommittee which investigated it. In the case of the tidelands, the Federal Government never had title to give away. Congress, under the initiative and strong support of Democrats, merely clarified the title of the States, which the Supreme Court had temporarily clouded.

AN INDEFENSIBLE CHARGE

The indefensible character of the "giveaway" charge is easy to see. It does not openly assert, but it is intended to convey the absurd idea that there should be no private development of natural resources, even with legally prescribed regulation. It also insinuates, without proof from any source, that there has been some lack of integrity on the part of the policymaking officials responsible for the administration of those resources. In short, that the Eisenhower administration, because it has sought and obtained the services of successful men of business, is a false trustee and a crooked guardian of property belonging to the American people.

The Altar of the Nations

EXTENSION OF REMARKS
OF
HON. PERKINS BASS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. BASS of New Hampshire. Mr. Speaker, under leave to extend my remarks, I should like to insert in the RECORD an Associated Press story carried in the Keene (N. H.) Evening Sentinel on May 19 of this year, telling of the Memorial Day activities to take place at the famed Altar of the Nation located at the Cathedral of the Pines in Rindge, N. H. National recognition is shown almost daily to this well-known nonsectarian memorial. Bills have been introduced by Senator BRIDGES, S. 3063, which is cosponsored by 22 other distinguished Senators from both sides of the aisle, and myself, H. R. 8826, to make the Altar of the Nation a national shrine. I hope the Congress this year will place its stamp of approval on this already national memorial to all who have served their country:

PRESIDENT WILL SEND WREATH TO CATHEDRAL
(By John B. Knox)

RINDGE.—On Memorial Day, May 30, the wreath of the President of the United States will be placed in the Cathedral of the Pines before the Altar of the Nation dedicated to God as a memorial for all American war dead—fighting men, nurses, and workers killed in industry.

In thus sending a wreath for the fourth consecutive year, President Eisenhower joins with the governors of all 48 States, the national commanders and patriotic organizations and the national leaders of civic, service and fraternal societies in tribute to all who died for their country in all wars. Clergy of different faiths will participate.

Gov. Lane Dwinell, of New Hampshire, will officiate at this ceremony in a hilltop grove of tall pines overlooking a great sweep of mountain, forest, and lake scenery.

This outdoor cathedral was dedicated to the glory of God and in loving and grateful memory of Sanderson Sloane by his parents, Douglas and Sybil Sloane. The son, a World War II pilot, was killed on a mission over Germany. Three years later the little son he never saw also died.

The spot they gave for this religious shrine—for people of all faiths—was the site their son had chosen for the home he was never to build. Some 2 million persons have come to the majestic place of worship on a lonely New Hampshire hill.

With the conducting of services by the Polish National Catholic Church in the cathedral, the number of denominations who have used this outdoor cathedral rose this spring to 36.

STARTS AT 3 P. M.

The Memorial Day ceremony will begin with an organ prelude at 3 p. m., followed by a salute to the colors by the local American Legion post. Then will follow a rollcall of the States and a reading of the Memorial Day tributes by the governors of all the States of the Nation.

As Eisenhower's wreath is placed at the altar, composed of stones sent here from all over the world, a soloist will sing The Star Spangled Banner.

The sacrifices of women in war will be commemorated by Mrs. Theodore S. Chapman, president of the General Federation of Women's Clubs. President George Meany, of the AFL–CIO, will recall those men and women who in laboratories, shipyards, munitions, and aviation plants, shops, and factories lost their lives while providing the Nation with the sinews of war.

Supreme Knight Luke E. Hart, of the Knights of Columbus, will have the Knights of Columbus tribute placed at the altar.

Col. Ralph T. Miller, provincial commander of the Salvation Army, and former New Hampshire Gov. Robert Blood, representing the National YMCA, again will place wreaths in tribute. E. Roland Harriman, national chairman of the Red Cross, will again have a wreath laid in tribute to all Red Cross men and women whose lives were sacrificed on war service.

FATE DEPENDS UPON FAITH

Significant are the words in the message of the national commander of the American Legion, J. Addington Wagner, to be read as his wreath is placed: "The fate of America will depend on the faith of America."

Representatives of the Voice of America will record the tribute for broadcast to people behind the Iron Curtain.

This Nation Under God

EXTENSION OF REMARKS
OF
HON. RUTH THOMPSON
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Miss THOMPSON of Michigan. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following address:

Dr. Dudley, Father Steiner, and distinguished guests, it is indeed a pleasure to be here today with your splendid group, which represents many faiths and geographic areas and dedicated to the program caption "This Nation Under God."

It is most appropriate that the Pilgrimage meets here in the Nation's Capital, so that recognition of an almighty god guiding the destiny of our country might be brought to bear in a forceful and lasting manner.

Far too many people today are guilty of what, for want of a better name, we will label "intellectual arrogance." They have ceased to depend on prayer, charity, or good works in accomplishing their desired ends. They rely strictly on knowledge gleaned from the printed work. Man has succeeded in constructing machinery that will do his bidding to a degree that staggers the imagination. He has planes that fly higher and farther and faster than ever before. Many automobiles now have 300 horsepower. Diseases are being eradicated with new miracle drugs. According to insurance statistics, improved diets are increasing the life span. Man has come a long way from the stone age. Unfortunately, he too often forgets he did not travel his long path alone.

A divine hand has led man, step by step, year by year, up the hill of human achievement—until he stands today with the capabilities of blowing himself from the face of the earth. The intellectual progress has been steady; unfortunately, the spiritual and moral progress has not kept pace. Where does mankind go from here?

Nations, like men, also quite often feel everything they are is a direct result of clever diplomacy, capable generals, or possibly a strategic geographic location. Any thinking person knows better. How many times have nations been saved from destruction by an absolute miracle? How many times have nations or cities been under siege, only to have the enemy depart just when those within the walls could no longer defend their positions? How many times in the history of our own country have we had circumstances similar to those just described? A question vexing military leaders for the past 15 years is "Why did not the Japanese move into Hawaii as they did the Philippines?" It could have been theirs for the taking, and World War II might easily have been prolonged by 5 years—with possible destruction of our west coast. Why didn't the Japanese move in? Was it because we were strongly entrenched? The islands were quite defenseless and the majority of the world knew it. God only knows. It's just that fundamental. You may search the records and review the tactics and intelligence reports of all nations concerned and you cannot find a logical military excuse for sparing Hawaii. Maybe that's because there are no records of the prayers offered in those hectic days by a terribly frightened people.

Probably every one of us here can think of a situation similar to that of Hawaii. "Why did not Hitler invade Britain at the time of Dunkirk? Why did not the Japanese take Australia?" We have seen many incidents such as these in our short life span that bear out my point.

Certainly, we have seen countless manifestations that this Nation is particularly blessed and watched over. "This Nation under God." The United States is unique; its citizens for almost two centuries have enjoyed freedoms that even today are still strangers to the majority of the world. We have stores of natural resources that appear inexhaustible. We have been able to draw on the cultures of the whole world to create what is known as the American scene.

Even from its very inception, this Nation has obviously been under the protecting hand of God. Just imagine—in a population originally only 4 million on the frontier of the world—the very cream of liberal thinking was assembled to construct the foundation of the finest government the world has ever known. It never fails to amaze me, as I sit in Congress, how many daily extenuating circumstances of government were anticipated by the Founding Fathers. These men were intelligent and educated, but one cannot help feeling that the safeguards placed in the Constitution of the United States go beyond the limits of human foresight. I like to feel that God had seen enough of brutality and despotism, and decided to let the world see how one nation could live and prosper under the auspices of Christian principles and teachings.

A most singular feature of the bountiful American way of life is the fact that despite the admission of almost everyone that our Government is based on religion and Christian teachings, there are many who do not want religion even mentioned insofar as government is concerned.

How many otherwise sensible people object to the morning reading of the Bible in public school classrooms? How many people do you know that object to a prayer opening a legislative day in the State legislatures or Congress? These people will tell you that religion does not belong in the proceedings of a democratic government.

Such a statement is ridiculous. Almost every step of governmental progress in history has been brought about through the gentling effect of religion. Did not the Christian missionaries tame the savage tribes that roamed the world for centuries? Was not the code of chivalry a direct result of the teachings of the church? Courtesy to ladies, treating others as you would have them treat you, Thou Shalt Not Kill—from these church teachings eventually came organized government. True government is but a gathering of people who desire to live and work together peacably for their common good. Is religion antagonistic to this purpose?

In this connection—prompted by a desire to make our citizens and the world conscious of the value of prayer—I introduced a bill to authorize the Postmaster General to use the words "Pray For Peace" on mail cancellation dies. Certainly, we have tried every other method to avert a war which no one can win. Why not turn to prayer? Imagine the good that can be done as thousands of people here and abroad are reminded daily of the only way to achieve a just and lasting peace. This bill passed without objection in the House of Representatives; however, it has been held up in the Senate Committee on Post Office and Civil Service.

The Post Office Department has filed an objection to this measure, claiming the expenditure of $250,000 is not justified for an endeavor of this sort. This is a mighty small amount when compared with what we are spending against the possibility of a war. For a change, this spending would be in the interest of peace. A cancellation die of this type would go far to show the rest of the world that we are not completely engrossed in the material things of life and yearn as earnestly as they for a cessation of war—hot or cold. This would be an appeal from the first of the sister nations of the world.

In closing, I would again like to congratulate your dedicated group, many of whom have traveled a great distance to be here today. You are a symbol of the moral strength of which our great Nation is capable. In addition, you are a working application of tolerance that should stand as an inspiration and challenge to all those who feel their way is the only way. The symbols of various faiths on display here is ample proof that uniformity is not demanded; rather, the intention is to show appreciation and respect for the religious faith of everyone. Let us hope that the trust and good will evidenced here today will spread to the far corners of our country and remove the needless mistrust that sometimes exists among the various denominations.

Thank you and God bless you.

Congress and the OTC Bill

EXTENSION OF REMARKS
OF
HON. HENDERSON L. LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. LANHAM. Mr. Speaker, the failure of H. R. 5550, the OTC bill, to move beyond the Ways and Means Committee is a tribute to the integrity of Congress. The bill represents no more than a concealed stratgem to confirm the State Department in its ambition to raise its field of acitivity, i. e., international relations, to an overriding level of priority wherever it comes into conflict with domestic interests.

In the pursuit of such ambitions the Constitution is an obsolete document or at best meaningless; any expedient obesance to it is reduced to twisting it, humoring it where otherwise offense might be given, and in its essence stultifying it by playing fast and loose with its principles.

We have the instance of the Department's support of the submission of OTC to Congress on the grounds, as expressed by Secretary of State John Foster Dulles before the Senate Finance Committee, that submission of the "organizational features" of GATT—the General Agreement on Tariffs and Trade—in the form of the OTC legislation, is a matter of "propriety" rather than an obligation under the Constitution. In other words, the submission of the OTC to Congress was above and beyond the call of duty. Presumably the Congress should vote the Congressional Medal of Honor to the Secretary for such an act of selflessness. In the meantime the substance of the issue, namely GATT, is carefully withheld from Congress. The State Department is willing to entrust Congress with the shell—OTC—but not the core—GATT.

When we reflect upon what is really at stake, namely the regulation of the foreign commerce of this country, the authority over which lies exclusively with Congress under the Constitution, it becomes clear that behind all the words, the shifts of position and the bravado of the State Department, what we really behold is a desperate struggle to dislodge Congress and, the Constitution notwithstanding, replacing the elected representatives of the people by the State Department.

Admission of this is stoutly denied by the State Department, for admission of it would point to the need of a constitutional amendment to accomplish the purpose. The State Department well knows that an amendment transferring the power to regulate foreign commerce from Congress to the executive would have no chance. That explains all the inverted logic, the topsy-turvy allegations, the denials of the obvious and the proclamation of the improbable to which the State Department has been reduced in its sorry stratagem.

The end that it cannot gain by an open and aboveboard approach it seeks one way or another by hook or crook to obtain in any event. It is to the great credit of Congress that it has shown itself not only wary and skeptical but firmly set against such unworthy strategy.

There are those who deplore what they call the "jealousy" of Congress over its authority. The word "jealousy" itself is an epithet designed to water down the integrity of Congress. I want to emphasize that unless Congress looks after its authority, a duty to which each Member is sworn as he takes an oath to uphold the Constitution—unless Congress is true to its responsibility to the voters who elect it and who rightly look to it to reflect the will of the electorate, there is little that will stand against the encroachment from the executive power. If "jealousy" is the right word for a proper concern over the division of powers then I say we should be jealous of our responsibility.

In this connection, I include, under leave to extend my remarks, a letter in the New York Journal of Commerce of May 23 that expresses the concern of numerous industries, producers and labor groups in this country over the threat of the OTC to the powers of Congress. The substance of the letter is in point with what I have said and develops some aspects that are worth keeping in mind:

STRACKBEIN CITES DULLES' STATEMENT

To the EDITOR:

Your editorial entitled "Furor Over OTC" in the May 9 issue was a masterpiece in its reflection of the differences between the pros and cons of the question. You aline yourself frankly with those in support of the OTC (i. e., for United States membership in the Organization for Trade Cooperation). Your views as expressed in the editorial fully confirm this frank alinement.

Ahe OTC you say is merely "an administrative arm" of GATT. "It is to be endowed with no supranational powers whatever," you continue.

DULLES' STATEMENT CHANGED

May I point out (with malice toward none) that Mr. Dulles, Secretary of State, in oral testimony before the Ways and Means Committee on March 1, 1956, changed his prepared text from a statement that OTC "is entirely administrative" to one saying that "it is essentially administrative" and that this marks an important difference; in fact it confirms the fear expressed by the opponents.

They fear the loss by Congress of its authority to regulate foreign commerce and its transfer to OTC–GATT if H. R. 5550 were passed. The safeguarding amendments adopted by the Ways and Means Committee would not apply to GATT itself but only to the OTC.

Therefore, GATT would remain free to amend itself, with our own acceptance of such amendments left to the State Department rather than the Congress. This is at the bottom of the fear.

To you this fear is something strange and you refer to it at once as tragic and ridicule it as something highly exaggerated. Moreover it is sinister since this fear is used by the protectionists as an appeal "to the worst nature of Congress—that is, to its jealousy of the powers of the executive branch."

CAUTION HELD JUSTIFIED

As one who has consistently called attention to this very aspect of the OTC I will say that not only is the caution justified—it is entirely commendable that Congress should be jealous of its constitutional authority, just as the press should be jealous of its freedom.

I do not believe that the point needs arguing. Hitler not only suppressed the freedom of the newspaper but he closed the legislature. Both stood in his way, one as formidable an obstacle as the other. Perhaps you are yourself jealous of the freedom of the press.

Let us hope so. If so, you should not berate those who for equally sound reasons are jealous of the functions of Congress. It would be just as easy to laugh at your concern for freedom of the press as the other way around. Neither is a laughing matter.

You say that this congressional jealousy of the Executive ignores the ominous changes that have swept the world since 1945. This raises the question whether there can be a dateline on the preservation of the integrity of the legislative branch. Both the freedom of the press and the preservation of the powers of Congress are as important since 1945 as before.

OPPOSES CURBING CONGRESS

If Congress is to be brushed aside every time a so-called emergency arises or is to be put to sleep for the duration of the cold war it cannot be worth much. Why not curb the press on the same pretext? Or is the press worth something to the preservation of freedom? If so, I do not believe that you can set Congress on a lower rung without courting consequences as disastrous as would follow suppression of the press.

If you will credit those of us who oppose the OTC with at least average sincerity you will better understand that there is much more at issue in the OTC legislation than meets the eye at first blush. That you are not sensitive to this imminent threat is no more surprising than the relative indifference of mere readers of newspapers to a particular threat to freedom of the press that to newspaper editors and publishers may be very real and vital.

The Constitution, like rules of a game, is invoked in nearly all instances by those whose interests would be injured by a breach. Those whose interests are not directly affected or who might even gain from such an infraction usually remain remarkably cool to an imminent threat or may even abet it.

The executive department, because of the vast powers at its disposal, is under constant temptation to enlarge its sway on the grounds that execution of laws requires wide discretion. On this theory the legislative branch would soon be out of business. The OTC is a perfect example.

O. R. STRACKBEIN,
Chairman, Nationwide Committee of Industry, Agriculture, and Labor on Import-Export Policy.

Bulldozer for Peace

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. DINGELL. Mr. Speaker, in these days of huge expenditures for foreign aid by the United States, it is indeed a great pleasure for me to discover for myself, and to report to the Congress on a splendid example of generosity on the part of the citizens of metropolitan Detroit.

A missionary, the Reverend Donald L. Hessler, has been ministering to the needs of the people of Yucatan in Mexico for some time. He was aware that the climate and jungle growth were such that the people armed with the primitive agricultural implements of the area, were unable to clear their land and to protect against the encroachments of the ever-advancing jungle. He was further aware that his peoples' great unanswered physical needs were such that their spiritual development was retarded.

He made his first appeal about 6 weeks ago to the people of Detroit and its environs for assistance in purchasing a small bulldozer to clear sufficient land for not only the road building needs of the area, but also to help his people have enough land under cultivation to care for their own immediate needs.

I was delighted to find last week that the fund now substantially exceeds $18,000 and is still climbing.

Father Hessler is a Catholic priest, but all religious groups, Catholic, Protestant, and Jewish have helped. Business and professional people have donated as well as womens' and veterans' groups. I am proud to say that my own council of the Knights of Columbus, St. Paul Council No. 2269, has had an important part. Prominent citizens and ordinary folks have made their contribution.

We know the result will be a wonderful thing for the people of Yucatan and for Father Hessler. I know it will bring satisfaction to all who participate, and will result in improved living conditions for many impoverished people in an undeveloped land. This is charity and foreign aid in its finest and purest form, coming from the hearts of many good people.

It is to the eternal credit of the Detroit Times, a civic minded newspaper in my own city of Detroit, Mich., that it has stimulated and fostered this worthwhile project through editorials and news coverage in a way which has made the early fruition of Father Hessler's dream possible. I pay tribute to that fine newspaper and to Mr. John Gariepy, who has done most of the reporting on the project, for the unselfish manner in which they have carried out the program to bring this before the people.

I insert into the RECORD here one of the Detroit Times' most recent articles from the issue of May 20, 1956, showing the progress of the drive:

DOZER DRIVE OVER THE HUMP
(By John Gariepy)

With funds now totaling $18,424, the "Bulldozer for Peace" campaign Saturday was over the hump grinding its way to a finish as more and more public response is evinced by the donations received at the campaign office.

A drive is on to complete the campaign by June 1 and to do this $6,576 is needed in donations in the next 2 weeks.

The drive can end June 1 if more persons enlist themselves as "lay missioners at home" by aiding the Reverend Father Donald L. Hessler, former Lake Orion resident, now laboring among native Indians in Mexico.

Father Hessler sought the help of The Detroit Times to purchase an 8-ton bulldozer, completely equipped, and costing about $25,000, to promote efficient agricultural methods among a race starving for over 1,000 years.

MOTHER'S DAY GIFT

Mrs. Catherine Tinek, 8060 Molena, wrote the campaign office:

"Enclosed please find $5, money I received from my husband for Mother's Day. I wish to donate it toward the bulldozer that Father Hessler is so badly in need of. I hope and pray that he will soon reach his quota."

A housewife from Walled Lake wrote:

"I have been reading the daily articles in the Detroit Times of the progress of the 'Bulldozer for Peace' campaign, wishing I could help. I enclosed $5 which was given to me for baby sitting and I hope it brings you a little closer to your goal. May you reap a rich harvest in the Lord's vineyard."

SPLENDID CAUSE

State Senator Harold M. Ryan wrote:

"Enclosed find check in the sum of $25 to add to the 'Bulldozer for Peace' fund. You and the Detroit Times are certainly to be commended in taking these efforts for such a worthwhile charitable cause.

"Actions like this go a long way toward helping bring peace to this world. I am encouraging my fellow lawyers to also make contributions to this splendid cause."

Mrs. Marie Kushner sent $15 in the name of the Ladies Social Gatherings of West Dearborn. First contributions were received from Ann Arbor, $2, and Ferndale, $10. Other recent contributions included James S. Holden, $50, Fred E. Harris, $25, and James L. Conlin, general manager, BOP assembly division, GM, $10.

Send contributions to Bulldozer, the Chancery, 1234 Washington Boulevard, Detroit 26. All gifts are tax deductible and will be acknowledged. The campaign office phone number is Woodward 1–2470.

Miss Carrie L. Allen

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. ROBERTS. Mr. Speaker, earlier this week the Department of the Air Force held its fourth annual honor awards ceremony honoring certain civilian employees of the Air Force for their distinguished service.

I am very pleased and proud that a constituent of mine, Miss Carrie L. Allen, from Ashland, Clay County, employed in the Office of Legislative Liaison for the

Air Force, was granted an award for outstanding performance for her work. I know that many Members of this House and their offices, like myself and my office, have received very competent, prompt, and courteous assistance from Miss Allen on many occasions. In this day, when so much happens so quickly, it is very gratifying to know that time is being taken to give recognition to an individual for outstanding work.

I extend my congratulations and appreciation to Miss Allen for her very fine work for the Air Force and in behalf of Congress.

The Inland Waterway

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. SIKES. Mr. Speaker, under permission granted to extend my own remarks and to include extraneous material, I wish to have inserted in the CONGRESSIONAL RECORD the following editorial from the May 22, 1956, issue of the Panama City Herald, Panama City, Fla., entitled "The Inland Waterway." This fine editorial points out the tremendous increase in waterway traffic and its importance to many industries and cities along its route:

Before Panama City's doorstep passes ever-increasing water traffic making use of the inland waterway, a route of commerce reaching as far west as Brownsville, Tex. Commercial traffic on the Nation's 28,996 miles of navigation channels will break all records this year, although the barges moved a record 87.5 billion tons of freight last year.

Use of inland waterways as a means of transportation of goods is a big business throughout the Nation.

Transshipping between the ships of sea and inland waterway freight carriers, in such ports as New York, New Orleans, Houston, Brownsville, Portland, Corpus Christi, and Mobile, is increasing.

Last year barges handled 45 percent of the waterborne commerce in the port of New Orleans and 23 percent in Houston. In New York, the inland traffic is usually equal to the total foreign and coastwise commerce.

In the inland north, barge traffic along their canals has increased the capacities of waterside steel mills, iron furnaces, electric generating plants, and grain elevators. It has contributed almost wholly to the revival of the bituminous coal industry along the waterways and enabled business to form hundreds of new waterside industries which receive their fuel or raw products by barge or ship their products by water.

In other areas, the aluminum, petroleum, and chemical industries along the navigation canals have been expanded and the fertilizer industry has received a big boost by locating in areas served by barge traffic.

East to west, the inland waterway extends from Florida to the middle of Texas, and at several points intersects with barge canals to almost every point in the Nation.

The port of Apalachicola, long lying somnolent at the mouth of a navigable waterway, has become a beehive of activity and is preparing to become the funnel for barge and gulf traffic to eastern areas.

The route of commerce, flowing past Bay County's doorstep is a sign of rapid progress.

The Lesson at Princeton

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. TUMULTY. Mr. Speaker, the following article from the Manchester (N. H.) Union Leader of Monday, May 21, reveals that when Alger Hiss spoke at Princeton University he followed the current party line. The article has other important lessons which can be learned by a thorough reading of it.

The article follows:

THE LESSON AT PRINCETON

(EDITOR'S NOTE.—Must a child burn himself severely to know the danger of fire? asks Counterattack in this article, reprinted here with special permission, commenting on the appearance of Alger Hiss on a Princeton University lecture platform.)

Even if inadvertently, Princeton University never more sharply fulfilled the functions of education than it did this month when one of its undergraduate debating societies invited Alger Hiss to speak to its membership. The lesson it taught was about the morality of the day and was summed up in the persons and performances of three persons involved in the Hiss incident.

First, of course, there is Alger Hiss. He is not a controversial figure. He is, instead, a clearly cut figure of contemporary history. He stands identified without successful contention as a collaborator with a Soviet espionage apparatus. And he has spent time in a Federal penitentiary for having lied in his testimony regarding that Soviet espionage apparatus. Nothing in his entire career, which included high but not publicly distinguished Government service, even begins to cast a shadow as long as his involvement with a betrayal of the security of the United States. Thus there could have been no question as to the nature of the man the Princeton undergraduates invited—or his chief qualification.

Next is the figure of Dr. Harold W. Dodds, president of Princeton University. He was asked, both by public officials and by a general array of Princeton alumni, to cancel the undergraduate invitation to Alger Hiss. He was, in short, asked to exercise exactly the same responsibility he would be expected to exercise had the undergraduates invited a notorious narcotics peddler to address the students—even if the peddler were to confine his talk merely to a description of poppy gardening.

Dr. Dodds made his position immediately, even if amazingly clear: The responsibility for such matters rests not with the men in whose hands the affairs of the university have been placed. Instead, as Dr. Dodds said, the responsibility rests with the students themselves. He issued a public statement summing up his version of the function of a university this way: "Education includes the freedom to make mistakes and to learn to accept responsibility for them. * * * It is often not enough to tell a child that fire is hot. To learn the personal significance of fire, the child must sometimes burn himself."

Extend to include Princeton's admirable premedical courses, of course this would suggest that a someday surgeon need not be told that accidental slicing of the jugular vein is to be earnestly eschewed. He should cut 1 or 2 and learn it that way.

The third figure in what is virtually a latter-day morality play at Princeton is a Roman Catholic priest, Rev. Hugh Halton, chaplain for Princeton's Catholic students and director of the Aquinas Foundation, Catholic undergraduate group at Princeton. Father Halton has spoken out frequently in the past calling on the university to return to its traditional basis of Christianity and scholarship.

This time Father Halton spoke to an assembly of Princeton undergraduates before Hiss' appearance. Although some of the students applauded, others booed, indicating that Dr. Dodds' willingness to have his students make mistakes about the situation in which they had become involved bore just the fruit that logically could have been expected: That is, that many students would come to look upon Hiss as an admirable symbol of resistance to morality and manners. This is what, in part, Father Halton had to say about the Hiss appearance at Princeton:

"The Hiss affair is simply a dramatic expression of a spiritual crisis within the university. The decision of the trustees supporting the administration, confers on uniformed minds and unseasoned characters the right to undermine the common good of the academic community, if they choose to do so. The Hiss decision called for a kind of knowledge, not to speak of an experience and mature judgment, which the undergraduates—with all the defects of their virtues—cannot have * * * Where will all this end? The administration and trustees have exchanged freedom for license. * * * I can understand why Alger Hiss needs Princeton; but I cannot for the life of me understand why Princeton needs Alger Hiss. In their report the trustees have found no subversion in this place and they are complacent. I believe there is a kind of spiritual and moral subversion which in the long run will do a greater disservice to Princeton and America than some of the threats the administration and trustees now consider more immediate. Freedom, divorced from authority and discipline, is a frightening thing."

The actual appearance of Hiss, a majority of covering newspapers pointed out, was anticlimactic. Hiss spoke about the Geneva conference. The newspapers said he was dull. Even supposedly sharp ears apparently were lulled to hear only a dull address. In the New York World-Telegram and Sun, that paper's staffer assigned to cover communism, Frederick Woltman, could write only that Hiss was very proper, very dignified, very dull, and that certainly none of the listening students was "brainwashed." The net effect was a mild, cooled-down Alger Hiss far removed from thoughts of Soviet espionage, betrayal, and the struggle between Marxist and Christian civilization.

Yet, what did Hiss say? He said that cold war and militaristic talk is "the tone of yesterday." He said that Geneva opened the door to an end of East-West hostilities. He quoted the Irish Communist playwright Sean O'Casey on the subject of nuclear warfare's menacing forcing peace upon the world. He said that the visit of Khrushchev and Bulganin to Britain was an important step forward. He said that he thought the Soviet had given up ideas of communizing the world by all-out war.

It is perhaps the most pointed comment of all on the Hiss appearance that the things he said have become, apparently, so glibly acceptable that it was not even pointed out that the Hiss speech hewed to the coexistence line of the 20th Congress of the Communist Party of the Soviet Union. Also, that he made no reference at all to the moral differences between the nations of the free world and the Soviet.

The Hiss speech really wasn't dull. It was just familiar. Even persons never connected with communism have been making similar ones lately.

And, in the symbols of the persons involved, the entire structure of the incident

also was familiar: A known collaborator with the Communist cause; a "liberal" spokesman to intercede on the collaborator's behalf; a voice of conscience speaking in objection and not being heeded.

PRINCETON POSTSCRIPT

As pointed out here, Princeton's defense of the Hiss appearance was firmly based on inability to deny the undergraduates a chance to hear a "controversial" figure. The students, it was pointed out, must have the freedom to make mistakes in their choice of speakers.

In October 1955 another of Princeton's undergraduate debating societies, the Princeton Senate, wanted to schedule as speaker the same Father Halton who so vigorously resisted the Hiss appearance.

The Princeton administration was firm in that case, too. It withheld permission for Father Halton's appearance for 6 solid months. Finally, in March 1956 the undergraduates went ahead and held their planned meeting anyway. There was only one change in the agenda. Father Halton wasn't present, apparently still too "controversial" for the Princeton administration.

Uneasy Quiet Along the Potomac

EXTENSION OF REMARKS
OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 29, 1956

Mr. ROBERTS. Mr. Speaker, under unanimous consent, I include in the CONGRESSIONAL RECORD an editorial which was printed in the very esteemed newspaper the Selma (Ala.) Times-Journal.

It is my opinion that this editorial portrays the situation as it exists in Washington. It demonstrates the fact that the issue of segregation is still not settled even though the advocates of integration would have you believe that everything is going smoothly in this movement. I have been told on good authority that many of the public schools are operating daily with members of the Metropolitan Police in the corridors and on the school grounds. I cannot believe that such forced integration can do anything except to promote an unhealthy atmosphere on the part of the students in public schools. Surely no one can point with certainty to any voluntary integration in the District of Columbia. It is another unhappy picture brought about by the ill considered May 17, 1954, decision of the Supreme Court and it will, in my opinion, cause trouble and heartache for many years to come.

The editorial follows:

UNEASY QUIET ALONG THE POTOMAC

WASHINGTON, D. C.—The Nation's Capital, sprawled along the mudflats of the Potomac River, is not as complacent about integration of the races as propagandists would have you believe.

Instead, the white citizens of Washington are seriously disturbed over a gradual process of subservience to Federal fiat which is turning the Capital City into a Negro community.

Already the population rate is estimated by many to be 65-35 Negro, and the remaining white residents, not liking the picture, are leaving in droves. Some say that as many as 13,000 white families moved out of Washington last year alone.

Questioned about these things, people on the streets and in stores, taxicab drivers and Government workers are quick to voice resentment of the transition now under way.

Although they will talk freely when questioned on an off-hand basis, they quickly fall silent when asked for names and addresses, in explanation that facts are being sought for publication in a southern newspaper.

Each has an excuse, but all are based upon the factor of fear of retaliation. Federal workers fear the wrath of Government, clerks fear discharge by employers who might lose Negro trade, and taxi drivers won't talk for publication because of the expectation of being dismissed in the event of a possible boycott.

Perhaps it is this spectre of fear which induces Washington newspapers to remain so busy pointing accusing fingers at the South that they never get around to observing their own doorstep and presenting a true picture of the racial situation in the Capital to the Nation as a whole.

But it is safe to say that a majority of the white residents of Washington does resent integration and would like to see a reversal of the current trend.

Possibly this resentment is keenest among those familiar with falling standards of public education since the schools were integrated on a mass basis. Parents of white children in schools integrated on substantial scales report that individual pupil progress has slowed and that there is a lessening of interest in attendance. Various reasons are cited, but they are all factors stemming from integration.

There also is a great deal of resentment among property owners over steady losses in investment values. Incidences are cited on good authority, even among Members of the Congress, where whole blocks of residential properties have suffered declines of as much as 50 percent within the period of only a comparatively few months.

Under an organized and carefully directed program of encroachment, once-white residential areas are being invaded and swallowed up in great gulps as declining values hasten the tide of invasion.

Possibly even more significant is the attitude of leaders of various activities beyond the threat of legal action on charges of racial discrimination, which are dependent mainly upon voluntary public donations.

A pertinent case in point is offered by a recent statement from the president of the Boys' Club of Metropolitan Police, District of Columbia. This club, sponsored by Washington police as a deterrent to juvenile delinquency, operates on a segregated basis and intends to continue that basis because it cannot hope to continue attracting public support from white donors otherwise.

Thomas G. Carney, president of the organization, presented the case plainly in a public statement when forced to a showdown on the racial issue.

Among other things, he said:

"The Boys' Club of Metropolitan Police, District of Columbia, is now conducting its annual solicitation of adult memberships to finance its operations during the coming year. The basic purpose of this organization has been and is to provide facilities for athletic activities and other wholesome diversions for the boys of this community to lessen their opportunities or inclination to become juvenile delinquents. The club, now in its 23d year of operation, has received nationwide recognition as an effective deterrent to juvenile delinquency.

"For the past several years the various clubs have maintained an average membership of 22,000 boys. Membership is, of course, voluntary and no fee of any kind is payable. At the present time 14,000 boys are enrolled as active members of the clubs operated for the benefit of colored boys of the District. Four clubhouses are available for their use.

"Eight thousand boys are enrolled as members of the clubs operated for white boys. While there are 5 separate club units for white boys, clubhouse facilities are now available for only 3 of these units. All of the clubhouses are used in the nature of community centers, since the boys invite their girl friends and parents to club-sponsored dances, movies, and other social activities.

"The annual cost of operations of the Boys' Club has been averaging $340,000 in the past few years. The administrative costs have averaged $28,000. All the rest goes for the benefit of the boys. The citizens of this community evidently have felt that the work of the Boys' Club is well worth the cost, since no campaign in the past has ever failed. Failure to support the present campaign can only result in the closing of some of the clubs, which would affect adversely not only the colored and white boys thus put on the streets, but the community as a whole.

"The Boys' Club of Metropolitan Police does not actually collect cash contributions. Citizens are invited to become adult members of the organization and the dues paid for such memberships constitute the finances for operation. All adult members receive a membership card. There are relatively few anonymous donors. Approximately 160,000 citizens pay such dues."

"The above facts have been stated because the Boys' Club of Metropolitan Police has been unjustly charged with practicing racial discrimination. The operation of club units exclusively for colored boys and exclusively for white boys has not been, and is not now, the result of a studied, premeditated policy of the Boys' Club to accomplish or practice segregation as an end in itself. The clubs were organized in a mutually exclusive racial basis over 22 years ago. The object then, as now, was to minimize a boy's, any boy's, chances of becoming a juvenile law breaker. The organization accommodated its operations to the local pattern of that time.

"That times have changed and will continue to change is admitted. It is not the mission of this organization, however, to retard or advance one side or the other of an issue that has no direct, material, or relevant bearing on the successful accomplishments of its sole function, an issue that is fundamental to some, emotional to many, the concern of everyone. To some people it is a moral issue; to others it is not. To say that this issue has been legally settled by court decision insofar as an organization of the character of the Police Boys' Club is concerned is just not correct.

"The 170 members of the board of directors of the Boys' Club of Metropolitan Police, District of Columbia, are of one mind in their desire to achieve first what they consider their first objective; namely, curbing juvenile delinquency; giving all boys a chance to reach manhood with a wholesome regard for law and order. These same members can be, and probably are, of many minds on the best solution to the social problem arising from racial differences.

"They know, however, that the Boys' Club does good as presently operated. Maybe it would do better if integrated. Maybe it would do worse. Many white members state they will not support an integrated organization. They give various reasons for their position. The records from past campaigns disclose that dues paid by white members constitute over 97 percent of the total amount collected. A substantial lessening of this financial support would result in the closing of the clubs. Both colored and white boys would then suffer.

"The boys who enjoy the clubs are not asking that their welfare be risked on a decision that would not add a jot or tittle to their

enjoyment of the pleasure the club now affords them. There is no discrimination in their club, real or fancied. Their club is their haven from the streets and alleys. Life is still not perfect for them, but the club makes it some better, in many cases a lot better, the difference, perhaps, between a good life and a bad life.

"Until certain that a change in its methods of operations will not risk the loss of these havens in any degree it has been the judgment of the directors of the Boys' Club of Metropolitan Police, District of Columbia, that no change should be made at this time. Let the Police Boys' Club continue to render its services to the boys of Washington. Let the issue of segregation be decided in other areas where children will not necessarily lose what little they have on the outcome," President Carnley concluded.

Here, then, is a typical example of integration on a voluntary basis as compared with that prevailing under the forces of fear and law, and the Boys' Club president has been quoted liberally in order that none may say only the high points were touched.

It seems evident that his statement proves beyond all doubt that the white citizens of Washington will be integrated only by one force or another, and that gives reason to believe that if all is quiet along the Potomac tonight, it is an uneasy quiet, at best.

Pastor Riedel Retiring at 78 After 53-Year Ministry

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. TUMULTY. Mr. Speaker, the life of Pastor Frederick R. Riedel, of Emanuel Evangelical United Brethren Church in Union City, N. J., has been one of unselfish service to God, community, and country. The citizens of the 14th District realize his retirement after 53 years of devoted duty is well deserved. Their joy at his well-deserved respite from the ordeal of continuous service however, is tinged with the sadness that we all feel when a faithful friend leaves his accustomed post. The Hudson Dispatch hails him in the following editorial.

As representative of a large group of the people he served I take this opportunity to record forever in the records of the Nation the gratitude of his neighbors for his outstanding example of living Americanism. The editorial follows:

PASTOR RIEDEL RETIRING AT 78 AFTER 53-YEAR MINISTRY

Three years ago on May 14 in these columns we had occasion to write about the golden anniversary in the ministry of Rev. Frederick R. Riedel, pastor of Emanuel Evangelical United Brethren Church, Union City, at which time we contrasted the granting of pensions in the prime of life to members of the Armed Forces and to police and firemen after 20 and 25 years respectively, with the observation that "it is remarkable to observe wearers of the cloth still active in the service of the Lord after a half century in Christ's ministry."

Now at the age of 78, the German-born clergyman, who has been in the United States since 1893, and who has been a minister since 1903, is about to relinquish the Union City pastorate he has held for the past 21 years and finally "retire." We place the quotes around "retire" intentionally, because, if we know Pastor Riedel, he'll be just like our other good friend, Rev. Charles K. Fegley, pastor emeritus of Good Shepherd Lutheran Church, Weehawken, he simply won't be able to stay inactive. We are certain it won't be long before he'll be accepting all kinds of emergency calls for his services.

Pastor Riedel says that, according to the regulations of his denomination, he should have retired 10 years ago but he was asked to remain active due to the fact that services at the Union City church are conducted both in German and English. We think it was most fortunate for Emanuel Church and the community that he could give the additional decade of indefatigable and devoted service.

Evidently figuring that Rev. Mr. Riedel at long last deserved his delayed retirement, Atlantic Conference of United Brethren Church, which last week held its 81st annual conference at Queens Village, Long Island, requested the Union City pastor to submit his retirement application. Typically, Pastor Riedel told Hudson Dispatch he hadn't been "figuring on retiring."

After arriving in America 63 years ago, Pastor Riedel did missionary work in Duluth, Minn., and answered the call to the ministry from there. He prepared for his life's work at North Central College in Illinois. His first pastorates were in Minnesota. Pastor Riedel looks back to those early days when one of the "high points" of his ministry was a Sunday when he received 92 members into church fellowship and baptized 48 persons.

He came east in 1927 and served in churches in Baltimore and Brooklyn before he was called to Emanuel Evangelical in 1935. In Union City, Pastor Riedel has proven himself a zealous builder of the church's temporal holdings as well as a saver of souls and a promoter of increased membership. During his pastorates, 2 churches and 3 parsonages were built and 3 churches were enlarged and renovated. Emanuel Church, which will observe its centennial in 1963, has been completely refurbished under his guidance.

Active in community affairs, Pastor Riedel is a past president of North Hudson Ministerial Association. Recently he has devoted much attention to ministering to the rapidly growing Spanish-speaking population of this area.

Rev. William Leier, pastor of Salem Evangelical United Brethren Church, Brooklyn, will succeed Pastor Riedel on July 1.

The A. T. & T. Antitrust Consent Decree

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I insert herewith an address I made before the Private Communications Association at the Hotel McAlpin in New York City, on May 28, 1956:

THE A. T. & T. ANTITRUST CONSENT DECREE

This evening I should like to discuss with you a matter which is of great concern to your industry and your organization. I am referring specifically to the Government's disposition of its antitrust suit against American Telephone & Telegraph and its subsidiary the Western Electric Co.

As you know, on January 24 of this year the Government's much-touted antitrust suit against American Telephone & Telegraph Co. came to a halt. After years of preparation and after exhaustive examination of thousands of documents, the Government's prosecution terminated in an innocuous, albeit much publicized, decree.

This decree, agreed to by both sides to avoid trial, represents one of the worst antitrust dispositions I have ever seen. In fact, it is worse than nothing at all. It not only fails to accomplish what the Government set out to do when it filed suit 7 years ago, but it goes further by prejudicing future administrations in any subsequent efforts to mitigate the effects of A. T. & T.'s monopoly.

The only conclusion I am able to draw from the facts is that the Attorney General has given A. T. & T. singularly preferential treatment.

Let us compare the chief provisions of the complaint filed by the Department of Justice in 1949 with the consent decree that the Department agreed to in 1956.

This complaint, carefully prepared following years of investigation, charged that the Western Electric Co., a wholly owned subsidiary of A. T. & T., manufactures and sells more than 90 percent of all telephones and telephone equipment sold in the United States and that a substantial part of the remaining 10 percent is produced under the control of Western Electric. It also alleged that A. T. & T. controls about 85 percent of local telephone service in the United States.

The complaint further charged that Western Electric and A. T. & T. combined with each other to monopolize the United States telephone manufacturing and telephone service industries. To correct this monopoly, the complaint requested the court to force A. T. & T. to sell all of its interest in Western Electric so that the business of manufacturing telephones would be divorced from the business of operating telephone service.

This was the heart of the suit—to break up the combination of A. T. & T. and Western Electric. Yet the consent decree does nothing to carry out this most important objective. The corporate structure of this combination not only remains unchanged but is fused even closer together. The manufacturing and telephone service monopoly is still concentrated in the same hands.

The complaint also asked that Western Electric be split into three separate companies to diversify the manufacturing of telephone equipment and to create competition where none existed before. The consent decree makes no effort to divide up Western Electric.

The complaint asked that Western Electric be required to sell to A. T. & T. its 50-percent ownership of Bell Laboratories so that research and experimentation by other manufacturers would be encouraged. The decree requires no transfer of ownership in Bell Laboratories.

When the complaint was filed, the Department of Justice had evidence that A. T. & T. required its many operating companies throughout the country to buy equipment and supplies only from Western Electric. The Government, therefore, requested that these contracts be declared void and that A. T. & T. be forbidden from entering into similar contracts in the future. The consent decree ignores this problem.

The complaint prayed that A. T. & T. and the Bell System companies be required to purchase their equipment by competitive bidding so as to inject competition in the manufacturing industry and to protect telephone users by insuring that the telephone companies paid no more than a fair price. The decree does nothing about this.

The complaint refers to existing agreements between Western Electric and other manufacturers of communications equipment, including, for example, Radio Corporation of America, General Electric, and Westinghouse. It charged that these agreements restrain competition and requests that they

be adjudged illegal and void. The decree fails so to do.

Why is there such great disparity between the relief sought originally and the relief finally obtained? Representatives of the Department of Justice could say only that the terms of the consent decree were the best the Government could get and that in their opinion there was insufficient evidence to justify the court's dissolution of the A. T. & T.–Western Electric combine.

The fact is, however, that the head of the Antitrust Division admits that A. T. & T. owns and controls 85 percent of all local telephone service in the United States.

He admits that A. T. & T. has practically a 100-percent monopoly on long distance service.

He admits that Western Electric manufactures and sells between 80 and 90 percent of all telephones and telephone equipment sold in the United States.

He admits that A. T. & T. requires its operating companies and its own Long Lines Department to buy virtually all of their telephone equipment from Western Electric.

He admits that A. T. & T. and Western Electric bought up or otherwise eliminated competing manufacturers of telephone equipment.

If these facts do not establish such a violation of the antitrust laws as warrant a court decision on the necessity for dissolution, then no facts would.

In the Government's antitrust case against the Pullman Co. the Court ordered a separation of Pullman's unregulated monopoly of the manufacture and sale of sleeping cars from its regulated monopoly of sleeping-car service. Since the Court did break up the Pullman monopoly why did the Department of Justice believe that the Court could not similarly break up the A. T. & T. monopoly?

The head of the Antitrust Division has asserted that although the decree did not accomplish what the Government had originally asked the Court to do, it did protect the public interest in alternative ways. Let us look more closely at the decree and see if it does. There are four main things that the decree purports to do.

First, instead of preventing A. T. & T. from requiring that its many operating companies buy only from Western Electric, it prohibits A. T. & T. from requiring independent companies to buy from Western Electric. From a practical standpoint this provision affects none of the long-distance telephone service in the United States and no more than 15 percent of the local telephone service in the country.

Second, instead of forcing Bell companies to buy all equipment by competitive bidding to protect competing manufacturers, the decree provides only that Western Electric must set up a generally acceptable accounting system subject to inspection by the Department of Justice. According to the Department, this will better enable appropriate governmental regulatory bodies to determine whether A. T. & T. is being charged fair and reasonable prices for equipment it buys from Western Electric. Presumably the appropriate regulatory body would be better able by this accounting provision to determine whether equipment costs incurred by A. T. & T. for Western Electric equipment are unreasonable and should be disallowed in the establishment of Bell company rates. Not only is this provision so vague and general as to be practically unenforceable the Department is even unaware whether the decree will require any changes in Western Electric's present accounting methods.

Third, the decree requires A. T. & T. to license, royalty free, any or all of its existing 8,600 patents to anyone who asks for a license with certain minor exceptions and also requires that future patents be licensed for reasonable royalties. This the Department regards as the heart of the decree. The Attorney General stated that the decree makes available to any citizen all inventions and know-how of the Bell System. It sounds good but what does it mean? In the light of the following facts, I think you will agree that it means very little:

(1) Although royalty free licensing is required for existing patents, the decree permits A. T. & T. to charge for the know-how necessary to use the patents. It is common knowledge that in most cases patents are useless without know-how. I understand that the charges for know-how and technical information connected with these patents could be as much as the royalty would have been before the decree.

(2) It is of little or no value for an independent manufacturer of telephone equipment to get a license from A. T. & T. to make, use, and sell such equipment if he has no market for his equipment. And under the decree there is little possibility that the independent's market will be broadened.

(3) A large number of the patents involved are valueless unless the licensee can obtain additional patents owned solely by RCA. At the present time RCA issues a package license which includes its own and many of A. T. & T.'s patents. Consequently a prospective licensee might well prefer an RCA package license which includes A. T. & T.'s patents rather than get an A. T. & T. license and then still have to get the RCA package license.

(4) A substantial number of the 8,600 patents involved in this decree have expired.

(5) Although the decree requires A. T. & T. to license any or all of its patents, existing or future, the company has had a standing policy since 1949 to license anyone for any purpose. Therefore, the decree makes little change in A. T. & T.'s licensing policy.

In the light of these circumstances, the fact is that the benefits of the patent provisions of the decree are largely illusory.

Finally, we come to the part of the decree that purportedly was designed to help small business, the part that supposedly limits the Bell System companies to common-carrier operations and supposedly requires Bell companies to get out of the private nonregulated communications field. If this in fact were the result of the decree, one of the effects of A. T. & T.'s monopoly on your industry would have been mitigated to some extent at least.

Unfortunately, the decree in practical operation has not required A. T. & T. to get out of the private communications field. It is true that under the decree, A. T. & T., Western Electric, and their subsidiaries are forbidden to engage in any business other than the furnishing of common carrier communications services, but the decree defines that term so loosely that the small-business man in the private communications field will be given little comfort.

Under the decree common carrier communications services include any communications service and facility (other than message telegram service), the charges for which are or become subject to regulation under existing or future laws of any State, Territory, or the District of Columbia. It also includes services and facilities, the charges for which are subject to regulation under the Federal Communications Act or would be subject to such regulation if they were furnished in interstate commerce. Thus, despite the decree, A. T. & T. and Western Electric can still engage in manufacturing, selling, and leasing of any and all private communications equipment and services, provided only that the charges made are subject to regulation under State law.

Just 1 week after the entry of this decree a bulletin of the Bell Laboratories announced that the telephone companies whose private communications services were not then subject to regulation were going to file tariffs with the appropriate regulatory authorities to bring them within regulation and so exempt these operations from the prohibitions of the decree. Accordingly, 2 months later, the Bell Co. in California filed tariffs for its private communications services. At about the same time the President of the Illinois Bell Telephone Co. announced to the stockholders that the company expected to look into the possibility of doing the same thing.

I have no doubt that this strategy will be followed throughout the United States. If it is, the Attorney General's consent decree will afford the private communications industry of America little protection indeed.

These are not the only loopholes in this decree. There are many more, but time does not permit listing them now.

The loopholes I have discussed, however, show that despite the Attorney General's claims that the A. T. & T. monopoly has been dissipated by the consent decree, the converse is true. Moreover, its monopoly position has been given the seal of Government approval. The facts with regard to this decree must be brought to the attention of the American people. Perhaps in the future there can be undone some of the harm that this decree has caused to competitive conditions in the communications industry.

The Federal Employee Health Program Discriminates Against the Field Service, Report by Interagency Committee Shows

---

EXTENSION OF REMARKS
OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, a Federal interagency committee, constituted of both personnel administrators and physicians, submitted a report published by the Civil Service Commission which shows that—

Although adequate employee health services are available in many Federal establishments, inadequate services or no service at all are available to a substantial number of employees. In general, the departmental service provides sufficient health services, but in the field service, except where medical services are already available for other purposes such as in Veterans' Administration hospitals and military establishments, employee health services seldom exist.

It is believed that some heads of agencies neither fully realize the value of such health programs nor realize the extent to which they exist in private employment. There is need for additional means for showing top management the worth of health programs.

All I can say on this is that it seems to me to be simply further evidence of the well-documented viewpoint of the present administration regarding employees; be they Federal employees or employees in private industry. This viewpoint has been summarized for us most ably by Charles "Bird Dog" Wilson and Howard Pyle, both high officials in the Federal Government, who are leading exponents of the joy-of-suffering school of economics.

The recently published report of the Civil Service Commission states that—

Mr. Mac Henry Schafer, Director of Personnel, Department of Agriculture, and formerly vice-president and director of em-

ployee relations, Northern Trust Co., Chicago, Ill., states:

"As a relative newcomer to Federal service from private business, I was shocked at the little attention paid to emotional and mental disturbances in people. Practically no organized program exists to care for such human needs among Federal workers. Psychiatric aid is rarely available and trained psychological counseling is almost nonexistent. The Public Health Service is restricted to 'fitness for duty' examinations. No therapy for cases of emotional maladjustment is available. The few private clinics are overloaded and can handle little but emergency and extreme cases.

"Even in a brief experience, an outsider can see the evidences of the need. Insecurity and frustration in the worker is not confined to the ranks of big busines. Big government has the same problems—and has taken little leadership in doing something about it. In any serious attempt to improve the efficiency and effectiveness of Federal service, much work remains to be done in providing guidance and competent leadership in this area. The cost would be repaid manyfold in more productive employees."

The interagency committee agreed, as a result of their study, that the costs to the Federal Government for employee casualties are less in those agencies having good health-service programs. This is not an inconsiderable factor, because the total cost for compensation in all Federal establishments rose from $23,371,749 in 1952 to $25,842,889 in 1953. This represents a per capita increase from $9.09 in 1952 to $10.42 in 1953. It can be readily seen that if compensation costs can be reduced only a small percentage through employee health programs, as well as through customary safety measures and safety education, substantial cash savings to the Government will result.

I include as part of my remarks a list of the members of the interagency committee together with the recommendations which they submitted:

FEDERAL EMPLOYEE HEALTH PROGRAM EVALUATION—A REPORT BY A COMMITTEE OF THE INTERAGENCY ADVISORY GROUP

Those who served as committee members and alternate members are named below. In addition to these committee members, scores of other medical officers and personnel officers contributed valuable advice and assistance in the preparation of this report.

Verne K. Harvey, M. D. (chairman), Civil Service Commission.

Roy Albert, M. D., Atomic Energy Commission.

Harry O. Carr, Department of the Air Force.

Barry Casper, Atomic Energy Commission.

Wilton H. Dickerson, Civil Service Commission.

Lt. Col. Gordon F. Fisher, USAF, MC, Department of the Air Force.

George H. Hieronymus, Department of the Army.

S. Preston Hipsley, Government Printing Office.

Col. B. Dixon Holland, USA, MC, Department of the Army.

Howard Jackson, Veterans' Administration.

Melvin T. Johnson, M. D., Department of Agriculture.

Edward Landry, Post Office Department.

Maurice Odoroff, Department of Health, Education, and Welfare.

Denton H. Reed, Veterans' Administration.

MacHenry Schafer, Department of Agriculture.

Capt. Lloyd B. Shone, USN, MC, Department of the Navy.

Donald W. Smith, Department of Health, Education, and Welfare.

Josef J. Weisskopf, M. D., Department of Health, Education, and Welfare.

INTRODUCTION

This interagency committee, constituted of both personnel administrators and physicians, has been considering ways and means for determining the value of Federal employee health programs developed in accordance with provisions of Public Law 658, 79th Congress, 2d session. A draft of this report has been reviewed by Federal field personnel councils throughout the Nation and strengthened as a result of their many suggestions.

The Federal employees' health service programs have two major objectives:

1. To serve the Federal employee, by assisting him to maintain optimal health while on the job.

2. To serve the Federal Government, by increasing work capacity through maintenance of optimum health.

Public Law 658 specifically states that authorization is given to establish health service programs for Federal employees "for the purpose of promoting the physical and mental fitness of employees of the Federal Government."

These services shall be limited to:

1. Treatment of on-the-job illness and dental conditions requiring emergency attention.

2. Preemployment and other examinations.

3. Referral to private physicians and dentists.

4. Preventive programs relating to health.

This law provides that "services will be provided, by contract or otherwise," and "health service programs shall be established only after consultation with the Public Health Service and consideration of its recommendations." The Federal Employee Health Branch, Division of Hospitals, is providing both functions of the program, consultative and operational.

I. PURPOSE

The purpose of this study is to work out practical means for ascertaining and interpreting the results of the Federal employees health program and to provide agencies of the Federal Government as a whole with feasible guides for evaluation of these programs.

II. RECOMMENDATIONS

1. There is sufficient evidence to indicate a need for further development of Federal employee health programs. On the basis of well-established facts in the experience of private industry, there is ample proof that employee health services have been a valuable asset in the promotion and maintenance of the physical and mental fitness of employees under numerous and varied circumstances. This committee, therefore, recommends strengthening of existing health activities and establishment of additional health services in locations where there are a sufficient number of Federal employees to warrant it.

The committee believes that the long-range benefits in decreased absenteeism, lowered accident rates and compensation costs, increased morale, and higher work efficiency by far outweigh the cost of initiating and maintaining appropriate Federal employee health programs which are already authorized by law.

2. Agencies should designate in their budget estimates the amount of money needed for their employee health programs.

3. More adequate provisions should be made for early detection and referral of mental health problems.

4. Maximum utilization should be made of arrangements whereby groups of one agency's employees who are separated from its medical facilities are attached for health services to medical facilities of other Federal agencies if practicable.

5. In establishing and operating their employee health services, agencies should study and follow the United States Public Health Service publication entitled "Health Services for Federal Employees: A Suggested Plan for a Preventive Medical Program in a Federal Employee's Health Service."

6. This committee believes in utilizing available objective techniques as far as possible to evaluate the worth of health programs; at the same time it recognizes the limitations of current techniques for this purpose. It is necessary, therefore, to supplement statistical analyses now available with informed judgment. An agency which does not have an employee health program, but contemplates establishing one, may gain an approximation of the potential of such a program from other agencies' evaluation reports. Likewise, an agency which has not yet directly evaluated its health program may get some indirect idea of its probable value by studying the returns reported by agencies with similar programs.

7. Agencies should evaluate their employee health programs annually. Central offices should require reports on health programs from all of their component bureaus, offices, and establishments. The format provided in this report may be used as a guide for that purpose. Data from other agencies may be useful for comparisons with other programs. New valid criteria for health program evaluation should be used in the future as they are developed.

8. Provisions should be made for annual reports by each agency to a central agency which in turn should incorporate them into a comprehensive report on Federal employee health programs. This summary report should be prepared in a manner to provide optimum assistance to agencies in comparing their health programs with those of other agencies.

9. One Federal agency should be given the responsibility for conducting a scientific study to develop objective criteria for the evaluation of Federal employee health programs.

The Other Side of the Story

EXTENSION OF REMARKS

OF

HON. PAUL C. JONES

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 29, 1956

Mr. JONES of Missouri. Mr. Speaker, I am pleased to present herewith copy of a letter from a constituent, the widow of a veteran who was killed in action in World War II. In my opinion, she has written one of the most forceful replies to the recent recommendations announced by President Eisenhower's Commission on Veterans Benefits that I have read anywhere.

As she states in her letter, she has most dramatically and yet without emotion presented "the other side of the story to which the Commission on Veterans' Benefits has apparently turned its blind eye."

I believe that all members, particularly those members of the Committee on Veterans' Affairs, will enjoy reading this fine letter:

POPLAR BLUFF, MO., *May 23, 1956.*
Congressman PAUL C. JONES,
Missouri 10th Congressional District,
New House of Representatives
Building, Washington, D. C.

DEAR CONGRESSMAN: This letter has reference to the recent recommendation by President Eisenhower's Commission on Veterans' Benefits to gradually eliminate benefits to veterans and widows and children of veterans. It is proposed to tie in many of these benefits with Social Security payments. In other instances the receipt of pensions would be contingent upon the actual need therefor, and pensions to widows and children of veterans would be based upon need or disability.

I am the widow of a veteran who was killed in action in World War II. I wish to emphatically state that I am not a mercenary, grasping individual; in fact, about 18 months elapsed before I would accept a pension from the Veterans Administration, thereby losing approximately $1,000 in benefits to myself and my son who was only 1 year old when his father was killed.

I would like to present the other side of the story to which the Commission on Veterans' Benefits has apparently turned its blind eye. This is only my story but I'm certain thousands of others have similar ones. As I recall, the Veterans Administration began paying benefits to my son and me, totaling $65 monthly. (The monthly pension has now been increased to a total of $121.) It is, no doubt, possible to live on that amount of income, but it would be only a hand-to-mouth existence. Therefore, it was necessary that I seek employment in order to maintain a normal living for us and to provide for my son's future education to which he has every right and which, doubtless, he would have had if his father had lived. By combining my income from employment and from the Government, my total income approximates that which a man could provide for his family.

My son has been deprived of a father, and, because of the necessity that I accept employment, he has also been deprived of a full-time mother. He is now 13 years old, and, except in rare instances, there has never been a time since he became school age that I could be at home when he left for or returned from school. He has never had the benefit of a normal home life to which every child is entitled. In addition, since July 1944, I have been deprived of a husband whom I loved very much. These are only a few of the many ways in which our loss is evident.

All this may seem unimportant to the Commission on Veterans' Benefits but it is a serious matter to those of us who have been unwillingly placed in this position.

The pension from the Veterans' Administration in no wise restores our normal home life but it does help supply some of the material things which we badly need. If it were possible for President Eisenhower's Commission on Veterans' Benefits to return my husband to me, I would be more than glad to voluntarily relinquish my pension, and I seriously doubt that there is a widow who feels otherwise. But, since the Commission is not endowed with the ability to return the dead, it seems only fair that those of us who have lost so much should be entitled to some repayment, however small.

I am aware there may be some veterans who are unjustly receiving benefits, but it is unfair to withdraw benefits from those people who deserve them. If our Government fails to properly acknowledge those who gave limb, sight, or life for their country, it may find itself in the unenviable position of having fewer patriots.

The article relating to the findings of President Eisenhower's Commission on Veterans' Benefits was carried on the front page of a recent issue of the St. Louis Globe-Democrat. It was ironic to note that the headline of that same issue read, "Senators Assail Jet Fiasco as $265 Million Total Loss." Would it not be better for our Government to stop some of this really needless spending? Such a sum of money would go a long way toward helping veterans and widows and children of veterans—or some other worthwhile project.

Sincerely yours,

Mrs. RUTH M. STEWART.

Small Business Statesmanship

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. HILL. Mr. Speaker, I was impressed the other day when I read an editorial in the New York Journal of Commerce of May 24, 1956, entitled "Small Business Statesmanship" because this is a phrase which should be used early and often when we consider the problems of small business. We should ban emotionalism from these considerations and look at such problems from a practical and realistic viewpoint.

Certainly we do not desire to destroy our larger business concerns under the guise of helping our smaller concerns. We want a healthy business economy with a fair opportunity for our smaller concerns to grow and expand. We all, I know, desire a tax structure which will aid our smaller businesses to improve their financial positions in order to achieve this necessary growth. But, in accomplishing this purpose, we should not penalize those business institutions which are necessary to a vital, dynamic and expanding business economy.

The article follows:

SMALL BUSINESS STATEMANSHIP

The idea that the way to help small business is to pull the props from under larger companies got a well-deserved rebuke from small business spokesmen recently.

Since a small sized firm in a big industry may be a big company in an industry in which the general scale of operations is larger, the so-called small business relief plans which hit at size may fall quite unevenly. And, of course, many small businesses have hopes of getting to be bigger; hence self-interest, as well as business statesmanship, suggests that they may do best to seek relief in ways which are not puntive to other sectors.

All of which seems relatively platitudinous, except that some proponents of relief measures for the small business sector seem unable to disassociate their plans from measures to cripple larger concerns. Since such plans can only slow the progress in developing well-covered measures, it is heartening that small business itself sees the wisdom of repudiating such tactics.

That this is so is suggested by a mix-up which seems to have grown out of a meeting of small business groups in Washington recently. It is not entirely clear how the mix-up came about, but following the Washington sessions the report was made that 12 small business organiaztions at the meeting had gone on record as unanimously supporting H. R. 9067.

This is a bill which would reduce tax rates for small business companies. It is aside from the point that the relatively larger tax reductions under its graduated rate schedule would not accrue for the very smallest companies. What is relevant is that this bill would step up the rates for bigger companies sharply, with an increase of some 28 percent at the top.

The bill's sponsor, Representative WRIGHT PATMAN, thinks that trustbusting can be combined with small business relief, for he claims that the rates in his bill will lead large companies to find it advantageous to work out their own dissolution plans. While this is, no doubt, an ingenious way to save antitrust enforcement funds, the plan clearly goes beyond the needs of small business relief.

In any case, a statement to the effect that the 12 organizations at the Washington meeting had wholeheartedly thrown their support behind H. R. 9067 was placed in the CONGRESSIONAL RECORD, with the various organizations identified.

In no time at all, however, a protest came back that at least one of the organizations listed had not even been present. But the meat of the protest was that this small business group wanted emphatically to disassociate itself from such a tax plan. The point was made that, while others at the meeting were known to favor early Congressional relief to small business, "we know of none who wish to impose inequities on any group of other corporations to accomplish this purpose."

So far from indorsing the bill's plan to graduate rates steeply for the bigger businesses, this organization claimed that "rates above 55 percent approach the levels of confiscation and hence pose a threat to the entire economy." And while this organization claimed that it had not been represented at the Washington meeting, the protesting small business spokesman expressed doubt that the membership of the organizations which were present embraced the theory of "near-confiscatory rates on the large concerns."

However this mixup about the Washington sessions came about, it is salutary to hear so vehement a disclaimer by small business itself of the theory that small business stands to gain by hurting other business groups.

What small business wants and needs is well-conceived plans to meet its problems. We happen to be among those who recognize that there is a very real small business problem. But solutions must be sought in the context of a healthy economic environment, not in the form of measures which seek to shift maladjustments from one group to another.

Tribute to Hon. William Thomas Granahan

SPEECH
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. SIMPSON of Pennsylvania. Mr. Speaker, the loss of our distinguished colleague, the Honorable WILLIAM T. GRANAHAN, of Philadelphia, was indeed a great shock to all of us, and particularly to those of us from Pennsylvania who are privileged to serve in this House.

We knew Mr. GRANAHAN for his devoted and tireless service to his congressional district, to his State, and to the Nation. His work as a member of the Interstate and Foreign Commerce Committee is a

record for all present and future members of that great committee to emulate. His widespread interests, including veterans' affairs, and the construction industry, as well as his long and varied service in positions of public trust, attest to his qualities as a leader and as a citizen.

Our hearts go out to Mrs. Granahan in her hour of bereavement. Her loss is shared by all of us.

Alger Hiss at Princeton

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. TUMULTY. Mr. Speaker, at the risk of repetition, I include another article from the Catholic Universe Bulletin. The columnist Joseph Breig is well known for his profundity. The article is as follows:

ALGER HISS AT PRINCETON
(By Joseph Breig)

Our indignation over the appearance of Alger Hiss as a speaker at Princeton University will not be as intelligent—and perhaps not as strong—as it ought to be unless we give due consideration to certain factors.

Hiss was convicted of perjury after a fair trial in which he was represented by the ablest of attorneys and protected by all the safeguards which American jurisprudence erects against injustice to the innocent.

His perjury consisted in false denials that he had handed over American security secrets to a foreign spy ring. The jury, in other words, judged that Hiss had betrayed his country in the gravest of matters.

This is the man who was invited to Princeton.

Hiss was invited by students who did not consult university authorities, as they should have done.

That students should have neglected this courtesy, this act of fair play—indeed, this serious duty—is perhaps understandable. But that Hiss should have ignored it is entirely inexcusable.

We easily forgive young people for being thoughtless and inconsiderate. College men are not always distinguished for their maturity or delicacy.

The most elementary good manners, however, should have suggested to Hiss that before accepting the invitation, he ascertain whether he was welcome.

Hiss cannot be so obtuse that he did not realize that his presence on the campus might be acutely embarrassing to Princeton. And even if we suppose that he is really as dense as all that, the newspapers soon enough disclosed the situation.

The politeness that we expect even of the least cultured of men surely required that Hiss send his regrets, and thus avoid inflicting a gross discourtesy on Princeton.

Hiss, then, did a highly ungentlemanly thing; and we need not discuss here whether ungentlemanliness is more frowned upon in some quarters than is betrayal of one's country.

The behavior of Hiss was completely inexcusable.

In contrast, the guilt of the students who extended the invitation is modified by several considerations.

College men are not entirely grown up. And these particular students were mere boys at the time Hiss was convicted. Obviously they did not read up on the newspaper files before acting.

Obviously, too, there has been a serious failure on the part of Princeton to educate its students to know what communism is, and what communism does.

In view of the gravity of communism's menace to everything that Americans hold dear, this is clearly a most culpable omission. Princeton surely stands indicted on that count.

Collegians do tend to be thoughtless; but surely Princeton men would not have invited Hiss as a guest speaker had they realized the enormity of communism's wrongs and his wrongs.

Nor can Princeton be absolved even in the light of the fact that the students who issued the invitation were members of what is grandiloquently called the Whig-Cliosophic debating society.

Whig-Cliosophics, we may assume, live in the most ivory of all possible adolescent ivory towers. But even Whig-Cliosophics, did Princeton educate them properly, would not be entirely ignorant about communism and about Hiss.

Hiss, then, was guilty of callous ungentlemanliness, and the Whig-C's must be held responsible for more thoughtlessness than we need feel called upon to excuse.

But what of the university administration?

The administration shrugged its shoulders and remarked that it believed in letting students work their own way out of the messes they create. The administration kept hands off.

This is simply total abdication of the responsibility which the administration is dutybound to discharge. This is making students the goats for the administration's dereliction in office.

What is Princeton doing? Is it sending into the world young men so irresponsible that they will commit great institutions—banks and corporations, say—to impossible positions without consulting their superiors?—young men who will expect authority to shrug off their gross errors with a tolerant smile?

We cannot help wondering what view Princeton's alumni will take of this preposterous incident.

The Hazard of Drunks on Airlines

EXTENSION OF REMARKS
OF
HON. J. VAUGHAN GARY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert an editorial which recently appeared in the Richmond Times Dispatch, entitled "The Hazard of Drunks on Airlines."

Long prior to the publication of this editorial I had become increasingly concerned with the problems which have arisen from the service of liquor on board commercial airlines. I had informed the chairman of the House Committee on Interstate and Foreign Commerce of my interest in the legislation to prohibit the sale and dispensing of alcoholic beverages on commercial planes. Therefore, I was particularly pleased when a newspaper in my home city of Richmond published the attached ediorial, calling public attention to the situation. I commend it to the attention of the Members of the House.

The editorial follows:

THE HAZARD OF DRUNKS ON AIRLINES

Legislation banning service of liquor on board commercial airlines in the United States is in the public interest. Six bills banning such service are now pending in Congress.

Thousands of people are killed annually by automobiles because drivers have had too much to drink, and hundreds of thousands are injured. Automobiles can't be controlled by legislation in the manner that commercial airlines can, so legislation of the type being considered for airlines is not the answer for cars, of course. But there is no reason why the traveling public should be jeopardized by the serving of liquor on board commercial planes.

Only six domestic airlines serve liquor now, and they don't serve it on all flights. They seem to think it is necessary to meet competition, but if all six agreed to stop, the problem would be solved for everybody. If they won't agree to do so, they should be compelled by law. The Civil Aeronautics Board could halt the practice, but it hasn't acted. It says that evidence of danger from drinking on planes has not been forthcoming.

The danger is fairly clear on its face, without specific testimony that some drunk has threatened a pilot in flight, or tried to throw a stewardess through a window.

Rowland K. Quinn, president of the Air Line Stewards and Stewardesses Association, is strongly opposed to the serving of liquor on planes, and so is Clarence N. Sayen, president of the Air Line Pilots Association. Godfrey N. Sperling, Jr., writing in the Christian Science Monitor, says:

"Mr. Quinn, together with numerous stewardesses and pilots, can cite lists of incidents that mount up to a mighty indictment on safety grounds of those responsible for the serving of liquor on planes. There are pilots who have had to land to get rid of drunks; drunks who have locked themselves in lavatories where they easily could start a fire; and drunks who have gone beserk among the passengers. (Just recently a drunk drew a switch-blade knife on his seat mate.)"

The foregoing indicates to us that intoxicated persons on airplanes imperil not only themselves but everybody else on board. A plane is remarkably safe when in the hands of a competent crew and if the passengers are sober. But get just one drunk charging around and wanting to fight somebody, and 50 lives may be seriously endangered.

If the airlines won't cut out the drinks by agreement, and the CAA won't order them to cut them out, Congress should enact mandatory legislation. This situation shouldn't be permitted to drift any longer.

This Year's Crop of Graduates Has Brightest Future

EXTENSION OF REMARKS
OF
HON. SID SIMPSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Quincy (Ill.) Herald-Whig, of May 27, 1956:

THIS YEAR'S CROP OF GRADUATES HAS BRIGHTEST FUTURE

Within a few days, a new class of Americans will have completed high school work. Graduation time is a serious period in our Nation, for the course of the world will be determined one day by the boys and girls now emerging from childhood.

In the last generation, education in the United States may not have improved in quality, but it has broadened in scope and in coverage. There are courses undreamed of in 1915. Today, almost all boys and girls enter high school although, unfortunately, not all remain through the 4-year course.

Schooling through the 12 grades has become wholly democratic. There is little illiteracy, and there should be none. Possession of a high school diploma is almost taken for granted. Its acquisition is painless. Gone is the era of the rickety old school building, dark and poorly heated. Gone also is the necessity of wading through snow or mud to attend classes.

Today's schoolroom is bright and cheerful. The laboratories and libraries are well equipped. For students who live some distance from school, there are buses to provide transportation.

All this is a part of modern living—and education.

PURPOSE NO. 1

Schools were never intended to be charitable institutions. The public schools are supported by tax money, a great deal of it. Private schools are supported by tuition, endowments or funds from sponsoring organizations. The private school may concentrate its efforts upon the especial needs of the student. The public schools must be operated primarily to turn the student into a useful citizen.

Private education preceded public education and prepared the way for it. Long before the American Revolution, however, some of the colonial assemblies in New England enacted laws providing that elementary and secondary schools be established. Six years after its founding, Connecticut enacted such a law, requiring that each community of 50 or more families have a school for the teaching of reading, writing, and arithmetic, and that each county have at least one school offering more advanced courses, the old-time Latin school. Each family head was directed to see that his children and servants attended school.

The purpose was clearly stated. The founders realized that self-government must depend upon a literate citizenry. Thus public education became mandatory.

Even before the Constitution, the American Congress took steps to extend educational advantages to the frontier. The ordinance of 1787 by which the great Middle West east of the Mississippi was governed, this included Illinois, set aside a section of land in each township for educational purposes.

Some communities sold the land and used the money to erect school facilities. Frequently the money never found its way into the school channels. Had all the school land been kept, its revenues would today go a long way toward support of the public school system.

The public school system originated in the necessity of a people who would remain forever free to have citizens with minds trained sufficiently to enable them to establish and maintain an organized society and a stable government.

That purpose has not changed. It remains the primary reason for the vast system of public education.

AS WE GREW

Many things were added through the years as our needs increased and as life grew in complexity.

Originally, the theory was that with the bare essentials of learning, one should be able to make his way. The country was young and opportunities were numerous. Pioneers were little interested in schools. Quincy's early school system followed settlement of the community by several years, and the first schools were crude affairs.

Public affairs, too, were simple then as compared to those of today. Just as government has broadened its interests, so has the school.

Schools are operated for the public good, but today public good includes also the opportunity of the individual to be able to make a living, and to contribute a skill to society. So schooling has progressed from interest only in insuring literacy to looking after the economic future of the student.

LOOKING AHEAD

Today's high school graduate should be immeasurably better fitted to cope with life than was his grandfather. But he will be in stiffer competition, for there are more trained persons today and higher demands of training in a multitude of new fields.

Only a scattering of the high school graduates went on to college at the turn of the century. Of today's high school classes, perhaps one-third will continue. Some will attend technical schools. Many will not complete college courses, but the percentage is rising each year.

Some hold that by giving higher education to so many, we are robbing the manual trades of personnel. But the reward from the manual skills now matches that of the professions and business. The carpenter and plumber can afford an education.

Mass education has raised the standards of life in America. But it cannot guarantee success, either at high school or college level. The old rules for success have not been changed. They never can be if progress is to continue.

School at any level can provide no more than an outline of knowledge and instill in students habits of orderly thought. These and the fundamentals are the most the school system can give the millions of students each year. Equipped with these, the boy or girl should face the world unafraid.

There is one other essential. It is willingness to learn and to work. Schooling must not be the end of education. The successful person will learn something almost every day of his life. Each experience is an addition to one's total of wisdom.

Schooling will not guarantee success, but it will give one a better opportunity to try for success. It will put the individual a little way on the road to usefulness.

Nothing worth while is likely to be attained easily. Hard work is as necessary today as ever. We are building marvelous machines to do the work that hands once did. But there must be people to design and build the machines, and other people to operate them. Work today takes a different form, but it still demands physical and mental energy, earnestness and devotion.

John F. Stevens: Basic Architect of the Panama Canal

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 29, 1956

Mr. FLOOD. Mr. Speaker, truly notable events in history and the great leaders primarily responsible for their outcome have often been temporarily obscured by occurrences of more spectacular but less basic nature. Nevertheless, with the passage of time, when it is possible to view with better perspective, they tend to assume their due stature.

One such episode in American history was the 1906 decision of the Congress and the President for the high-level lake and lock-type canal at Panama—a major decision brought about mainly under the vision and leadership of chief engineer, John F. Stevens, of the Isthmian Canal Commission. The year 1956 marks the 50th anniversary of that momentous choice.

It was my privilege, on May 12, 1956, to have been the principal speaker for the 21st annual meeting of the Panama Canal Society of Washington, D. C., held at the Sheraton-Carlton Hotel in this city, when the great work of John F. Stevens for the Panama Canal was commemorated.

In the preparation of my address, I have had access to a wealth of information on Panama Canal history, published in recent years. Not only that; I had the additional advantage of having my manuscript checked by John F. Stevens, Jr.

As a principal collector of his father's papers and student of Isthmian history, the young Stevens was exceptionally well-informed on the canal chapter and other portions of his father's career. He made a number of valuable suggestions as to facts of which he had direct personal knowledge which I used.

The officers of the society, 1955–56, were Col. George S. Brady, president; Alexander E. McClure, vice president; and Col. David R. Wolverton, secretary-treasurer. The committee on arrangements consisted of Roger S. Erdman, chairman; and Hon. Maurice H. Thatcher and Joseph A. Cheeseman, members. The arrangements included a delightful musical program.

The toastmaster was the Honorable Maurice H. Thatcher, of Kentucky, former Member of Congress, Civil Governor of the Canal Zone, and the sole surviving member of the Isthmian Canal Commission, serving more than 3 years during peak construction, 1910 to 1913. He is also past president and honorary life president of the society.

In the course of the program Toastmaster Thatcher described the society as follows:

The Panama Canal Society of Washington, D. C., is made up chiefly of those who as officials and employees of the Isthmian Canal Commission rendered service in and about the building of the canal. The ranks of surviving members of that splendid band of Americans is fast diminishing. Our society was founded 21 years ago, under the suggestion and aid of Ben Jenkins, whose absence today because of another engagement we regret. He served on the Isthmus as Chief Clerk of the Atlantic Division, the head of which was Gen. Wm. L. Sibert, in construction days, Colonel Sibert. In our annual society meetings we have especially honored various leaders in the great Isthmian undertaking; and now we strive to pay a just measure of appreciation to another—an always earnest friend of old-timers—who is all deserving—John F. Stevens, Chief Engineer of the Isthmian Canal Commission, 1905–07.

In addition to former officials and employees of the construction era, the society also includes those who have served the Panama Canal organization since the canal was opened to traffic in 1914, and members of the Armed Forces

who have served on the isthmus. Thus, its membership is representative of various professions, businesses, and skilled trades in these connections. Other Panama Canal societies are located in Chicago, Los Angeles, New York, and Seattle; Arkansas, Florida, North Carolina, and Virginia.

The event was outstanding, and, indeed, of historic character. Hence, I believe that an account of the principal features of the proceedings merits a place in the annals of the Congress. This should constitute an enduring record of the high honors and recognition paid to John F. Stevens by those whose labors were joined with his own in building the canal and those who remained to maintain and operate it.

To make this stirring chapter of American history available to scholars and historians of the future, as well as members of the legislative and executive departments of the Federal Government, especially cognizant committees of the Congress and their staffs, under leave granted by the House, I include the principal features of the program, including my address.

Called to order by President Brady, the 21st annual meeting of the Panama Canal Society of Washington, D. C., opened with the following invocation by Rev. John J. Heenan, S. J., of Georgetown University:

INVOCATION

Almighty God who, in the beginning didst gather together into one place the waters that are under the firmament—and didst make the dry land to emerge therefrom—who didst bestow upon man the genius to conceive and the courage to effect the junction of the eastern and western oceans—by a wondrous water stairway upraised between two continents—and didst give to him the indomitable will to level the mountains, to fill up the valleys—and to overcome the malevolence of pest and plague—we praise and thank Thee for this signal triumph of human enterprise for the benefit of mankind—and we beg Thee to bless those who have gathered here to celebrate in grateful memory the accomplishments of one of Thy chosen instruments in this design. May this blessing descend upon all of us through Christ our Lord. Amen.

After the pledge of allegiance to the flag led by Andrew W. Dowling, past president of the society, an enumeration of deceased members of the society during the past year by Roger S. Erdman, honorary life member, and brief opening remarks, President Brady turned over the program to the toastmaster, Governor Thatcher.

Among his first comments, the toastmaster expressed appreciation of the beautifully worded invocatory prayer offered by Father John J. Heenan at the opening of the program, and introduced me as the principal speaker with appropriate remarks outlining my career.

At the conclusion of my remarks, Toastmaster Thatcher said:

Congressman FLOOD, we are deeply appreciative for your brilliant historical address and fine tribute to one who performed such outstanding service in the construction of the Panama Canal. You are a busy man, indeed, and you have greatly honored us in coming before us and speaking of matters that occurred 50 years ago, and bringing them into striking historical focus.

REMARKS OF HON. MAURICE H. THATCHER, INTRODUCING MR. EARL HARDING

Some time back, when this program was being planned, the society most appropriately invited John Frank Stevens, Jr., of Brooklyn, N. Y., to respond to our principal speaker on this occasion. He accepted and had arranged to arrive here this morning.

Last week, on Tuesday, May 1, 1956, we were shocked to learn of his sudden death at his church in Brooklyn—an irreparable loss to his family, a multitude of friends, his community, and to his country.

I have known him as a sturdy, outstanding, American citizen, possessed of the highest attributes of patriotic zeal and character. His death tends to cast a shadow over our proceedings today, but I know that he would wish us to carry on in the cheerful mood so characteristic of him.

Fortunately, in arranging for this event, Mr. Stevens wrote a brief response to Congressman FLOOD's address, which had been furnished him. His widow, Harriette Stover Stevens, has requested that it be read to this gathering by Mr. Earl Harding, of New York.

A retired business executive with the background of a distinguished career in journalism, Mr. Harding, early in life, was thrust into the Panama Canal situation and other problems affecting Latin American nations. He has made detailed studies of the diplomatic history of the Panama Revolution of 1903; in Panama, in Colombia, and in Europe, as well as in the United States. He has written extensively, on this subject and on Panama Canal problems.

In the course of his Isthmain studies, he long ago developed a great admiration of the vastly important work of Chief Engineer John F. Stevens for the Panama Canal. As a consequence, he became a close friend of his son, John F. Stevens, Jr., with whom he enjoyed a common interest in canal history.

It is signally appropriate that Mrs. Stevens chose Mr. Harding to deliver the last address, and I may add, the last public utterance of her husband. May I present Mr. Earl Harding.

RESPONSE OF JOHN F. STEVENS, JR., READ BY EARL HARDING

BROOKLYN, N. Y., *May 5, 1956.*

Mr. EARL HARDING,
New York.

DEAR MR. HARDING: It is my sad duty to transmit a brief response to Congressman FLOOD's address, which my late husband had planned to make on May 12 before the Panama Canal Society of Washington.

As I understand that you will attend that meeting I shall be grateful if you will read it.

Please assure the society and those participating in its program of my deep gratitude for the honor they are paying to my husband's father.

Sincerely,

HARRIETTE S. STEVENS.
(Mrs. John F. Stevens, Jr.)

Mr. Chairman, distinguished guests, ladies, and gentlemen, today's program honoring my father, soon after his birthday, is a great occasion for our family on this 50th anniversary of the momentous decision as to the type of canal to be built at Panama.

In June 1906 father was in Washington at our home, and I was home from school. He learned from the press that a decision had been reached on the recommendations of the International Board of Engineers appointed by President Theodore Roosevelt, and that it was decided to build a sea-level canal.

When father read this news he telephoned the White House and asked for an appointment with the President for that very evening, which was given him for 8 o'clock.

When he returned home and came through the hall, he tossed his hat over on the table and said: "Well, that's settled. There will be no sea-level canal built at Panama."

A few days later, President Roosevelt insisted in the Congress on a lock canal, which was then designed, built, and has been operating for 40 years.

Speaking for our family, please accept our heartfelt thanks for this occasion and especially for Governor Thatcher's tribute in verse, which follows the splendid address of Congressman FLOOD. Thank you sincerely.

Called upon by the toastmaster, the Honorable George H. Roderick, Assistant Secretary of the Army and Chairman of the Board of Directors of Panama Canal Company, spoke briefly. He expressed appreciation for Mrs. Roderick and himself for the society's invitation to be present and of the pleasure which was theirs. He brought greetings from the Panama Canal organization to the gathering and expressed his deep interest in the history of the Panama Canal, as revealed in the course of the program.

Secretary Roderick also spoke of his own official tasks in dealing with current problems of the Panama Canal, and of his trips to the isthmus in this connection. He referred particularly to the flight of Mrs. Roderick and himself to and from the Canal Zone in late March 1954 with Senator and Mrs. Alexander Wiley, of Wisconsin, as well as Governor and Mrs. Thatcher—all making the trip to attend the dedication of the memorial at Balboa to Gen. George W. Goethals on March 31, 1954.

At the luncheon the toastmaster introduced those at the speaker's table in addition to Secretary and Mrs. Roderick, Mr. Earl Harding, and myself, as follows:

Mrs. Maurice H. Thatcher and Mrs. Aileen Gorgas Wrightson, past presidents of the ladies auxiliary of the society.

Mrs. George S. Brady.

Rev. John J. Heenan, S. J., of Georgetown University.

Mrs. Lyle Prather, whose husband was a former manager of the Panama Railroad.

Andrew W. Dewling, former president of the society.

Mrs. Charles G. Holle, whose husband is Deputy Chief of Engineers, United States Army and a former engineer of maintenance, Panama Canal.

Roger S. Erdman.

Col. Pierre Gaillard, son of Col. David D. Gaillard of the Isthmian Canal Commission.

Distinguished personages in the audience, noted by the toastmaster, were:

Capt. Charles Bittinger, well-known artist and naval camouflage expert.

Dr. Robert W. Bruere, editor and writer.

Chalkey DuVal, chief engineer of the city of Richmond, Va.

Col. Eugene D. Hegarty, United States Marine Corps Reserve.

Carroll Kenworthy, foreign editor, United Press.

Capt. E. John Long, writer and editor.

Comdr. E. S. Moale, secretary of the United States Naval Historical Foundation.

Mrs. Ruth Shipley, longtime Chief of the Passport Division, Department of State, and a resident on the isthmus during construction.

Col. Joseph F. Siler, president of the Gorgas Memorial Institute of Tropical and Preventive Medicine.

Prof. Ben. Williams, for many years superintendent of schools of the Canal Zone.

The toastmaster also introduced other past presidents of the society as follows:

Wm. R. McCann, of Hopewell, Va., distinguished engineer, who started his career on canal construction;

Walter G. Ross, business executive, who was a quartermaster during the construction era; and

Col. David R. Wolverton, lawyer, formerly with the sanitary department during construction.

In closing the formal program Governor Thatcher made some remarks of general character, from which highly pertinent quotations are given, as follows:

The future of the Panama Canal must be determined by the Congress of the United States. Let us hope that when it comes to act it may be fully informed, and do that which is best for the public interest.

* * * * *

There are those who wish to see the Panama Canal internationalized; taken from the hands of the United States and turned over to an international or world organization, which would very likely team up with the world at large, and use it in such a way as to greatly harm this Nation. Our people taxed themselves to build this, the greatest industrial enterprise of history; and our Government has maintained and operated it with great success ever since its completion. American lives, American leadership and skill, and American treasure went into the successful American effort. The work was effected under American treaty rights and arrangements which the world recognizes as valid. Speaking for myself, and voicing, I believe, the overwhelming sentiment of the American people, I would oppose the indicated suggestion or movement as one of monumental stupidity and evil.

Our Nation has used the canal for the good of mankind; and in times of war for the cause of freedom. It will be a sad day, indeed, that on which this great ocean link is taken from the jurisdiction, control, and operation of the United States and turned over to any other organization or power. Not only would our own land greatly suffer thereby but at some time of crisis perhaps with fatal effect, and the cause of free nations and free peoples would everywhere be imperiled. There is no other country in all the earth today which, if it had built the canal as we have built it, would surrender its right to own, control, and operate it.

Yet there are those in our midst at this hour, at this time of grave danger to the freedom to the entire human race, who, through impractical idealism or sinister design, would yield up all of these precious and dearly earned rights which are ours. With these rights responsibilities have come, and we have discharged them well.

Our country's conduct and attitude in the past constitute assurance of what may come. Our action has served every worthy cause and end. The canal has enabled us to make the critical contribution to defeat in war the tyrannies of despotism; and in peace to serve the free shipping and commerce of the world. We have thus benefited not only ourselves but all mankind. Our abandonment of the control of this great waterway—beneficent and strategic—would be, indeed, an act of stupendous criminal folly.

ADDRESS BY CONGRESSMAN FLOOD

Fifty years ago, the Government of the United States was faced with the grave responsibility of deciding the type of canal to be constructed at Panama. In a memorable struggle in the Congress in 1906 between advocates of a canal formed by elevated lakes and those for one at sea level, later described as the "Battle of the Levels," victory went to the high-level-lake and lock type. That was the key decision in building the Panama Canal.

How were these results accomplished? The full answer is a long and complicated story. However, when reduced to its essentials, the explanation is relatively brief and simple. It revolves about one sturdy man—chief engineer John F. Stevens of the Canal Commission. Who was he and what was the path that led him to become associated with the famous project? The answers form an important section of American history.

A native of Maine, after a try at teaching, he decided, despite his lack of formal technical training, to become an engineer. In 1874, at the age of 21, he moved to Minneapolis where his uncle, Jesse Stevens, was an engineer, and began as an assistant engineer for the city—a rodman.

At that time railway building in North America was booming. Finding municipal engineering too limited, Stevens, in 1876, shifted to railroading with a position as section hand in Texas. Serving as axman, rodman, instrument man, surveyor, location engineer and construction superintendent, he rose rapidly step by step to executive positions. Eventually attracting the attention of the great railroad-empire builder, James J. Hill, he made an enduring friendship based upon their great common interest in transportation.

Sent by Hill to locate a route for the Great Northern Railway across the Rockies, Stevens, in 1889 made the dramatic discovery of Marais Pass in Montana, through which the road was constructed. For this extraordinary feat, the engineer-explorer was honored during his lifetime by the erection of a heroic bronze statue near the tracks at Summit, Mont., showing him as he appeared at the time of the discovery. Replicas of this statue are in the State library of Maine and at the New York headquarters of the American Society of Civil Engineers.

In 1890, Stevens was assigned the task of locating the best line for a railroad from western Montana to Puget Sound. This involved the choice of a crossing of the Columbia River, which in turn depended upon location of a pass in the Cascade Range.

Again Stevens found a suitable pass near the Wenatchee River, which is now called the Stevens Pass. Today, this important region of the Northwest is served by the railroad through this pass and the Stevens Pass Highway.

Ever alert to great undertakings in other parts of the world, he naturally became interested in the even more challenging problem of building a canal at Panama.

Meanwhile, events that would profoundly effect his career and Isthmian history were occurring. These included the dramatic voyage of the U. S. S. *Oregon* in 1898 around Cape Horn, which focused public attention on the necessity for the Isthmian Canal; the vast interoceanic canal explorations by the Isthmian Canal Commission under Adm. John G. Walker, 1899–1902, which finally recommended Panama; the choice by the Congress and President Theodore Roosevelt in 1902 of the Panama route in preference to Nicaragua, after a scorching debate known as the battle of the routes; the Panama Revolution of 1903, which sealed the choice of the Panama location; acquisition in 1904 of the French Panama Canal Co.'s holdings and the Canal Zone; and finally, assumption by the United States also in 1904 of the vast task of completing the canal under the direction of an Isthmian Canal Commission for construction, of which Admiral Walker was the first chairman. He was succeeded April 1, 1905, by Theodore P. Shonts, president of the Clover Leaf Railroad.

Though not then expecting ever to be actively connected with the great enterprise, Stevens had followed the unfolding of isthmian events with increasing understanding. The grave problems likely to be encountered in constructing a navigation channel across a mountainous undeveloped region of heavy trropical rainfall appealed to him as offering an extraordinary challenge.

However, he had accepted an appointment with the Phillippine Commission to head its railroad building program and, in June 1905, was in Chicago preparing to accompany Secretary Taft's Commission to the Islands. It looked as if he had been definitely diverted from any association with the Panama Canal.

But ominous events on the isthmus of many months duration had culminated in a yellow fever epidemic followed by the unexpected resignation on June 26, 1905, of the first chief engineer, John F. Wallace. The Canal Zone promptly became a scene of chaos and hysteria, for a time threatening the security of the canal program, which was then still in the experimental and development stage.

President Roosevelt, who had watched the crisis growing over those trying months, became deeply concerned and sought a solution. Turning to leaders in the railroad world for assistance, he consulted James J. Hill, who told the President of Stevens' ability and record of achievements. The President became interested in appointing him as chief engineer of the Commission.

Stevens, when advised of this opening at Panama, because of his involvement in the Philippine situation, appears to have been rather hesitant and wished time to consider. He mentioned the matter to his wife who, since their marriage in Texas in 1877, had accompanied him during many travels on the frontiers and shared the hardships of his upward climb as well as its compensations. Mrs. Stevens knew her husband's capacity and never hesitated to encouraged him to greater tasks. She promptly replied: "Ever since you left Maine in 1874 you have been training yourself for this, the greatest engineering project in the world, and now it is offered to you. Please telephone at once and tell the President you will accept."

This ended his hesitancy and the President, on June 30, appointed Stevens as Chief Engineer of the Canal Commission, effective July 1, 1905.

Before departing for Panama, the new Chief Engineer visited Oyster Bay to see the President, who described affairs on the isthmus as being in a "devil of a mess." Stevens understood the difficulties likely to be encountered, but felt thoroughly competent to handle them. However, to avoid any possibility of later misunderstanding, he outlined to Roosevelt the conditions of his acceptance; that he was to have a "free hand in all matters;" that he was not to be hampered by any authority, high or low, and that he would remain with the project until, in his own judgment, its "success or failure" was determined.

The President approved these terms and directed Stevens to communicate about the project directly with him rather than through routine channels. When Stevens pointed out that this procedure might result in conflict with the War Department, the President waved his point aside, stating that everyone there knew his views.

Then, to impress his desire for action, President Roosevelt told the story of the man of sudden wealth speaking to his newly employed butler: "I don't know in the least what you are to do—but one thing I do know, you get busy and buttle like hell."

Arriving with Chairman Shonts at Colon on July 25, 1905, Chief Engineer Stevens found a dangerous psychological situation, with employees "scared out of their boots, afraid of yellow fever and afraid of everything." The only thing that had kept many on the isthmus was lack of transportation to

go home. In fact, more employees returned on the steamer that carried Stevens to the isthmus than had been brought down by it.

At a conference of high officials the same evening on the spacious veranda of Gov. Charles R. Magoon's home in Ancon at the Pacific end of the canal, attended by Col. Wm. C. Gorgas and the Governor, Chairman Shonts and Chief Engineer Stevens correctly estimated the urgent needs of situation; housing and feeding of employees, sanitation and health, recreation and morale, and an adequate and revitalized organization.

Within the short period of 1 week Stevens decided what to do; double track the Panama Railroad, which he then described as a "phantom railroad;" establish commissaries for all employees; build a hotel, the Tivoli, as a temporary measure; place all available labor on houses and sanitary work; design proper track levels in Culebra Cut and a rail transportation system for mass excavation; and organize the forces for construction. His extensive observations in comparable situations enabled Stevens to form sound and discerning judgments quickly.

Stopping all unnecessary canal construction activities, he sent excess men to the United States with instructions that they would be notified when to return. Others were placed on immediate necessities. Having previously accepted the mosquito theory of disease propagation, he became an ardent supporter of Colonel Gorgas in health and sanitation matters.

A man of imposing stature and commanding personality, Chief Engineer Stevens tramped the entire length of the canal viewing the various works. Walking with energy, he radiated the confidence of a natural leader. Often speaking to employees, he told them that there were only three diseases on the isthmus: Yellow fever, malaria, and cold feet; and the greatest of these was cold feet.

Prior to the appointment of Stevens, President Roosevelt had designated an International Board of Consulting Engineers to consider the type of canal. Until that question was resolved, Stevens was seriously handicapped. Nevertheless, he went ahead with excavation of Culebra Cut, which work would be useful no matter what the decision; and on alternate canal plans, which would be ready in anticipation of whatever verdict the Government might reach.

Reporting to the President on January 10, 1906, this Board split. Eight members, including five Europeans, voting for the "sea-level" type; and the five remaining members—all Americans—for the high-level lake and lock type. The minority report, which reflected the views of Chief Engineer Stevens, was prepared by Alfred Noble, an American member of the Board.

Meanwhile, in the Canal Zone, Stevens thoughtfully examined all significant angles of the problem. Though initially inclined toward the popular idea of a "sea-level" canal, when coming to the Isthmus, he approached the solution of the problem objectively. Interpreting the topography in the light of operational and navigational needs as well as engineering and construction, he decided on the high-level-lake plan with the Atlantic terminal dams and locks at Gatun and the Pacific dams and locks in one group at Aguadulce—a hill south of Miraflores. This was essentially the plan originally presented in 1879 by the French engineer, Godin de Lepinay, the originating genius of the basic plan for the Panama Canal as actually constructed.

Forwarding the engineering board's report to the Congress on February 19, 1906, President Roosevelt summarized its main points but strongly supported the high-level-lake plan. He invited especial attention to the fact "that the chief engineer, who will be mainly responsible for the success of this mighty engineering feat, and who has therefore a peculiar personal interest in judging aright; is emphatically and earnestly in favor of the lock-canal project and against the sea-level project."

When testifying in Washington in January 1906, Stevens had advocated the high-level plan with a conviction that no one could shake and voiced his determined opposition to the "sea-level" idea. But one appearance of the engineering leader was not enough.

In June he was again in Washington leading in the historic debate. Testifying before committees of Congress, preparing refutations of "sea-level" advocates, and drafting addresses for Senator Philander C. Knox, Chief Engineer Stevens faced the great crisis of his canal career.

He went to the President for assistance but discovered that he had become "lukewarm" in his stand. As one who believed in vigorous handling of superiors as well as subordinates, Stevens talked to him "like a Dutch uncle." Roosevelt was again convinced and stood behind him "like a brick."

In the end, with the strong support of the President, Secretary of War Taft, and the Isthmian Canal Commission, the plans of Chief Engineer Stevens prevailed. In an act approved June 29, 1906, the Congress adopted the high-level lake and lock plan as proposed by the minority of the International Board of Consulting Engineers. That was the great decision in building the Panama Canal.

Whatever may have been urged at the time of the decision as to the merits of the so-called sea-level design, it is a matter of history that the existing canal was constructed substantially according to the plan strongly recommended by Chief Engineer Stevens, approved and accepted by the Congress and the President. Moreover, it has proved an eminent success, with the transit since 1914 of more than 250,000 vessels of various classes of all nations, commercial and military, with toll rates measurably reflecting the costs of construction, maintenance, and operation.

The day after approving the act of Congress, June 30, 1906, President Roosevelt showed his confidence in Stevens by appointing him as a member of the Canal Commission in addition to his position as Chief Engineer. His star was in the ascendant.

Unfortunately, the minority report provided for constructing the Pacific locks in two groups, separated by a small intermediate-level lake. Instinctively recognizing this division of locks as a serious error in functional design, Stevens, early in 1906, had recommended to Chairman Shonts in Washington the combination of all Pacific locks at one location as a desirable change in the approved plans. But he did not present this well-founded proposal with the detailed operational justification required to secure the attention it merited. Nor had there been any ship-transit experience in the canal upon which to base such justification, and no action was taken.

Promptly returning to the isthmus on July 4, 1906, Stevens resumed studies of the Pacific lock situation. Eventually, on August 3, 1906, he approved a plan for placing all Pacific locks in 1 group of 3 lifts south of Miraflores with the terminal dam and locks between two hills, Cerro Aguadulce, on the west side of the sea-level section of the canal, and Cerro de Puente, on the east. This location would have provided the same lock arrangement at both ends of the canal, avoided creating a traffic choke at Pedro Miguel, enabled uninterrupted summit-lake navigation from the Atlantic locks to the Pacific, and supplied a lake-level traffic mobilization anchorage at the Pacific end to match that at the Atlantic—a plan identical with the original conception of De Lepinay.

At this time, however, Stevens was under great pressure to start construction. Opponents of any canal at all were seeking some means to delay the enterprise. Advocates of the sea-level idea, stung to the quick by their defeat in the Congress, were set, ready to strike at any change in the approved program as indicating weakness in the high-level plan of Stevens. These two forces together represented a political and economic power that he could not safely ignore.

It is indeed regrettable that Stevens' foundation studies for the Pacific locks, which were necessarily made in great haste, proved unsatisfactory. He did not dare to jeopardize the project by further delay. Still confident, however, that this important question would come up again, 20 days later, on August 23, 1906, he voided his plan, marking it, "not to be destroyed but kept in this office," and proceeded with the plan for separating the Pacific locks as approved by the minority of the International Board of Consulting Engineers.

Many years later, in 1943, as a result of critical traffic problems in World War II, Capt. Miles P. DuVal, then captain of the port, Balboa, in charge of marine operations in the Pacific sector of the canal, developed what proved to be the first comprehensive plan for the canal's operational improvement, known as the Terminal Lake Plan.

Submitted by him to higher canal authority, it received immediate attention. Later, in 1945, it was approved in principle by the Governor of the Panama Canal when testifying before the Committee on Merchant Marine and Fisheries in the event of completion of the Third Locks project, which, by the way, had been suspended in 1942. Published as a technical thesis in leading engineering journals, the Terminal Lake-Third Locks proposal, because of its inherent logic and "comparatively low cost," has had a wide appeal as the proper form of modernization for the Panama Canal. Moreover, it is being strongly supported in the Congress.

Let us return to events of 1906. President Roosevelt, after the decision as to type had been made, was free to visit the Isthmus as he had long wished to do. Under an itinerary prepared by Chief Engineer Stevens, Roosevelt's visitation to the Canal Zone and the Republic of Panama, November 14–17, 1906, marks a highlight in Isthmian history—the first time any President of the United States had set foot on foreign soil.

In January 1907, in the midst of a crisis over contracts, Chairman Shonts, after receiving an offer to head a large transportation merger in New York, resigned effective March 4, 1907. News of this produced a sensation on the Isthmus. All eyes promptly turned to Stevens as their man of destiny. But even he had been hard pressed for many months protecting the interests of the canal.

Accustomed to doing great things in an unhampered way, he had grown tired of Government redtape and frustrations and, on January 30, 1907, wrote his own resignation directly to the President, expressing his desire to return to the railroads. To his close associates, however, he revealed his disgust and irritation at Washington officialdom.

The President promptly acquiesced. He had had two civilian chief engineers. The first had left after 1 year and now the 2nd was planning to leave after 2 years. The canal could not be satisfactorily built with such frequent changes in engineering leadership.

By 1907 the major decisions had been made, success had become a certainty, and problems less acute. Roosevelt determined to secure continuity in management in construction: "I propose now to put it in charge of men who will stay on the job till I get tired of having them there, or till I say they may abandon it."

He selected Maj. George W. Goethals, an outstanding engineer officer of the Army as Stevens' successor and again reorganized the commission. The other engineering members were Majs. William L. Sibert and David D. Gaillard, and Rear Adm. Harry H. Rousseau, a former chief of the Navy Bureau of Yards and Docks. Col. William C. Gorgas, the great sanitarian, who had come to the

Isthmus in 1904, and had been appointed a member of the commission on recommendation of Stevens, was also named. The two civilian members were Jackson Smith, succeeded by Col. H. F. Hodges; and Hon. J. C. S. Blackburn, who was succeeded by Hon. Maurice H. Thatcher, afterward a Member of Congress. It is noteworthy that neither this commission nor its predecessor included members experienced in navagational operations.

Stevens did not leave the Isthmus until April 7, when employees arranged a farewell reception at Colon attended by many throughout the Canal Zone and from the Republic of Panama. In addressing the throng, he gave generous credit to his predecessor, John F. Wallace, for the organization he had inherited and had modified. He revealed that 2 years previously, on taking charge, he was almost as overwhelmed by the vastness of the preparatory work to be done as was the President. He added that "until Colonel Gorgas had lifted the dark cloud which the unsanitary conditions placed over the work," he was doubtful of success.

Appealing to the men, as a friend, to take their "little differences and complaints" to Chief Engineer Goethals and not to Washington, Stevens predicted that the canal would be open to traffic by January 1, 1915.

As evidence of the esteem in which he was held, canal employees presented him with two bound volumes of 10,000 signatures of a petition in which they had requested him to reconsider his resignation and remain, a gold watch, diamond ring, and a silver table set. The last included a tray with an engraving showing the completed canal.

Stevens was visibly moved by the exceptional demonstration. He knew that it marked the end of an outstanding chapter in his career. With its passing went forever his hope of becoming the builder of the Panama Canal.

The next day was Sunday. Many had remained in Colon overnight. Long before departure of the S. S. *Panama*, the largest crowd since United States occupation of the Canal Zone, gathered on the pier. At noon the Isthmian Canal Commission Band, which he had established in 1905, played Auld Lang Syne. The *Panama* slowly left her dock and headed toward the sea, amid cheers of the spectators and whistles on ships in the bay. Stevens, standing at the rail with his young son, John F., Jr., looked on, pale and sad.

After returning to the United States, Mr. Stevens continued his upward climb in the railroad industry, becoming one of the best known railroad officials in the country. In 1917, after declaration of war against Germany, he went to President Wilson in search of an active assignment in the war. As Russia was then an ally and in urgent need of a competent railroad man in connection with its war transport problems, the availability of Stevens was timely. Appointed as Minister Plenipotentiary and Head of the United States Railway Mission to Russia, he undertook the difficult tasks involved in operating and improving its rail systems. Later, from 1919 to 1923, he was president of the Inter-Allied Technical Board supervising the Siberian railways.

In these positions, he observed the start and early years of the Communist revolution. Accurately assessing the tremendous scope of that world conspiracy, he was among the first observers to alert responsible leaders in the United States as to its dangers.

Returning home in 1923, he later became president of the American Society of Civil Engineers, and received many other honors, including the John Fritz medal for great achievements. He died at Southern Pines, N. C., in 1943, at the age of 90 years, keen in mind to the end.

The significance of Stevens' canal contributions, though substantially obscured for a time, has gained stature with the years. He rescued the project from possible disaster; assembled a major part of the plant and organized the forces for construction; planned the main features of the waterway and brought about the great decision for the high-level lake and lock plan; launched the enterprise into the era of construction and guided the work until its success was a certainty. Not only that, Stevens clearly foresaw the necessity for major changes in the Pacific lock arrangement, for which he developed a plan but was unable to secure its adoption. Subsequent studies of canal operations have established that this plan would have supplied the best operational canal practicable of economic attainment—striking evidence of the high quality of his insight.

A man of eminent vision whose great gifts were harnessed to practicality, Stevens made no major mistakes, either of engineering or policy. His great constructive contributions for the Panama Canal have now emerged into historical perspective. The facts increasingly demonstrate that he was the basic architect of the Panama Canal.

I deem it appropriate to close my remarks by reading the fine tribute in verse paid by Governor Thatcher to the distinguished man whom we now honor. It epitomizes in compact and enduring form the splendid character and achievements of John F. Stevens.

"JOHN FOSTER STEVENS: A TRIBUTE

"Amongst all those whose labors cleft the land
To blend, as one, the seas at Panama—
There was none greater than John Stevens; and
The passing years bear witness. He foresaw—
More clearly than the others had foreseen—
The value of the plan for lock and lake,
And led Authority—in doubt between
Diverse designs—the wiser choice to make.
Possessed of genius rare, with skills supreme
And ripened knowledge gained from ventures vast—
He shaped the molds to vitalize the Dream
Which had so long persisted in the past.
His all he gave to serve the Isthmian task:
What more could men demand, or duty ask?"

—*Maurice H. Thatcher.*

Kings Point: The Annapolis of the Merchant Marine

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 29, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Rear Adm. Gordon McLintock, USMS, Superintendent, United States Merchant Marine Academy, before the Propeller Club, port of Newport News, on the commemoration of Maritime Day, at Newport News on May 21, 1956:

KINGS POINT: THE ANNAPOLIS OF THE MERCHANT MARINE

(Address by Rear Adm. Gordon McLintock, USMS, Superintendent, U. S. Merchant Marine Academy, before the Propeller Club, port of Newport News, on the commemoration of Maritime Day, at Newport News on May 21, 1956)

Thank you, Mr. Blewett, thank you very much.

Mr. Sorenson, members and guests of the Propeller Club, port of Newport News, ladies and gentlemen, I am deely honored at having been invited to address you, the Propeller Club, port of Newport News, on your commemoration of Maritime Day. I want to thank your president, Mr. Sorenson, and also Mr. William Blewett, president of the Newport News Shipbuilding & Drydock Co., and former president of your club. As a member of the board of governors of the Propeller Club, port of New York, I bring you especial greetings.

Maritime Day any year is a proud day for a man of the sea—especially for the American, who finds it the day to reflect upon the inspirational tradition of the American merchant marine, to take measure of maritime America as it stands today, and finally to feel hopeful of the maritime future of our great country.

We have heard much in recent months about the encouraging Government-industry partnership for a sound and continuous development of our merchant marine. A partnership, which in its optimistic promise, is remindful of the inevitable martial status question which faced a young lady applicant in filling out her employment forms; she read the question, she meditated a moment, then answered simply, hopeful.

But hopeful is not sufficient to describe Maritime Day 1956. We are already making progress, important progress, to help materialize the hopes we all hold.

National Maritime Day 1956 is making a valuable contribution to this end, thanks to the public relations policies of the industry, thanks to the dynamic and objective policy of our Government in encouraging public understanding of the matter, and thanks to the Congressional interest in things maritime.

National organizations like your own have made a splendid contribution in letting the American people "in" on what's going on in their merchant marine and reappraising their stake in a dependable commercial fleet. The Propeller Club of the United States is to be congratulated for this outstanding program on a national scale.

The Maritime Day poster campaign, in the inaugural of which I was privileged to participate with a selection of Kings Point cadets in Washington earlier this month, is a fine example of cooperation between Government and industry in bringing these things to the attention of the public. Now the plans for a film on our merchant marine seem to be materializing. Your interest in the 50–50 hearings, and, close to our hearts up North, your support of the Kings Point permanency legislation also exemplify your forceful, productive concern over such matters.

In short, Maritime Day 1956 marks more than the historic occasion of the Savannah's famous crossing. It marks the real progress which is being made toward giving America the merchant marine we need.

Up at Kings Point, we too are looking toward the future. The progressive outlook of the Maritime Administration includes, in addition to its tonnage replacement construction program, the development of the academy program to keep pace with the needs of the industry.

The first time I came to Newport News was in 1919, when I was serving as a cadet in the steamer *Wentworth*. We loaded a cargo of coal for Italy and were only in port for about 2 days. In those times the cadets were required to stand the night watches in port so that overtime payments to the crew could be avoided. However, we did get an opportunity to see the city for a few hours and to buy an ice cream soda. It was the best ice cream soda I have ever had. Eight years later while serving as chief officer in the steamer *Charles E. Harwood*, we had discharged in Norfolk and were outward bound for Tampico, Mexico, by way of Jacksonville,

Fla., when, having dropped the pilot off Cape Henry, the captain became seriously ill, and had to go below. When we arrived at Jacksonville I had an ambulance waiting on the dock for him and thus I have an affection for these parts, having sailed from here on a voyage which was to give me my first command.

My most recent visits have been on memorable occasions, the launching of the queen of the seas, the flagship *United States*, her trial trip and her delivery trip. This ship is a magnificent tribute to the people of Newport News and to the skill and craftsmanship of the employees and staff of the Newport News Shipbuilding & Drydock Co., and to the leadership and ability of its president, Mr. William Blewett, known to his friends as Bill Blewett. This ship really put America back on the seas in a big way, recapturing the Blue Riband of the western ocean after it had been held by our competitors for 100 years. Perhaps one of the greatest compliments paid to the ship was the enthusiasm with which she was greeted upon her arrival, after her maiden crossing, by the British who might have been forgiven some chagrin after having held the Atlantic trophy for so many years, but who lined the banks of the Solent by the thousands, to cheer her arrival.

Materiel is of no use without personnel, however, and first-class ships must have first-class seamen to run them. Of the officers on the bridge and in the engine room of the *United States* on that memorable maiden voyage, over two-thirds were Kings Pointers, graduates of the United States Merchant Marine Academy, which was established in 1942 for just such a purpose, the manning of the ships of our merchant marine with well-trained officers, possessed of a high degree of professional competence, and a well-rounded education.

Actually, the need for a national system of training for merchant officers was recognized by a Government Industry Committee as early as 1932, and brought into particular focus by the *Morro Castle* and *Mohawk* disasters which occurred in 1934 and 1935, respectively, and which brought to the attention of the public and the Congress the sorry state into which our merchant marine had fallen in between wars. As a result the Congress made a thorough study of the maritime picture, both materiel and personnel, congressional committees consulted experts in the shipping world and the Merchant Marine Act of 1936 was drawn up. This became the magna carta of the modern American merchant marine, and as enacted, and subsequently amended, it directed that the United States Maritime Commission, predecessor of the United States Maritime Administration, educate American citizens to become officers of our merchant marine, to the end that the United States might have a "merchant marine of the best equipped, safest and most most suitable types of vessels, constructed in the United States, and manned with a trained and efficient citizen personnel." This was the initial step as a Federal venture to develop a body of highly qualified merchant marine officers. From this Kings Point was born.

The Merchant Marine Cadet Corps was established in 1938 and a permanent site selected for the Federal Academy in 1941, at Kings Point, N. Y., on the north shore of Long Island. It is a splendid site, with a deepwater basin and fine facilities for sailing, and it is interesting to note that it was purchased from the estate of the late Walter P. Chrysler for the nominal sum of $100,000. Excellent modern buildings, comfortable barracks, classrooms, shops, laboratories, library, and so forth, were built, and the whole first-rate, modern plant, geared to train and educate a thousand young men was constructed at less than the cost of a single destroyer.

The first prize established for a graduation award at the new academy was the Bailey Memorial Award, in memory of Mr. Charles F. Bailey, for 16 years engineering director of the Newport News Shipbuilding Co. The apprentice training school at the yard is well and favorably known throughout the world and the company has always shown a continuing interest in our training at Kings Point. President Ferguson, President Woodward, and President Blewett, as successive presidents of the Society of Naval Architects and Marine Engineers have reviewed our regiment on Naval Architects Day, and additionally, have shown a very real and practical interest in the academy, in many ways.

To return to the establishment of the academy. With the coming of World War II we actually had on board, at our maximum, 2,600 young men in training to be ships' officers. As you in Newport News well remember the losses of ships and men were very great and there was a pressing need for replacements. I think it is a proud part of our history that you were able to supply those ships and that we had some part in supplying well trained officers to man them. We have on our war memorial the names of 212 Kings Pointers who gave their lives, while serving in those ships, as a result of enemy action.

I think it not inappropriate at this location to mention the immense achievement of the shipyards of this Nation in building in an incredibly short time, the 60 million tons of merchant shipping which undoubtedly gave us the victory. We all remember the wolf packs which operated just off our coast here, notably at Torpedo Junction, by which Hitler hoped to cut the supply line, but which, thanks to our shipyards and our sailors, was constantly replenished, and the supplies went through.

At the Merchant Marine Academy, after the conclusion of the war, we immediately cut back and we now have a peacetime complement of 700 cadets on board, together with a class in training at sea, which gives us approximately 100 deck officer graduates a year, and 100 engineer officers.

I think you may be interested in knowing something of the present course at Kings Point. It is a full 4-year course on a college level and our aim is to educate the prospective officer in all phases of his profession as well as in the liberal arts so that when he is finished, he is technically highly proficient in the most modern methods, and trained for leadership, hardened to responsibility, and competent to give orders because he has learned to obey. In reality, the course is actually a 5-year one, since the 3 years of study ashore are 11-month years, and in semester hours total more than the average 4-year college course. The course is not easy one and over 30 percent of the men fall by the wayside, but those who graduate can really congratulate themselves on a job well done.

We have one of the best electronics departments, in its particular field, in the country, with courses in applied electronics as related to modern aids to navigation. I am glad to say we have a very fine engineering department, a department of nautical science, formerly known as the department of seamanship and navigation, a department of mathematics and science, a department of ship management, and a department of history and languages, as well as a department of naval science, and, of course, a department of athletics. At the end of all this the cadet has earned a bachelor of science degree, and a license as either a third officer or a third engineer depending on which course of study he has elected to pursue, and a commission as an ensign in the Naval Reserve. Most important, I think, is that his character has also been trained so that he is physically, mentally, and morally equipped to do credit to himself and to his ship and to rise in his profession as the years go by.

A part of this character training which has proved to be very valuable is the year which the cadet spends at sea on board a variety of ships learning, under the ship's officers, some of the many facets of his calling, and continuing his studies to meet the required standards of his instructors at the Academy to whom he submits his sea project papers for marking. The sea year is the second of his 4 years and it serves the dual purpose of practical study and of weeding out a student who may not be cut out for a seagoing life.

The question is sometimes asked, "How many of the graduates remain at sea?", and I should like to answer by quoting my answer to the Payne committee questionnaire on maritime training recently published:

"In reaching conclusions relative to the number of graduates pursuing their profession only the postwar classes, i. e., only those classes which graduated from and including 1949 to the present should be used for the following reasons:

"1. In 1949 the Academy's first 4-year career class was graduated.

"2. With the outbreak of World War II, career objectives were largely forgotten by the young men of our country who hastened to volunteer for the Armed Forces or for the merchant marine for the purpose of defending their country and winning the war. At its peak, wartime shipping tonnage totaled 60 million tons, which could not be maintained in peacetime, and provide employment for war-trained merchant officers. Similarly, the 11 million men in the Armed Forces could not have remained in the Army, Navy, or Air Force after the war had they desired to. Those who entered Kings Point in or subsequent to 1945, and graduated in 1949, presumably entered with the objective of making the sea their career.

"3. According to statistics prepared by the Maritime Administration through the year 1953, from actual checks of graduates, 62 percent of the graduates of the year 1949 are still following their profession, 52 percent of them actually at sea in the merchant service or on active duty with the Navy. Of the 10 percent who are in steamship companies ashore and allied industries no doubt a large number have reached the top of their profession at sea and then been promoted to shore positions in their respective companies, such as port captains, engineers, marine superintendents, vice presidents, et cetera. The percentage of graduates still following their profession increases, of course, annually, from 1949 to the present."

I believe this record will stand up very well with the percentages of graduates from the other Federal academies who remain on active duty.

I am glad to say that our graduates are making a good record and that, for example, of the 16 ships in the Farrell Lines, 11 are commanded by Kings Point graduates. These are all young men in their early 30's and the recently appointed marine superintendent is also a Kings Point graduate, age 30, who has several years in command behind him. We have also a Kings Point graduate who is vice president of the Mississippi Steamship Co., and a port captain in the American President Lines, and we have a number of chief engineers, some in the largest tankers afloat. Kings Pointers are to be found on most bridges and in most enginerooms under the American flag.

As to the future we are greatly encouraged by having been made permanent and we already have courses in nuclear physics and are keeping abreast, and in fact anticipating the needs of the ship's officer of the future. We recently had on loan from the Newport News shipyard an exhibit depicting the man-

ner in which they would propose to install a nuclear plant in a mariner ship conversion which was very informative and of great interest to us all at the academy. Mr. Blewett has, I am glad to say, been a stalwart supporter of Kings Point and a frequent visitor, and I should like to extend an invitation to Mr. Sorenson, your president, and to each of you personally, to "come up and see us some time" and I believe you would be pleased with the caliber of the young men, of the curriculum, and of the whole program underway so vigorously at the United States Merchant Marine Academy.

We have of course a large student port of the Propeller Club, the Port of Kings Point.

We at Kings Point feel an unusually large measure of pride in Maritime Day 1956, for this day marks the first national maritime day that the United States of America, and particularly the American merchant marine, can boast of a permanent United States Merchant Marine Academy, a big step forward in the continuous progress being recorded to help assure maritime America of its rightful place as a world maritime leader.

It has been a pleasure to come and visit you tonight and I am greatly indebted to you for inviting me and for receiving me so graciously and hospitably this evening.

Disabled Are Valuable

EXTENSION OF REMARKS
OF

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 29, 1956

Mr. BENNETT of Florida. Mr. Speaker, "I'm wearing two hats, one as Chairman of the President's Committee on Employment of the Physically Handicapped, and the other as national commander of the Disabled American Veterans," said Gen. Melvin J. Maas during the opening meeting, Thursday, May 17, 1956, of the annual meeting of the representatives of some 300 organizations affiliated with the President's Committee on Employment of the Physically Handicapped. Then he was speaking in the departmental auditorium, in Washington, D. C., and continued:

I'm going to step aside, while Maj. Omer W. Clark, national legislative director of the DAV, turns over to DICK NIXON, our country's Vice President, the prize winning checks, from the national headquarters of the DAV, which the Vice President will then present to the five national essay contest winners, whose traveling expenses to Washington, D. C., and back home were also paid for by the DAV.

The 5 DAV checks having been presented to Vice President NIXON, he in turn presented them to the 5 national essay contest winners: Alaire Dickson, Gooding, Idaho; Kaye Ray, Tucson, Ariz.; Theresa Drzal, Johnstown, Pa.; Sharon Berg, Salt Lake City, Utah; and Rodney Nicholson, El Dorado, Ark.

The Vice President casually remarked that he was glad that there was at least one young man among the essay contest winners.

The Vice President also presented a beautiful plaque—the President's trophy—made by handicapped persons being trained by the National Institute for the Crippled and Disabled in New York City, to the Outstanding Handicapped Person of the Year, Dr. Arthur S. Abramson, of New York City, himself a wheelchair veteran of World War II, in appreciation of him, notwithstanding a paralysis of the lower portion of his body by reason of gunshot wounds, making very outstanding contributions toward the physical rehabilitation of disabled veterans and other handicapped persons during the last several years.

The theme of the 2-day session, and of the panel discussions, was that "Disabled Are Valuable"—dependable, appreciative, valuable. The session included discussions as to how to surmount the various road blocks toward facilitating the employment of the physically handicapped, both civilians and veterans.

Changing from one hat to the other, as chairman of the President's Committee on Employment of the Physically Handicapped and as national commander of the DAV, "Mel" Maas—as he is known to his friends—has, in both capacities, taken advantage of every opportunity to point out the advantages to employers of employing handicapped employables in suitable useful jobs, matching the man to the job by utilizing his remaining abilities. Surveys, he asserts, indicate that, generally speaking, handicapped employees lose less time because of accidents, absenteeism, or indisposition, and are generally more productive than able-bodied employees.

No better investment can be made by the Nation, resulting in greater financial and humanitarian dividends, than the relatively small cost involved in effectuating the physical and vocational rehabilitation of handicapped persons—thus enabling them to be converted from tax-consuming to tax-paying citizens.

Though now totally blind, General Maas sees in many ways better than those who have eyesight. A veteran of World War I, World War II, and the Korean conflict, rising from the rank of private and then corporal in the Marine Corps during World War I, General Maas has made many contributions to society; but he considers his present two positions as of paramount importance, in this country, and in effect throughout the world, because he says human dignity, independence for human beings, can be obtained only by enabling them to become useful and self-sustaining.

"Independence Through Employment—Hire Disabled Veterans" is the printed message on an attractive Independence Hall 1956 calendar card which, several months ago, was distributed to some 300,000 employers, under the sponsorship of the President's Committee on Employment of the Physically Handicapped, designed to focus their attention upon the advantages of employing America's disabled defenders. This special calendar card indicates "printing costs paid by the Irving J. Phillipson rehabilitation fund of the Disabled American Veterans' Service Foundation."

These facts I know, by what I have read in our newspapers, and because a long-time friend of mine, Miles H. Draper of Tampa, Fla., is president and chairman of the board of trustees of the DAV Service Foundation. Serving with him are Gen. Melvin J. Maas, Daniel W. Bell, and Maple T. Harl, of Washington, D. C.; Gen. George C. Kenney, Lewis L. Clarke, Francis Buono, and Arthur W. Procter, of New York City; John L. Golob and James L. Monahan, of Minnesota; Laurence Curtis, of Boston, Mass.; Boniface R. Maile, of Detroit, Mich.; and Floyd L. Ming, of Bakersfield, Calif.

A past national commander of the DAV and former national service director, Millard W. Rice is the foundation's executive secretary and full-time executive director, with offices at 631 Pennsylvania Ave., NW., Washington, D. C.

I am told that the Disabled American Veterans Service Foundation was created by the DAV in 1931, as an incorporated trustee under the laws of the State of Ohio, to give assurance to donors of a continuity of policy as to funds raised; and that it has been responsible, during the 1948-55 period for appropriating the aggregate sum of $2,490,000 to the congressionally chartered 36-year-old service-giving Disabled American Veterans—DAV—in addition to smaller amounts to DAV departments and units by reason of localized fund-raising projects.

Its continuity of policy is assured by its method of electing its trustees, 10 of whom each serve for a 5-year period, with 2 expiring each succeeding year, whereas the remaining 3 consist of the incumbent national commander and chairman of the National Finance Committee of the DAV and 1 other elected for a 1-year term.

Most of its net funds have been raised by the DAV Service Foundation by conducting annual puzzle contests, but almost immediately after proving the success of such formula, many other organizations decided to do likewise, which has thus been responsible for diminishing returns in successive contests.

Other effective methods for raising substantial funds therefore need to be developed. Several recent bequests in wills have given encouragement to the distribution of a lawyers advisory committee folder among lawyers who specialize in probate work. I am advised that up to 20 percent of an individual's taxable income, and somewhat less of a corporation's taxable income, may be deducted for Federal income tax purposes, when donated to this foundation; and thus the Federal Government shares in the cost of making donations to such Treasury-recognized organizations as the DAV Service Foundation and the service-giving Disabled American Veterans.

The welfare of America's disabled defenders is inevitably linked with our country's future welfare and security, because our country's potential future war veterans will naturally be impressed by the fact that our Nation enables its disabled war veterans to become useful civilians.

Unfortunately, too many of my fellow-Americans erroneously assume that governmental benefits to disabled veterans are automatically awarded. They fail to realize that more claims are denied by the United States Veterans' Administration than are allowed. Ordinarily,

it is much more difficult for a disabled veteran to prove his case factually and technically than it is for an able-bodied veteran to prove his entitlement to benefits under the so-called GI bill of rights.

The burden of proof to establish his claim for service-connection of his disability rests upon the disabled veteran himself, if official records fail to substantiate his claim. Thus proving service connection may necessitate detailed specific fact-giving, affidavit evidence, which because of the death or disappearance of buddies and others who know the pertinent facts, may be exceedingly difficult to obtain.

Because of such technical difficulties, the DAV has long maintained the largest veteran staff of full-time, paid, expert national service officers located in all of the regional offices of the United States Veterans' Administration—where they have access to the claimant's official records—to advise and assist distressed, disabled veterans, and their dependents, how to establish service-connection and entitlement to disability compensation for their handicapping disabilities, plus needed physical and vocational rehabilitation, and finally placement into useful self-sustaining employment.

Thousands of discouraged disabled veterans are each year thus converted from community liabilities into community assets. Each claim is different from every other one, just as the problem of every handicapped person is different from every other one. In extending much needed service to disheartened, disabled veterans, the DAV not only benefits scores of thousands of disabled veterans, and their dependents, each year, but also benefits their respective communities, and, in the final analysis, our country. The extensiveness and effectiveness of their personalized, helping-hand services to America's disabled war veterans is only in part indicated by the statistical résumé of their activities for the last fiscal year, as follows:

Service connections established	7,231
Attendant's allowances procured	188
Death compensation awards	4,281
Burial allowances processed	1,571
Public Law 346 benefits obtained	2,601
VA claim files reviewed	299,096
Increased compensation obtained	18,193
Non-service pensions proven	6,860
Insurance benefit adjustments	1,208
Public Law 16 benefits obtained	2,596
Retirement benefits secured	63
Appearances before rating agencies	134,915

The nationwide service setup of the DAV is under the jurisdiction of Capt. Cicero F. Hogan. As national director of claims, he has his offices at the Disabled American Veterans national service headquarters at 1701 18th Street NW, Washington, D. C.

Also located at such national service headquarters is the DAV national legislative director, Maj. Omer W. Clark, former Deputy Administrator of Veterans' Affairs, and his assistant legislative director, Elmer M. Freudenberger, former Chief of Claims of the United States Veterans' Administration. Major Clark is also chairman of the Disabled Veterans Committee of the President's Committee on Employment of the Physically Handicapped.

A very important part of the services extended by the DAV comes under its national director of employment, John W. Burris, who is also its national civil service officer—also at the same address.

The administrative activities of its national service headquarters are coordinated by the DAV's able assistant national adjutant, Roland A. Jensen.

The overall administrative activities of the DAV come under the jurisdiction of its long-time National Adjutant, Vivian D. Colby—a wounded Marine of World War I—located at the DAV National Headquarters at 5555 Ridge Avenue, Cincinnati, Ohio. Under his jurisdiction also comes the DAV's chief fundraising project—sending out miniature automobile license tags to automobile owners, by reason of which about 125,000 sets of lost keys are each year returned to their owners, without regard to whether they had previously made any donation therefor.

Unfortunately, only about 20 percent of the recipients of such key-insurance Idento Tags do send back donations to the DAV, but those who do so, fortunately, have enabled the DAV to maintain its some 200 full-time National Service officers, and about 600 employees at its Idento Tag plant in Cincinnati—mostly disabled veterans, their dependents, and other handicapped persons—owned and operated entirely by the DAV itself.

Every automobile owner who receives an Idento Tag ought to attach same to his key-ring. He is assured that his keys will probably be returned to him if lost, if the finder deposits them in some Post Office box. Prior to the DAV's adoption of this Idento Tag project in 1941, it had been conducted commercially, and, on an ordered basis, a charge of at least $1.00 was made therefor. If all the recipients of the DAV's Idento Tags were to make a $1.00 contribution, then, together with those who are more generous, the DAV would show a profit on such project of several hundred percent, which would enable it to accomplish its long time objective of establishing full-time national contact officers in all of the some 166 hospitals maintained by the United States Veterans' Administration throughout the country. Bed patients in these hospitals are greatly in need of such personalized contacts from trained service officers, to advise, counsel, and assist them as to their rights and how to prove entitlement to same, under the some one thousand laws administered by the Veterans' Administration.

No charitable donation brings greater dividend returns, from a financial and humanitarian standpoint, than those donations which make it possible for the DAV to extend its helping-hand services to scores of thousands of distressed disabled defenders, and their dependents, which they so sorely need.

Direct donations to the DAV are greatly needed if it is to be enabled to continue to maintain its invaluable, personalized services. Many Americans may wish to make more substantial donations by designation of the Disabled American Veterans Service Foundation as a beneficiary in trust agreements, wills, insurance policies, assignment of stocks and bonds, and other properties.

Incidentally, I am myself a member of the DAV, and sincerely believe its service activities, locally through its some 2,000 local chapters, and nationally through its some 200 full-time national service officers, to be of paramount importance to America's disabled veterans, and to their local communities and for the future security of America itself.

Mr. Speaker, Americans who are grateful to America's disabled defenders for their sacrifices of parts of their bodies or of their health will generously support the vitally important rehabilitation service program so effectively maintained by the 36-year-old congressionally chartered Disabled American Veterans—DAV—as sponsored and supported by its incorporated trustee, the Disabled American Veterans Service Foundation.

On Every Dollar Bill

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. BOSCH. Mr. Speaker, it is well for all of us to become better acquainted with the spiritual and historical lessons left with us for guidance and inspiration by the founders of our Republic. One of many is found on the back of our $1 bill, but I dare say, many of us have given little thought to the reasoning behind the symbols there found.

Under leave to extend my remarks, I include a very fine explanation from the Christopher News Notes, No. 75, of May 1956:

ON EVERY DOLLAR BILL

There's a powerful lesson on every dollar bill. Take a look at the back of one—the green side—i. e., the "greenback." The two circles represent both sides of the Great Seal of the United States.

Do you know what the circular symbol on the left means? Ask a few friends if they understand the significance of the pyramid shown there, and the eye above it.

We made many tests and found that not one person in a hundred could explain the meaning behind these symbols, even though they are on every one of the billion and a half $1 bills now in circulation.

RAY BOLGER HELPS

So we decided to dig up the facts for one of our weekly Christopher television films. Hollywood star Ray Bolger appeared in the program and explained in a fascinating way the spiritual and historical lesson symbolized on the back of every dollar bill. We have already received so many requests from all over the country for a detailed explanation that we thought it well to summarize it here in the News Notes.

ORIGIN OF SYMBOLS

The founders of our country thought it so important to express the basic truths of our Nation in the great seal that the matter was brought before Congress on the very afternoon of the signing of the Declaration of Independence, July 4, 1776.

Three great leaders, Thomas Jefferson, Benjamin Franklin, and John Adams were appointed as a committee of three to prepare the seal. Six years later, on June 20, 1782, after exhaustive study and largely through

the efforts of William Barton and Charles Thomson, Congress passed a resolution approving the final design of the great seal.

DETAILS WITH A MEANING

Here are some of the significant details we found through our research:

1. Pyramid: First of all, note the pyramid in the left hand circle. It represents the material strength of our country. In the words of William Barton, who played such an important part in designing it, it stands for strength and duration.

2. Eye: Directly above the pyramid is the Eye of God which, though separate, completes the pyramid. It emphasizes the importance of putting the spiritual welfare of our country above its material prosperity. Our Founding Fathers [1] firmly believed that our strength was rooted in God and that our progress must always be under the watchful eye of Providence.

3. Under God: The words "Annuit Coeptis" circling the top of the seal are once again a significant proof of the faith of the Founding Fathers and this Nation's dependence on God. These words mean: "He (God) has favored our undertakings."

4. New order: Now look at the three Latin words directly under the pyramid—"Novus Ordo Seclorum" which means "A new order of ages." They signify that this new republic, which had just been founded, introduced a new age in the life and freedom of the people of the world * * * that it ushered in a new era in which the people themselves would be able to exercise their God-given rights to self-government.

5. Started in 1776: The roman numerals—MDCCLXXVI—at the base of the pyramid add up to 1776—the beginning of the United States as an independent Nation.

THE CIRCLE AT THE RIGHT

Now take a look at the right-hand circle on the back of the dollar bill.

1. Eagle: It first became our national emblem in 1782 when it was chosen for the Great Seal as a symbol of strength and victory.

2. States rights: The shield on the eagle's breast signifies self-reliance. It contains 13 stripes as a reminder that each individual State, with its basic rights and responsibilities, was expected to help protect the freedom of all the States.

3. The role of Congress: The bar across the top of the shield stands for Congress—as the unifying and binding force between the States. The colors of the bar and stripes are red, white, and blue in the seal itself. Red signifies hardiness and valor; white, purity, and innocence; and blue, vigilance, perseverance, and justice.

4. Peace comes first: In the right talon or claw of the eagle, you will note an olive branch and if you examine it closely, you will see that it has 13 olive leaves. In the eagle's left talon is a bundle of 13 arrows. Symbolizing the power of peace and war, the olive branch and the arrows are a reminder to the 13 States of their obligation first to work for peace and against war.

5. Ring of light: Finally, above the eagle's head is a ring of light in gold, surrounding 13 stars of silver on a blue field. The stars denote "a new State taking its place and rank among other sovereign powers."

So you can see how important the great seal of the United States really is. In its design our Founding Fathers drew a lesson that was meant to be handed down for generations to come.

It may interest you to know that the great seal is used on official documents, medals, currency, official stationery and publications, and in several other ways under the supervision of the Secretary of State, who is custodian of the seal.

WHAT YOU CAN DO

If you take a few minutes to familiarize yourself with these facts about the great seal, you'll be in a position to do a little missionary work in passing them on to others. Here are a few suggestions:

1. Take a dollar bill and explain the meaningful details to members of your own family, your friends and fellow workers.

2. Tell teachers to explain these symbols in every classroom.

3. Remind your local newspapers, radio and television stations that they can perform a public service by bringing these facts to the attention of the public as part of the great American heritage that each and all have a right to know.

IF YOU WON'T, WHO WILL?

In these days when there is widespread criticism of how little is known about the high ideals on which our Nation is founded, it is up to those who believe in God to use every opportunity to keep all Americans ever conscious of the fact that our whole concept of liberty is rooted in divine truth.

If you won't, who will?

By doing nothing, you may be aiding those who slowly but surely are striving to despiritualize every phase of public and private life. Their chief strength is the failure of the average good citizen to make his voice heard.

Here is an opportunity for you to spread far and wide a few simple facts. Doing something positive and constructive like this is far more effective than merely complaining about what's wrong with your country—and your world.

Don't forget for one moment what you, personally and individually, can do. If you are tempted to do nothing, recall the solemn warning of Jesus Christ: "He that is not with me, is against me" (Matt. 12: 30).

[1] (In the book, The History of the Seal of the United States, by Gaillard Hunt, published by the State Department in 1909, it states on page 12 that Jefferson, Franklin and Adams explicitly approved the inclusion of the eye of providence in the seal. Then on page 42, Mr. Hunt quotes: "The pyramid signifies strength and duration. The eye over it and the motto allude to the many signal interpositions of Providence in favor of the American cause." * * * In the Encyclopedia Britannica under the topic, "Seal of the United States," it states that Benjamin Franklin first suggested the "eye of Providence in a radiant triangle.")

Let's Extend and Logically Terminate GI Home Loan Program

EXTENSION OF REMARKS

OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 29, 1956

Mr. FASCELL. Mr. Speaker, on April 12, 1956, I introduced H. R. 10469, a bill to provide for a 3-year extension of the GI home loan program. This measure provides for a gradual termination allowing a 1-month extension for every 2 months of active service for World War II veterans. It further provides that all veterans disabled during World War II shall receive a full 3-year extension from the July 25, 1957, termination date.

Action in the United States Senate Thursday, May 24, recognizes the need for an extension of the GI home loan program. The Senate has not, however, given consideration to the need for a gradual termination nor has it recognized the adverse effects that an abrupt termination will have upon our overall economy. Their action reminds me of the doctor who, after examining his patient—who was sorely in need of glasses—prescribed merely an aspirin.

The entire American public, particularly the veteran and American businessman who are affected by this program, are entitled to fair consideration. This consideration can be and should be extended now in the form of positive and final action in this session of the Congress.

The Washington Post and Times Herald of Friday, May 25, 1956, quoted Secretary of Commerce Sinclair Weeks as terming the economy "very spotty today." He and Secretary of the Treasury George M. Humphrey pointed to existing soft spots in our economy. It behooves us as Members of this Congress to enact an extension of the GI home loan program and uphold the all-important home building and related industries. An extension with a gradual termination will prevent further softening in these fields.

Since April 12, 1956, the date I introduced this measure, 32 bills calling for an extension of this program have been introduced by my colleagues in the House. Positive recognition of the need was further evidenced as I previously noted by the United States Senate in their affirmative action in calling for an extension last Thursday.

During the 6½ weeks since I introduced this legislation, endorsements have been received from DAV, AMVETS, home builders, Mortgage Bankers Association, savings and loan associations, realtors, electrical appliance dealers, and labor organizations. In addition to this, the American Legion, VFW, and other veteran organizations have urged Congress to enact an extension of this program during this session. I have yet to receive or hear of any well-founded opposition to an extension of this worthy program.

At this time I would like to call my colleagues' attention to several more of the numerous letters of endorsement which I have received:

DEAR CONGRESSMAN FASCELL: The United States Savings and Loan League, the nationwide trade association representing the savings and loan institutions of America, and its 4,300 member savings and loan associations and cooperative banks have gone on record in favor of a reasonable extension of the GI home-loan program.

In this connection the United States Savings and Loan League is pleased to endorse your bill, H. R. 10469, which extends the program and calls for an orderly and gradual termination between now and 1960. The philosophy of your measure promises a logical and equitable solution to the problem of orderly terminating a program which has been of invaluable assistance to the veterans of our country and the Nation as a whole.

In a recent survey conducted by the Department of Commerce, it was noted that the percentage of American families who own their own homes has now reached 59 percent. Undoubtedly, the GI home loan program contributed significantly toward making us a nation of which the majority of families own their own homes. The savings and loan

industry of America takes pride in this record of home ownership and is doing everything within its power to encourage home ownership and thrift.

This bill, H. R. 10469, is definitely in keeping with our philosophy and we heartily congratulate you on your efforts in this regard. I feel certain that the savings and loan business will wholeheartedly support you in this important endeavor."

Sincerely,

STEPHEN SLIPHER,
Staff Vice President,
United States Savings and Loan League.

DEAR CONGRESSMAN FASCELL: The Dade County Central Labor Union wants you to know how much it appreciates your work in our Nation's Capital in behalf of good government and the welfare of all the people. We are especially grateful for your efforts in behalf of low-cost housing. So many of our people still do not have decent places to live and this is the only way that they ever will get them.

We have gone on record in approval and commendation of your work and accomplishments.

Very truly yours,

EDGAR CHAMBERS,
Secretary, Dade County Central Labor Union.

DEAR MR. FASCELL: We very much appreciate the reprint enclosed with your letter under date of April 27 showing the very able manner in which you presented this bill to extend the GI home-loan program to the House.

We believe that you have a practical solution to a serious problem, and hope that the Congress will agree with you to the extent that they will pass your measure without any unnecessary delay.

If there is anything we can do to assist, please advise. Again thanking you for your very fine cooperation, we are,

Sincerely,
FLORIDA BUILDING INDUSTRY COUNCIL,
H. SIMPSON, *Secretary.*

DEAR REPRESENTATIVE FASCELL: The board of governors of this association has read with interest and approval your speech of April 21, 1956. It is in entire agreement with your suggestion and has asked me to send to you the enclosed copy of the resolution adopted today.

With kindest regards.

Very cordially yours,
MORTGAGE BANKERS' ASSOCIATION OF GREATER MIAMI,
CHARLES CONTOPOULO,
Secreary-Treasurer.

RESOLUTION

Whereas the Honorable DANTE B. FASCELL, a Member of the House of Representatives of the Congress of the United States from the Fourth Congressional District of Florida, made a noteworthy speech in the House of Representatives on April 12, 1956, in which he strongly recommended the extension of the GI home-loan program, a copy of which speech is contained in the CONGRESSIONAL RECORD, and which speech has been studied by the undersigned organization; and

Whereas this organization likewise strongly recommends the extension of the said GI home-loan program, believing such extension to be in the public interest, as well as in the interest of all mortgage lenders: Now, therefore, be it

Resolved by the Mortgage Bankers' Association of Greater Miami, That Hon. DANTE B. FASCELL be commended for his forthright position with reference to the proposed extension of the GI home-loan program; and be it further

Resolved, That this association strongly favors, and urges the adoption of, appropriate legislation and action to etxend the GI home-loan program; and be it further

Resolved, That a copy of this resolution be forwarded to Hon. DANTE B. FASCELL and a copy thereof spread upon the records of this association.

Adopted at Miami, Fla., this 21st day of May 1956.

MORTGAGE BANKERS' ASSOCIATION OF GREATER MIAMI.

DEAR MR. FASCELL: Received your copy of the CONGRESSIONAL RECORD in which you presented your speech for the extension of the GI home loan program. We all feel that this is a wonderful thing. I do not know whether you sent a copy to other brokers in this area or not. In the event you haven't, I will be glad to do that for you.

Yours truly,

WALTER A. STADNIK,
Realtor, Miami Springs Realty.

DEAR DANTE: We are writing in reference to the speech you made on the extension of the GI home loan program, Thursday, April 12, 1956.

We would like to go on record and state that we agree with everything you have brought forth to the 84th Congress, second session.

We, who deal in the building and financing of GI houses can greatly see the need for the extension of this program. We know this need will not only affect the mortgage men, the builders and the GI's but will also affect the prosperity and the economy of this country if such termination is allowed to come to an abrupt ending on July 25, 1957, which is the termination of said legislation now of record.

Yours very truly,

REID BUILDERS, INC.,
WARREN G. REID,
Secretary-Treasurer.

DEAR DANTE: Just a line to tell you that I think your bill providing for gradual termination of the VA program in an orderly manner is an exceptionally sound and well conceived piece of legislation.

I certainly hope it will be enacted and believe that it would work to the best interests of the veterans, the public and the Nation as a whole.

With warmest personal regards.

Sincerely yours,

R. V. WALKER,
Executive Vice President, First Federal Savings and Loan Association of Miami.

DEAR SIR: As an active builder, realtor, and mortgage loan correspondent in the northern Virginia area, I have recently reviewed the type of client that have been purchasing our homes and brokerage properties, and for your information, they fall in the following categories: 8 percent conventional, 4 percent FHA, 88 percent GI.

As you readily evaluate, the curtailing of the GI program would hit this area with a terrific impact. Therefore, we request that you eagerly pursue the approval of Representative FASCELL's bill to extend the Virginia home guaranty program for an additional 3 years, in order that an abrupt termination of this program does not create an unhealthy and inflationary effect on the entire Nation's economy.

If we can be of any further assistance in developing other necessary statistics for you, please call on this firm.

ARTHUR POMPONIO,
M. Pomponio & Sons, Inc., Builders,

DEAR DANTE: You are to be commended for your bill, H. R. 10469, as the veterans sure need some aid.

If I can do anything to help at any time, let me know.

Your friend,

W. C. JOHNSON,
Business Manager, International Brotherhood of Electrical Workers.

DEAR REPRESENTATIVE FASCELL: The members of local union No. 359, IBEW, who number 1,150, wish for me to convey to you their feelings in regard to the extension of the GI home loan program.

At the last regular business meeting of local 359, the CONGRESSIONAL RECORD in regard to the extension of the GI home loan program was fully discussed and it is the wishes of the members of this local to inform you that we are in full support of extension of the GI home loan program.

Very truly yours,

LEONARD W. SPRING,
International Brotherhood of Electrical Workers.

It is obvious from the endorsements from organizations representing millions of Americans that definite steps and final action to extend this program must be taken. It is extremely important that the veteran home buyers, the home builders and the thousands of others that produce materials for this industry be given advance notice as to what to expect in the way of legislation in this field.

Any action calling for an abrupt termination will have adverse economic effects on our economy. The only logical way to terminate the program is through a gradual process based on length of service. A committee study of this proposal could effect the proper solution to a gradual termination.

Let us extend the GI home loan program and provide for a gradual termination.

Quiet Heroism Leads Above and Beyond

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. BENNETT of Florida. Mr. Speaker, I wish to call to your attention an act of heroism on the part of William Kennedy, AD2, a mechanic on a Navy bomber operating out of Naval Air Station, Jacksonville, Fla. A crash landing of an 80,000 pound P2V Neptune bomber was averted there last week through the ingenuity and courage of Mr. Kennedy. When the plane was being landed, it was discovered that the nose wheel would not drop and lock in position through any normal procedure. Thereupon, Kennedy tied a rope around his waist and climbed down into the nose wheel well and released the locks by hand. The wheel still did not drop far enough and Kennedy made a second descent and finally successfully locked the wheel in a safe position. Because of the tight quarters Kennedy had to do all of the work without a parachute. Kennedy is a native of East Bradford, R. I.,

but has now become a real hero in Jacksonville. A fitting tribute was paid to him by an editorial in the Florida Times-Union dated May 25, as follows:

QUIET HEROISM LEADS ABOVE AND BEYOND

It was action "above and beyond the call of duty" by William E. Kennedy, local airman, that prevented the crash landing of a Neptune bomber here. He climbed into the nose wheel well at great risk to himself to release a locked landing gear.

Not all people are capable of such action. Many are incapable of facing the physical dangers of such a deed, but there are many more who are simply incapable of doing anything other than taking care of themselves. The idea of going beyond the call of duty just does not occur to them.

Shylock in The Merchant of Venice, is the classic literary example of the character who takes the last pound of flesh in everything he does. At the other extreme in life are those who are constantly giving something more than what is required—whether it is in daring, or devotion, or dedication to one's daily tasks.

This attitude above and beyond the call of duty is well dramatized in the work of military personnel, but it is by no means restricted to the military sphere. In every walk of life we find people who realize that you get what you give, and who therefore do not limit their efforts to a minimum.

Thoreau once said "the mass of men lead lives of quiet desperation." But to the extent this is true, it is also true that many of them lead lives of quiet heroism, for they do not yield to desperation. Hard as life may be, they continue to seek to do more than merely what is enough to get them by.

Often their excellence earns little recognition. It may win for them the gratitude of those who benefit from it, or in cases where it is exhibited in work it may win for them a degree of employment security. But fame is not necessarily the reward of those who give, even if they give much:

"Far from the madding crowd's ignoble strife
Their sober wishes never learned to stray;
Along the cool sequestered vale of life
They kept the noiseless tenor of their way."

What they have is not the applause of listening senates, but the knowledge that they have been true to themselves by doing more than just getting by. There are thousands who though humble and nameless react heroically and rise above and beyond the call of duty to make this a better world. Their reward is of the sort which Vachel Lindsay described in the Eagle That Is Forgotten:

"To live in mankind is far more than to live in a name,
To live in mankind, far far more than to live in a name."

World Peace

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 29, 1956

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of a letter addressed to President Eisenhower and Prime Minister Bulganin by Mr. Clifford R. Johnson, 106 Campus Road, Staten Island 1, N. Y., on the subject of world peace.

Mr. Johnson's letter follows:

STATEN ISLAND,
NEW YORK CITY, N. Y., *March 26, 1956.*

President DWIGHT D. EISENHOWER,
The White House.

Prime Minister NIKOLAI A. BULGANIN,
The Kremlin.

DEAR MR. PRESIDENT AND MR. PRIME MINISTER: The unusual depth of sincerity in behalf of world peace as expressed by both of you during the past year, inspires and persuades me that the time has come to send this communication.

I am writing to you as the author of an atomic age peace proposal which has been deservingly described as the political formula for constructing the spiritual equivalent of the H-bomb for preventing wars of aggression .

Needless to say, I have taken full cognizance of your views as expressed in the published accounts of your exchange of letters (starting September 19, 1955, to March 1, 1956).

Your comments upon the issues discussed make a lot of sense to me.

But let us be quite frank. Both countries are getting nowhere. There is very definitely a need for a new approach. This letter has the answer if you will forgive me for being so confident.

As you both well know, the fear of sudden and surprise attack is the root of the tensions and armament race now gripping both nations. The reason for this fear, and you must be profoundly aware of it, is the simple fact that at the present time a comparatively few men in both countries have an influential voice in making the decision for peace or war. Peacemaking by the few is as outdated and unworkable in this atomic age as would be bows and arrows in a struggle against nuclear weapons. Peacemaking by all is the amazingly simple answer. Its proof rests on the following statement. That the common people of all countries are definitely opposed to war, is universally recognized and acknowledged. Hence, it follows very logically if they had something to say about it, there would be no global wars.

Peacemaking by all would be on the road to becoming an effective reality if both the United States of America and the U. S. S. R. would sign an agreement for the adoption of the following proposal:

I. Each country would allow all its qualified voters to participate in a national referendum or plebiscite to decide the issue of starting armed aggression against any nation.

II. No referendum to be held if the nation is attacked by armed invasion or if the United Nations asks each member nation to supply its quota of men for a police action.

III. This agreement would only go into effect when provisions I and II would be incorporated into the written constitution of both countries and the United Nations Charter.

Such a political formula (or its equivalent) for registering accurately public opinion, is the atomic age answer for preventing world war III.

It is almost impossible to imagine a majority of the voters of either the United States of America or the U. S. S. R. voting in favor of attacking the other, in view of their record of historic friendship. After this system has been in use for some time, there will be such a great sense of confidence developed that it will be relatively simple to work out the problems of disarmament. The problem of the prohibition of atomic weapons would evaporate.

And could there be any better warning system devised, than a nation debating and then voting on a question of committing armed aggression?

Very obviously my proposal would effectively correct or neutralize the limitations of your ground inspection and aerial photography plans. Leaving the warmaking power in the hands of a few men who secretly make the decision is the real cause of the fear of sudden and surprise attack. This universal practice needs to be replaced with the referendum process as soon as possible so that the common people can enjoy the maximum benefits of the atomic age.

It is so appropriate to recall that both East and West have spoken a lot about the subject of free elections and peace-loving states.

The Constitutions of both countries are exactly alike when it comes to ignoring the electoral process with respect to a declaration of war based on popular will. And to capture the will of the majority is of course the heart of my proposal. The world would benefit enormously from the example of both countries in extending and strengthening the electoral process which is the basis of so many problems, including elections in Germany. My proposal could be applied to Germany and so remove the threat of German militarism.

My proposal would of course abolish or neutralize the effects of the indispensible leader type of government which so largely caused World War II.

Peacemaking by all represents rule by the majority which is the most precious principle of good government. Bad government produces today's tensions. It is as simple as that.

The reason peaceful coexistence is so shaky at present is because it rests on such a small base (peacemaking by the few). Peacemaking by all represents the very largest base for building the most endurable structure of peaceful coexistence. It is an accepted engineering principle that the bigger the base, the more stable the structure.

My proposal could be made a part of your proposed friendship treaty (or any other tension-reducing agreement) as a starter and later it could be incorporated as an amendment in the U. N. Charter by using it as a definition for a peace-loving state.

Such an amendment would transform the U. N. into an effective atomic-age organization which would eliminate the need for all the existing little U. N.'s on both sides. You are both in agreement as to the need for a stronger U. N. A treaty is always in danger of becoming "a scrap of paper" unless it is written into a nation's constitution. If both countries adopt my proposal its acceptance by the U. N. would almost be automatic.

I am in full agreement with both of you when you speak about the need for deeds and not just words as the best prerequisite for establishing a basis for peace. This all boils down to the need for honesty. My proposal would enable a maximum of honesty on the part of all people to be effectively utilized to prevent war.

It is sheer folly to think that either country would be willing to really weaken its position in any way with respect to the other under existing conditions.

Here is where my proposal could break the logjam. Can you just imagine the effect on public opinion in both countries if you would make a simultaneous appeal to start the ball rolling with respect to the principle embodied in my proposal? Such a daring display of honesty of intentions would be an unsurpassable expression of dynamic deeds at the very top levels of both governments. Such an appeal would immediately receive the enthusiastic support of peace-loving peoples throughout the world because they would clearly realize that their desire for peace could be effectively harnessed for the first time in history.

No two other persons in the world today can do so much with such little effort to help establish the right conditions for a sound and lasting peace.

I humbly and prayerfully ask both of you to peruse this letter so that the understanding of all peoples may be effectively used to

prevent wars of aggression and thus establish the best political climate for a workable disarmament in our time and so speed the day when your children's grandchildren or generations yet unborn will no longer be required to study the art of war.

With sincere best wishes,

Yours for peacemaking by all,

CLIFFORD R. JOHNSON.

French-American Friendship Dinner

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1956

Mr. FORAND. Mr. Speaker, under leave to extend my remarks, I include an address delivered by Gov. G. Mennen Williams, of Michigan, at the first annual dinner held in the Waldorf-Astoria Hotel, New York, on Sunday, April 29, 1956, under the auspices of the newly organized French-American National Friendship Committee, a group of American citizens of French descent and American friends of France.

I include also a brief press report of the event.

ADDRESS BY GOV. G. MENNEN WILLIAMS, OF MICHIGAN, AT FIRST ANNUAL FRENCH-AMERICAN FRIENDSHIP DINNER, WALDORF-ASTORIA HOTEL, APRIL 29, 1956

The Frenchman and the American alike regard liberty as being of the very essence of a happy, meaningful life. Equality before the law has become a firmly entrenched goal for us and has also come to mean freedom from discrimination because of race, religion, or national origin. Fraternity is understood as encompassing brotherhood and a respect for the dignity of one another in social relationships.

We Americans have not yet achieved in the full the three-part goal of democracy. We sometimes tread on civil rights and thus infringe upon the concept of liberty. We have a long way to go before our racial and ethnic groups can agree that equality and fraternity are indeed a part of the American way of life. But our goals clearly stand before us, their signal beacons undiminished by the momentary clouds of social conflict.

The French have not achieved liberty, equality, and fraternity in full measure, either. France of today, even discounting fully the exaggerations we so commonly hear, is a land of cross-currents of enormous problems.

But France enjoys much the same democratic heritage that we do. This great heritage is one that will prevail over transitory issues of the day, no matter how serious or insoluble these issues may appear at the moment of conflict. This tradition of democracy is our best assurance that France will remain a free, democratic nation; that she will solve her problems within the noble framework which her tradition has afforded her, and that she will continue on into the far distant future as one of the genuine leaders of the free world.

In these days the free world is being threatened by a vast totalitarian monster, centering around international communism. It is therefore more urgent than ever that the two citadels of freedom, France and the United States, stand together in strength and harmony.

Of late I have been disturbed by reference to what our present United States Ambassador to France has called "an increasing misunderstanding" between our two countries, with regard to some of our common problems.

It is natural that all men will not agree on all things. But I would ask, does not this so-called "misunderstanding" come in no small part from the fact that we have permitted barriers to be erected between our countries, which have impeded the normal flow of free trade, and the normal exchange of ideas between us?

Close understanding comes not only from common historical interests. It grows also out of economic and cultural exchange.

Free trade is the firm basis on which Frenchmen and Americans must continue their long friendship. Every year, our two countries exchange more than a half-billion dollars in goods, not even counting our trade with French areas outside Europe.

"Trade not aid" sounds good as a slogan—but like other slogans it is meaningless, and even harmful, if not lived up to in practice.

Not to allow our allies to obtain a deservedly larger share of our growing market in this time of great American prosperity is dangerous to all of us. At the best, it makes us look like people who do not practice what we preach. At the worst, it provides Soviet agents with a ready-made tool, of deadly potency, to be used for the purpose of turning our friends against us with false promises of economic assistance which can only ensnare free peoples in the mesh of Communist control.

When tariffs are irresponsibly raised, quotas set up, and complicated customs and banking regulations established, the slogan "trade not aid" becomes a dangerous mockery. How can other countries accept our promises of economic aid, when we are raising tariffs on everything from bicycles to watches, and imposing banking restrictions which make healthy economic relationships impossible?

Prosperous and happy citizens in other free countries are the only good insurance against the inroads of communism. If the farmers and factory workers of France benefit from better wages and better prices—which only increased American trade can give them—then both we and they are the gainers. Then, and only then, will we be able to allay these "misunderstandings" of which the present American Ambassador to France spoke the other day. The only shame is, that by shortsighted policies we should have permitted such problems to arise in the first place.

PRESS REPORT

The first annual French-American friendship dinner was held Sunday, April 29, at the Waldorf-Astoria, under the sponsorship of the French-American National Friendship Committee, a new organization founded by American citizens of French descent and American friends of France. Over 300 guests were present.

Guest of honor was Gov. G. Mennen Williams, of Michigan, who underlined the necessity of French-American understanding and emphasized that France will always remain the traditional ally of the United States.

Other speakers included Comte Jean Vyaud De Lagarde, Consul General of France; Carmine G. De Sapio, secretary of the State of New York; and Dr. Albert Simard, chairman of the dinner committee and past president of the French-speaking societies of New York.

Also, Michael Cieplinski, commissioner of nationalities relations, New York City, and Jean Hesse, president of the Comite Central des Societies Francaises de New York and French War Veterans.

AIME J. FORAND, Democrat, Rhode Island, the only American Congressman of French descent, served as dinner chairman and Gov. Averell Harriman, of New York, was honorary chairman of the sponsoring committee.

Rev. Jean Maynard, Father Armand Morissettee, and Rabbi Samuel M. Silver represented the major religions present.

Guest artists included Miss Hope Hampton, Mildah Polia, Louis Quilico, Arnita Ferguson, and the Groupe Folkloric Breton.

A committee of young women in French costume distributed French roses and small bottles of French cognac to the dinner guests.

Both Governor Williams and Secretary De Sapio laid strong emphasis upon the need for encouraging free trade between the United States and France and called for the removal of economic barriers impeding the exchange of goods between the two countries.

Communism and Airpower

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Dr. Stefan T. Possony, professor of political science at Georgetown University, Washington, D. C., entitled "Communism and Airpower: A Survey of Possible Communist Air Strategies":

COMMUNISM AND AIRPOWER: A SURVEY OF POSSIBLE COMMUNIST AIR STRATEGIES

(By Dr. Stefan T. Possony)

Marx and Engels died before the advent of aviation. Lenin did not show much interest in military airpower. Stalin's pronouncements on the subject are rather negative and highly reminiscent of the somewhat prejudiced statements made in the United States by World War I generals and admirals to the congressional committees investigating military aviation in the 1920's. It is therefore quite true that there is no such thing as a Communist doctrine on airpower and that Communist military experts have shown little interest in, or understanding of, the problems of aerial warfare. Not surprisingly, many military analysts in the West have concluded that Soviet military leaders do not ascribe as much significance to strategic air warfare as do American and British strategists.

We should not be too hasty with such deductions. Soviet strategy is not necessarily planned in strict accordance with the obiter dicta of late Communist redemptors or their living apostles. There may be many reasons, including security and deception, why Soviet military writers do not want to talk about nuclear air war or are content with plagiarizing statements by Western preatomic soldiers. Rather than deal with Soviet doctrinal writings, we should look at what the Soviets actually have been doing. Two important facts stand out:

1. Since the early twenties Soviet military leaders, including the celebrated Marshal Tukhachevsky, have shown great interest in airpower. If they did not succeed in building strong strategic air forces before 1945, it was not for want of trying but for lack of industrial and technological resources.

2. Since the end of World War II, and particularly since the emergence of a truly productive aeronautical industry in Russia, the Soviets have made great strides in the development of their air forces. Never be-

fore in history has an air force developed so fast and on so vast a scale. It is also probably true that, relatively speaking, the Soviet Union is devoting more resources to airpower than any other major nation. There is a possibility that even in absolute terms their investments in airpower are currently the largest in the world. The growth of the Red air forces has been particularly rapid in the last 3 or 4 years, during which time they have acquired modern jet aircraft in all combat categories. It is inconceivable that the Soviets would have undertaken their gigantic aerial program if they did not believe in the overriding future importance of airpower.

Regardless of the dogmas of the dead, the Soviet strategic position has undergone a profound change since 1945. Until the defeat of Germany and perhaps until the Communist conquest of China, the primary mission of the Soviet armed forces was to prepare for operations on the Eurasian land mass. Surface operations in Europe and Asia still are a most important Soviet security interest, and ground forces must continue to play a key role in their military thinking.

But since 1945 or 1946 Soviet leaders have chosen to consider the United States as their main opponent. Accordingly they must develop a weapons system with which they can prevent the United States from threatening the Soviet Union with nuclear air attack. It is a fact that the United States could exert exceptionally strong military pressure against the vital centers of the Soviet Union. Therefore unless the U. S. S. R. develops a weapons system that presents an equally strong threat against the vital centers of American strength, it would be in a significantly inferior strategic position. In fact the Communists would be allowing the United States to threaten them with unilateral atomic warfare. As long as the United States is able to destroy Baku or Sverdlovsk, the Russians must be able to destroy Pittsburgh or Houston.

Even the most ardent believer in surface force must realize that there is no practical way for the U. S. S. R. to put real pressure on the United States and at the same time extricate itself from a dangerous threat to its international aspirations, except by creating intercontinental airpower. Moreover, distances, the size of American cities and industrial installations, and the firepower requirements to destroy such targets render nuclear weapons indispensable. Without them the Soviet Union can present no real military threat against the United States. The development of intercontinental nuclear airpower is thus an ineluctable necessity for the U. S. S. R.

It is certain that the Kremlin has analyzed its strategic problem in these or similar terms. That it has is borne out by the manner in which the U. S. S. R. has been developing military aviation. But this does not necessarily mean that the Soviets must adopt strategic airpower as their one and only weapons system or that they must emulate American air strategy. The Soviets have great faith in the efficacy of their traditional conflict technique. They have gone on record time and again that combined weapons systems are far more powerful than any single "master weapon," however devastating. A large nation does not build a weapons system by beginning from scratch but integrates the new arm with existing forces and techniques. This must be particularly true in the case of the Soviets who, in their combined military and nonmilitary weapons systems, possess a unique conflict tool, the value of which they have never doubted. We can deduce, therefore, that they will make every attempt to integrate their new aerial weapons with their existing Communist conflict machine, both to increase the power of air operations and to improve the effectiveness of their older capabilities of conflict and conquest.

WAR OF COEXTERMINATION

It seems inevitable that the Soviet leaders have decided, first, to go all out for the development of nuclear airpower and, second, to combine their aerial weapons system with their other organizations for conflict, particularly with the international Communist apparatus. But having made these two decisions, a third problem must loom large in their minds. Since the United States now operates under a policy of avoiding war, the Soviet Union has the capability of launching the initial strike. In the nuclear age the belligerent who attacks first holds an overwhelming strategic advantage, far superior to the frequently decisive advantages which surprise aggressors possessed in past wars. The nuclear aggressor stands an excellent chance of reducing his opponent's capability to counterattack or retaliate.

But the same power of atomic weapons which confers on the aggressor this dividend in strength paradoxically may vitiate his strategy of nuclear blitz. If only a fraction of a retaliatory force can strike back at him, devastation could be large enough to destroy the cohesion of his social fabric. The advantages gained from surprise initiation of the conflict through massive atomic attack thus may prove quite illusory, irrespective of the possibility that the destruction in the attacked country might exceed the devastation in the aggressor nation. This is particularly true in a hypothetical war between the Soviet Union and the United States. By and large, Soviet industrial targets are more vulnerable than targets in the United States, and the Soviet Government is far less assured of popular support than the United States Government.

Accordingly the Soviets cannot adopt a strategy which would lead to a nuclear duel, nor any strategy in which they would be the recipients of a substantial number of atomic weapons. Whether 500 or 5,000 nuclear bombs would be required to terminate the life of the Communist dictatorship is immaterial. Soviet leaders must consider the grave risk that the survival chance of their regime would be diminished if Russia were subjected to nuclear bombardment on any significant scale. They cannot hope to fight a war without loss or risk; however, since the destruction of the United States is not an objective in itself but merely the most important step toward their goal of world conquest, they must try to wage war in such a manner that Communist power will be increased rather than diminished in relation to that of third nations. The mutual extermination of the United States and the Soviet Union may leave the military power of other nations intact—including some which today are considered weak. Regardless of the political and material fate of the United States, the strength of many surviving or neutral nations could then be adequate to overcome whatever Communist power might remain in the ruins of Soviet Russia. Hence the Communist strategists cannot accept a war concept which would entail the destruction of the primary base of the world revolution. The question arises: how can the Soviet Union defeat the United States without being destroyed even in victory?

SOVIET STRATEGIC CONCEPTS

To a Western mind the problem of victory with survival may seem like the traditional one of squaring the circle, but to Communist conflict thinkers, with their long experience in revolutionary operations, the problem is hardly novel. For many generations Communists have grappled with the task of overthrowing a government vastly superior in power to their revolutionary organizations. While fighting its more powerful foe, the Communist Party had to make every effort to avoid destruction at the hand of a government which had it only willed, could have exterminated the revolutionaries.

Logic and experience have indicated that successful revolution is the result of three distinct factors:

1. Freedom of action: A strong and determined government, especially of the autocratic or dictatorial type, can suppress any significant revolutionary activities. Against such a government sustained subversive operations are possible only in the form of propaganda from exile, that is, only in preparatory efforts. The establishment of effective revolutionary forces and the acquisition of revolutionary striking power can occur only after oppositional and revolutionary activities have been legalized and when the bulk of these activities is being protected by political and constitutional means against repression. Hence the first requirement of the revolutionary is the acquisition of freedom of action.

2. Simultaneous pressure: The gradual growth of revolutionary strength within the framework of a state granting political freedom does not by itself enable the revolutionaries to seize the government. It is conceivable that by evolutionary means revolutionaries may acquire ever more influence on the state and society and ultimately send their representatives into the government. The danger of relying exclusively on such a process of gradual advance and frequent stops, however, is that it lasts too long. The cohesion and resolve of the revolutionary movement may falter; its motivation may fall out of tune with the times. As revolutionaries reach cabinet status, their fervor abates—it happened to the Socialists of the Second International—while the rank and file revolutionaries grow old and contented and become opposed to strife and risk. While building up their organizations and strongholds revolutionaries must at the same time exert pressure, submit to counterpressure, precipitate events, and ultimately seize the government and smash it—as Lenin told them. The existing order must be destroyed, not merely modified or usurped. But before the revolution gets to that point, the state machinery, and in a broader sense the entire social structure, must be fatally weakened and disintegrated, either through inner decay or by termite tactics.

Moreover, both as a result and as a cause of social disintegration, deep-seated dissatisfaction and widespread disaffection must exist among the populace of the nation. This disaffection must manifest itself in such rebellious activities as mass strikes, large-scale passive resistance, disobedience, desertion among the military, and during the last phases of the process of decay, in the appearance of large rebellious crowds and insurrectional and terror bands in the streets. Until rebellious movements assume a truly mass character and while the government is still able to put down rebellions and uprisings, the state has not yet been disintegrated. In a truly revolutionary situation either the government no longer dares to use its security forces, or else the security forces themselves have become utterly undependable. Also in a revolutionary situation the rebellious masses no longer fear repression but continue to demonstrate, rise, and attack, regardless of casualties.

The emergence of such a situation is the condition sine qua non of a revolutionary seizure of power. Communists have succeeded often in gaining freedom of action, setting up "class warfare organizations," and equipping subversive forces. But in most instances those forces fall short in their insurrectional undertakings simply because the government attacked had not been paralyzed and disintegrated before the rising. Experience has shown that economic or routine political crises, such as a world depression

of the 1932 magnitude or even the runaway inflation in Germany during 1923 (when currency fell to one-trillionth of its value) are not "disintegrators" of sufficient effectiveness to produce genuine revolutionary situations. Such situations can come about only as a result of war, with its incident heavy devastations and casualties, and, more specifically, as a result of a resounding military defeat.

The Russian revolution is a child of military defeat. The Chinese revolution resulted from many years of dislocating wars and numerous piecemeal defeats. Accordingly the Communists have recently preferred, unless in exceptional cases, to forgo the classical 19th century strategy of revolutionary insurrection and to gain power primarily through military and paramilitary means. This does not suggest that they do not employ other means as well. Diplomatic pressure, propaganda, evolutionary buildup of strength, and insurrections will be used where opportunity permits. It does mean that these short-of-military-pressure techniques have become subsidiary weapons designed to enhance the effectiveness of the main, the military, weapons system. The Communists do not expect to defeat major opponents except with maximum power and violence, regardless of cheaper and easier strategies which might occasionally be successful against weaker enemies.

Since the Soviets consider the United States the chief obstacle on their road to world dominion, they must be considering ways and means to remove this formidable roadblock. Unquestionably the United States can be harmed by many tricks and techniques, but the point is to paralyze and dominate its total power. Such an ambitious objective can be reached only through a decisive military defeat, presumably on American soil, or through a completely successful Communist revolution. In Communist thinking war and revolution are closely linked in the sense that revolution can take the place of war or that revolution follows a war which has produced a revolutionary situation. Since it is very unlikely that the United States will fall victim to a revolutionary situation brought about by crises short of war, this means that America must be subjected to war, devastation, and defeat if it is to be eliminated. If revolution in the United States can be counted on at all, it can be conceived only as a terminal phase in a major military conflict, as a short cut to physical and forceful occupation but not as a substitute for a Communist military victory. It does not require much imagination to see that atomic weapons could be the greatest "dislocators," and hence producers of revolutionary situations, that history has ever known. The atomic weapon thus fits in closely with the Communist conflict doctrine.

Third. Exploitation. Once a revolutionary situation has arisen, it can be exploited by actual seizure of power in the conventional organized insurrection or, in the more modern version, by gradual political conquest culminating in a coalition government[1] which can be transformed step by step into a Communist dictatorship, or, perhaps in a future conflict, by means of airborne military forces supported by native revolutionaries.

UNILATERAL NUCLEAR WAR

This, then, is the established Communist conflict doctrine. We must suppose that it applies to a situation wherein nuclear air forces have become the main force of the revolution. If so, we may deduce that to prepare revolutionary conquests in the nuclear age the Soviets first must seek to bring about situations in which their nuclear air forces enjoy freedom of action. Secondly, they must exploit this freedom to create revolutionary situations which, in the third phase of the process, will allow them to seize state power. Their single most important task is to achieve nuclear freedom of action against the massive nuclear strength of the United States.

To express this problem in another way: the purpose of Soviet strategy must be to create a condition in which they can drop nuclear weapons on American targets but in which the United States has been deprived of its capability to employ its own nuclear weapons. The purpose of such a unilateral nuclear war would be to produce a revolutionary situation or perhaps destroy this country altogether. At the same time the United States would be inhibited from creating revolutionary situations within the Soviet orbit.

There are several conceivable methods by which a situation of unilateral nuclear war could be set up. One easy method would be to induce the United States and its allies to disarm and to destroy their atomic stockpiles, on the strength of Soviet promises, which would not be kept, to do likewise. As a variant the Soviets might agree to accept some kind of mutual control to keep the United States disarmed and, through secret methods which would escape the attention of the Western Powers, continue to produce their own atomic weapons. As another variant the Soviets might concentrate their propaganda proposals not on nuclear weapons but on delivery vehicles and try to accomplish aerial disarmament, perhaps by means of pressures operating against the American budget-making structure. There are some who think this disarmment scheme is too naive and that the Soviets would not be able to get away with it. The fact remains that they have been untiring in their efforts to induce American disarmament by diplomatic maneuvers in the United Nations, by the creation of a strong peace movement, and by psychological efforts against nations allied with the United States. But let us assume that these efforts will fail. The problem still would be to achieve unilateral war, despite the fact that the United States will have retained its arsenal.

DEVELOPING NUCLEAR FREEDOM

There are essentially four methods which a revolutionary aggressor has at his disposal to create the prerequisites of unilateral nuclear war:

Create technical superiority: For the first 10 years or so of the nuclear age the United States possessed a technological unilateral war capability against the Soviet Union. In the future such a capability may emerge in the form of a monopoly possession of an atomic delivery system which the opponent cannot stop or of an attack system which strikes so rapidly that the defender will be crippled before he is able to retaliate. Technical superiority also could be achieved through an aerial defense system which is so effective that the opponent cannot carry out his retaliatory attacks as intended. In short a technological imbalance would be developed, allowing the aggressor to deliver his atomic stockpile while inhibiting the defender from doing likewise.

Achieve tactical surprise: A second method of fighting unilateral atomic war would be to achieve full tactical surprise, especially with respect to the timing of the initial blow, the direction and targets of the strike, and the tactical procedures adopted for the operation. History has shown that tactical surprises have more often succeeded than failed, provided they were undertaken by a resourceful military leader acting with the support of an aggressively resolute government. If tactical surprise were successful, it too would mean that the attacking forces cannot be halted and that they can cripple the opponent's capability for counterattack before the retaliatory blow is struck.

Paralyze retaliatory forces: Another method would be to incapacitate the retaliatory forces on the ground by sabotage and infiltration or by an open, violent assault by insurrectional forces timed so that the retaliatory forces will be paralyzed temporarily—at the very moment when they are needed most.

Expand power orbit: A fourth method would consist in the continued and rapid buildup of Russia's industrial and technological strengths, the acquisition of key geographical positions, especially in the Arctic, the development of an integrated political and military orbit strength, and the open or camouflaged absorption of many uncommitted nations. Expansion of the Communist power orbit would be accompanied by attempts to isolate the United States and weaken it from within. The purpose of this two-pronged operation would be to create a substantial superiority of military, industrial, psychological, and political power wherein an American victory may seem to be impossible of achievement, with the result that the United States might hesitate too long before ordering the atomic forces into battle. While the effectiveness of each method employed singly may be questionable, a four-barreled undertaking along these lines could be quite effective.

[1] In Communist parlance this is a government in which Communists and crypto-Communists hold cabinet rank—usually controlling propaganda and at least a portion of the security forces—and in which the placing of militant Communists in key positions is allowed throughout the nation's administrative, military, economic, and social structure.

More Information on Missiles

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. KEATING. Mr. Speaker, this morning's New York Times carries an excellent article by Mr. Anthony Leviero regarding the missile program. It is a thoughtful contribution to this important and challenging subject.

The article follows:

DEFENSE AIDES BACK NIKE, CALL NEW ONE PHENOMENAL

(By Anthony Leviero)

WASHINGTON, May 28.—The Army's Nike antiaircraft missile system received the unqualified backing of high Defense Department officials today. Civilian officials at a level above the feuding Army and Air Force said that Nike I not only is being improved, but also had a successor, Nike B, that would be a phenomenal destroyer of aircraft.

Anonymous sources indicated during the Nike shooting tests at White Sands, N. Mex., last week that Nike B would have an atomic bomb for a warhead, but Washington officials declined comment on this today.

In the interservice disputes aired last week, Air Force sources condemned the Nike missile as unsuitable for the antiaircraft defense of this country's cities.

These new facts on the Nike system were disclosed today:

The warhead of Nike I, now guarding 18 major cities and industrial centers, is being improved to reduce its margin of error.

Nike B will have a warhead four times larger than Nike I, and it will have twice the range and considerably more altitude. The range of Nike I is said to be 25 or 30 miles. It was said that Nike B would have the power to break up whole fleets of enemy aircraft.

Studies have begun on Nike II, one of the deepest secrets of the Pentagon. This would

be an antimissile missile capable of destroying intercontinental ballistics missiles. The Defense Department, however, has not yet decided to let the Army go ahead with the development of Nike II.

The Army has invested about $1 billion in the Nike. The Nike is the only supersonic antiaircraft missile that is operational rather than experimental.

The new facts on the Nike system, coming from neutral sources, tended to support the claims of Army leaders that the Nike is the best possible system yet devised for close-in antiaircraft defense.

These sources also disclosed some tactical characteristics of the Air Force's competing Talos missile and of the Bomarc. From this it was apparent that air defenses will improve enormously in about 2 years.

How the Army and the Air Force were thrown into competition in the so-called "point defense" or inner protection of home targets also became clearer.

Nike is the weapon for last-ditch defense to shoot down enemy bombers that escape fighter intercepters and missiles deployed far from the continental United States. Its margin of error—circular probability of error—is secret, but is measured in feet. Some marked improvements in the power of Nike's burst have been devised and these are now being incorporated in all the Nike warheads now being produced. Thus the circular probability of error between Nike and its target will be substantially reduced.

SIZE OF WARHEAD DISCLOSED

In order to give an idea of the size of Nike I's warhead, Lt. Gen. Stanley R. Mickelsen disclosed last week that it was 6 times larger than a 90-millimeter antiaircraft shell and about 4 times larger than a 120-millimeter shell.

The 90-millimeter shell is equal to 3⅝ inches and the 120-millimeter shell to 4⅘. These conventional antiaircraft artillery shells were the best the Nation had to down aircraft until the development of the Nike was started in 1945.

General Mickelsen disclosed that the warhead of Nike I contains preformed steel slugs. This warhead has considerable weight that is still secret. The kill probability of Nike I is being improved with novel devices that do not alter the size of its warhead.

It is in the warhead of Nike B that revolutionary new techniques and components are being incorporated. Officials will only whisper indirect clues to its capabilities, but it was obvious it is designed to cope with whole fleets of aircraft as well as with individual bombers that escape the interceptors.

Although Nike B has been test-fired frequently, it will not be in general use for about 2 years. But the disclosures today answered one of the most serious points of criticism made by the Air Force, which was that a virtually new fire control and launching system would have to replace present equipment in order to accommodate Nike B.

"UNIVERSAL SYSTEM" SET

It was learned that most battery emplacements now armed with Nike I already include at least one launcher that can fire Nike B when it is available and that the radar and fire-control equipment has been modified to handle the more powerful successor missile.

Moreover, a new "universal system" is now being manufactured for all new batteries. These will be able to fire both Nike I and Nike B.

The high level officials said there was much truth in the Air Force contention on replacement of equipment, at least as to cost. First estimates were that the modification of Nike I equipment would cost 25 percent additional, but this is now running 75 percent higher. A present Nike battery costs about $2,500,000.

The officials said, however, the added cost was a worthwhile investment. They viewed Nike as a weapon that has provided a great measure of security since it became operational a few years ago and regarded the changes as improvements that all modern weapons undergo in a period of years as they become obsolescent.

The White Sands reports of an atomic warhead for Nike B appear to agree with reports in other quarters that the missile would destroy whole groups of planes. Officials willing to speculate on this acknowledged that the radioactive fallout from the comparatively small warhead would not be serious enough to endanger the American public. An atomic warhead would be used only at extreme altitudes, probably well above 30,000 feet.

SUPERMISSILE PLANNED

Nike II, when it comes, may have an entirely different name, but that is the way scientists and engineers refer to the missile they hope will kill other missiles.

This antimissile missile would be planned specifically to kill existing missiles like the Air Force Navaho and Snark, both long-range missiles. It would also be designed to intercept the intercontinental ballistic missile, now in development both in the Soviet Union and the United States, which could flash at a speed of 15,000 to 17,000 miles an hour with a hydrogen bomb warhead. It would be designed to cope with these missiles at altitudes of 70,000 to 80,000 feet.

While the Army has Nike II in the "study" stage, the Defense Department is pondering whether to give the Army the go-ahead or whether this particular mission should be assigned to another service. Meanwhile, however, no time is being lost in its preliminary research.

Also answered today by the Defense Department officials was the Air Force criticism that Nike does not have a "seeker" or homing device. A homing device enables a missile, after it is in the air, to "tune in" electronically on its target and drive into it.

Nike is equipped with what is called a command guidance system—that is, it is controlled entirely by an electric-brain computer and by two sets of radar in its battery emplacements. Officials declared today this command guidance equipment was the best possible for a weapon using a 50- to 70-mile line-of-sight range.

Moreover, they said it was extremely improbable that a Nike in flight could be "jammed" electronically by the enemy, whereas any missile with a homing device might be jammed. It is possible, however, to jam the Nike control equipment on the ground, but the enemy would have to come rather close for this, it was said.

BRUCKER LAUDS NIKE

DETROIT, May 28.—Wilber M. Brucker, the Secretary of the Army, expressed confidence today in the controversial Nike weapon for defense against hostile aircraft.

Reduce Production of Certain Agricultural Surpluses Put Into Effect by Executive Order

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. McGREGOR. Mr. Speaker, on January 17, 1956, I introduced H. R. 8549, a bill to prohibit the use of real property owned by the United States for the production of agricultural commodities which are to be disposed of by sale. It seemed ridiculous to me that we have had a policy of renting farmland that is owned by our Federal Government to people, who in turn, produce the very crops that are in surplus.

The Federal Government had been following a policy of buying this property, constructing the needed projects, and then leasing thousands of acres, in many instances, back to the previous owner who puts the land into production of crops we now consider surplus and for which we are now paying the farmers for not growing. To me this is a silly procedure. After many conferences with the Defense Department, a decision was reached whereby this program could be put on a sound and logical basis simply by a Presidential directive. I am happy to advise, the President made a public release, and I quote from that release:

The President today by memorandum requested the heads of all executive departments and agencies to place in effect specified policies designed to limit the leasing of federally owned farmlands for the production of price-supported crops in surplus supply. The President's action was taken to make the leasing of farmlands owned by the Federal Government consistent with the administration's program to reduce price-depressing surpluses and to bring agricultural production into line with markets.

Now, Mr. Speaker, I would like to quote from the President's executive memorandum to all executive departments and agencies:

1. Except as provided in paragraphs 2 and 4 hereof, leases of farmlands made by the Federal Government on or after the effective date of this memorandum shall prohibit the cultivation of price-supported crops in surplus supply.

2. In the case of acquisitions of farmlands by the Federal Government on or after the effective date of this memorandum, if price-supported crops in surplus supply are growing on such lands at the time of acquisition, the harvesting of such crops may be permitted.

This directive, Mr. Speaker, by the President establishes a policy that is in accord with the administration's program to reduce depressing surpluses and would bring agricultural production into line with market demands. I am highly pleased that this policy, that has been adopted, will accomplish the objective of the bill I introduced, H. R. 8549, and will assure fair and equitable treatment to the farmers that are leasing Government-owned real property for agricultural purposes.

What Government Ownership Does to Workers

EXTENSION OF REMARKS
OF
HON. BARRY M. GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 29, 1956

Mr. GOLDWATER. Mr. President, one of the great accomplishments of this administration has been to get the Gov-

ernment out of many of the businesses with which it had occupied itself in competition with free enterprise. There are those in this country who will disagree with that effort. They are the ones who believe the Federal Government can perform our economic chores better than can free enterprise.

For such people I advocate a careful reading of an article entitled "What Government Ownership Does to Workers," published in U. S. News & World Report of May 25, 1956.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT GOVERNMENT OWNERSHIP DOES TO WORKERS—MINES LOSE MONEY, 1,000 WELSH MINERS THROWN OUT OF JOBS

GWAUN-CAE-GURWEN, WALES.—This village of 4,000 in the coalfields of South Wales is doomed because of its failure to cooperate with the managers of Britain's socialized coal industry.

The National Coal Board over in London, the agency which runs Britain's coal mines, has anounced that on May 26 it will close down for good two mines that lie on the outskirts of this hillside town. The board says that the frequency of strikes and slowdowns at the two mines makes it impossible to run them on anywhere near an economic basis.

When the mines are closed, the machinery dismantled and taken away, more than 1,000 miners will be out of jobs. For all practical purposes, the village of Gwaun-Cae-Gurwen will cease to exist economically.

Seventy-five percent of the miners who work at the condemned East and Steer collieries live in this village. When the mines close down, these families will have to go elsewhere. There is nothing for the men to do here if they can't mine coal.

CRITICISM OF MINERS

Except in Gwaun-Cae-Gurwen itself you find little sympathy for the miners.

The coal board condemns what it calls the miners' lack of cooperation and their refusal to keep output high enough to justify continued operation of the two mines.

The miners' union—the National Union of Mineworkers—finds fault with the men for striking without union authorization.

But, if you walk the streets of Gwaun-Cae-Gurwen or talk with people at random near the mines, you come up with a story of trouble in labor relations—a story that stretches back to January 1, 1947—the day Britain nationalized her coal mines—and back into the days when the mines were privately owned.

"The men just don't seem to have any confidence in the coal board," said a village official. "Most of this trouble has come since nationalization. The men think it's a lot harder to get anywhere with the officials now than it used to be. The trouble in the pits is certainly a lot worse now."

The anger felt by the workers toward the coal board and its local representatives was expressed by one miner in these words. "Why pick on us? There are worse troubles at other pits in Wales and England, but they don't close them."

There is the complaint, too, that everything is "too top heavy" in the coal board's operations. It doesn't do any good to talk to officials at the mine, one miner said, "because they have to go all the way to London to find out what they can do."

TOO MUCH DISEASE?

You also hear complaints about the narrow seams of anthracite and how hard they are to work, and about the incidence of silicosis and pneumoconiosis, which are lung diseases caused by habitual inhaling of such impurities as coal dust. If you remind the miners that the incidence of pneumoconiosis has fallen 60 percent in 2 years because of improved methods of dust control, you get this answer:

"You look at a miner's face when he comes up. It's black with dust. His lungs have got to be the same way because he's breathing that dust all day at the coal face."

At the East and Steer pits you hear the coal board called "spiteful" because it has refused to open the brick bathhouses it constructed for the men to use when they come up from the pits.

These bathhouses are the most modern structures at the mines. One was built at a cost of $84,000; the other cost twice as much. They stand out in contrast to the dinginess of the other mine buildings. The board keeps them closed because it says it would have to spend $28,000 a year to maintain them and the expense cannot be justified in view of the heavy losses incurred in operating the East and Steer pits.

Some people here have a feeling that the coal board will back down and keep the mines open; that it cannot afford to lose this anthracite. The miners at a meeting last week endorsed a union resolution urging them to work harder in order to prove to the board that it would be worthwhile to keep the mines open.

The board, however, remains adamant. It says that it is not bluffing; that the mines will close down.

STRIKES AND SLOWDOWNS

The board says it is losing the equivalent of more than a million dollars a year by operating the East and Steer pits. There were 47 strikes and slowdowns at the 2 mines in 1955. So far this year there have been 11.

The board maintains it lost during 1955 about $900 for every man employed at the East pit and $1,100 for each man working at Steer. It claims that output per man-shift—the measuring stick for economic operation of British mines—is only 7.4 hundredweights at Steer and 9.2 at East, as against an average of 19 for the South Wales division as a whole.

Actually there have been 249 strikes and slowdowns—all unofficial, unauthorized by the union—since these two mines were nationalized in 1947. The advent of government ownership at the East and Steer pits brought an immediate increase in labor troubles, rather than any improvement.

In 1948, 1 year after the government took over the mines, both East and Steer pits were closed by the coal board on the charge that the miners engaged in too many restrictive practices. Later on, Steer pit was closed for a year and a half. The board reopened both mines after it got a promise of cooperation from the miners.

In May of last year the board dismissed 149 miners at the two pits because, it said, output was too low. Output averaged 4,000 tons a week, but the board said it should have been 6,000 tons.

The current complaint against the miners at Steer and East pits, as seen by the coal board, is based on "the continued restriction of effort, lack of cooperation by the workmen, and low productivity resulting in serious financial loss." The board complains that the miners failed to keep their promises to "cooperate with the management and carry out their allotted tasks."

The coal board also says: "The men at the pits have not honored agreements made on their behalf nor have they followed the advice of their union. They have not made use of the conciliation machinery."

After "repeated trials over a period of nearly 10 years," the coal board says, the officials see no signs of improvement at Steer and East pits.

All the troubles came to a head this month when both pits went out on strike for 2 weeks because 2 men were fired for slowing down on the job. Ten other pits in the area, with a total of 3,800 miners, went out in sympathy with East and Steer. The other mines went back to work after a union decision urging them to do so. The men at East and Steer remained out 3 days longer.

This history of labor trouble at these two mines results from what the Times of London calls "a process of mutual exasperation" between the miners and the coal board.

As you talk with them, you deduce that the miners at East and Steer pits are not satisfied that government ownership of the mines is the best way to bring good labor relations.

MINERS STILL VOTE "LEFT"

But, although the miners at Gwaun-Cae-Gurwen voice nothing but scorn for the National Coal Board, they vote solidly for the Labor Party in national elections.

You hear that quite a few of the miners are Communists. The president of the south Wales area of the National Miners Union, Will Paynter, is an avowed Communist. Paynter, however, is one of the most caustic critics of the miners' conduct at East and Steer pits.

The anthracite fields in south Wales are Britain's only source of hard coal except for limited supplies in Scotland. The coal that comes out of the East and Steer pits—locally called "the best coal in the world"—is valuable to the British economy as a source of dollar income from Canada.

Yet the anthracite fields are operated under nationalization at heavy losses. The coal board showed a loss of 3.7 million pounds sterling for its southwestern division in 1955 compared with a loss of 1.8 million pounds in 1954. Operations in the anthracite fields of south Wales accounted for 3.4 million pounds of the 1955 loss.

Most of the loss stems from the inability of the board to keep the miners digging enough coal.

PROFITS TO LOSSES

In 1939, under private ownership, output of the south Wales coalfields stood at 273 tons per man per year. The owners that year realized profits of 1.5 million pounds.

In 1955, output per man per year had dropped to 230 tons, and the nationalized mines were operating at heavy losses.

As one observer puts it, "The Welsh miners said that with profits taken away and sacking the owners you would get more coal and cheaper coal and that they would be happy doing it." So far, it hasn't worked out that way.

In Gwaun-Cae-Gurwen, you don't hear much discussion of statistics like those. There is no other employment in the village. The families here are absolutely dependent on the two mines.

The coal board is sinking a new shaft a few miles away, and it hopes to tap the seams mined at the East and Steer pits from this new mine. But it will be 2 or 3 years before the new mine is ready for full operation.

Meanwhile, if the East and Steer pits close, some of the miners hope to find work in the steel mills at Port Talbot, down on the seacoast. Others expect to go to England, where industrial jobs can be had for the asking.

The coal board says that it is not blacklisting these men, although other mines in the area won't be able to absorb half of them.

A GROWING FEAR

In the gray rows of miners' homes along the streets of Gwaun-Cae-Gurwen, you can find an atmosphere of rising fears that this time the coal board means what it says, of fears that families will have to be uprooted and moved away.

Out at the mines you sense frustration and bitterness in the remarks of the miners, when they talk about the National Coal

Board. For these miners—whether they are at fault or not—the fact that the Government is their boss has not so far meant a sense of participation and belonging. This was among the things they were trying to achieve when they threw out the private owners and nationalized the mines.

Revision of Government Appropriation, Budgeting, and Accounting Processes

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. ROGERS of Florida. Mr. Speaker, I have introduced today legislation which I believe is a necessary step and long overdue to place our governmental accounting and budgeting processes on a more realistic and orderly basis. As I am sure most Members realize, we have a backlog of unexpended authorizations in the amount of almost $80 billion and I think all of us realize the lack of control that this situation brings about. I had been working on provisions to incorporate in legislation to present to the House for consideration when a bill was introduced in the Senate, being S. 3897, which incorporates proposals to bring about some necessary reforms as suggested by the Second Hoover Commission and which has strong bipartisan support in the Senate. I have introduced a companion bill to the Senate bill today.

It is estimated by the Second Hoover Commission that the reforms suggested and as set forth in this legislation could effect savings in the amount of almost $4 billion. This figure is perhaps hard to fully substantiate but at least it gives a very dramatic evidence of the great savings that can be effected in our Government by the enactment of this legislation.

It is my strong feeling that the House should consider this legislation at the earliest possible time and I am respectfully asking for a hearing before the House Government Operations Committee on the provisions of this measure which I believe are sound and should be enacted by the Congress.

This measure proposes changes in executive branch accounting and formulation of budget requests for appropriations, and it proposes changes in congressional authorization of the expenditure of money on Federal programs. It would place the entire governmental financial structure on an annual accrued expenditures basis, as opposed to the obligations system now in operation. It would permit a much closer supervision by Congress over the expenditures of the executive branch of the Government and would provide for the top management of the executive branch a more complete and more meaningful understanding of the financial operations of the Government. Almost all major private corporations have adopted this system of budgetary control, and the Hoover Commission's report indicates that this system can profitably and effectively be adopted by the Federal Government.

The changes which are proposed are generally stated in "where and as practicable" terms. They are not of as much consequence to agencies which spend money primarily for administrative and operating purposes such as employee services, travel, rents, utilities bills; and which now are granted appropriations that remain available for incurring obligations only during a specified fiscal year. The changes are more substantial for agencies that are engaged in construction or purchase of equipment in large volume, and which require appropriations to be available for obligation over a period that is longer than 1 fiscal year.

For the latter sort of Department or agency, the bill would introduce practices that are essentially different from those now followed. Money would be provided by Congress only for 1 year's accrued expenditures; contracts for work in excess of 1 year would be authorized, but the money would not be provided for more than 1 year at a time. At the present, the contract authorization is little used, and money is appropriated for incurring obligations not only in 1 year but over a greater period the duration of which may be either definite—multiple-year—or indefinite—no-year.

Two differences are to be noted: a proposed one-year-at-a-time appropriation, contrasted with multiple or indefinite years; and appropriation for accrued expenditures rather than obligations. As implied in the remarks of an earlier paragraph, accrued expenditures and obligations incurred do not differ for some important objects, such as employees' services, travel, and communication, utilities bills, rents, interest, pensions, claims, investments. But accrued expenditures do differ from obligations incurred for lands and structures, equipment, supplies and materials, grants, subsidies and contributions. Expenditures accrue when goods and services are received, or generally, when title passes to the Government. Accrual includes the occasions when performance on a contract is accepted for the purpose of progress payments that are made before the completion of the entire job. Obligations are incurred, on the other hand, when orders are placed and contracts are awarded. The accrual of expenditures differs from the incurral of obligations, when it differs at all, in coming at a later point in the process of the Government's procurement.

The significance of the difference between expenditures and obligations is this: If appropriations are limited to the year's accrued expenditures rather than to authority to obligate—whether or not obligations are incurred—then the Congress keeps much shorter the time that elapses between its authorization of the expenditure of funds and the actual expenditure of the funds. The process of review of accomplishments is made more immediate.

The bill requires that appropriation requests be in terms of accrued expenditures. It requires also that requests be built up from accounts of costs, and that measurements of performance be shown. These requirements are consistent with making appropriations in terms of accrued expenditures, but costs may diverge from expenditures. If the costs incurred in the year, rather than the obligations incurred, are summarized in building up appropriation requests, accounts of such assets as inventories and of fixed properties will be needed. These assets may be used and so become costs in years additional to, or other than, that in which they are purchased. The actual cost of getting the benefits of the Government's programs can be ascertained only if cost accounts which reflect changes in inventories, depreciation, and so on are developed.

Question for Mr. Nixon—The Murray M. Chotiner-White House Influence Case

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. PRICE. Mr. Speaker, I am introducing an editorial from the St. Louis Post-Dispatch referring to a high public officer. Let us not forget that this high public officer is now the Vice President of the United States and the heir presumptive to the office of the Presidency itself.

Let us not forget that this official, having "charted his course," is now running for the Vice Presidency again with the blessings of General Eisenhower.

Under leave to extend and revise my remarks, I offer the editorial from the St. Louis Post-Dispatch:

QUESTION FOR MR. NIXON

Senate investigators are resuming their inquiry into the Washington affairs of Murray M. Chotiner, who was Vice President NIXON'S campaign manager. They are especially interested in the fact that a convicted jury tamperer got Mr. Chotiner four clients who were involved in cases with the Government.

And there we have said it again. Mr. Chotiner was Mr. NIXON'S campaign manager. Is this "guilt by association"? Mr. NIXON'S defenders are asking. Mr. Chotiner managed the Nixon campaigns, of course, but he also managed campaigns for Earl Warren, now Chief Justice, and others. Why pick on Mr. NIXON?

The answer is plain and the Nixon ranks surely know it. By taking a high moral position on influence cases in one party and keeping remarkably silent on a similar case closer to home, the knight errant of 1951 has assumed the position of a sitting duck.

For example, in 1951 William M. Boyle denied that he had used his influence with the Democratic National Committee to introduce private clients to the RFC. Senator NIXON said then: "The very fact that the introduction comes from the National Committee * * * constitutes influence."

That same year Senator NIXON was highly dissatisfied with the Boyle investigation and said: "This inquiry has too many loose ends to call it closed, and I think we'll have to resume hearings."

The statements which Senator NIXON made then are exactly applicable to the Chotiner case today. For Mr. Chotiner also stands high in his party's leadership and also arranged contacts (through White House as-

sistants) for private clients with a Federal agency. Does that very fact constitute influence? Does this inquiry have too many loose ends? Vice President NIXON does not say. It takes no great sense of public ethics to recognize that influence peddling would be just as bad in Republican as in Democratic ranks. The crusade which Senator NIXON helped to lead needs to be brought up to date, and Vice President NIXON is just the man to do it.

B'nai B'rith's Triennial Convention

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following part of the proceedings of the triennial convention of B'nai B'rith which was held in Washington, D. C., on Tuesday, May 8, 1956:

Mr. PHILIP M. KLUTZNICK (president of B'nai B'rith). Ladies and gentlemen, under ordinary conditions a happy and proud moment in the life of a B'nai B'rith president occurs when he presents the B'nai B'rith president's medal for humanitarianism to a distinguished member. I am delighted that but a few months ago it was my privilege to do so, in presenting it to the Honorable Simon Sobeloff who sits at our festive board tonight. It is not an honor that is given lightly. It is the highest award B'nai B'rith bestows. But it is always insignificant in comparison to the achievements and magnanimity of the person who receives it. Every effort is made to select men from time to time whose attributes emphasize one or another aspect of humanitarian endeavor. More then a year ago one such person was selected. The award was to be made, but was necessarily deferred due to his inability to be present in person at the place and at the time fixed. Tonight he was to receive it, but he is no longer with us. So it is that the pride in presenting this medal is mingled with feelings of sorrow. This is the first time that I have had the experience of presenting it through another to one who has passed away. It is not, I assure you, an easy thing to do. The deep feeling of pride remains. I am proud that Joseph Cherner was one of us, a member of B'nai B'rith. I am proud that men of his ability and nobility issue from the ranks of the Jewish people. I am proud that our country still offers persons with his ability and energy the opportunity to rise in the world. But I cannot still the grief that Joseph Cherner is not here to receive the award. Our only solace is that he knew that this event was planned, that he thereby realized to some extent the depth of our affection and esteem for him.

Joseph Cherner came to this land as a penniless youth at the age of 13. He was grateful to this country for the opportunities it gave him, but equally warm was his attachment to the people from whom he sprung, wherever they were. I need not tell those of you who are a part of the Jewish community in this city the extent of his benefactions. All shared in his generosity. The Hebrew Home for the Aged, the Hebrew Academy, the greater Washington Community Chest Federation, the Jewish Community Center, and numerous other causes. Recently he donated a large sum to the building fund for the new Tifereth Israel Congregation, which will include an auditorium to bear his name.

Joseph Cherner was a man whose greatness of spirit and humanitarianism surpassed his acknowledged commercial ability. He gave a generous amount each year to the UJA and in times of greatest stress, 5 years ago, and again this year he doubled it. He was a supporter as well of our own B'nai B'rith Henry Monsky Foundation, the Albert Einstein Medical College of the Yeshiva University and Brandeis University. The welfare of Israel was a passion with him. In the miracle of its birth he found constant inspiration and pride. He expressed it in striking fashion by purchasing State of Israel bonds. He became the largest single bondowner in the United States. He was a lavish donor to the Weitzman Institute of Science and to the Hebrew University, desiring that Israel should become more than a viable and secure state. He wanted it to play its new role in the expansion of science and learning.

These among others were the tangible expressions of his warm and outgoing spirit, of his deeply felt humility, of his sympathy for all who were oppressed. By his acts and deeds he encourged faith, learning, good citizenship, and he strengthened the little fledgling but so important State of Israel. He was the image of American opportunity and the embodiment of one of the great attributes of Jewish living, tzodokah, not charity but justice. In a sense he was one of the striking symbols in his own inimitable way of B'nai B'rith itself. May I ask that his lifelong friend, Mr. A. S. Kay, accompany Mrs. Cherner to this podium.

So in pride and in sorrow I now present this award to Mrs. Ruth Cherner, the worthy helpmate in all of his endeavors.

Now, too—approaching the conclusion, I'll call on an old friend, president of the board of trustees of Bandeis University, an active and distinguished citizen, president of the Development Corporation for Israel, Mr. Abraham Feinberg, to make a presentation.

Mr. ABRAHAM FEINBERG. Mr. Chairman, Mr. Secretary, distinguished guests, ladies and gentlemen, I knew that Phil Klutznick had very many talents, but I did not know that included amongst them was the art of being an impressario. Weren't those children wonderful tonight? Of course, you know that the loudest and proudest voice among them was Mrs. Klutznick's son, Tom. I have a very great feeling of personal satisfaction in performing my function tonight because I am a member of this great organization. That feeling is buttressed by the fact that in a small town in South Carolina called Rock Hill where there are no more than 25 or 30 Jewish families there is a B'nai B'rith lodge named in memory of my father. I have, of course, an official feeling of satisfaction that B'nai B'rith is being rewarded for the great services which it has rendered to the Development Corporation for Israel. I would be remiss if I did not read to you one sentence from a letter which I received from Philip Klutznick when he heard that this award was to be made. It reads: "I know of no greater happiness that one can have than to have done that which was responsive to the heart's yearning and still receive gratitude for having done it."

I think that if tonight, instead of over 100 years ago, the B'nai B'rith were just being formed, that this sentence would make it a great organization. It is refreshing to see how it as an organization, the largest representative organization in American Jewish life, and indeed in world Jewry, responds and reacts to the feelings and the hopes and the sentiments of all of the Jews of this country. And though you are to be commended tonight for your work in relation to the Israel bond drive, the whole Israel program of B'nai B'rith is to be commended. For it has engaged in every facet of work for Israel in the earnest hope that in the promotion and promulgation of this work, Israel would meet its destiny and would grow to be the great democracy which all of us know it will be. In contrast how revolting it was to have listened to the destructive rumblings of a few frightened Jews in Chicago under the aegis of the American Council for Judaism, how revolting it was to sense their own insecurity and their distrust of their fellow Americans and of their Government. And how wonderful it is to hear the constructive articulation of an organization like B'nai B'rith. You do not speak for the Jews, they tell us. That's true. Five-and-a-half million Jews in this country speak for the Jews and they speak for themselves and through their organizations. And they tell us that Israel cannot look to Dachau, Auschwitz or Bergenpelsen for sustenance, that it must look to us, the living, the virile, the active, representatives of a great democracy, a Government without which Israel could never have existed. Of course they look to us and of course we as Jews and we as Americans will not be denied the right to speak, the right to protest, to activate in all respect and at all times. And in that context I know that I speak for you when I say that there was much that was encouraging in the remarks of the Secretary of State tonight, and in the headlines which we saw in the papers, which indicate that Israel at long last will have some method of acquiring some defensive equipment. I know I also speak for you when I express the fervent hope that the day is not far from us when this great country of ours will join its allies in providing such equipment for a very great sister democracy whose survival means so much to this world and whose elimination might bring such chaos to this world. Mr. Klutznick, it is with a great deal of pleasure and a great sense of responsibility to the work which you and your organization have done that I present to you this plaque from the Development Corporation of Israel.

May I read the inscription? "To the membership of B'nai B'rith in recognition of its outstanding efforts in securing Israel's future through the sale and purchase of State of Israel Bonds. State of Israel Bond Organization." Congratulations.

Mr. PHILIP M. KLUTZNICK. Ladies and gentlemen, at this time of the night and after Abe Feinberg has already read my acceptance and commented upon it so graciously, all that I can possibly say is that I am but a vehicle or messenger through which this is being received on behalf of the thousands of men who responded with full heart to a great cause, and made an investment which, God willing, will pay dividends not alone to them, but when peace comes, and it must come, I am certain that with the aid and assistance and guidance of our honored guests tonight, it may be facilitated; that when it comes we may yet see the day when the great things for which Israel was born may come to pass—an end to military discussions and the beginning of the spirit and the faith and the culture that must flow from that holy land.

Freedom Crusade

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. DODD. Mr. Speaker, the Freedom Crusade is under way and reports

reaching me indicate that thousands of Americans have already written to Mao Tse-Tung, Peking, China, to ask him to keep his word and release the 13 innocent American citizens who are languishing in Communist Chinese jails.

Mr. Speaker, I have the feeling that the people of America will take the leadership with respect to the plight of these 13 American citizens and that they are impatient because the Government has not been able to bring about the release of these innocent people.

As my colleagues know, I have been doing all that I can to keep this problem before our Government and before Congress.

Recently the Reverend Harold Rigney, who was a prisoner of the Chinese Communists for 4 years, came to Washington and told me and several of our colleagues of his terrible experiences while in Communist prison.

Now Father Rigney has organized the Freedom Crusade and is devoting all of his energy to help the Americans who are still in jail.

Every American can join the Freedom Crusade and I ask my colleagues to particularly participate and to urge their constituents to join in this great movement to bring about the release of our American prisoners.

Thousands of people in the State of Connecticut and particularly in my own congressional district have already written Freedom Crusade letters.

Here are the facts about the Freedom Crusade:

FREEDOM CRUSADE

Question. What is it?

Answer. The Freedom Crusade is a nationwide letter-writing campaign to Chairman Mao Tse-tung head of Red China's Government, politely petitioning the release of 13 Americans still held prisoners by the Chinese Reds. This crusade has been launched by Father Rigney and is being conducted with the cooperation of the Back of the Yards Council, Chicago.

Question. Who is Father Rigney?

Answer. Very Rev. Harold W. Rigney, S. V. D., is a Divine Word Missionary whose 10-year prison sentence in Red China was cut down to 4 years and 2 months by prayer, publicity, and letter-writing.

Question. Will it work?

Answer. The letter-writing campaign will work because the Red regime of China is very sensitive to publicity. Moreover, the communistic rulers of China will be more influenced by letters from laborers, farmers, and labor unions than by requests from our industrialists and politicians. Letters of children will also exert a great influence.

Question. Where was it conceived?

Answer. The campaign was conceived "in those dreadful prisons in China" by Father Rigney who felt that just such a campaign was needed to free him and all other Americans rotting in Red prisons.

Question. What is the address?

Answer. The address is simply: Chairman Mao Tse-tung, Peking, China. There is no need to give your return address.

Question. What do I say?

Answer. Your letter should contain three points:

1. Give your name, your occupation (this is most important), the name of your union, if any, and—if married—state the number of children, if any.

2. Then courteously remind Mao Tse-tung that his government promised in September of 1955 to free the 13 American prisoners still held in China. Say that you would like to see him carry out this promise. And if you have time, list the 13 prisoners.

3. Conclude by saying you hope to see Mao Tse-tung demonstrate the policy of leniency which he professes toward violators of the law, by applying leniency in full to these 13 American prisoners.

Question. Why use air mail?

Answer. The misinformed Chinese will be astonished to see that American laborers can afford air mail. In Red China a carpenter must work several hours to purchase an air mail stamp. Air mail postage to Red China is 25 cents per half ounce. Ten-cent air letters and 8-cent letters via ordinary mail can be used but are less effective.

Question. Will a count be kept?

Answer. Keeping tally of the number of letters sent to Mao Tse-tung is most important for publicity reasons on a national and international basis. Individuals and groups should immediately report the number of letters they have written by sending a post card to: Father Rigney, Chicago, Ill. The tabulating will be done by a Chicago's Back of the Yards Council.

Question. Who are the 13 prisoners?

Answer. They are businessmen and missionaries, Protestant and Catholic: Rev. John William Clifford, Jesuit, San Francisco, Calif.; John Thomas Downey, New Britain, Conn.; Richard George Fecteau, Lynn, Mass.; Rev. Fulgence Gross, Franciscan, Omaha, Nebr.; Rev. John Alexander Houle, Jesuit, Glendale, Calif.; Rev. Paul J. Mackensen, Jr., Lutheran missionary, Baltimore, Md.; Robert E. McCann, Altadena, Calif.; Rev. Charles Joseph McCarthy, Jesuit, San Francisco, Calif.; Rev. Joseph Patrick McCormack, Maryknoll, Palmyra, N. Y.; Rev. Thomas Leonard Phillips, Jesuit, Butte, Mont.; Bishop Ambrose Henry Pinger, Franciscan, Lindsay, Nebr.; Hugh Francis Redmond, Yonkers, N. Y., and Rev. Cyril John Wagner, Franciscan, Pittsburgh, Pa.

Question. Give a sample letter.

Answer. The envelope address: Chairman Mao Tse-tung, Peking, China.

The letter:

"DEAR CHAIRMAN MAO TSE-TUNG: I am John A. Brown, a carpenter, a member of the United Brotherhood of Carpenters. I am married and have five children.

"In September of 1955 your government promised to release all Americans, and today 13 are still in prison. I would like to see you carry out your promise. The names of the prisoners are (here insert the names if you have time):

"I have heard of the policy of leniency which you profess toward violators of the law. It is my fond wish that you carry out this policy of leniency by applying it in full to these 13 American prisoners, releasing them from prison and helping them to leave China and return to their homes.

"Sincerely yours,

"JOHN A. BROWN."

Question. Are more circulars available?

Answer. More of these circulars can be obtained by sending your address and stamps to cover return postage to: Father Rigney, Chicago, Ill.

FELLOW AMERICANS: I know what prison life is like in Red China, a veritable hell of mental and physical tortures. I am sure these 13 prisoners are going through the same or similar tortures I endured. If your letter helps reduce even to a small extent the imprisonment of these fellow Americans, it will be well worthwhile and they will be eternally grateful to you as I am to the tens of thousands who wrote letters in my behalf.

Sincerely yours,

FATHER HAROLD RIGNEY, S. V. D.

The Hiss Hour at Princeton

EXTENSION OF REMARKS
OF

HON. T. JAMES TUMULTY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 29, 1956

Mr. TUMULTY. Mr. Speaker, Mr. Budenz, himself a former Communist but now repentant and cooperating with the United States Government in exposing the Communist conspiracy, has some enlightening remarks on the Hiss appearance at Princeton. The article follows:

[From the Catholic Universe Bulletin of May 11, 1956]

THE HISS HOUR AT PRINCETON

(By Louis Budenz)

The appearance of Alger Hiss on the Princeton University campus is a symptom of the disintegration of American morale, at least in part, before the Khrushchev "new look" line of the Communists.

The Daily Worker reflected this when it ran a great heading over a special correspondent's story: "Princeton University Students Boo Enemy of Free Speech."

This enemy was Father Hugh Halton, Catholic chaplain on the campus, who said that the appearance of Hiss represented "Princeton's darkest hour."

"Free speech" was thus expanded by the Communists—they who defend the denial of all rights in Soviet Russia—to cover the honoring of any person who may have given aid to the Communist cause.

Free speech was not the issue in the Hiss case at Princeton. Alger Hiss is a convicted perjurer, and his perjury had to do with alleged pro-Soviet activities.

The Americans for Democratic Action, an organization often accused of left-wing tendencies, understood that much at Swarthmore College and prevented the junior ADA from having Hiss speak.

That some students, who were only 8 or 10 years old when Hiss was at Yalta, should be confused is understandable. But that the trustees of a great university would permit this distinction to be given to one with the reputation and record of Hiss is an index of how far we have gone in an unguarded attitude toward the Communist cause.

Representative T. JAMES TUMULTY, of Jersey City, summed it up when he said that "you might as well have asked Bulganin to speak on the meaning of Geneva." But in acquiescence to the new Communist line, Bulganin has already been a visitor in England by invitation and there is talk of his being invited to the United States.

The Hiss incident serves to pictorialize the carelessness prevalent in many important circles at the moment when we should be particularly alert against the atmosphere which Soviet Russia and the Communists are now creating.

Hiss defended the indefensible Yalta agreement. The cries of the Chinese and Polish peoples, betrayed at Yalta, remind us how false is this judgment and how much we were deceived on that occasion.

A new incident in the current Khrushchev line recalls how alert we should be at the present hour. It is the notice of the alleged dissolution of the Cominform, or the Information Bureau of the Communist and Workers Parties, created in 1947 to continue the work of the Communist international.

The last issue of the weekly organ of the Cominform, "For a Lasting Peace, For a Peoples Democracy" carries the announce-

ment of the dissolution. But in a huge article accompanying this announcement we get a glimpse of the deceit involved.

The article is boldly entitled "For the Further Development and Strengthening of the of the International Communist Movement." In other words, while the headline-reading public and the non-Soviet world in general are led to believe that the dissolution of the Cominform will lead to some sort of a check on Red seditious activities, the article tells the Communists that these activities will be increased. The article says:

"The Communist and Workers Parties will find new forms of relations and contacts which are suitable to the present situations. This will strengthen their spirit of mutual cooperation, on the basis of the principles of proletarian internationalism and further unite and rally them in the common struggle for the cause of peace, democracy, and socialism."

We can see before our very eyes the complete Moscow control of the Communist Parties of the world which this declaration promises. It is registered in the response of each one of them to the new Khrushchev line.

We have also had a warning out of the past concerning the deception involved in this whole device of alleged dissolution of a Communist international agency. It was given us in the dissolution of the Communist International during World War II.

Then, many of our unthinking commentators represented this move as a relaxation of sedition on an international scale by Moscow. But the Communists themselves were tipped off then that the dissolution was a hoax, designed to win American lend-lease and to prepare the road for our debacles at Yalta and Potsdam.

Then it was that Gerhart Eisler, under the name of Hans Berger, and other Red theoreticians, told the American comrades that proletarian internationalism would be advanced by the move. Are we ever to learn from experience?

H. R. 9566

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 29, 1956

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include at the request of the Brotherhood of Shoe and Allied Craftsmen in Brockton, Mass., the following resolution in support of H. R. 9566:

RESOLUTION IN SUPPORT OF H. R. 9566

Whereas the existence of an efficient, economical parcel post system is essential to the pattern of life of our citizens and businesses in both rural and urban areas; and

Whereas the present discriminatory parcel post size and weight limitations seriously disrupt the service once enjoyed by all at great and unnecessary cost and inconvenience; and

Whereas there is no nationwide substitute for parcel post that can and will serve all citizens regardless of address; and

Whereas the present size and weight limitations have been both a financial and an administrative burden to the Post Office Department: Be it hereby

Resolved, That the Brotherhood of Shoe and Allied Craftsmen and its 6,000 members favors immediate enactment of H. R. 9566 and restoration thereby of uniform parcel post size and weight limits. It is respectfully requested that Representative RICHARD B. WIGGLESWORTH insert this resolution in the CONGRESSIONAL RECORD and that he request the chairman of the Post Office Committee to schedule hearings now on parcel post size and weights so that the citizens of Brockton, Mass. may have relief from the present law before the current legislative session is concluded.

Lest We Forget

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Tuesday, May 29, 1956

Mr. DOUGLAS. Mr. President, for the information of Members of the Senate and the encouragement of young students of American government, I ask unanimous consent to have printed in the Appendix of the RECORD the oration entitled "Let We Forget," by Gabriel G. Kajeckas, a senior at Gonzaga High School in Washington, delivered in the 19th Annual High School Oratorical Contest sponsored by the American Legion. Winner of the District of Columbia and regional finals, young Mr. Kajeckas' address was 1 of the top 12 entries in the Nation. The contrast he points out so vividly between the system symbolized by the plow and the hammer and sickle must be especially poignant to him as the son of the counselor of the Legation of Lithuania, a courageous country temporarily under the yoke of Communist tyranny. His parents and all of us can be justly proud of his moving oration.

There being no objection, the oration was ordered to be printed in the RECORD, as follows:

LEST WE FORGET

(Address by Gabriel G. Kajeckas, Gonzaga High School, Washington, D. C., in the nineteenth annual American Legion high school oratorical contest)

Ladies and gentlemen, in the world today, there are two great governments, and only two. And these governments mold this earth of ours into its daily patterns of politics, preparations, and prayers. These two governments are motivated by and take their purpose from two forces, or spirits.

And today, these 2 great spirits or forces can be summed up by 2 material symbols. At first, an impossible task. Maybe. But listen to what I have to say, and then judge for yourselves.

The first symbol that I want to consider is—a plow. And the plow of which I speak is the symbol of peaceful production—the symbol of a pioneering spirit—the symbol of hope, courage, sacrifice, and faith. And this plow that I'm talking about prepared the soil of a new land for its harvest of liberty, dependent on its people. Yes, the plow of which I speak planted faith in the hearts of a people.

And then, what about the other of the two symbols? That other one is the hammer and sickle. The hammer—symbol of the might which forged chains of steel—chains of slavery—and crushed the seeds of freedom. And the sickle, which cut the heart out of a people.

And what about the men who live governed by these symbols? One man is reaping the fruits of a harvest that his fathers dreamed of—living in a nation—free and indivisible, with liberty and justice for all men. Living in a land where he has the right to worship as he pleases, to work at whatever profession he chooses—where he has the right to live as he wishes.

And what about the other man, living in the shadow of the hammer, which might crush him at any time, as it crushed his freedom? What about that man, who has no freedoms, who is taught that he must not think—that the state will think for him?

It is here, ladies and gentlemen, that we immediately see the initial contrast between the two forms of government—the United States and Russia—one founded on freedom—the other on might. This, in the present day and age, is the great antithesis of existence freedom or might—freedom or suppression—two forces completely different, two forces diametrically opposed. And this is our world.

Ladies and gentlemen, 180 years ago, a deserted plow stood in a field. And it is this solitary picture that to me symbolizes the beginning of our long and brilliant history. That plow stood alone. The man who had been using it but a minute before was now fighting. The handle of the plow was still warm from his grasp—but now, he was holding another piece of wood and steel—fighting for the right to use that plow unoppressed and in freedom. And it was this minute man, willing to fight for everything he held dear, that fired "The Shot Heard 'Round the World." And because of their love for the right and the performance of their duty as God gave them the light to see it, 180 years ago, in 1776, with a firm reliance on divine providence, men pledged to each other their lives, their fortunes, and their sacred honor.

While in Russia, in the middle of our roaring twenties, 5 million Russian Kulak farmers were murdered in cold blood because there had been a Communist revolution. A revolution of men who said that there wasn't any divine providence—that henceforth no man had a fortune of his own, that sacred honor was not a reality. And because of these principles men's lives were pledged to the state—and in this pledge, men were no longer men, but pieces of machinery, to be molded and twisted and shaped by the desires of the state, by a hammer and sickle.

But because these American farmers, on the other hand, were willing to die fighting for the liberty which they prized as life itself—because they were men and not pieces of machinery, on a warm summer day in 1776, a man put the finishing touches on a 1-page document—a man who had sworn upon the altar of God eternal hostility against every form of tyranny over the mind of man. And this man, Thomas Jefferson, drew up the Declaration of Independence, and as the final signature was added to this document, the United States had become a reality.

Several days later, the time that it took for the news to cross the Atlantic, King George of England choked on his dinner—because a small group of men somewhere far across the sea had dared to cry out to heaven and earth that "these united colonies are and of right ought to be free and independent states."

We all know what happened then. A long and bitter war followed, in which men suffered, bled, and died—for freedom—for guaranteed freedom—for a way of life—and ultimately, for a Constitution. And slowly, through the lives of the valiant, like Nathan Hale, through the heroic sacrifice of the patriots, like Robert Morris, and through the eternal devotion of the great, like George Washington, the war came to an end and with the end of that war came the birth of a nation—a nation destined to become the hope of all enslaved and oppressed peoples everywhere—a land where all men have free-

dom to vote, freedom to worship, freedom from want, and freedom from fear. We enjoy this manner of living for one reason—because it is our recognized right, inalienable, and unconquerable. And the reason that we have this right is because of an old and worn piece of paper which today rests behind a pane of glass in an official building in Washington. That piece of paper is the Constitution of the United States of America—and it was this piece of paper that established our Government as a government of laws and not of men—for our Founding Fathers believed that "give a man power and he will tend to abuse it" —and this Constitution established our country as a place where men have ideas and exchange them freely, where men have abiding faith in the future of their land, where men have hope, where courage is not a sometime thing, where men are men and not machinery, where men can use a plow and not be chained to it.

Yes, ladies and gentlemen, this is your Constitution—for you, by you, and of you. It is yours, it is the voice of the people.

But halfway around the world, in Soviet Russia, people have no voice. Their creed is the Communist Manifesto, which manifests nothing more than blood, greed, and destruction. These people have no interchange of ideas—they have their quota to fill, and they must fill it—and thus, life for the Russian people becomes a continuing nightmare of terrors, because they always know that Ivan is watching them.

Thus, my friends, of the two governments greatest in size, yours is the one truly great, for yours is the one in which all men are equal—as God created them. Yours is the brotherhood of man under the Fatherhood of God.

In this brotherhood, take hold the handle of the plow of liberty, dig a furrow of freedom into the future, plant the seeds of liberty deep in your hearts and spirits, thus preserving our Constitution, so that our land, under one government, may cry out with one soul, "This is my land, this is your land, this is the future of the world."

This future is your Constitution; love it, and live it. Vote according to it and serve it, support and defend it. Remember everything that makes up our American way of life—yes, remember everything—for who will remember if we forget?

Address by Hon. Pat McNamara, of Michigan, to the United Automobile Workers at Detroit, Mich.

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Tuesday, May 29, 1956

Mr. MAGNUSON. Mr. President, on Sunday, the distinguished Senator from Michigan [Mr. MCNAMARA] made a very important address in Detroit. In his address he emphasized some of the real problems regarding unemployment in the automobile industry. I ask unanimous consent that his address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY PAT MCNAMARA, OF MICHIGAN, AT DODGE LOCAL NO. 3 HALL, UAW, SUNDAY, MAY 27, 1956, DETROIT, MICH.

I want to thank Pat Quinn for inviting me here. I always like to speak to my friends, but it makes me very unhappy when my friends are out of work.

If there was some way I could stand here and tell you not to worry—that everything is going to be all right—I would do it in an instant. But I'll make no false promises to you. You people have been through this before—too often before—and you realize there is no quick answer.

You auto workers apparently are becoming the forgotten men in this period of great prosperity you hear so much about.

There's something about this prosperity picture that strikes me as a bit odd. According to some sources you get a picture of people singing and dancing in the streets and lighting their cigarettes with $10 bills. But when you look a little closer, it reminds you of a movie set. All the buildings are beautiful, but when you get around behind them, you find they are only attractive fronts held up by some shakey props.

That's why I think what we have now is something like a false-front prosperity. The surface looks good, the high-sounding figures are impressive—but some of the props are giving way—and these are important props such as the auto industry, the farmers, and independent business.

I get the feeling that some of the prosperity boosters wish you people would sort of disappear. They'd like to sweep you under the rug and out of sight—but I can tell you that that rug is getting pretty lumpy and it's going to be uncomfortable walking for the prosperity boosters.

Why are you down here this morning—instead of at home enjoying a comfortable Sunday, assured that your regular paycheck is coming in every week? There are a number of reasons.

One big one perhaps is that the auto industry may have gotten a bit greedy last year and gobbled up too much of its market. Sales races between the giants were more important than maintaining an orderly market. And you boys build such good cars that it's hard to convince someone that his 1955 model really isn't any good and that he should buy a 1956.

Another reason is the tight-money policy of the Eisenhower administration. You know what tight money is. That means it's hard to come by—and harder to hold onto when you get some.

No less an expert than Mr. Harlow Curtice, who operates a small business hereabouts, has been complaining about that. He says the credit policies of the Federal Reserve Board are very restrictive. When Mr. Curtice said that, I welcomed his comments, and I said I hoped his conversion would have some weight with his friends in the White House.

At the same time Mr. Curtice made his remarks, he lowered his estimate of the year's auto production. He said the industry would produce not more than 5,800,000 cars, compared with his original estimate of 6½ million. I don't think that's news to any of you.

It may have taken some courage for Mr. Curtice to take issue with the Government's economic policy. It was almost like biting the hand that feeds him. After all, the present administration has done a lot for his General Motors, dedicated as it is not only to preserving giantism, but to making it even bigger.

(I don't mean to concentrate on General Motors here, but a lot of the GM people aren't getting regular paychecks, either.)

This giantism is having severe effects on independent business—or small business—as it is frequently called. Something like 10,000 firms went out of business last year, while corporation profits went up nearly $10 billion. The farmers, meanwhile, were losing a billion dollars in income.

Now the reason I have been talking about the farmers and the independent business troubles in conjunction with your own current difficulties is that all this goes together.

When you auto workers aren't getting paid, you sure as the devil aren't going to buy any of these stockpiled cars, or a lot of things that other manufacturers make, either. Neither are the farmers, and this kind of situation hits the independent businessman long before it hits the big boys. But it will hit them eventually.

In other words, when you take away some of the props of this so-called prosperity, it puts a big strain on the others—and you face the threat of the whole thing tumbling down.

It doesn't need to tumble down. We can have solid prosperity built on solid foundations of good judgment and forward-looking planning.

I don't get any joy out of hard times just because it might make a good campaign issue. What we need is a realistic economic policy by the Government—one that spends less effort making the big outfits bigger—and spends more time creating the greatest good for the greatest number.

In your own case, a realistic production policy is needed—one that doesn't try to slug the public into buying more cars than it can absorb solely to back up advertising slogans.

As I said, it seems the present administration wishes you people wouldn't cloud up the prosperity picture they're bragging so much about.

On top of that, we continue to get that callous big-business attitude toward the plight of the unemployed workers. You all remember when Charlie Wilson made his crack about bird dogs and kennel dogs in reference to the laidoff autoworkers in 1954.

Just the other day, we had another example when Howard Pyle, assistant to President Eisenhower, described—right here in Detroit—the right to suffer as one of the joys of a free economy. Well, I don't think any of us will agree that the right to suffer is part of our Bill of Rights—as I said in the Senate at the time.

Even when he apologized—which he did in an awful hurry—Mr. Pyle put his other foot in his mouth when he said your current trouble was seasonable. Apparently he hasn't been conferring with Mr. Curtice.

Unfortunately, we in Congress can't just pass a law and make everything rosy. But one of the things I have done is to personally request of Defense Secretary Wilson that more defense work be channeled into our idle plants here to help keep you people working. This isn't a permanent answer, I know, but it could mean the difference between pay lines and breadlines.

Labor and the Next Election

EXTENSION OF REMARKS
OF
HON. BARRY M. GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 29, 1956

Mr. GOLDWATER. Mr. President, Victor Riesel's eyes may have been closed forever by the vicious attack on him which left him blind, but his keen insight into and knowledge of the political aspirations of certain leaders of labor continue to warn the American people of this growing political monopoly.

I ask unanimous consent to have printed in the Appendix of the RECORD an illuminating article entitled "Inside Labor," written by Mr. Riesel, and published by the Hall Syndicate, Inc., on May 10, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INSIDE LABOR

(By Victor Riesel)

The Republican elephant is not rolling over and playing dead in the middle of the race for the votes of millions of rank and file union members this November. The GOP has set in motion a nationwide labor operation to go over the heads of union chiefs tied to the Democrats and to coordinate the activities of Republican unionists.

They are matching the Democrats, technique by technique, and will have Republican labor committees on State levels as well as a top-flight national labor advisory committee. And, like the Democrats, the GOP has set up a labor section within their national organization with a full-time director.

Heading this vital section is a man named Roy James, formerly administrative assistant to the Senate Labor Committee. James was pushed for the post by Labor Secretary James Mitchell, who has vigorously proposed a course by the Republicans that would steer away from a head-on clash with powerful union leaders. Mitchell and his associates are in the GOP group that prefers to placate labor as against the Goldwater-Jenner-Curtis wing of the party which believes in a tougher approach.

The State committees of the GOP will be matched by those of the Democrats, who have set up a national labor division run by Thomas R. Byrne, a former consultant to the United States Labor Department and a man with wide contacts among labor leaders.

Byrne's first step in whipping labor into line for the Democrats will be the formation of a 15-man national labor advisory committee. Ten of the fifteen who will serve have already accepted and within a week the names of the full group will be announced. George Harrison, head of the powerful Railway Clerks Union, will be chairman of this committee. Harrison has long been identified with the Democrats and some years back was offered the ambassadorship to France by Harry Truman. Harrison preferred to stay with his union.

Interestingly enough, Harrison has been pushing for the nomination of Frank Clement, 36-year-old Governor of Tennessee, as vice president on the Democratic ticket. If Clement is nominated it means that an older candidate, from a northern State, will probably be the presidential nominee.

Harrison's 15-man committee will have as its primary job the formulation of a proposed labor platform for the Democrats. The bulk of their proposals will undoubtedly be incorporated into the final plank submitted to the convention, for these men talk for the most powerful force within the Democratic Party.

These influential unionists have hammered together a giant vote-gathering machine across the country complete with precinct workers, ladies' auxiliaries, plant and shop committees and huge amounts of ready cash to be used either as outright campaign contributions or for printing of literature or for radio and TV programs featuring Democratic candidates.

In addition, they will walk into the Chicago nominating convention with an important chunk of delegates from New York, New Jersey, Pennsylvania, Massachusetts, Ohio, Illinois, Wisconsin, and California.

It's a cinch, too, that any presidential candidate will be cleared with these men who control the money and manpower so vital to an effective election campaign.

The union chiefs will also have an impressive record of performance behind them—not just in past elections but in the recent fight for control of the regular Democratic Party machinery in Texas.

Labor was anxious to defeat the faction of the Democratic Party led by Gov. Allan Shivers. They wanted the SAM RAYBURN-LYNDON JOHNSON wing of the Texas party to gain control. They tossed cash and precinct workers into the fight—and they succeeded. Shivers lost.

The unionists—especially the political strategists of Walter Reuther's UAW and other old CIO unions—have their eyes on more than Texas, with its upwards of 500,000 union members. They are looking ahead to making inroads in the entire Southwest, an area where labor has never before played an influential political role, but where union membership is mounting.

So, the donkey and the elephant are approaching the starting gate for the big race in 1956—and the stakes are high.

A Tribute to Hon. Wayne Morse, of Oregon

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, May 29, 1956

Mr. NEUBERGER. Mr. President, on May 24 a great labor statesman of our times, W. P. Kennedy, president of the Brotherhood of Railroad Trainmen, was the principal speaker at the annual banquet of LaGrande Lodge, No. 315, held in LaGrande, Oreg.

The members of the Railroad Brotherhood Association on that occasion were privileged to hear an extremely able address. During the course of his remarks President Kennedy paid high tribute to my colleague the senior Senator from Oregon [Mr. MORSE]. I have been deeply moved by the very glowing sentiments expressed concerning Senator MORSE.

In my opinion, the recitation of Senator MORSE's outstanding record in the Senate merits an even wider audience. Therefore, I ask unanimous consent that Mr. Kennedy's address be insterted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF W. P. KENNEDY, PRESIDENT, BROTHERHOOD OF RAILROAD TRAINMEN, BEFORE THE ANNUAL BANQUET, LAGRANDE LODGE, NO. 315, LAGRANDE, OREG., MAY 24, 1956

It is really grand to be in LaGrande again. This is my first visit here as president of the Brotherhood of Railroad Trainmen. While serving as vice president I had the pleasure of visiting with you on a previous occasion.

You may be sure that I welcomed the invitation from Brother Harrison, who advised the purpose of the annual meeting was presentation of veteran emblems to the members holding continuous membership.

The sturdy forthright progressiveness of the brotherhood throughout the 73 years of our existence has had a wholesome influenee on our members in keeping their memberships intact.

LaGrande Lodge, No. 315, is certainly no exception, for we have already issued 188 continuous membership emblems to your members, who have held 10 years or more continuous membership. Twenty-five emblems will be awarded tonight. Of those, 5 will be for 35 years. That means for 35 years these loyal members have paid their dues regularly each month.

It is a tribute to each of them. It is a fine testimony to our great brotherhood for its services to the members.

Our collective efforts within the brotherhood have brought forth untold amounts of good to all of us. The applicant initiated into membership this month or in any month is provided with protection and services seldom equaled and never surpassed by any other organization.

It is always good to hold annual festivities honoring those who have qualified for our veteran emblems. While it is rewarding to them, it is also encouraging to the younger members.

From my own experiences I know how it feels to get the coveted emblems. I proudly wear the 45 and look eagerly forward for the 50. I am sure other members share that same pride in receiving their continuous membership emblems.

It is always invigorating and encouraging to visit the officers and members of lodges, general grievance committees, State legislative boards, field supervisors, and the attorneys of our legal aid department as I travel throughout the United States and Canada in the service of our brotherhood.

Oftentimes I am required to be in Washington, the Nation's Capital. That city is the nerve center of our great country and a citizen going to the District of Columbia for the first time or for the hundredth time, has a right to anticipate his visit with some feeling, a feeling of confidence that in the Nation's Capital are the men and the women who make the world's greatest democracy run well in behalf of all of us.

Lately, however, there is something that doesn't ring out quite so clear and so sharp as I feel it should. The impressive marbled halls and wide avenues seem to be shrouded in an atmosphere that seems seriously disturbing from one who was raised in the Western States. I have that feeling and I think you would, too, if you visited Washington now. It's rather difficult to describe. There is bridled caution everywhere you turn, a fear of moving forward positively with a sound program for all the people. Perhaps it's this businessman's—big businessman's—administration in Washington. The dollar sign seems to loom as the most almighty product for consideration. It has been said that these people know the price of everything and the value of nothing.

Of course, this is not the story carried out of Washington and read in the Oregon newspapers. These are not the words that they speak. Instead the impression is cleverly given that from the President on down, the administration is as deeply devoted to the general welfare of all the people as were Franklin D. Roosevelt and Harry Truman. Far beneath the slick and cleverly contrived rhetoric which has successfully sold toothpaste in the past, the American people are now sold the idea that this is a progressive administration, committed to far-reaching programs for the betterment of the little people. I say this is not so. I say that the true facts have been covered, layer upon layer, with the slickest advertising copy that Madison Avenue, New York, ever produced. Slowly but surely, more and more citizens are being alerted to this great advertising crusade of confusion. They know that words are cheap—disgustingly cheap—and that only a positive, courageous program carried out successfully, is what matters.

The truth and facts are not being resurrected by accident. There are many fearless and decent people who are doing their bit to unearth them. Some are from Oregon, such as United States Senators WAYNE MORSE and RICHARD NEUBERGER and Representative EDITH GREEN. In the labor movement we have determined not to be fooled again.

Were I to select one man today who has done more to bring the true facts, the real story as it affects us, out into the glaring and revealing light of day it would be your senior Senator, WAYNE MORSE. Senator MORSE, with his sharp intelligence, honesty, and integrity is the faithful sentinel of the United States Senate. We all agree that this is not the age of the indispensable man but as a citizen, and as a trade unionist I view WAYNE MORSE as more closely approaching this role in the United States Senate than any other individual—and there are many worthy, devoted individuals who occupy those other 95 seats of trust in the Senate.

A United States Senate without WAYNE MORSE would be a far less hopeful part of Government. No one else could so effectively lash out in defense of you and me, or so artfully manipulate the pinpricks of conscience on those who play the dubious role as spokesmen of mighty, vested interests. When Senator MORSE takes the floor of the Senate, his opponents, who are our opponents, immediately put their guard up. They know that the unparalleled sharpness of this man will uncover their half-truths, their untruths, and expose them for the whole Nation to witness. If only the Nation's press would serve the people one-quarter as well as this courageous Senator they would report his skilled handiwork and far more people would be alerted to the shams foisted upon them.

I say to you as Oregonians, you have a debt to your country. You should return WAYNE MORSE to Washington. Neither you nor the citizens of the other 47 States can afford not to have him in the Senate. But you men and women of Oregon are the only ones who have the opportunity to vote for him. The responsibility is yours.

I sometimes wonder whether the men and women of Oregon, even those in the labor movement, fully appreciate the esteem and devotion and unbounded respect those of us, from other States, have for your senior Senator.

One indication of this deep belief in the man was shown several months ago when Senator MORSE was given one of the most coveted awards presented by the labor movement, the Sidney Hillman Foundation Meritorious Public Service Award for 1955 by the Amalgamated Clothing Workers of America. The text of the citation of the award sums up much of our respect for the man.

"Throughout his public life, as a public member of the National War Labor Board and in his 12 years in the United States Senate, WAYNE MORSE has placed the welfare of the people above all other considerations.

"With unusual energy, intelligence, and courage, he has fought for the public interest in many areas, including an enlightened foreign policy, the preservation of our natural resources, the protection of civil liberties and the extension of economic security to all citizens. In pursuit of these goals, Senator MORSE has demonstrated knowledge, determination, and an unusual ability to articulate the issues, to become one of the most effective Members of the United States Senate. In the process he has done much to stimulate an enlightened and informed public opinion.

"Senator MORSE follows in the great tradition of other liberals from the West, such as George Norris and Robert LaFollette, in his independence of private and partisan interests and in his defense of the public welfare. He is bound to no man or party, but seeks only to disclose the truth and to uphold the just, regardless of the odds or the opposition. We honor Senator WAYNE MORSE as a living symbol of the wise, honest, and courageous servant of the people."

That was a richly deserved tribute to WAYNE MORSE.

None of us should be allowed to forget MORSE's almost singlehanded battle against the Tidelands Oil giveaway—in April 1953, when he set a record by holding the floor of the Senate continuously for 22 hours and 26 minutes. He was not only fighting against one of the giant giveaways in American history; this was also a fight to provide funds for the education of our children. The Anderson-Hill bill, referred to as oil for lamps of education, would have turned royalties received by four States—California, Texas, Florida, and Louisiana—to the education of the children from all the 48 States. It involved some $67 billion. Oregon's stake in all this amounted to more than $80,700,000. Knowing full well the odds against stopping the Tidelands giveaway were insurmountable, MORSE still had no hesitation in giving all of his great energy to opposing it. The bill passed but the educational job done for the American people cannot be calculated in dollar-and-cents terms. It played a major part in stopping another giveaway, the Dixon-Yates contract to cripple the Tennessee Valley Authority, for example, a pet of President Eisenhower and his Secretary of Interior, which the Chief Executive, himself, had to disavow. And the administration has not been quite so blatant in its giveaways since that clever scheme was defeated.

In 1954 we saw WAYNE MORSE play another heroic role in conjunction with several other Senators. The administration was trying to push through the Atomic Energy Act without any debate whatsoever. It was apparent that the bill provided little or no protection of the public interest and it appeared that this priceless new energy, which was developed at a cost of over $10 billion to American taxpayers, would be turned over largely to powerful corporations for private profit. The day the bill was filed the administration tried to rush it through. Senator MORSE and several colleagues went to work. For 3 days and 3 nights they held forth on the floor of the Senate demanding major revisions of the important legislation. MORSE, himself, spoke 8 hours one night, 10 the next, and 12 hours the third night—all on the graveyard shift. Finally the Republican majority cracked and key amendments were agreed to which provided public-preference clauses and other changes that gave some safeguards to the public interest.

More recently, only last month, your good Senator held forth on the floor of the Senate for 5 solid hours and presented a most devastating attack on the Eisenhower National Labor Relations Board. Careful documentation and details offered conclusive proof that the Eisenhower Board is solidly stacked against organized labor. A few weeks after this historic speech the Federal court of appeals upheld Senator MORSE's contention on one case when it unanimously overruled the NLRB. A three judge panel ruled that pickets cannot lose their right to reinstatement and back pay because of strike violence in which they did not participate.

Those of us on the railroads have had occasion to remember Senator MORSE and his hard work in behalf of railroad labor. I recall, particularly, how he actually saved important amendments to the Railroad Retirement Act in the dying hours of the 83d Congress in 1954. When it seemed that technical difficulties in the windup of the session would completely destroy hope for the amendments, MORSE went into action. Through parliamentary procedural moves he coordinated action between the Senate and the House. The bill passed both Houses, one of the few bills in those last hours, and it was finally approved by the President.

Let me tell you this WAYNE MORSE is not beholden to organized labor or to any other group in this country. He stands squarely on his own feet, makes his own decisions on what he has found to be just and right. We've had our differences. One I can name, was on an appointment to head the Bureau of Locomotive Inspection. Our differences were fundamental there. But overall, on most major issues, MORSE and organized labor stand together in their support of the public interest. If anyone tries to tell you that WAYNE MORSE is labor's lackey, or anyone else's lackey, tell them how completely wrong they are. He takes a back seat to no one in unparalleled integrity and in making his own decisions. He is his own man. And that is what he should be.

It took rare political courage for WAYNE MORSE to turn his back on the Republican Party when he found President Eisenhower had become a captive of big-business interests and compromised fundamental issues. MORSE found that his own outlook was more closely alined with that of the western and northern Democrats, so he joined them. But here, again,, he refused to compromise with his principles although his record of support of the Democrats is one of the highest in the Congress. He was one of a small band which fought giving President Eisenhower a blank check to make war at will over the Formosa, Quemoy, and Matsu Islands.

When we say you should return WAYNE MORSE to Washington we're not asking for a rubber stamp, because he will never be that. We do want a man in whom we have great confidence, a man who carefully weighs his actions in light of the welfare of this Nation and of all the people in it. Oregonians want all this, but they also want a man who can represent his State and serve the interests of its people. In WAYNE MORSE you have such a man. When WAYNE MORSE steers key pieces of legislation through Congress bearing his name, some of it may be of interest only to Oregon, but most of it is of interest to Oregon because it is of interest to all of the people.

That was true of the Employment Act of 1946, which was cosponsored when he was a freshman Senator in the 79th Congress. That was also true of the Housing Act of 1949 which was passed in the 81st Congress.

In 11½ years Senator MORSE's name has been on 54 bills which were enacted into law. His name has appeared on a total of 547 bills. That is a record in which any legislator could take pride.

The work and constant pressure applied by the Senator helped secure funds for vital projects in Oregon and the Pacific Northwest. Last year Congress broke the deadlock imposed by the administration's no-new-starts policy by providing funds for 107 unbudgeted projects and by increasing funds for many projects in the President's budget to more realistic and adequate amounts.

Oregon and the Pacific Northwest gained new construction starts on Cougar, Hills Creek and Ice Harbor Dams, on planning funds for John Day and Green Peter Dams, the Talent project and important navigation projects at the mouth of the Columbia, Tillamook Bay and Bar and Charleston Boat Harbor. These are only slight steps forward but they have been won, in a great part, by the persistence of both WAYNE MORSE and his colleague Senator RICHARD NEUBERGER.

Even more, these Senators have not relented on the biggest sellout the Northwest has ever experienced—the attempt to undermine the Hells Canyon Dam project. If President Eisenhower and his former Secretary of the Interior are successful in allowing the Idaho Power Co., controlled by interests in Maine, to construct their smaller dams it will prove to be one of the cruelest acts against the people of the Northwest ever supported by an administration in Washington. You have full right to complain to high heaven the powerful Eastern interests are moving into this area, on an entirely self-seeking basis as carpetbaggers of old, and denying the people the rights to their great natural resources. You will feel this sellout in many ways in addition to higher power rates.

The man who helped to sponsor this influx of carpetbagger capital, the former Secretary of Interior, is amazingly, the man who is

trying to become a United States Senator. I've been in many States, and supported many candidates in campaigns, but I have never seen a race for public office where the choice, as far as the people are concerned, was as clear cut as the choice between WAYNE MORSE and Douglas McKay.

Recently, Life magazine carried a picture of Douglas McKay in a 1901 Hupmobile. I don't know of anything that could be more appropirate than this picture—unless, perhaps, he was sitting in an ox cart. For McKay's policies, whether in the field of natural resources or in labor legislation, belong in a period no later than 1900.

I followed with some horror his dealings with the mechanics employed at his automobile firm in Salem. The demands that he made upon his workers, organized within the International Association of Machinists, could be construed in no other way than that he was out to completely crush the union. Although he had majority of the stock and controlled the company he tried to place the blame for his miserable role on others, notably his son-in-law. Now we are told that he has sold his interest to that son-in-law but whatever action he takes now we have a clearly drawn diagram of what labor relations, McKay style, means. How could we possibly have more of a contrast when we compare McKay's record to that of WAYNE MORSE and his deep concern for the American worker?

My attention has been called to an article in the Oregon Statesman of last December, of an interview with Douglas McKay. Back in his home State for the holidays, he was reported to have said that after nearly 2 years in office he can ignore generally political criticism but that he was still trying to get his wife to adopt his philosophy. He is quoted as saying: "I tell her that when she goes to bed she should say her prayers, tell everybody to go to hell, and then go to sleep as I do."

My only comment is that McKay can tell the good people of Oregon to go to hell if he wants to but that the good people of Oregon will not go to hell, neither will they send McKay to the Senate of the United States.

I did not come to Oregon to tell you how to vote. I have come to discuss some of the important issues with you as a citizen of another State and as a fellow unionist. There are some things which you might want to give careful consideration. I could not tell you how to vote. That is a decision that you must make with your own conscience and act upon in the voting booth. No union officer can deliver any vote but his own and that is the way it should be in a democracy. I do hope you will all vote.

All the evidence shows that Oregonians are aware of the issues. For the first time in memory there are more registered Democrats than Republicans in Oregon. My personal observation is that many of these people left the Republican Party because it had fallen into the hands of men who live in a 19th century world. The farsighted Republicans such as the late Senator McNary are no longer on the scene. And others such as WAYNE MORSE have left the party because it was no longer a home for liberalism and was no longer devoted to the welfare of all the people.

These are some of the thoughts you might keep in mind between now and November. Oregonians, for the first time in years, can justly take pride in their senatorial team in Washington, WAYNE MORSE and RICHARD NEUBERGER. There isn't a better team in the Nation. Millions of Americans are counting upon you to keep them in Washington where they can continue to fight for us, the people.

It has been good to be with you again. Your tribute to the members of continuous membership is worthy of note. It is a splendid example to our new members, for within a few years they will become the veterans of tomorrow.

The Brotherhood of Railroad Trainmen and Ladies Auxiliary are traditionally liberal, militant people, who love the good life of freedom and abundance for all. We believe in democratic government, free enterprise, with the dignity and importance of human rights, freedoms, and needs over all else. We can never hope to obtain economic, social, and political perfection. It must necessarily be a struggle for survival. The constant alertness and care will keep us in readiness for any fate. We cannot stand still. We do not want to go backward. We must move forward. We will go forward as long as we keep strong militant labor unions, ready and willing to battle for economic, social, and political justice.

In Oregon this year you have a great challenge before you. The forces of reaction are threatening the very thresholds of liberal government and militant unionism. The lines are acutely drawn—there can be no doubt. The workers, the farmers, the common folks everywhere who believe in good government will work for and vote for WAYNE MORSE for United States Senator and for those who stand firmly with him. It is a challenge to you—I am sure you will not fail to meet it courageously.

Supreme Court Decision on Indian Lands and Direct Income Therefrom

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 29, 1956

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD Decision No. 134, October term of the Supreme Court, concerning a writ of certiorari to the United States Court of Appeals for the Ninth Circuit in the case of Clark Squire, Collector of Internal Revenue for the District of Washington vs. Horton Capoeman and Emma Capoeman, with the opinion delivered April 23, 1956.

This appears to be an epochal decision by the United States Supreme Court in the matter of taxing allotted Indian lands or the direct income therefrom. Basically, the court holds that not merely the trust but income derived directly therefrom is not taxable. It also protects the proceeds against attachment for debts contracted prior to the issuance of a fee patent.

This decision will be of interest to a great many people throughout the United States and should be readily available for reference by the Members of the Congress.

There being no objection, the decision was ordered to be printed in the RECORD, as follows:

SUPREME COURT OF THE UNITED STATES, No. 134, OCTOBER TERM, 1955.—CLARK SQUIRE, COLLECTOR OF INTERNAL REVENUE FOR THE DISTRICT OF WASHINGTON, PETITIONER v. HORTON CAPOEMAN AND EMMA CAPOEMAN, HIS WIFE—ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE NINTH CIRCUIT—APRIL 23, 1956

Mr. Chief Justice Warren delivered the opinion of the Court.

The question presented is whether the proceeds of the sale by the United States Government of standing timber on allotted lands on the Quinaielt Indian Reservation may be made subject to capital gains tax, consistently with applicable treaty and statutory provisions and the Government's role as respondents' trustee and guardian.

When white men first came to the Olympic Peninsula, in what is now the State of Washington, they found the Quinaielt Tribe of Indians and their neighboring allied tribes occupying a tract of country lying between the coast range and the Pacific Ocean. This vast tract, with the exception of a small portion reserved for their exclusive use, was ceded by the Quinaielts and their neighbors to the United States in exchange for protection and tutelage by the treaty of July 1, 1855, and January 25, 1856, 12 Stat. 971. According to this treaty, the Quinaielts were to have exclusive use of their reservation "and no white man shall be permitted to reside thereon without permission of the tribe." Article II. Years later, Congress passed the General Allotment Act of 1887.[1] Thereunder, Indians were to be allotted lands on their reservations not to exceed 160 acres of grazing land or 80 acres of agricultural land,[2] and 25 years after allotment the allottees were to receive the lands discharged of the trust under which the United States had theretofore held them, and to obtain a patent "in fee discharged of said trust and free of all charge or incumbrance whatsoever,"[3] though the President might extend the period.[4]

Respondents, husband and wife, were born on the reservation, and are described by the Government as fullblood, noncompetent Quinaielt Indians. They have lived on the reservation all their lives with the exception of the time served by respondent husband in the Armed Forces of the United States during World War II.

Pursuant to the treaty and under the General Allotment Act of 1887, respondent husband was allotted from the treaty-guaranteed reservation 93.25 acres and received a trust patent[5] therefor dated October 1, 1907.[6] During the tax year here in question the fee title to this land was still held by the United States in trust for him, and was not subject to alienation or encumbrance by him, except with the consent of the United States Government, which consent had never been given. The land was forest land, covered by coniferous trees from 100 years to several hundred years old. It was not adaptable to agricultural purposes, and was of little value after the timber was cut.

In the year 1943 the Bureau of Indian Affairs of the United States Department of the Interior entered into a contract of sale for the standing timber on respondent's allotted land for the total price of $15,080.80. The Government received the sum of $8,418.28 on behalf of respondent in that year.[7]

Upon demand of petitioner, Collector of Internal Revenue for the District of Washington, respondents filed a joint income-tax return on October 10, 1947, for the tax year 1943, reporting long-term capital gain from the sale of the timber in that year. Simultaneously, they paid the taxes shown due. Thereafter, they filed a timely claim for refund of the taxes paid and contended that the proceeds from the sale of timber from the allotted land were not subject to Federal income taxation because such taxation would be in violation of the provisions of the Quinaielt Treaty, the trust patent, and the General Allotment Act. The claim for refund was denied, and this action was instituted. The district court found that the tax had been unlawfully collected and ordered the refund. 110 F. Supp. 924. The Court of Appeals, agreeing with the district court but recognizing a conflict between this case and the decision of the 10th circuit in the case of *Jones* v. *Taunah* (186 F. 2d 445, affirmed). 220 F. 2d 349. Because of the apparent conflict, we granted certiorari. 350 U. S. 816.

The Government urges us to view this case as an ordinary tax case without regard to the

Footnotes at end of speech.

treaty, relevant statutes, congressional policy concerning Indians, or the guardian-ward relationship between the United States and these particular Indians. It argues:

"As citizens of the United States they are taxable under the broad provisions of sections 11 and 22 (a) of the Internal Revenue Code of 1939, which imposes a tax on the net income of every individual, derived from any source whatever. There is no exemption from tax in the Quinaielt Treaty, the General Allotment Act, the taxing statute, or in any other legislation dealing with taxpayers' affairs. * * *

"Even if it be assumed that the United States would be prohibited from imposing a direct tax on the allotted land held in trust for the taxpayers, there would, nevertheless, be no prohibition against a Federal tax on the income derived from the land, since a tax on such income is not the same as a tax on the source of the income, the land."[8]

We agree with the Government that Indians are citizens and that in ordinary affairs of life, not governed by treaties or remedial legislation, they are subject to the payment of income taxes as are other citizens. We also agree that to be valid, exemptions to tax laws should be clearly expressed. But we cannot agree that taxability of petitioners in these circumstances is unaffected by the treaty, the trust patent, or the Allotment Act.

The courts below held that imposition of the tax here in question is inconsistent with the Government's promise to transfer the fee "free of all charge or incumbrance whatsoever." Although this statutory provision is not expressly couched in terms of nontaxability, this Court has said that:

"Doubtful expressions are to be resolved in favor of the weak and defenseless people who are the wards of the Nation, dependent upon its protection and good faith. Hence, in the words of Chief Justice Marshall, 'The language used in treaties with the Indians should never be construed to their prejudice. If words be made use of, which are susceptible of a more extended meaning than their plain import, as connected with the tenor of the treaty, they should be considered as used only in the latter sense.' *Worcester* v. *The State of Georgia* (6 Pet 515, 582)." *Carpenter* v. *Shaw* (280 U. S. 363, 367)

Thus, the general words "charge or incumbrance" might well be sufficient to include taxation. But Congress, in an amendment to the General Allotment Act, gave additional force to respondents' position. Section 6 of that act was amended to include a proviso—

"That the Secretary of the Interior may, in his discretion, and he is authorized, whenever he shall be satisfied that any Indian allottee is competent and capable of managing his or her affairs at any time to cause to be issued to such allottee a patent in fee simple, and thereafter all restrictions as to sale, incumbrance, or taxation of said land shall be removed and said land shall not be liable to the satisfaction of any debt contracted prior to the issuing of such patent. * * *"[9]

The Government argues that this amendment was directed solely at permitting State and local taxation after a transfer in fee, but there is no indication in the legislative history of the amendment that it was to be so limited.[10] The fact that this amendment antedated the Federal income tax by 10 years also seems irrelevant. The literal language of the proviso evinces a congressional intent to subject an Indian allotment to all taxes only after a patent in fee is issued to the allottee. This, in turn, implies that, until such time as the patent is issued, the allotment shall be free from all taxes, both those in being and those which might in the future be enacted.[11]

Footnotes at end of speech.

The first opinion of an attorney general touching on this question seemed to construe the language of the amendment to section 6 as exempting from the income tax income derived from restricted allotments.[12] And even without such a clear statutory basis for exemption, a later attorney general advised that he was—

"Unable, by implication, to impute to Congress under the broad language of our Internal Revenue Acts an intent to impose a tax for the benefit of the Federal Government on income derived from the restricted property of these wards of the Nation; property the management and control of which rests largely in the hands of officers of the Government charged by law with the responsibility and duty of protecting the interests and welfare of these dependent people. In other words, it is not lightly to be assumed that Congress intended to tax the ward for the benefit of the guardian."[13]

Two of these opinions were published as Treasury Decisions.[14] On the basis of these opinions and decisions, and a series of district and circuit court decisions, it was said by Felix S. Cohen, an acknowledged expert in Indian law, that "It is clear that the exemption accorded tribal and restricted Indian lands extends to the income derived directly therefrom."[15] These relatively contemporaneous official and unofficial writings are entitled to consideration. The Government makes much of a subsequent Attorney General's opinion,[16] which expressly overruled an earlier opinion,[17] on the authority of *Superintendent of Five Civilized Tribes* v. *Commission* (295 U. S. 418).

This case is distinguishable from the case at hand. It involved what the court characterized as "income derived from investment of surplus income from land,"[18] or income on income, which Cohen termed "reinvestment income." The purpose of the allotment system was to protect the Indians' interest and "to prepare the Indians to take their place as independent, qualified members of the modern body politic." *Board of Commissioners* v. *Seber* (318 U. S. 705, 715). To this end, it is necessary to preserve the trust and income derived directly therefrom, but it is not necessary to exempt reinvestment income from tax burdens. It is noteworthy that the Superintendent case did not involve an attempt to tax the land "surplus."[19]

The wisdom of the congressional exemption from tax embodied in section 6 of the General Allotment Act is manifested by the facts of the instant case. Respondent's timber constitutes the major value of his alloted land. The Government determines the conditions under which the cutting is made.[20] Once logged off, the land is of little value.[21] The land no longer serves the purpose for which it was by treaty set aside to his ancestors, and for which it was allotted to him. It can no longer be adequate to his needs and serve the purpose of bringing him finally to a state of competency and independence. Unless the proceeds of the timber sale are preserved for respondent, he cannot go forward when declared competent with the necessary chance of economic survival in competition with others. This chance is guaranteed by the tax exemption afforded by the General Allotment Act, and the solemn undertaking in the patent. It is unreasonable to infer that in enacting the income tax law, Congress intended to limit or undermine the Government's undertaking. To tax respondent under these circumstances would, in the words of the court below, be "at the least, a sorry breach of faith with these Indians."[22]

The judgment of the court of appeals is affirmed.

Mr. Justice Reed, dissenting.

My view is that the sale price of the timber in excess of its market value on

Footnotes at end of speech.

March 1, 1913, was a capital gain, subject to Federal income tax. *Jones* v. *Taunahi* (186 F. 2d 445). *Cf. Choteau* v. *Burnet* (283 U. S. 691); *Superintendent* v. *Commissioner* (295 U. S. 418). The gain is taxable income like the value of annual crops.

Mr. Justice Harlan took no part in the consideration or decision of this case.

[1] 24 Stat. 388, 25 U. S. C., sec. 331, et seq.

[2] 25 U. S. C., sec. 331.

[3] Id., sec. 348.

[4] Ibid. The trust period here involved has regularly been extended by executive order. See note following 25 U. S. C., sec. 848, and see 25 U. S. C., sec. 462, which provides: "The existing periods of trust placed upon any Indian lands and any restriction on alienation thereof are extended and continued until otherwise directed by Congress."

[5] The term "patent" inadequately describes respondents' interest. "Congress * * * was careful to avoid investing the allottee with the title in the first instance, and directed that there should be issued to him what * * * is in reality an allotment certificate * * *." *Monson* v. *Simonson* (231 U. S. 341, 345).

[6] In pertinent part, the patent provides: "Now know ye, That the United States of America, in consideration of the premises, has allotted, and by these presents does allot, unto the said Horton Capoeman, the land above described, and hereby declares that it does and will hold the land thus allotted (subject to all statutory provisions and restrictions) for the period of 25 years, in trust for the sole use and benefit of the said Indian, and that at the expiration of said period the United States will convey the same by patent to said Indian, in fee, discharged of said trust and free of all charge or encumbrance whatsoever * * *."

[7] This sale seems to have followed a pattern generally adopted by the Government in selling timber from Indian allotments. Huge areas of forest are put up for competitive bids by lumber companies. These tracts include the tribal forest lands and individual allotments, with the consent of tribal councils and individual allottees. The successful bidder is required to make an immediate advance payment of a large proportion of the estimated value of the lumber in the tract. Since as much as 640 million board feet have been sold at one time, this requirement makes it economically infeasible for any but the largest companies to submit bids. The uncertainties of such large-scale operations, which are to be carried on over 25- or 30-year periods, coupled with local quality and accessibility variables, has resulted in substantially lower than prevailing market bids. In some instances, the return to other sellers of comparable timber was 2 or 3 times that received by the Indians. See transcript of Nov. 28, 1955, Joint Hearting of Subcommittee on Legislative Oversight Function of the Senate Committee on Interior and Insular Affairs and of Subcommittee on Public Works and Resources of the House Committee on Government Operations, 2151–2217, and passim.

Statement of Prof. Lev E. Dobriansky, Professor of Soviet Economics, Georgetown University

EXTENSION OF REMARKS

OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1956

Mr. DODD. Mr. Speaker, on Monday, May 14, it was reported in the New York Times, under the caption "Soviet Plans End of Prison Camps," that Moscow is planning to abolish within the next 18 months all internment camps. However, a careful reading of this report discloses the fact that Moscow has no intention of eliminating "corrective labor colonies," whether near the homes of political prisoners or at far distances, and that "in cases of extremely serious political crimes" deportations to Siberia would still be likely.

We must not be deceived by the information reported to have been given by a MVD official to a group of French Socialists, - led by Marceau Pivert. Whether forced-labor camps are near the homes of prisoners or not, the very existence of such camps deserves the strongest censure of free world opinion. Moreover, the political crimes referred to are almost entirely the patriotic acts of Ukrainians, Poles, Lithuanians, Byeloruthenians, Latvians, Estonians, Armenians, Georgians, and others to regain their national independence and freedom. Such acts cannot but receive our total sympathy and support.

The recent testimony given by Dr. Lev E. Dobriansky, professor of Soviet economics at Georgetown University and also chairman of the Ukrainian Congress Committee of America, on Forced Labor in Ukraine and Moscow's New Look, reveals the bases of our sound skepticism of such reports emanating from Moscow. This testimony supports Senate Joint Resolution 117, providing for United States cooperation with other nations through the International Labor Organization to abolish forced labor. A careful reading of it will convince one that the apparent measures of so-called liberalization taken by Moscow do not strike the core of the issue and are designed to deceive the West by the supposed reasonableness of the present oligarchical dictatorship. Under unanimous consent, I present this testimony for printing in the Appendix of the RECORD:

Mr. DOBRIANSKY. The Ukrainian Congress Committee of America, as you no doubt know, is a national organization of Americans of Ukrainian background. There are approximately 1½ million such Americans here in this country and the objectives of the organization are informational, educational, and largely in the area of foreign policy.

We attempt to disseminate as much information as we can on the basis of the experiences of not only Ukrainians, but all other non-Russian nationals within the Soviet Union.

I am very grateful for the invitation extended me by this committee to submit testimony on Senate Joint Resolution 117 which provides for United States cooperation with other nations through the International Labor Organization to abolish forced labor.

It was my equal privilege to testify in 1950 before the McMahon Committee on the Genocide Convention which presented the opportunity to offer evidence on the close relationship existing between forced-labor camps in the Soviet Union and the heinous crime of genocide. At the time, many in this country viewed the evidence with doubt and disbelief, but just recently, at the 20th Congress of the Communist Party of the Soviet Union, even the Russian Communist leaders admitted to its veracity and truth. had we wisely ratified the Genocide Convention, we would today be in the strongest moral and legal position to do something in the court of world opinion about the genocidal acts of mass murder, purges and famine which the present oligarchical dictatorship vainly ascribes to Stalin.

Forced labor in itself is not genocide, but it bears its criminal features as an institutional instrument and means for the consummate act of genocide as practiced in the Soviet Union. Again, and more seriously at this time, we would be missing the boat should we fail to pass Senate Joint Resolution 117 and allow the opportunity of exercising our leadership in the International Labor Organization toward the abolition of forced labor for political and economic purposes slip by us.

In the limited time allottted me here I should like to develop the essentials that presently constitute the picture of Moscow's application of the instrument of forced labor to Ukraine, the largest non-Russian nation both in the Soviet Union and the European orbit of the Russian Communist Empire. These essentials may be appropriately attuned to Mr. Khrushchev's latest revealing and bluff-like outburst, "Never shake your fist at a Russian"—AP, April 23, England.

Indeed, founded on extensive source material, they will serve to explain, especially in the field of forced labor, why Ukrainian patriots always shake their fists at imperialist Russian Moscow without fear or trepidation in the face of Russian threats or bluff. Whether at Vorkuta in the north or Krupkoy in the south, Kamenets-Podolsk in the west or Magadan in the east, forced Ukrainian labor, in rhythym with the captive Ukrainian people generally, keeps shaking its fist at the colonial Russian imperialists through widespread strikes, resistance and a network of planned political operation.

Since World War II mounting evidence on the extent, nature, conditions and composition of the Russian Communist concentration-camp system has been overwhelming.

There is little excuse today for displayed ignorance on the existence and horrible realities of this forced labor system. Undirected tours by Westerners into the forced labor camps are prohibited, but intellect-appealing facts about them are abundantly accessible.

The work of the Select House Committee To Investigate Communist Aggression, which carefully studied the documented testimonies of scores of former Ukrainian and other inmates of these camps, is monumental in scope and content, despite limitations of time and resources in assembling all the data that are still available. Investigation of Communist Takeover and Occupation of the Non-Russian Nations of the U. S. S. R., 83d Congress, Washington, 1954; also, Communist Takeover and Occupation of Ukraine, Special Report No. 4, 1955.

Countless Ukrainian refugees who experienced the most dreadful life in these camps and were fortunate to escape the scissors of forced repatriation, have yet to relate their individual forced labor experiences. The realistic and compatible testimonies given by German, Hungarian, Spanish, Austrian, and Japanese prisoners who mingled and slaved with Ukrainian and other nationals in these camps, have provided us with a wealth of the most recent information.

This authoritative work that I have in my hand here, Mr. Chairman, on The Black Deeds of the Kremlin, published by the Basilian Press in Canada, consists of vivid personal accounts given by former Ukrainian inmates of camps in the Solovetsky Islands, Kolyma, and other distant places of the empire known as the Soviet Union. I wish to submit it for extracted use at the discretion of the committee in the preparation of its publication of these proceedings.

I wish also to have the permission of the committee to submit subsequently and within reason additional factual data which base my general observations on forced labor in Ukraine and of its people.

As in the case of agricultural collectivization, to construe forced labor in the Soviet Union in purely economic terms is a grave mistake that only leads to a distorted picture of the situation. Similar to the phenomenon of forced saving, there is forced labor among the ostensibly "free labor" which is inherently associated with the very mechanism of a planned economy in a totalitarian social framework. Aimed at curbing labor turnover, this type of forced labor ranks far below the type dwelled on here from the viewpoints of human costs and the brutal violation of political and moral principles and rights. It patently belies the Soviet Code of Laws on Labor which, like the Soviet Constitution, is a paper of theory with scarcely the remotest relationship to practice. However, unquestionably of prime concern to free men everywhere is the forced labor in what Moscow paints as "the corrective labor camps."

Several years ago the British delegate to the Economic and Social Council of the United Nations, Mr. Corley Smith, sized up these camps well when he stated, "If, as we believe, a high proportion of the population of the Soviet Union is in fact working in forced labor camps and colonies, this can mean either that the Soviet system has produced an infinitely higher proportion of criminals than any other social system, or else that the regime is unpopular and is only maintained by force or the mass imprisonment of its opponents." Forced Labor in Russia, International Survey, London, No. 60, August 1950, page 31.

All parts of this statement are true, but it is the latter causal explanation that is powerfully buttressed by fact. The vast majority in these forced labor camps is made up of political prisoners, and only a small percentage of criminals has been witnessed

among the approximately 15 million imprisoned in them.

Furthermore, not only does the determining fact of forced labor for political reasons stand out in connection with the worst type of such labor in the Soviet Union, but also, and perhaps more significant, is the prominent fact that the composition of this labor clearly demonstrates the nature of these political reasons. It is not simply opposition to a dictatorial regime but one far deeper than this.

The conspicuous Ukrainian and generally non-Russian composition of the inmates shows that the nature of these political reasons is one of the continuous and unrelenting struggle of the captive non-Russian nations in the Soviet Union against the traditional colonialism and imperialism of totalitarian Russia, be it White or Red. Whoever fails to grasp this basic political reason for forced labor in the Soviet Union today, not only fails to perceive the significance of presented facts but also fails to understand the foremost anti-Communist and centrifugal force at work in this colonial empire.

As so many other fundamental institutional facets of the Soviet Union, the institution of forced labor has its firm historical roots in totalitarian Russian history and scarcely any in the foundations of ideologic communism. Political prisoners sent into Siberian exile and forced labor was, lest it be forgotten, a prominent feature of the Czarist Russian Empire and its furtherance of the colonial movement. See M. Mirsky, Russia, page 231.

Like the Iron Curtain, the police state, and colonialism and imperialism, this institution of Czarist Russian totalitarianism was carried over wholesale into the present period of Russian Communist totalitarianism and, with considerable technologic innovation, developed into a major instrument of authoritarian control and genocidal liquidation. Thus, with regard to the largest single national group in the forced labor camps of the Soviet Union—the Ukrainians—the concrete content of the political reasons for their imprisonment in hard circumstances of forced labor consists of their fearless and patriotic resistance and opposition to denationalization and Russification since the late twenties, to the mass collectivization measures in the early thirties, to the successive purges of the thirties and the late forties, to the current deportation program under the guise of land development in central Asia, and to many singular aspects of slow genocide of the Ukrainian nation itself.

The Russian leader, Khrushchev, knows these events well inasmuch as he formed his criminal record in Ukraine for his quick ascent to power.

The ultimate meaning of the forced labor of Ukrainians and other non-Russian captive nations in the Soviet Union cannot, therefore, be properly understood unless this fact is fully observed within the ruling context of political realities in the Soviet Union. A succinct description of this context is given by David Lawrence in a remarkable article on "200,000,000 Slaves":

"Inside the Soviet Union are more than a score of major nationalities. There are only about 80 million Russians. The other nationalities—around 120 million persons—have little feeling of patriotism about anything Russian. The so-called Union of Soviet Socialist Republics is a paper description of a loose federation held together only by the iron hand of the dictatorship group." (U. S. News & World Report, Washington, February 18, 1955.)

Ukrainians, Byelorussians, Lithuanians, Georgians, Armenians, Turkestanians, Azerbaijani and others have a patriotism only to their respective native countries. For the sin of bourgeois nationalism, which every patriotic American understands as one's love of God and native land, these non-Russian patriots are committed to forced labor and, in countless instances, through it to death.

Two paramount general facts appear in respect to the composition and conditions of the forced labor camps in the Soviet Union. One is the predominant numbers of Ukrainian political prisoners which observers conservatively estimate at 45 percent of total composition.

Two, the leadership of opposition and resistance to armed authorities has been undertaken in the main by patriotic Ukrainian nationalists who belong to the thriving network of the far-flung Ukrainian underground.

The striking importance of these basic general facts for our leadership today in taking constructive and effective steps to abolish forced labor will become manifest once we review some of the evidence supporting these facts.

In the informative work on Forced Labor in Soviet Russia—D. J. Dallin and B. I. Nicolaevsky, Yale University Press, 1947—the testimony of Prof. Ernst Tallgren, himself a former prisoner in the early forties, emphasizes that the bulk of labor prisoners in the Russian Communist concentration system consists of political offenders and of these "the most numerous * * * are Ukrainian farmers" as well as "those condemned for their religious beliefs, particularly Catholics and members of the Ukrainian Autocephalous Orthodox Church."

In the thirties, as well as in the forties, in occupied western Ukraine, the sturdy Ukrainian peasantry fought the collectivization program not only for economic reasons but also the political one of centralized Moscow control for colonial exploitation and abetted Russification. Countless were deported to the slave labor camps, which doubtlessly contributed, in a comparison of the 1926 and 1939 official census figures for Ukraine, to a decrease of 16.8 percent of Ukrainians in their native country.

For the record, at this point, I should like to submit an article on I Was In Siberia written by the author of the book One of the 15,000,000, Little, Brown & Co., Boston, 1952.

Mr. Nicholas Prychodko, who now resides in Canada, gives a pertinent and vivid account of his experiences in this general period of mass deportations to the slave labor camps.

Others who have recently furnished striking evidence from their personal experiences include, to mention only a few, John H. Noble, William E. R. Piddington, numerous released German prisoners, Dr. Joseph Scholmer, Maria Varkony, Dr. Fedor Varkony, and Japanese and other former prisoners heard by the International Commission Against Concentration Camp Practices.

To a question posed on the basis of his slave labor experiences in Vorkuta, "What nationality were the prisoners at Vorkuta?" Mr. Noble answered, "Most of them were Soviets, but not Russians. Most of them, I'd say, were Ukrainians." Vorkuta has been a tremendous center in the Russian slave labor camp chain, and Mr. Noble in his writings clearly stresses this significant compositional fact which accounted for the serious strikes there; but the Reader's Digest recently saw fit to delete references to Ukrainians in one of these articles.

Concerning Vorkuta, Mr. William E. R. Piddington, a British subject, relates his experiences of as late as 1953–54, after Stalin's death, and shows the activities of the Ukrainian majority led by members of the UPA, the Ukrainian underground, in his work titled "Russian Frenzy"—London, 1955.

Interrogating released German prisoners, the U. S. News & World Report asked, "Where have you been working?", to which they answered, "Many of us have been working on the Volga-Don Canal during the last few years. It has been built by 60,000 slave workers of all nationalities. The largest groups were Ukrainians and Georgians." (October 30, 1953.)

Interviews with hundreds of these released prisoners have been conducted by a leading Ukrainian organization in Western Europe and disclose the Ukrainian percentage in the camps covered to range at about 60 percent.

The testimony of Dr. Joseph Scholmer as presented in his classic work, Vorkuta, is perhaps unsurpassed for methodical observation and accuracy. His description of the first mass strike ever staged in the Soviet Union is conclusive in many ways, and certainly in regard to the establishment of the general facts advanced here. He witnessed them being organized by Ukrainian and Lithuanian resistance groups and himself participated in them. The impact of Dr. Scholmer's authoritative disclosures, with relevant passages from his work, on the unrealistic thinking of many Russian experts in the West is cogently shown in this brief memorandum submitted to me by a member of the Supreme Ukrainian Liberation Council, which is the foreign representation of the Ukrainian underground.

Among other things, it bears on Mr. George Sokolsky's comments on the apparent silent boycott against the work in the American market. I request that it be included as part of my statement.

For the period of the supposedly reasonable collective leadership, the testimonies of Maria Varkony and Dr. Fedor Varkony, former Hungarian prisoners in the Russian slave-labor camps, should cause us to pause and carefully analyze the deceptive propaganda maneuvers being staged by Moscow.

Maria Varkony, who spent 10 years in the camps, relates how the Tayshet-Lena railroad in Siberia has been built on the bones of slave women laborers, many of them perishing in the bitter climate. As she describes it, "The majority of the women were unable to fulfill the work norm (in heavy construction) and, therefore, received penalty rations consisting of 1 pound of bread. Many women died of exhaustion."

In the testimony of Dr. Varkony, recently broadcast to the Soviet Union, one finds mass murder under Khrushchev's collective leadership, staged in June 1954 in the Kingir camps of Karaganda. In the strike held at this camp, over 500 Ukrainian women were crushed to death by Russian Communist tanks of the T–34 make. The details of this glaring act of genocide, committed in a forced-labor camp under the present oligarchical dictatorship, I wish to insert here as part of my testimony.

The evidence assembled by the International Commission Against Concentration Camp Practices from released Japanese and German prisoners substantiates further the Ukrainian composition and leadership in the Russian Communist slave labor camps.

In a report on The Strike Mechanism In Soviet Concentration Camps the writer devotes a section to the patriotic Ukrainian partisans and states:

"In several places, these partisans were among the chief strike organizers. At Norilsk and Taichet, for example, it was they who prepared and led the action." (Monthly Information Bulletin 4, August-November 1955, pp. 19–27.)

In a succeeding article on The 96-Day Strike In the Norilsk Camps, it is observed that "As in most of the other political camps around there, the largest national group was the Ukrainians." (Monthly Information Bulletin 4, August-November 1955, pp. 28–35.)

Another instructive report on Modifications of the Regime in the Tayshet Camps from the Spring of 1953 to November 1954 strikes upon a very important note when in respect to Ukrainian leadership, it states: "Their example of boldness and self-respect—and even more important, that they could

get away with it—stirred the Camp 13 prisoners deeply." (Monthly Information Bulletin 5, December 1955, pp. 23–27.)

The psychological and spiritual effect of such leadership in the ghastly circumstances of a typical forced labor camp cannot be too strongly emphasized. Similar leadership on our part, pointing to the complete abolition of such forced labor, likewise cannot be taken lightly. Because of their solid contribution to the general picture of forced labor in Ukraine and of Ukrainians, I ask for the full incorporation of these three reports in this hearing.

This general analysis of Russian Communist forced labor in Ukraine and of Ukrainians establishes the following points of conclusion:

1. That for political offenses the largest single national group in the forced labor camps is the Ukrainians, who with courage, fearlessness and the cooperation of other non-Russian patriots have formed a leadership in these camps as part of the greater struggle for human dignity and national self-determination and independence.

2. That the opposition to the colonial and imperialist regime of Moscow is not, as some mistakenly think, latent or potential but, instead, very much active; and the great unrest, strikes, and resistance in the forced labor camps, to which large and heavy economic projects are assigned, constituted a major contributing factor to the party's change in maneuvers at the recent 20th Congress.

3. That if our many resolutions and official statements on liberation of the captive nations, national self-determination, freedom with justice, and close international collaboration are to mean anything, we should speedily pass this measure on abolishing forced labor which in the Soviet Union is inextricably bound up with Russian Communist colonialism and imperialism, political tyranny, and genocide.

4. That with all the wealth of evidence and data at our disposal we should entertain no fear of any participation of Moscow in the International Labor Organization and with greater activity and cooperation with other free nations exercise our leadership in the formulation of an international convention which will conduce to the abolition of forced labor for political and economic purposes.

5. That by even taking this step we shall, notably in these days of clever Moscow tactics, be creating a great pressure of freedom aimed at the oligarchical dictatorship and great hope and comfort to the millions rotting away in the forced labor camps of the Soviet Union and for whom the amnesty ukase of September 17, 1955, has no application.

To permit relatively minor considerations to obstruct such necessary participation and leadership by us in the ILO can only cause one to wonder about our keen awareness of the struggle in which we are engaged. We have a moral responsibility toward those in captivity as well as to ourselves in freedom and its preservation. This responsibility is more than ever before emphasized by the fact that we stand today in the direct path of the Russian Communist ambition for world domination.

As one of our Department of State officials, Mr. Francis B. Stevens, has been quoted to say, "The imperialistic urges of the Tsars—urges which were translated into efforts to penetrate the Near East, the Far East, and Eastern Europe—did not die with the Tsars. The history of the past 20 years is replete with examples of the anxiety of the Soviet leaders to give expression to this historic imperialism." (Washington Post, Aug. 28, 1953.)

The strikes and rebellions by the unassisted captives of this Russian totalitarian drive are, whether we are aware of it or not, an integral part of our struggle for freedom. The excellent editorial in the New York Times this past Monday on Murder in Tiflis, which parallels in part my own analysis submitted earlier this month to the House Un-American Activities Committee, asks, "And why should not Georgians rebel? Why should Georgia—or the Ukraine, or Armenia, or Poland, or any of the captive sovietized areas—be denied free self-determination in an era when Moscow hypocritically preaches freedom to what remains of the colonial world?"

I therefore request that this fitting editorial be appended to my testimony because similar and definitely related quetsions may be pointedly raised in the International Labor Organization by our delegates, seeking freedom of labor for our indisputable allies in the colonial empire of Moscow.

Consumer Credit: The Thirty-Six Billion Dollar Question

EXTENSION OF REMARKS
OF

HON. JESSE P. WOLCOTT

OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1956

Mr. WOLCOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Arthur O. Dietz, president, CIT Financial Corp.:

CONSUMER CREDIT: THE THIRTY-SIX BILLION DOLLAR QUESTION

(Address by Arthur O. Dietz, president, CIT Financial Corp., before the Commonwealth Club of California, Sheraton-Palace Hotel, San Francisco, April 6, 1956)

Gentlemen, I feel especially honored to be the guest of the Commonwealth Club today and to visit, once again, one of my favorite cities. Your organization enjoys an outstanding reputation throughout the country and your membership is a most distinguished one. You were very kind to invite me here.

My topic, which refers to consumer credit as a $36 billion question facing our Nation today, is one that requires an answer—or a series of answers. People are asking, is consumer credit sound? Is there too much of it? What will its future be?

I come before you as a businessman who is going to talk about his business. To a certain extent I am at a disadvantage, just as many other businessmen would be. The case of the automobile industry will explain my point. Today it is hardly possible to pick up a newspaper without reading some criticism of the way the auto industry is conducted—yet I remind you that in the past 10 years this same industry has been responsible for the greatest peacetime industrial feat of all time.

The auto industry—our No. 1 industrial force—led this Nation out of the wartime economy which prevailed from 1940 to 1945 and did it with such tremendous energy and skill that we completely avoided the postwar depression everyone feared. It has produced 64 million cars and trucks in a decade, making possible the suburbanization wave that has revolutionized our way of life. It has poured at least $10 billion into our economy for new plants and better machinery and equipment. It has fooled all the Gloomy Gusses who from year to year have predicted that a Detroit-born depression was just around the corner.

Or take television. No matter where you go you read or hear criticism of television programing. Yet in 10 years this industry has been responsible for a second revolution. It has placed this remarkable instrument for entertainment and education in practically every American home. It offers us more cost-free amusement and excitement in a month than we could have enjoyed in a lifetime in an earlier day. Last year, for example, Mary Martin played Peter Pan to 125 million viewers, surpassing as a great dramatic and communications achievement all previous theatrical, motion picture, and even written presentations of this immortal story. Only a few weeks ago, more than 50 million people saw Shakespeare's Richard III on a Sunday afternoon—more people than had seen this play previously in the thousands of times it has been performed in the last three and a half centuries.

MASS CREDIT ESSENTIAL

It is the same with my business—installment credit. Now I am willing—in fact I am here—to debate the views of those who have misgivings about our affairs. But I would like to get in on the record, at the outset, that the American economy as we know it today would never have come into being if mass financing—time buying—did not exist.

A short time ago, the New York Times published a story by its Moscow correspondent on the new Russian effort to overcome the western nations on the economic, rather than the military, front. Here is an excerpt from that story: "It is not unlikely that the Soviet diagnosis of the world capitalist economy is now based on the premise that a major depression is about to break out again in the United States and spread throughout the free world. Soviet writers are emphasizing that such a depression did not occur last year only because of the great growth of consumer credit in the United States, a factor they believe has just about exhausted its force."

I suspect it may not be too long before the Russians announce they also invented installment credit.

Actually, there is no consumer credit in Russia. They have a long record of failure to meet the material needs of their people and create a standard of living for the ordinary citizen that would be regarded as adequate over here. If the worker, the producer, is not given a fair opportunity to share in the fruits of production—and to aspire to an ever-larger and more-satisfying portion of life's good things—a dynamic, self-feeding economy cannot exist. Human ingenuity and industry, particularly in this country, have demonstrated that it is possible to provide almost the entire population with more attractive and more comfortable homes; access to the most exciting entertainment events by way of television and radio; finer, safer motorcars, and household appliances that have eliminated most of the drudgery and much of the waste and inconvenience of housework. Produce these we can; but it is consumer credit, and only consumer credit, that makes them available to the average American and his family.

A few weeks ago a very significant cartoon appeared on the editorial page of the Wall Street Journal. The cartoon showed a man and his wife living in squalor, sitting on furniture made of orange crates, wearing patched clothes, and with an antique radio as their only visible luxury. In the caption they were pompously explaining to visitors that they always pay cash for everything they buy.

An exaggerated cartoon very often spotlights the truth. This particular cartoon, published by the Nation's most influential business newspaper, demonstrates—in a more effective way than anything I can say—that installment credit has won general recognition as a mainspring of our consumer economy.

The importance of consumer credit was recognized also in President Eisenhower's re-

cent economic message to Congress. As you know, he said the development of consumer installment credit has been highly beneficial to the Nation's economy, and he recommended that a study be made of this form of credit, with consideration given to the possibility of legislation to authorize Federal controls on a standby basis over its terms.

It is in this atmosphere that I come to speak to you today. There is now general agreement—from such varied authorities as the economists of the Soviet Union, the Wall Street Journal, and the President of the United States—that consumer installment credit, for better or worse, is an essential element in the American economic system. In less than two generations it has become widely used in the marketing of durable goods of all kinds. The amount of consumer debt outstanding at the end of 1955 was $36,225,000,000, after a climb of more than $6 billion in the previous 12 months.

Approximately $5.5 billion of that $36 billion represents charge accounts and service loans. This is not really consumer term debt at all but simply a billing convenience. It represents the bills we all regularly pay each month to stores, to the doctor, dentist, utilities, and so forth. Another $2.8 billion are single payment loans which banks make to business people and investors and which, in my opinion, have few characteristics of consumer credit. The remaining $28 billion, properly called installment credit, is divided among automobiles, $14.3 billion; other durables, $6.4 billion; repair and modernization loans, $1.6 billion; and personal loans, $5.5 billion.

AUTOMOBILE TERMS

As we look at the recent record it must be pointed out that, in the past 2 years, there has been a significant liberalization of terms in the most important sector of installment financing—automobile credit. During the 12 months between June 1954 and June 1955, banks and finance companies began accepting downpayments on new cars of as low as 25 percent (with some lower) and maturities running to 36 months. Previously, standard downpayments were 33⅓ percent and normal maximum maturities were 30 months.

I do not condone loose terms nor to try to tell you that they are nothing to be concerned about. By any tested standards we have known in the past, 25 percent down and 36 months to pay are pretty liberal terms. A few years ago we would have thought them very loose indeed.

However, I am not particularly alarmed by what happened last year. In the first place, the situation has stabilized. There has been no further drift toward longer maturities and lower downpayments for at least 6 months. Maybe there's been a little stiffening—just a little. The industry has proved it can check itself when it wants to and there is nothing to indicate that any further liberalization is in prospect.

You see, as in almost every other phase of our American business system, checks and balances—inbuilt stabilizers—exist. The pocketbook nerve is the best disciplinarian there is. If credit is granted on terms that are too loose, losses begin to increase in frequency. When any sensible businessman finds he is running into losses because of some practice or policy for which he is responsible, he does not hesitate very long—he mends his ways just as fast as he can. Year after year I have seen that whenever someone gets too close to the fire of loose terms, he soon is singed and draws back. That is what protects our economy, the great mass of consumers, and the consumer credit industry itself from serious losses—that and the good judgment of the consumer himself.

Nevertheless, as I have already reminded you, in good times and bad there have always been those who viewed the people's credit with misgivings. Leading bankers and industrialists deplored it in the twenties. Roger Babson wrote of the "Folly of Installment Buying" in the 1930's and he was not alone in his views.

However, up to the present, these warnings have never been right. The bankers of the Twenties who prophesied that we in the finance business would eventually go broke because, in a depression, our customers would not pay their debts, were proved 100 percent wrong by the events of 1929–35. The 1937 forecasts of Mr. Babson have never materialized to the effect that:

"If courage did not fail me, I should show that the instalment industry may lead to America's downfall. The desire for ease, which the instalment industry is stimulating, is increasing in the cities and lowering the birth rates. The curse of instalment buying will be eliminated only as the desires of the people are controlled and directed along sane lines."

GROUNDLESS FEARS

As I prepared these remarks, I had before me a collection of stories from leading American business publications. My file goes back only to the early months of 1953 but in the past 3 years there have appeared hundreds of stories in the vein "The business boom is dangerously inflated by credit buying of wage earners who live from one payday to the next." Yet the facts are that the debts of 1953, which were of such concern then, have all been paid—and none of the difficulties which were feared have come to pass. Instead, these same 1953–54 obligations have been met with a delinquency and loss record that is the best on record.

Those who have these grave concerns about instalment debt never emphasize today's experience, and they concede the excellence of the record in the past. Instead, the practice is to cite some suppositious danger in the future—something that might happen—but never has. Their criticisms clearly reflect mistrust of the individual consumer's right to decide simple personal questions for himself. There have always been those who cannot trust the ordinary fellow. In the 18th and 19th centuries, for example, there were the intellectual or economic aristocrats who were sure average men could not be trusted with the right to select their own rulers.

Today the anxiety of this type of individual is now focused on economic issues and particularly on questions of consumption, because consumption is calling the turn in our economy. The critic assumes that he or someone like him knows better than the consumer how much of the consumer's income should be spent for one commodity or service (including credit) as against another, and what is really best for Mr. and Mrs. John Jones.

It would be patronizing and downright undemocratic for anyone to express this attitude openly, so it is usually rationalized in terms of the economic health of the Nation, or the future of automobile or other durable goods sales, or the level of consumer debt.

The historic prejudices against going into debt for personal purchases were widely held when I went into the finance business in 1916. I know, because I shared them. These prejudices were hamstringing the young automobile industry, for automobiles were costly and only the wealthy could buy them for cash.

But as cars improved mechanically, more and more Americans realized their potential for pleasure and profit and wanted to own them. The pressure for credit arrangements began to grow, starting here on the west coast where the motoring season was longer. The problem of paying the manufacturer before delivery and tying up large amounts of cash for long periods was an insurmountable one for most dealers. The banks were unwilling to carry this load. Into this vacuum moved the first sales finance companies. They set up and handled the credit mechanism so obviously needed to help this new industry grow.

In 1919, my first assignment from our founder, the late Henry Ittleson, was to call on manufacturers and dealers and try to interest them in our financing service. Most of the manufacturers I met were polite but unenthusiastic about the suggestion of selling cars on time. Some were even outraged. I recall vividly one president who told me indignantly that his company would stop making cars before he would sell on the installment plan. The company, incidentally, is still in business selling cars under his name and it has been selling most of its cars on time for more than 25 years.

It didn't take long for the manufacturers and dealers to realize that to achieve mass production and mass consumption, a third mechanism—mass financing—would be necessary. By 1923, installment financing had gained a firm foothold in the automobile field. Two years later, the number or installment sales of automobiles exceeded the number of cash sales for the first time.

During the next few years the motor industry pioneered in this new concept of mass financing. Millions of American consumers tried, for the first time, the idea of buying out of current income. Meanwhile, the manufacturers of other durable goods—refrigerators, radios, washing machines, and so forth—observed the success of the automobile industry and they, in turn, sought the help of finance companies.

But the critics were hardly convinced. They warned that while installment credit might get by in prosperous times, it would meet disaster in event of a business downturn. Let's examine that record.

The record shows that after the crash of 1929, the portfolios of installment credit companies proved to be sounder than any other type of investments except United States Government obligations. Three of the principal sales finance companies, including C. I. T., ended the year 1929 with retail automobile outstandings aggregating $941 million. In the eventual liquidation of this paper, losses were loss than $6 million—or less than two-thirds of 1 percent.

THE DEPRESSION RECORD

At December 31, 1929, these same receivables had an average maturity of 6½ months. They were more than 90 percent liquidated by the end of 1930. This answers the argument that installment credit causes people to pay in bad times for the "dead horses" they purchased when times were good. At the end of 1930, when all the pre-1930 obligations had been liquidated, the Great Depression was scarcely beginning. Actually, 1930, was not a bad year for business and none of the debt which originated in 1929 spilled over into 1932 or 1933 to deepen the depression. Any installment credit which comes into being after the start of a recession or depression is not deflationary. Instead this actually primes the pump for recovery because it is a net addition to purchasing power at a time when such additions are desperately needed. The FHA program, for example, was an installment credit device started in the depth of the depression to provide new customers for the construction industry.

During all those years, while the arguments flew back and forth, the consumer was quietly chalking up an excellent record of honesty, integrity, and commonsense. We have learned, as have all financing institutions, that the American consumer is the best credit manager in the world. He has proved this time and time again—not only during the depression of the Thirties but under every other conceivable economic condition. Consumer credit has provided—year after year, through good times and

bad—an essential prop to the Nation's economy. So much for the history of consumer credit. How do we stand today?

The present concern over today's debt boils down to this: In 1955, installment credit outstanding increased $5.4 billion, from $22.5 billion to $27.9 billion—a rise of 24 percent. This increase reflects, primarily, credit extended for the great increase in automobile sales. It represents the aggregate decision of millions of consumers to spend on automobile purchases 6.3 percent of their year's income after taxes, instead of 4.7 percent as in 1954. This increase in consumption did not have an inflationary result, for every economic indicator has held steady. But it did help in making 1955 the most prosperous year in our history. Incidentally, last year an average of less than one in a hundred of our automobile financing customers was delinquent 30 days or more and, as always, our total losses were well below 1 percent.

WHOSE DEBT?

Some persons fear this rate of increase in consumer debt may be dangerous. They want to take steps to prevent such irregular growth of installment credit, possibly by the use of direct controls. Since this credit is the servant of the average wage or salary earner, it is also a charge against the same group of people. And when anyone attempts to determine whether there is too much indebtedness today, he should first consider who owes the money.

According to a study by the University of Michigan's Survey Research Center, published by the Federal Reserve Board for 1955, consumer debt is centered in the middle-income group earning from $3,000 to $7,500 a year. This income group, incidentally, has doubled in size since 1935 and now makes up more than one-half the total population. Specifically, the Michigan study shows that this debt is most heavily concentrated among younger families, who need and use installment credit to establish early a standard of living they can acquire in no other way. There are few signs of "whim buying" or "credit sprees" in the behavior of this group. For them, the use of credit is not a device for "keeping up with the Joneses" but is simply part of a life-cycle investment program; something they do to create a decent home and manner of living. They also are the group who are best able to carry it because of their incomes, their long-term prospects, and their valid expectations for the future. Within the middle-income group, incidentally, it is shown that 86 percent have either no debt at all or are making debt repayments that total less than 20 percent of their incomes.

Moreover, for these people, installment buying is a method of building personal capital. Of the 53 million passenger cars owned by United States consumers at the end of 1955, an estimated 40 million worth conservatively $40 billion were owned free and clear of debt. Some two-thirds of these cars were originally purchased on time but now are completely paid for. In 1955, about 10 million people made their final automobile payments and this year, an estimated 9,200,000 will do so. These people are the prospects for new cars this year and next and many of them will surely buy.

I hope you will agree with me that installment credit, as it is employed today, is serving a most essential social and economic purpose and that it represents obligations by people who intend to pay their debts and who have long since demonstrated their capacity to do so.

This leaves the final question: Is there too much of it?

Usually, the experts try to answer this question—either pro or con—by referring to certain ratios based on Federal Reserve estimates of the amount of credit outstanding. The points often made include:

1. That the ratio of outstanding consumer debt to disposable personal income is today 13 percent, compared with a range immediately before World War II—often called a "normal" period—of 9.8 to 10.6 percent.

2. That the ratio of installment debt to savings and to so-called "discretionary" income (the money left over after food, shelter, and clothing are provided in accordance with prewar standards) is significantly lower than it ever was prewar.

3. That any measure of the growth of new consumer debt to other economic indicators in the past year shows consumer obligations gaining at a rapid rate.

And so on. There are many of these conclusions, some of which seem to make the debt picture look very bright and some which on the surface appear rather disturbing.

In my opinion, none of these relationships is at all conclusive and no one can say with any certainty where the too high mark belongs. The chief reason is that all such ratios are based on prewar comparisons and it is absolutely unreasonable to compare today's use of consumer credit with that of any previous period—because several sweeping and fundamental changes have occurred.

There is the great revolution in income distribution. Over half our families now qualify as members of the middle-income group and have the means and the desire to employ installment credit, which we have already seen is peculiarly a middle-income tool.

THE BIG CHANGE

A second big change has been the new reliance which American family life places on durable goods. The family which in 1929 or 1935 was spending so much per week for the iceman, so much for public transportation and so much for the laundry, was paying for these services by the use of time payments—a bill every week or an outlay every day. But now the iceman has become a refrigerator, the bus or train a family car and the laundryman or washwoman a washing machine. As a result, the substitute expenditures for preserving food, keeping clean or getting to work, by way of monthly payments, became installment credit and are duly reported by the Federal Reserve Board. Many a family spends a smaller share of its income on these necessities of life today, in a mechanized household, than it did when human effort and a daily cash outlay were involved. But the change does inflate today's installment credit totals, in comparison with the past.

A final social change is in the community attitude toward the use of installment credit. Today time buying is widely accepted and no longer bears any stigma whatever—as compared with past periods when there was considerable social or moral disapproval.

To summarize, this is the case for consumer credit:

It made possible the great mass-production automobile and appliance industries, is responsible for millions of jobs and has brought enormous material blessings to the American public.

In the great depression, it made a splendid record for soundness, did not measurably contribute to the decline in consumer purchases and established the American time buyer as the best of credit managers. In the post-World War II period, it has served the growing middle-income-class well by making possible much of the increase in their living standards; it has made a tremendous contribution as we shifted most successfully from a war footing to the world's most productive and prosperous peacetime economy.

Delinquency rates and losses by financing agencies and consumers have remained remarkably—and normally—low.

Durable articles bought on installment credit swell the current statistics on the use of credit, as has the modern social preference for buying valuable durables out of income instead of using one's savings.

It is in this atmosphere of social change and universal recognition of the important place of consumer installment credit in our economy that the Federal Reserve Board, at the request of President Eisenhower, will undertake a full-scale study of the subject. I feel sure the study has already begun as an intensification of the long and continuing investigation of this form of credit which has engaged the Board's staff for years.

FULL-SCALE STUDY

I believe much that is good will come from this study. Our industry is not perfect and the employment of personal credit undoubtedly remains imperfectly meshed into the economy, as is normal in a free and dynamic society. We need better statistics and better reporting and I hope we will get them. We need to know a great deal more about the consumer and what makes him tick as he and his wife make decisions as to the allocations of the past, present, and future incomes. Surely, everyone will agree that we need to know all we can about the consumer because he is the only reliance for keeping our plants and markets humming during the next decade when our economy achieves the goal, which it undoubtedly will, of producing $500 billion worth of goods and services annually, 25 percent more than we now have.

The true function of installment credit is made crystal clear by comparing its place in the economies of the United States and England today. With limited natural resources and insufficient productivity, England is a nation that must produce and export all it can to survive.

England today is stringently limiting the use of installment credit, for this is a very effective way to knock Englishmen out of the market for cars and household appliances, thus conserving steel, gasoline, power, and other vital commodities that are either needed for export or must be imported. If you must force your people to consume less, must deliberately depress their living standards, then, indeed, you should do what the British have been forced to do.

However, with our own unlimited natural resources and productive capacity, the last thing anyone in his right mind wants is to reduce the number of car buyers, household appliance buyers, and so on over here.

The United States economy needs more domestic customers and more domestic consumption, not less. The obvious solution is to let the powerful stimulant of installment credit function freely to increase our living standards, our material satisfactions, and our levels of employment and prosperity.

A KEYNOTE

In closing, I want to read this very recent declaration by Mr. William McChesney Martin, Jr., the Chairman of the Federal Reserve Board:

"Time was when a man who financed luxury expenditures on credit was considered stupid and unreliable; but now one who refuses to capitalize on his potential and confines himself to financial actuality is the unusual case.

"The typical instalment borrower today is not an improvident man with small income. He is chiefly an urban or suburban dweller, is generally above 25 years of age, is married and has children to support, has an average income of about $5,000, and often has sizable financial assets.

"He has committed himself to a regimen of small monthly payments for the purpose of acquiring an equity. To him these payments are essentially savings. And when you stop to think about it, what more sensible use of savings is there than their purposeful application to an improved standard of living for the saver himself and his

family? This is an investment in life itself."

That is the clear answer to the $36 billion question. Consumer credit today is part of the very fabric of our national life. It is the tool we have forged in this favored land to build and equip our homes, to enable us to live in comfort, cleanliness, ease, and safety beyond the dreams of the aristocracies of past generations. It brings us entertainment, transportation, and self-expression which have given the experience of living several new dimensions.

Consumer credit has grown with our growing population. It has risen with our standard of living. It has prospered as our Nation has prospered. It has made our economy a truly democratic one.

We who are entrusted with the administration of this splendid and vital tool have a deep obligation to all our fellow Americans. It is unthinkable that consumer credit shall not continue to grow in usefulness, guided by those principles of fairness, competitive enterprise and vigorous initiative which are and must ever continue to be the mainsprings of the American business system.

Address by Gen. Earle E. Partridge on Armed Forces Day

EXTENSION OF REMARKS
OF
HON. J. EDGAR CHENOWETH
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. CHENOWETH. Mr. Speaker, I am sure the Members of the House will be interested in a very fine address delivered by Gen. Earle E. Partridge, commander in chief, Continental Air Defense Command, on Armed Forces Day, May 17. General Partridge was speaking before the Press and Union League Club in San Francisco, and calls our attention to some of the threatening advances the Soviets have made in offensive airpower.

The headquarters of the Continental Air Defense Command is located in Colorado Springs. General Partridge has a very important assignment, which is to defend the United States against air attack. I am sure that those of you who have visited this headquarters have been very much impressed, as I was, with the importance of this installation.

Whenever General Partridge speaks his remarks are given great weight, as he speaks with knowledge and authority of our air problems. I am happy that I can include in my remarks this challenging address, as follows:

Gentlemen, I am especially happy to be in San Francisco today to assist in marketing the passage of another Armed Forces Day.

Armed Forces Day, 1956, falls in a period of particular significance insofar as our international relations are concerned. This significance is highlighted by the events which took place recently in England. Two Soviet Union emissaries arrived in England last month aboard one of the world's most modern jet transports. They brought smiles, but they also brought ominous words about hydrogen bombs and ballistic missiles.

I am sure that you will agree with me that in an international situation in which the conduct of one of the world's great nations is in the hands of this type of leadership, anything might happen. I am sure you will agree also that on Armed Forces Day, 1956, we find our country exposed to the threat of direct Soviet attack.

Today, I should like to explain the nature of the threat which this country faces, describe the Continental Air Defense Command which has been established to meet the possibility of hostile air attack, give you some indication of the philosophy under which we operate the Continental Air Defense Command, and finally, leave with you a general impression of the magnitude of the effort which the country is going to have to exert in the years to come not only in support of the Continental Air Defense Command itself, but also in support of the Armed Forces of the Nation.

Let us turn directly to the threat of hostile air attack against this Nation. In this country, since World War II, we have repeatedly made the mistake of underestimating the technical and operational capabilities of the Soviets. When they started to copy our B–29 aircraft and produce a long-range air army, we said that their industry was incapable of the task and that they would have difficulty in the fields of training and operations. We were wrong. The Soviets produced a very large strategic air force equipped with B–29's and they still have hundreds of these aircraft in their inventory.

In 1949 the Soviets exploded their first atomic device, some 1 to 3 years earlier than forecast by our experts.

In 1954 and 1955, the Soviets showed us the early models of a high quality, high speed, long-range jet and turbo-jet bomber force. They now have hundreds of these modern aircraft in their operational units. This accomplishment also came as a shock to our technical experts and recent indications demonstrate that the Soviets are in fact producing heavy bombers faster than we are in this country.

Lastly, the Soviets have produced thermonuclear devices employing very advanced scientific principles, and, here again, they confounded our forecasters.

We might as well face it. The Soviets have a long-range strategic air arm comprised in part of aircraft as good as ours and undoubtedly equipped with mass destruction weapons. The Soviets could, if they wished, launch a devastating attack against this country at any time of their choosing.

Thus, we find that we in the United States now face a situation which has never seriously concerned us before. Never before in our history have we been directly exposed to the threat of a catastrophic attack.

The seriousness of this situation lends tremendous emphasis to the importance of the command of which I happen to be the commander in chief. This is the Continental Air Defense Command, an organization composed of Army, Navy, and Air Force units. It is a joint command with Headquarters in Colorado Springs and elements spread over practically the entire United States and in the adjacent waters.

The mission of the Continental Air Defense Command is very simply stated in a 7 word sentence: Defend the United States against air attack.

In carrying out this mission, we really have 4 basic actions to carry on. We must find out who is flying in the airspace over and around our country; we must identify these aircraft; or third, if we are unable to identify them, we must go up to intercept them with fighter airplanes. If we should chance to discover a hostile intruder in the airspace which we are supposed to control, it then becomes our function to proceed to the destruction phase of our activities. So basically the work which Continental Air Defense Command carries out using Army, Navy, and Air Force elements is the fourfold job of detection identification, interception, and destruction.

For detection purposes, the Continental Air Defense Command relies primarily on radar. Some of this is land based as, for example, the station on the top of Mount Tamalpais at the north end of the Golden Gate Bridge. Some of the radar is water based—we have Navy radar picket ships operating off both our coasts—and some of our radar is airborne. At McClellan Air Force Base, Sacramento, Calif., and at Otis Air Force Base on Cape Cod in Massachusetts we have squadrons of Lockheed Constellation aircraft equipped with radar and the necessary control and communications equipment so that these aircraft can carry out in the air the same functions of detection and control that land-based and sea-based radar stations perform.

Our radar net extends over a very large portion of the United States and into the southern part of Canada. The coverage is being extended by installation of more units and by technical advances in the equipment itself. At the present time our low altitude coverage is not as good as we would like to see it and for that reason we are retaining within the system on an operational basis a good portion of the Ground Observer Corps and its complex of 73 filter centers.

Once we have detected aircraft flying over the country, it is necessary to identify them in one way or another. To carry out this function we rely primarily on the Air Defense Identification Zones and the assistance of the Civil Aeronautics Administration. When you stop to think that there are over 30,000 flights of aircraft in the United States daily and several hundred additional aircraft coming in from overseas terminals, you must realize that regardless of the amount of radar we might have, we would have difficulty in keeping track of each individual flight. However, with the assistance of the Air Defense Identification Zones and the CAA, we are able to reduce the number of unknown tracks appearing in the system to a small figure and this number is still further reduced by the use of interceptor aircraft which are dispatched to take a look at any aircraft which may be unidentified or wandering off its proper path. The interception exercise is the third function which we carry out, and I might say that we do this on a 24-hour-a-day, and 365-days-of-the-year basis. For this purpose, we have armed fighters on alert throughout the country prepared to be dispatched for intercept purposes on a few minutes' notice.

In the event that we should find in our system an aircraft which is acting in a hostile manner, we then must proceed to bring to bear upon it the weapons provided the Continental Air Defense Command for destruction purposes. These range from antiaircraft guns of World War II vintage to more modern guns of postwar manufacture, the NIKE missiles which you may have seen on their stations here in the San Francisco area, and a large number of Air Force fighters. Naturally, there is a good deal of glamor connected with the operation of the guided missiles and fighters, but I should like to point out to you that the entire establishment for detection, identification, interception, and destruction operates as an entity, a single integrated system. The portion which is on the ground or which provides the radar coverage and the machinery for controlling the fighters is generally referred to as the ground environment. It is a nationwide hookup, extensive and complicated.

At the present time we are operating what is known as a manual control system. In other words, men sit at radar scopes about 15 inches in diameter, they observe the blips,

they make use of china marking pencils, scales, and good judgment, plus wire and radio communications to direct the fighters so it is possible for them to make an intercept on any unknown track. This system is cumbersome, requires too much in judgment and mental capacity of the people who operate it, and is in the final analysis completely dependent on the employment of voice radio.

I assume that many of you here have flown the airways in recent years and have observed the tremendous congestion which exists on practically any radio channel to which you might listen. The same is true in the air-defense system and we must go to an automatic data transmission arrangement by which ground controllers can give specific and detailed instructions to the pilots in the air without the possibility of interference.

Such a system is being constructed and when installed it will increase the capacity of our air defense system manyfold. You perhaps have seen references in the press to the semiautomatic ground environment system generally referred to as SAGE. The first installations of this type are now being put in on the east coast of the United States and I will not take time to describe them to you except to say that the heart of the system is a hugh electronic computer which has electronic memory and by means of which all the information pertaining to the air defense problem can be used. Information is put into the electronic computer both by automatic data transmission and by manual means. The information is retained and can be called up selectively or as a whole for review and employment by the fighter director.

Naturally, whether we have a manual system or the semiautomatic ground environment system, there is an extremely expensive communications system tying the entire Continental Air Defense Command together.

The system for Continental Air Defense was originally set up to counteract the TU-4 or B-29-type bomber being built in postwar years by the Soviet Union. The system is now being improved to take care of the high speed, high altitude jet and turboprop bombers, and eventually we must be prepared to cope with the intercontinental ballistic missile.

So far as the philosophy of air defense is concerned, we in the Continental Air Defense Command are convinced that the best defense the country can possibly have is a good offense. We believe implicitly in the requirement for a strong strategic air arm, and one of our principal missions in air defense is to provide for the protection of that air arm.

We are not, however, dedicated to the school which believes that we should have a long-range striking arm solely and that we should devote no resources to air defense. The mere existence of an air defense system in this country forces the enemy to adopt many measures which he would otherwise be able to avoid. As examples, if he knows that we have fighters, he must burden his attacking aircraft with defensive guns; if he knows that we are prepared to operate effectively against him in good weather, he must adopt the expedient of making his attack at night or in bad weather thus accepting severe penalties from navigational and bombing standpoints. Even more important, in order to get just a few of his bombers to their targets, the existence of an Air Defense Command forces him to employ large striking forces which may have the capability of saturating our defenses.

But most of all, we want to have an air defense which will deter the enemy from deciding to initiate an air attack. This is the real objective of the present Continental Air Defense Command system.

Before leaving the subject of the philosophy of operation of the continental air defense system, let me say that we believe it mandatory for the security of the Nation that we have a strong air defense system which is constantly on the alert and constantly being exercised so that if the enemy does decide to strike us, we will exact a heavy toll from his striking force. One of the major returns which we get from the air defense system is early warning of any approaching hostile force. It is imperative that we have this type of warning not only to alert the air defenses and to warn the population of the country, but even more important, to provide time so that the Strategic Air Command may be dispatched for retaliatory strikes.

The system which I have described to you in very broad terms is immensely complicated and geographically widespread. The time has long since passed when we could consider that our continental air defenses extended only to our borders and to the adjacent waters. As you are well aware from recent press releases, a warning line is being built across the middle part of Canada and another across northern Canada and Alaska. Our system of providing early warning and control for the weapons involved is immensely more complicated than it was even a year ago and the amount of our national resources required to support the continental air defense system is rising sharply. I am convinced in my own mind that so long as the present international tensions continue, the expenditures not only for air defense but for the Nation's military services as a whole will continue to rise. I am equally convinced that regardless of the amount which the Nation is required to spend on national security, the cost is minute when compared to the damage which we might suffer if a successful hostile air attack involving atomic and thermonuclear weapons were made on this country.

Thank you.

The Late William T. Granahan

SPEECH
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. DOLLINGER. Mr. Speaker, the untimely and sudden death of our dear colleague, WILLIAM T. GRANAHAN, came as a great shock to me. I had come to know him well through serving with him on the Committee on Interstate and Foreign Commerce. I shall miss him very much and am saddened by his death.

BILL GRANAHAN was conscientious, devoted to duty, and rendered outstanding service to his constituents and his State and Nation. He was a great American, a fine gentleman, and true friend. He was noted for his kindliness, his courtesy, and other splendid qualities which endeared him to all who knew him.

The people of the Second Congressional District of Pennsylvania have lost an able Legislator who labored diligently in their behalf. His loss will be keenly felt by Members of this House, for he had the respect and devotion of his colleagues.

I extend my deepest sympathy to his fine wife and the other members of his family.

Key to Progress—The Uncommon Man

EXTENSION OF REMARKS
OF
HON. J. ALLEN FREAR, JR.
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Tuesday, May 29, 1956

Mr. FREAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Key to Progress—The Uncommon Man," delivered by Crawford H. Greenewalt, president of E. I. du Pont de Nemours & Co., before the 43d anniversary dinner of the Bureau of Advertising, American Newspaper Publishers Association, in New York City, on April 26, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

KEY TO PROGRESS—THE UNCOMMON MAN

(By Crawford H. Greenewalt)

In the world of wonders created on earth, there are few so remarkable as the modern phenomenon of speechmaking. I don't suppose there is a meal at which 10 or more people gather that is not blessed, or otherwise, by an address of some sort. In fact, one might say that the after-dinner speech has become one of the occupational hazards of modern times, and I leave it to you to decide whether the hazard is more severe for the speaker or for his audience.

The art of speechmaking is as yet untouched by technology or automation, and still remains in the do-it-yourself realm of man's affairs. This archaic situation may not last much longer for I am told that a group of scientists is busily engaged in teaching electronic computers the art of speech. That seems to me a most dubious objective. The flood of words to which the average citizen is subjected is already quite sufficiently torrential.

On the other hand, a talking electronic brain suggests interesting speculations. I can imagine, for example, Mr. Maier (Irwin Maier, dinner committee chairman) at some future date suggesting to his associates that they get the Du Pont "Univac" for their next banquet. He might, I suppose, point out that it had been given a brandnew set of transistors, had split the sides of those attending the Amalgamated Gimmick Manufacturer's convention, had clarified knotty points on the nature of the universe at the last American Physical Society meeting, and had provided thoughtful uplift at a recent Salvation Army banquet.

PERSONAL IDENTITY

Unfortunately for me, all of this is considerably in the future, and so I have had to nudge my own old and feeble mental transistors to put together a set of words that would be neither too long nor too inarticulate for this distinguished audience.

The guides to public speaking all seem to suggest that the subject be tailored to the audience, which means, I suppose, that I should deliver myself of some well-chosen remarks on the art of newspaper publishing. Frankly, this is something for which I have neither the capacity nor the courage. And so, pushing my circuitry back into its own domain, I thought I would try to give you some thoughts on the world of large industrial enterprise as viewed from the inside out—this simply to create a contrast, hopefully favorable, between the all too frequent gloomy glimpses that seem to be given from the outside in.

Any discussion of this sort requires perspective and, hence, some point of past reference. Since the only available time machine seems to have been preempted by Alley Oop, I thought I had better, and perhaps more appropriately, turn to the newspaper files. And for that exercise I selected the year 1902, which happens, not entirely by coincidence, to be the year in which I was born. I did find in my searches some fascinating trivia, such as a sale of gold-headed canes, a report on bargains in the mouth-organ industry, an ad for red flannel undershirts, an announcement of a starter set for home blacksmithing, and a note on the popularity of a new game called Ping-pong. I regret to report that there was no headline announcing the arrival of a young Greenewalt.

My principal finding and, in fact, the one I was looking for, was that names really meant news in 1902. Businesses were identified with their principal officers or proprietors; newspapers were the personal voices of their editors and publishers; a college was intimately associated with the name of its president—Dr. Eliot, of Harvard, for example, and Dr. Wilson, whom some of you may be old enough to remember, at Princeton before his sojourn with a somewhat larger institution. The great scientific and chemical developments of that day were recognized as the prodigies of individual inventors.

ANONYMITY OF THE GROUP

Standard Oil was John D. Rockefeller. The Morgan bank was J. P. Morgan. The Louisville Courier was Henry Watterson just as the New York World was Joseph Pulitzer. The largest newspaper chain of the day was William Randolph Hearst. The electric light was Thomas Edison; the telephone, Alexander Graham Bell; and the Ford car was Henry, Sr., himself.

Today, the emphasis has passed from these colorful, personable, and somewhat rugged individuals to the relatively quiet anonymity of the group. Standard Oil has become a large company managed by many people. The large newspaper now sees itself as an institution, no longer engaged in the rough-and-tumble of personal journalism. Universities have become large-scale purveyors of education. Developments in science are only rarely attributable to one person, and come into commercial being through the synthesis of a great number of individual contributions.

GROUP CARICATURE

What has been happening for the last 50 years has been a gradual replacement of the individual by the group. This is a natural, even an inevitable development as our economy and its component parts have grown in size and stature. Only what we now call small businesses can be encompassed and directed by a single mind. As our enterprises grow, delegation of authority becomes more and more essential to successful operation, with the result that there remain very few large-scale activities that can be clearly identified with a single individual.

In spite of all this, we seem to continue the practice of substituting for the individual a kind of stereotype in caricature associated with any given vocation. There is, for example, the absent-minded professor, with the implication that academic life attracts absent-minded people or causes people to become absent-minded. We have, if you will forgive me, the inebriated reporter, the libelous inference being that newspaper work holds a lure for alcoholics, or that there is something about newspaper work that drives men to drink. The long-haired musician or scientist, the bluff and hearty salesman are types that I am sure you will recognize.

The businessman, according to this dictionary of typical specimens, is materialistic, selfish, irritable with his employees, indifferent to his wife, contemptuous of the fine arts, and insatiable in his pursuit of money. To businessmen as individuals, this typecasting is, at worst, irritating and, at best, wryly amusing. But I am afraid, nevertheless, that it has made its mark and has created in the minds of the average person the myth that the public welfare is in some way in danger, that society needs protection from these businessmen in caricature.

FROM THE SAME MELTING POT

If I can insert here a personal note, I might record the fact that I started my career many years ago as a scientist—hence, at that time, was presumably long-haired, and doubly so since I was also an amateur musician. Imagine how disconcerting it was, some years after having made the transition from the laboratory to the business office, to find myself characterized by no less an agency than the Department of Justice as a "monopolist by marriage," and by the Daily Worker as a bloodless capitalist. Time, Inc., was kinder—calling me merely "graying, hawk-nosed," a term my children adopted with some glee.

The fact is, of course, that any generalization about the practitioners of business or of any other profession is utter nonsense. Business, as an institution, recruits its people from the same melting pot which supplies the human raw material for any other trade or vocation. You would be as hard pressed to find a typical businessman as you would a typical sportswriter, professor, or musician. Business, like all other professions, is made up of people with all kinds of backgrounds, all kinds of motivations, all kinds of habits of behavior.

Business, in short, does not attract a particular type, neither the morally weak, nor the wickedly inclined, nor the knights in shining armor. It is, on the other hand, comprised of perfectly normal, reasonable human beings, subject to whatever frailties and limitations characterize man on this earth. They represent a cross-section of society—the brilliant and the dull, the generous and grasping, the expansive and the petty, the good and the bad. Here are ordinary human beings grouped together in organizations designed to complement the weakness of one with the strength of the other, to temper the exuberance of the young with the maturity, and wisdom of the old. Whatever individual dispositions may be present, it is the average, the composite, that governs.

JUDGMENT IN BLACK AND WHITE

So, if we can concede that people in the main have decent and honorable instincts, I believe it must necessarily follow that those in the business world will average out at about the same moral level.

Business, unfortunately, is too often judged in black and white. Errors have been made by businessmen in the past and, in an imperfect world, will certainly continue to be made in the future. Such errors must, of course, be identified and corrected promptly. But emphasis on things which are wrong must not be allowed to obscure the things which are right. For it is an unassailable fact that economic progress of the most monumental kind has come about through the business process.

Much has been said in recent years of the "new type of businessmen," as if, by some process of sexless eugenics, the bull terriers and bloodhounds of the business past had been crossbred to produce a race of intelligent and kindly poodles. I have never been able to accept this concept. It seems to me that men will always reflect the society in which they live, will respond to its pressures, its ideals, and its customs. As society as a whole develops and grows both spiritually and materially, the individuals comprising it will, on the average, grow and develop with it. In business endeavor, there is an added pressure for conformity to the public interest, arising simply out of the numbers of people involved in any given management decision.

EMPHASIS ON CONTINUITY

The change over the years from the responsible individual to the responsible group has greatly increased emphasis on continuity of a given enterprise. Fifty years ago, a man was disposed to look upon his business as ending with his lifetime, and his policy decisions were, accordingly, geared to a relatively short span of years. Today, business enterprises have accumulated, so to speak, a life span of their own, starting in some cases in the remote past and going on into the unforeseeable future. Its managers have become torchbearers, accepting the responsibility passed on to them by their predecessors and aspiring to pass on a healthy and dynamic entity to their successors.

The Du Pont Co. is an outstanding example of the point I wish to make. We are an old enterprise, and have what I think is a proud record of fruitful contribution to the American scene over a period of more than 150 years. I can assure you that the traditions of the past, the ethics and high performance of the many men who have participated in our enterprise have become an almost palpable force in their influence on those of us who, for a brief span, have the responsibility for carrying the enterprise forward.

THE FORCE OF SOCIETY

It seems to me almost axiomatic that, over the long stretch of corporate life, no business can prosper unless it serves the public interest in all of its many facets. And, as a business develops and its policymaking decisions are delegated to an ever-increasing number of people, business conduct will in itself reflect the public interest as it may exist in a particular setting and at a particular time.

The question of the size of our business enterprises is frequently mentioned with concern. Of course, there is no doubt that the size of the industrial units essential to a strong economy has increased very substantially in the past 50 years and will increase even more substantially in the future. The reason for this growth is too well known and too well accepted to be open to debate. Business units, whether concerned with nylon or news, must be large enough to support the scale of activity to which they are dedicated, and that scale is never static, but increases continually with technological growth and improved living standards.

Modern society, leaning so heavily on technology, simply cannot exist without many large units. As our technological horizons broaden and increase in complexity, the demand will be for increasing rather than decreasing aggregations of talent, manpower, and resources.

MORE POTENT THAN LAW

I view this with satisfaction, not with alarm, for the pressures of society will inevitably produce their own controls and stabilizers. These pressures for the preservation of a particular moral code are great indeed, particularly in the area that has been called "obedience to the unenforceable"—the things we do, not because they are required, but because they are right. This strength is much more potent and compelling than the law. The law is essentially negative and prohibitive. Ethical principles are vibrantly and affirmatively alive. The segment of humanity concerned with business will be no less responsive to these pressures than any other group.

This averaging process can have its bad side, of course, as well as its good. If the organization of modern society can hold a scoundrel in check, we run the risk, at the same time, that it can stifle the creative individual by submerging him into the common denominator. Society, indeed, sometimes seems intent upon inclining us in that direction. We see the constellation rather

than the star; we applaud the ensemble rather than the brilliant soloist.

The trend can be seen, as I have indicated, in the inevitable and quite essential growth of our organizations. Science and production and administration have become necessarily dependent upon team effort. Our trade and labor unions almost by definition are dedicated to the sublimation of the individual to the general level. Our taxing methods have the present effect of leveling the rewards of individual performance and, for the future, the often frightening prospect of curbing the will toward individual accomplishment.

THE INDISPENSABLE MAN

Even the folklore admonishes us with pious phrases to put our trust in mass rather than man, as in the tired, old doctrine that no man is indispensable. It seems to me that this country and the world have been enriched and invigorated most conspicuously by indispensable men, for the right man with the right idea at the right vortex of history has always been the indispensable man. Think of Newton, Lavoisier, Franklin, Archimedes, Gutenberg, and a host of others. Certainly the world could ill afford to dispense with their discoveries.

Despite these trends, we seem thus far to have gotten by; it is the future about which we must think. Future developments may be expected in the next generation that will, in my opinion, prove at least as startling as those of the past 50 years. I am afraid I shall have to disappoint the pie-in-the-sky department by noting that I have nothing to offer as to the exact nature of these developments. If you would take note of the form book on past prophets—even the intelligent ones—you will find that they have always missed out by falling far short of the actuality The reason is a simple one. The future invariably takes its specific form from new principles that cannot be visualized by the forecaster. In 1800, no one could have guessed at the revolution in transportation and its effect on human affairs.

In 1850 no one could have foreseen the universal use of electricity and the uplift it gave to the public weal. In 1900 flight was something restricted to angels and birds. In 1925 the atom was only an unlocked Pandora's box. In every age there have been new principles just around the corner, and that corner is still ahead of us today. The future is bright—of that we may be sure. What difference to us does it make now what the precise source of its brilliance may be?

Just when we will realize this promise of the future and how far the new developments will take us depends on how well we are able to recognize and encourage individual achievement. We cannot move very rapidly if we shut the door on our ablest people by absorbing them in the lifeless tomb of mediocrity.

UNCOMMON MAN

If I were faced with a choice between a society that sublimated the good with the bad, I think I would rather take my chances with the scoundrels than risk losing the creative force represented by the gifted individual, or what we might call the uncommon man. I am sure the country's long-term balance would sustain me here. To play Mark Antony in reverse, it seems to me that the evil that men can do survives them only a short time, whereas the good, far from being interred with their bones, goes on and on forever. And the good that all men accomplish can be no more than the sum of their individual accomplishments.

Try as we will, we can create no synthetic genius, no composite leader. Men are not interchangeable parts like so many pinion gears or carburetors; genius, as John Adams said, is bestowed imperiously by nature upon an individual. And behind every advance of the human race is a germ of creation growing in the mind of some lone individual, as individual whose dreams waken him in the night while others lie contentedly asleep.

DEVELOP CREATIVE GENIUS

We need those dreams, for today's dreams represent tomorrow's realities. Yet, in the very nature of our mass effort, there lies this grave danger—not that the individual may circumvent the public will but that he will himself be conformed and shaped to the general pattern, with the loss of his unique, original contributions. The group nature of business enterprise itself will provide adequate safeguards against public affront. The great problem, the great question, is to develop within the framework of the group the creative genius of the individual.

It is a problem for management, for public education, for government, for the church, for the press, for everyone. The stake is both the material one of preserving our most productive source of progress and the spiritual one of insuring to each individual the human dignity which is his birthright.

I know of no problem so pressing, of no issue so vital. For unless we can guarantee the encouragement and fruitfulness of the uncommon man, the future will lose for all men its virtue, its brightness, and its promise.

The Late William T. Granahan

SPEECH
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, I join in expressing my grief and shock at the passing of my good friend and colleague, BILL GRANAHAN.

BILL was a man of ability, modesty, and integrity, who was admired and respected by all who knew and served with him. His devotion to the needs and desires of the people of his district, State, and Nation has always been in the highest tradition of service in the House of Representatives. BILL GRANAHAN has left behind him a distinguished record of accomplishment in the cause of liberalism. His sincerity of purpose and his faithful service in behalf of the average American were an inspiration to his fellow Pennsylvanians.

We have lost a true servant of the people and a great American who will be long remembered for his outstanding record in the House. To his widow I express my heartfelt sympathy in her bereavement.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Free Markets or International Commodity Agreements

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Thursday, May 31, 1956

Mr. MARTIN of Iowa. Mr. President, the final session of the 41st annual convention of the National Association of Purchasing Agents was devoted to a panel discussion of "Materials and Energy Supplies of the Future." I have already referred to the excellent article in the Journal of Commerce by its editor, H. E. Luedicke, which covers this session.

On this panel, Adam K. Stricker, Jr., of the business research staff of General Motors Corp., discussed the history of commodity agreements. His review of these agreements, which attempt to interfere with free competition, covered a period starting in the 1920's and extended through recent years. His paper reveals the steps which have been taken within the United Nations to establish such agreements.

Mr. President, I ask that Mr. Stricker's statement to the National Association of Purchasing Agents be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY ADAM K. STRICKER, JR., BUSINESS RESEARCH STAFF, GENERAL MOTORS CORP., DETROIT, MICH., BEFORE THE NATIONAL ASSOCIATION OF PURCHASING AGENTS, CLEVELAND, OHIO, MAY 23, 1956

No group in our society is more aware of the function performed by a free price system in directing our competitive economy. You purchase the vast array of materials necessary to operate our industries. Unconsciously you determine and are influenced by the supply-demand relationships of all the many products you buy.

To take one current example, you know that when the price of copper continues to rise at a greater rate than the price of aluminum it signifies a basic change in the relative supply and demand of these two materials. You proceed to find ways to use aluminum as a substitute for copper and thus preserve copper for the more essential uses. This tends to bring the demand of the two materials more nearly in balance. The relatively higher price for copper serves to increase the available supply. Thus an equilibrium is produced.

As long as we maintain a free price mechanism, you, the purchasing agents of America, will guide the economy by the countless transactions which you initiate every day. Your actions maximize the use of available resources.

For many years there have been groups in other countries who have advocated government schemes to control the production and the prices of basic materials. I need only remind you that in the 1920's the export of rubber from the Malay States, the Straits Settlements, nd Ceylon was under strict control by the British under the Stevenson plan. The price rose from 15 cents per pound in August 1922 to $1.01 per pound in November 1925.

Opposition to the Stevenson plan became marked in the United States under the enormously high prices of 1925. Among other things some consideration was given to the possibility of promoting rubber production in tropical areas in the Western Hemisphere. More important was the renewed use of reclaimed rubber. The use of reclaimed rubber had amounted to more than one-half that of new crude rubber in the United States in 1917 but had dropped to less than 20 percent in 1922. In 1927 and 1928, its use once more equalled 50 percent that of crude rubber in the United States and almost one-third of world new crude rubber consumption.

The British Colonial Secretary announced the decision to abandon restriction on November 1, 1928. He said this decision was made because it was difficult to influence prices with a reduced proportion of output under British control and the prospect of losing a still larger part of the market to the Netherlands Indies, where planting had been stimulated and where producers not only had lower costs than in restriction areas but also every inducement to use new developments such as seed selection and budgrafting. He also reported opposition to the scheme in Ceylon; smuggling and the corruption of native staffs.

Another control scheme which also failed to stabilize production or price was the Brazilian coffee valorization plan. The controls broke down and instead of stabibilizing prices the price was lower than ever. The most spectacular development in Brazilian policy regarding coffee was the burning of enormous amounts; from 1931 to 1938 Brazil destroyed 65 million bags, or 8,600 million pounds, the equivalent of total United States imports for 5 years.

We are sympathetic with the problems of countries whose national income and well being are involved with the markets for a few basic commodities. Indonesia and Bolivia depend on exports of tin, Brazil of coffee, Chile of copper for necessary foreign exchange. There are numerous other examples that readily come to mind. Experience, however, does not hold any promise that these countries will prosper from Government-control schemes. If we can maintain a high level of gross national product in our own economy, we assist the underdeveloped countries by our demands on the world markets for primary commodities. This is our greatest opportunity to help others while helping ourselves.

Our Government today is trying to assist underdeveloped countries to diversify their own economies, thus making them less vulnerable to fluctuations in the demand for any commodity. We do this through economic aid, bilateral technical assistance, and we also support the United Nations technical-assistance programs.

During the course of World War II, a group within the State Department drafted proposals to guide the world economy during the postwar period. The results of their work were embodied in a document known as Proposals for Expansion of World Trade and Employment, which was issued by the State Department in November 1945. One of the proposals provided for intergovernmental commodity agreements designed to meet the recurrent problem of stabilizing the prices of raw materials. This proposal was sponsored by our Government to aid countries such as those we have just mentioned.

The State Department believed that they had improved upon the earlier control schemes by providing for governmental representation from countries with important consuming interests on the intergovernmental control boards of any commodity. This was an improvement over the earlier plans such as the Stevenson Rubber Act. However, I need hardly tell this group that a conference of governmental representatives sitting down around the table is quite different from a free market in which buyers and sellers adjust the supply-demand relationships through the operation of the price mechanism. Any such scheme of necessity implies governmental controls over price and production.

As mentioned by the previous speaker, the United States proposals were referred to the Economic and Social Council of the United Nations. The Economic Council, at its first session, approved a resolution on February 18, 1946, to establish a Preparatory Committee to draft an agreement embodying the proposals suggested by our Government for submission to an international conference. This committee first met in London in the fall of 1946. It subsequently held meetings in Geneva and in New York. A draft convention was submitted to the International Conference on Trade and Employment which convened at Havana, Cuba, in November 1947.

When the Habana conference disbanded in the spring of 1948, it produced a convention often referred to as the Habana Charter to establish an International Trade Organization, otherwise called the ITO. Chapter IV of the Habana Charter, the chapter dealing with tariffs and commercial policies, was the basis for GATT, a subject which has just been reviewed by the preceding speaker. Chapter V provided for world antitrust laws dealing with restrictive business practices which were to be administered by the United Nations. Chapter VI established the ground rules for intergovernmental commodity agreements, which were to deal with the price and production of basic commodities.

As you have already heard, the Habana Charter was submitted to the Congress by former President Truman in 1949. The House Committee on Foreign Affairs conducted hearings during the spring of 1950, but failed to report the resolution requested by President Truman. The socialistic overtones throughout the document killed it in committee. In December, the Department of State announced that it would not ask the new Congress, which had just been elected, to consider the Habana Charter again.

In the meantime, steps were being taken within the United Nations to establish the charter chapter by chapter. As the previous speaker has already told you, chapter IV became GATT.

The study of chapter V, the chapter dealing with restrictive business practices, or world antitrust laws, was turned over to an ad hoc committee established by the United Nations Economic and Social Council in 1951. The United States Government sponsored the resolution to form this committee. The committee's report was finally tabled by the Economic and Social Council at its meeting in New York in the spring of 1955. That's too long a story to include here.

Chapter VI, dealing with commodity agreements, the subject of my remarks this afternoon, was implemented within the United Nations by an organization known as the Interim Coordinating Committee for International Commodity Arrangements. This is referred to in the United Nations terminology as ICCICA. The word "interim" in the title for this group referred to the period before the ratification of the charter when the ITO would take over its functions. The first report of ICCICA was issued in November 1947 while the delegates were still meeting in Habana. The charter is dead, but the interim continues.

All the thinking on commodity agreements up to 1950 was directed toward the problem of surpluses and the stabilization of prices. When the Korean War came upon us, we were confronted by a new set of problems involving shortages.

This resulted in the birth of an extracurricular organization, namely, the International Materials Conference. It had the power to make recommendations to governments on the allocation of critical materials. This organization, sponsored largely by our own State Department, was established outside of the United Nations structure in view of the difficulties involved in operating an organization with such powers if Russia and her satellites had a voice in all its decisions during the Korean conflict.

The International Materials Conference actually allocated copper, nickel, sulfur, cobalt, tungsten, molybdenum, zinc, and newsprint to all the nations of the free world in accordance with what it called a country's 'entitlement for consumption.' The allocations were implemented in the United States by using the Defense Production Act with its material and price controls. As the IMC began to hamper seriously many industries in the United States, Congress made its own examination of this organization and amended the Defense Production Act in 1952 restricting the powers of the IMC over our economy, and in addition, it provided that no funds appropriated to the State Department could be used to pay any of the expenses of operating the IMC. This organization was completely disbanded in 1953.

In the meantime, another effort was made by countries largely dependent upon the production of raw materials to establish another group within the United Nations with greater powers than ICCICA to deal with commodity problems. The United Nations General Assembly, at its seventh session at New York, on December 21, 1952, adopted Resolution No. 623, which provided for a special group to study commodity problems. The study group appointed by the Secretary-General, produced a report released in November 1953 entitled "Commodity Trade and Economic Development." This report, in turn, became the basis for a resolution submitted to the Economic and Social Council in the spring of 1954 providing for the establishment of a Commission on International Commodity Trade.

The United States Representative to the United Nations Economic and Social Council opposed the establishment of this Commission, particularly in view of its very broad terms of reference. They included provisions to establish 'just and equitable' relations between the price of raw materials and manufactured goods. The United States Representative voiced our unalterable opposition to any such proposal involving complete regimentation of the world's economy.

In the brief moments accorded me on this program I could not begin to review all the implications inherent in these innocent sounding words. Suffice it to say that in the United Nations debates, suggestions were made that controls should be exercised presumably by this Commission over the production of new synthetic materials which displace natural products. They were, of course, thinking of the market problems arising from the competition of synthetic fibers with cotton and wool and synthetic rubber with the natural product. I need not tell this group what would happen to free markets if such controls were in effect.

In spite of United States opposition, the Commission was established in 1954. Our Government was elected to a seat on this Commission which we declined to accept. At the 20th meeting of the Economic and Social Council held at Geneva last summer, the United States Representative formally requested that another country be elected to our place on the Commission.

The Commission has produced a number of statistical studies, but it has been unable to do anything more in view of the fact that the United States has not participated in its work.

Most of the countries sponsoring the Commission approached the problem of price stability on the premise that the secular trend in the price of primary commodities relative to manufactured goods will be downward. Now, if we are at all successful in advancing the living standards of the present underdeveloped countries as we are trying to do with both bilateral and multilateral programs, we certainly will convert these countries from primitive agricultural economies to industrialized societies. This means that their per capita consumption of the basic industrial raw materials will rise and, unless we begin to think of improving our technology and our abilities to produce materials for an expanding world economy, we may well end up with shortages rather than surpluses. Those who advocate government planning may once again, as with the IMC, suggest allocating scarce materials rather than stabilizing their prices.

At the present time, our Government is a party to two international commodity agreements, the International Wheat Agreement and the International Sugar Agreement, both established many years ago. We are not a party to the International Tin Agreement, and we are not participating in a proposed new coffee agreement. It gives me great pleasure to appear on this panel with the next speaker, Secretary Wormser, who played an important part in establishing the policy of our Government with respect to the tin agreement.

Certainly our experience with wartime price and allocation controls within the United States, with the rubber and coffee schemes I have described, with our efforts to stabilize domestic agricultural incomes, and with the International Materials Conference, does not give us a basis to expect Government controls to be superior to free markets.

No one can foretell the future. However, in my opinion, the free play of competitive forces set in motion by your day-by-day decisions over the long run will be more successful in insuring that the world's resources are put to their most productive use than the decisions of well-meaning bureaucrats. The truth of the matter is that none of us is smart enough to plan a regimented world economy.

Third House of Congress?

EXTENSION OF REMARKS
OF

HON. GORDON H. SCHERER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1956

Mr. SCHERER. Mr. Speaker, the members of the Committee on Un-American Activities of the Congress have been greatly concerned over a number of decisions of the Federal courts, particularly the Supreme Court, in the past few years.

These decisions have seriously hampered the work of the committee and its ability to do the job imposed upon it by the Congress. It is known that some judges have strong personal feelings as to the necessity and advisability for investigations by the Congress into the Communist conspiracy. It is becoming increasingly apparent that they are attempting to impose their ideas through decisions which are more legislative than judicial.

While the President, his Cabinet, the Members of Congress, and the county sheriff are freely criticized, we have consistently hesitated to take the courts to task. Over the years we have been taught, and properly so, that the court is an institution to be respected. Out of this has grown a feeling that individual judges can do no wrong—that they must be free from criticism and that the motives behind decisions should not be questioned.

Some judges, appointed for life, have gradually arrogated unto themselves executive and legislative powers. Because of the general timidity on the part of the people to criticize the courts, these judges are becoming bolder, and more and more by judicial decision are attempting to run the Government in accordance with their own philosophies. These philosophies are not always sound because, as FRANCIS WALTER, chairman of the Un-American Activities Committee, has pointed out, these judges often live in Ivory Towers, apart from reality, with blinds drawn.

It should not be inferred that my remarks are a general indictment of the Federal bench, because the great majority are like the capable, fearless, Federal judge and fine American we have in Cincinnati.

The Los Angeles Herald-Express in its lead editorial of May 15, 1956, entitled "The Third House of Congress?" discusses one phase of this issue much better than I, and therefore, I am including it as part of my observations:

THIRD HOUSE OF CONGRESS?

The constitutional question before the American people, since Earl Warren has become Chief Justice of the United States, is whether the Supreme Court is a third house of Congress legislating on its own.

The Constitution clearly defines the functions of Congress and the procedures concerning the passage of legislation.

The Constitution does not with similar clarity define the functions of the Supreme Court.

Chief Justice John Marshall, however, by a series of basic decisions, determined the supremacy of the Court in matters constitutional. But nowhere has it been asserted that the Supreme Court is a legislative body.

Nevertheless in the case involving the United Mine Workers District 50 against the Arkansas Oak Flooring Co., the Supreme Court does legislate. No question of constitutionality is raised. The Court makes new law.

Under the Taft-Hartley law, officers of a union are required to file an oath to the effect that they are not Communists.

This John L. Lewis has refused to do for no better reason than that he will not do it.

His choice is to disregard the law which was also the choice once upon a time of Al Capone and others who believed that the Volstead Act was all wrong and that they would not abide by it.

The National Labor Relations Board, obeying the law, has required union officials to take this oath before they would be certified for collective-bargaining purposes. Now along comes the Court and upholds the right of a union official, if he chooses, to violate the law.

By taking this position, the Supreme Court reopens the entire labor field for infiltration by Communists, many of whom have been forced out of labor unions by this provision of the Taft-Hartley law.

Actually a number of labor unions were expelled from their national organizations because of Communist affiliations.

In effect, this Supreme Court decision requires an employer to bargain with a labor union even if all its officers are known Communists and therefore agents of Soviet Russia.

The Supreme Court does not declare the Taft-Hartley law unconstitutional.

It simply makes it optional for a labor leader to obey the law or to ignore it, and it requires an employer and the NLRB to abide by whatever decision the individual labor leader makes as to whether he will be law-abiding or not.

Such a decision is encouragement for disobedience of the law and could be used as a precedent for all sorts of evasions.

There is, for instance, a tax law. Why should not each individual American citizen, following the reasoning of the Supreme Court, decide for himself whether he chooses to obey the law, file a return, and pay the income tax?

Using the language of this decision, failure to file could not be regarded as a confession of guilt, but rather the choice of the individual as to whether he would make certain information public. If it is good law for John L. Lewis, why not for any gander?

Something curious has crept into the Supreme Court and it has become very disturbing to the American people.

It is difficult quite to analyze what has happened, but the same judges were not legislating before Earl Warren became Chief Justice.

Maybe he has given a new tone to the Court, the tone not of a high judicial body but of a third house of Congress.

Resolution Adopted by National Society of New England Women

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1956

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following resolutions adopted by the 43d Annual Congress of the National Society of New England Women:

NATIONAL SOCIETY OF
NEW ENGLAND WOMEN,
Glen Ridge, N. J., May 29, 1956.

Representative EDITH NOURSE ROGERS,
House Office Building,
Washington, D. C.

DEAR MRS. ROGERS: Enclosed is a copy of the resolutions adopted by the 43d annual congress of the national society of New England Women, May 16, New Ocean House, Swampscott, Mass.

The society urges the Congress to reject membership in the proposed Organization for Trade Cooperation, to examine the General Agreement on Tariffs and Trade, and to resume its constitutional responsibility to regulate foreign commerce. New England industries such as textile, china, watch, etc., have, as you well know, been hard hit and must wait 6 to 9 months under escape clause provisions for a hearing with the result then in doubt.

The society also urges a reappraisement of foreign aid in terms of money spent and benefit to the United States received.

The national society of New England women is comprised of members whose forebears dwelt in New England prior to the signing of the Constitution of the United States. There are 82 colonies in 22 States.

We wonder if you would be so good as to place these resolutions in the CONGRESSIONAL RECORD.

Sincerely,
FLORENCE A. BEEKER (Mrs. Wm. A.),
President General.

NATIONAL SOCIETY OF NEW ENGLAND WOMEN, RESOLUTIONS ADOPTED BY THE FORTY-THIRD ANNUAL CONGRESS, MAY 16, 1956, NEW OCEAN HOUSE, SWAMPSCOTT, MASS.

I. DEDICATION

Resolved, That the 43d annual congress of the National Society of New England Women rededicates itself to patriotic service for the maintenance of the sovereignty and the preservation of this Republic under the Constitution of the United States.

II. LOYALTY TO THE CONSTITUTION

Resolved, That the 43d annual congress of the National Society of New England Women opposes the so-called strengthening of the United Nations or any international organization, agency or plan that would abolish or limit any of the rights, privileges or immunities provided by the Constitution of the United States, as steps toward a Socialist-Communist dominated world government and the extinction of the United States.

III. OPPOSITION TO ATLANTIC UNION

Resolved, That the 43d annual congress of the National Society of New England Women reaffirms its opposition to the Atlantic Union resolution (S. Con. Res. 12) that asks for an exploratory convention to discuss surrender of United States sovereignty in a permanent political, economic and military union of the North Atlantic Pact countries.

IV. OPPOSITION TO GENOCIDE, HUMAN RIGHTS AND UNESCO

Resolved, That the 43d annual congress of the National Society of New England Women reaffirms its opposition to interference by the United Nations and its agencies in the domestic affairs of the United States and especially by the proposed (1) Covenant of Human Rights, proposed (2) genocide convention and (3) United Nations Educational, Scientific, and Cultural Organization (UNESCO) and urges the Congress of the United States to withhold financial support from these projects that would hasten the triumph of world socialism for world citizenship and world government.

V. ADMISSION OF RED CHINA TO THE UNITED NATIONS

Resolved, That the 43d annual congress of the National Society of New England Women reaffirms its opposition to the admission of Red China to the United Nations and urges the introduction of a joint resolution in the Congress of the United States to abrogate the treaty by which the United States became a member of the United Nations if Red China is admitted.

VI. NULLIFICATION OF THE STATUS OF FORCES TREATY

Resolved, That the 43d annual congress of the National Society of New England Women reaffirms its opposition to the North Atlantic Treaty status of forces agreement and urges the Congress of the United States to adopt legislation by joint resolution to nullify that part of the treaty that deprives American soldiers of trial rights under the protection of the Constitution of the United States.

VII. ORGANIZATION FOR TRADE COOPERATION (OTC)

Whereas United States membership in a new international administrative Organization for Trade Cooperation is now before Congress, in which the United States would be outvoted, its resources dissipated for the one Socialist economic world; and

Whereas the General Agreement on Tariffs and Trade (GATT) which the Organization for Trade Cooperation (OTC) would administer has never been approved by Congress and its decisions made in Geneva have weakened and are threatening New England textile, glass, chemical, watch, bicycle, and other industries vital to survival of the free enterprise system and a sound national defense; and

Whereas approval of the Organization for Trade Cooperation (OTC) would be regarded as indirect approval of the General Agreement on Tariffs and Trade (GATT): Therefore be it

Resolved, That the 43d annual congress of the National Society of New England Women urges the Congress of the United States to reject membership in the Organization for Trade Cooperation, to carefully examine the provisions of the General Agreement on Tariffs and Trade and to resume its constitutional responsibility to regulate foreign commerce.

VIII. SUPPORT OF THE M'CARRAN-WALTER IMMIGRATION LAW

Resolved, That the 43d annual congress of the National Society of New England Women reaffirms its support of the McCarran-Walter Immigration and Nationality Act against repeal or crippling amendments.

IX. REFUGEE LAW

Resolved, That the 43d annual congress of the National Society of New England Women reaffirms its opposition to circumventing the provisions of the McCarran-Walter Immigration Act by liberalizing the 1953 Refugee Relief Act to facilitate the influx of additional immigrants.

X. FEDERAL AID TO EDUCATION

Resolved, That the 43d annual congress of the Natonal Society of New England Women reaffirms its position against Federal aid to education as leading inevitably to Federal control of education and a step toward the autocratic state.

XI. PROPOSED CONSTITUTIONAL AMENDMENTS

Resolved, That the 43d annual congress of the Natonal Society of New England Women supports the principles of the following proposed constitutional amendments designed to redefine and recapture constitutional government:

1. Bricker amendment to prevent overriding of our Constitution and our domestic law by means of the treaty power.

2. Reed-Dirksen amendment to eliminate to a large extent the heavy progressive rate feature from our income-tax system without

impairing the power of Congress to raise revenue. This amendment limits the top rate of income taxes, but permits Congress to exceed the limit by a three-fourths vote.

3. Byrd-Bridges amendment to require annual budget balancing by limiting congressional appropriations in any fiscal year to the estimate of receipts of the Government for that fiscal year, except in times of dire emergency to be determined by a three-fourths vote of Congress.

4. Mundt-Coudert amendment or a reform of the electoral college along these lines, designed to take away the excessive power now exercised by minority groups in larger cities under the present electoral-college system.

5. Reed-Walter amendment to give the States the full power to originate amendments to the Constitution.

We have the choice of continuing every year to write our Congressmen to get them to do what they should do, or restore the permanent contract—the Constitution. With the contract signed, limiting the powers of Congress to tax and spend, we could feel secure. With such limitation we will improve government because we will reduce the amount of it. States have everything to gain and nothing to lose by adopting these proposed amendments. Call them to the attention of State legislators.

XII. FOREIGN AID

Whereas it is proposed to expand the foreign-aid program, the chief cause of our heavy tax burden, unbalanced budget, and growing socialism at home; Therefore be it

Resolved, That the 43d annual congress of the National Society of New England Women reaffirms its opposition to continued foreign aid and urges the Congress of the United States to reappraise the foreign-aid program in terms of money spent and United States' benefit received.

XIII. ALEXANDER HAMILTON BICENTENNIAL CELEBRATION

Whereas the States comprising New England were among the Thirteen Original Colonies whose representatives, with Alexander Hamilton, established the Constitution of the United States; and

Whereas Alexander Hamilton is one of our great historical figures: Therefore be it

Resolved, That the 43d annual congress of the National Society of New England Women calls upon its colonies to take an appropriate part in the celebration of the 200th anniversary of the birth of Alexander Hamilton.

As We See It

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 31, 1956

Mr. MARTIN of Pennsylvania. Mr. President, the National Guardsman, in its June 1956 issue, has as its guest editor the distinguished Senator from Delaware [Mr. FREAR]. His subject is "As We See It." This editorial deserves the attention of all Americans. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AS WE SEE IT—I AM THE GUARD

(EDITOR'S NOTE.—Guest editorialist for this issue of the National Guardsman is Delaware's United States Senator J. ALLEN FREAR, JR. He writes a weekly commentary for his constituents, and has granted permission to reprint one which, while intended primarily for Military Reserve Week, has applicability every week.)

As many of you know, the 7-day period from April 22 to 28 has been designated as "Military Reserve Week." The purpose of this activity is to stimulate increased interest and participation in the Reserve components of our Armed Forces and thus help strengthen the national security. I am happy to devote this statement to Military Reserve Week because it provides an opportunity for me to express publicly and proudly a few words of support and encouragement for the National Guard of Delaware and of the Nation as a whole.

The guard is easily one of America's most famous military institutions. From the earliest beginnings of our Nation, the guard has functioned in an important and vital roles as a partner with other units of our national defense. Known as civilians in peace and soldiers in war, the National Guard has established itself both as a State organization and as a federalized adjunct of the country's overall military system.

From time to time as our military planners review and revise the organization of our Armed Forces, mention is made of the future role which the National Guard may take in the overall defense picture. One hears rumors from time to time that the necessity for the existence of the National Guard is not as great as heretofore and that in fact the guard, as a separate organization, can be replaced.

However, those who advocate either replacing or integrating the guard with the Regular Reserve Forces of the Nation fail to take into account its importance as a unit of the State as much as it is an arm of the National Government: It should be remembered that the National Guard has provided the bulk of our fighting troops at the beginning of almost every national emergency, that is, war. In addition, in times of disaster or internal upheaval of a civilian nature, troops of the National Guard are available and ready for service to their respective States and communities. In Delaware our National Guard organization stands as one of the finest anywhere in the United States. Units of our National Guard, particularly its ground forces, have a long history of prideful accomplishments.

During the current observances of Military Reserve Week, the Army National Guard will undertake a drive for volunteers for the Army 6 months training program and for the enlistment of men who have had previous military service in any of the Armed Forces.

The Air National Guard is seeking enlistment of prior servicemen and young men between 17 and 18½ years without prior service. Members of the National Guard have emphasized to me that young men of Delaware can fulfill their military training and service obligation through membership in the Army National Guard or the Air National Guard. Interested young men in the State may find it of value to discuss the question of new or added military service with members of our National Guard during the present week.

While I am happy to note the recruitment possibilities for the National Guard which are currently being highlighted, I want most of all in this brief message to emphasize the importance of having the National Guard's identity retained by our defense planners. Delawareans who are familiar with my general views on the relationship of the Federal Government to the several States, will know of my inherent belief that the power of our democracy lies in the authority of the States themselves as 48 separate entities working for the common welfare. As I see it, the National Guard through its long history has been developed to meet the varying requirements which arise from time to time in the States themselves. Secondly, it functions under the Federal Government in time of national crisis.

A significant description of this famous American institution has been prepared against a pictorial background of its many functions over years past. In our office here in Washington we have a framed copy of this declaration which is entitled, "I Am the Guard." In concluding these remarks I want to quote directly from its closing lines:

"Wherever a strong arm and valiant spirit must defend the Nation, in peace or war, wherever a child cries or a woman weeps in times of disaster, there I stand * * * I am the Guard. For three centuries a soldier in war, a civilian in peace—of security and honor, I am the custodian, now and forever * * * I am the Guard."

For Freer Competition

EXTENSION OF REMARKS

OF

HON. THOS. E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, May 31, 1956

Mr. MARTIN of Iowa. Mr. President, H. E. Luedicke, the editor of the New York Journal of Commerce, on Thursday, May 24, reviewed the final session of the meeting of the National Association of Purchasing Agents, held in Cleveland on Wednesday, May 23.

This session was devoted to a panel discussion of the subject "Materials and Energy Supplies of the Future; Problems That Can Bite You; Availability, Costs, and Controls." The participants in this discussion were Felix E. Wormser, Assistant Secretary, Department of the Interior; Fred G. Singer, manager, tariff division, development department, E. I. du Pont de Nemours Co., Wilmington, Del.; and Adam K. Stricker, Jr., business research staff, General Motors Corp., Detroit, Mich.

Mr. Luedicke's review of this session is of great interest. It shows the desire on the part of both business and government under this administration to maintain a free, competitive capitalism unencumbered by international commodity agreements.

Mr. President, I ask unanimous consent to have Mr. Luedicke's review of this meeting printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Journal of Commerce and Commercial of May 24, 1956]

FOR FREER COMPETITION: UNSHACKLED MARKETS URGED BY PURCHASERS

(By H. E. Luedicke)

CLEVELAND, May 23.—A strong plea for restoration and maintenance of the free competitive market system featured the closing session of this year's convention of the National Association of Purchasing Agents.

Here are the highlights of the session:

A strong endorsement of free competitive capitalism as the key to President Eisenhower's economic philosophy was given by Felix E. Wormser, Assistant Secretary for

Mineral Resources, Department of the Interior.

A broadside against the use of international commodity agreements was fired by Adam K. Stricker, Jr., of the business research staff of General Motors Corp.

A most careful screening of all proposed international economic treaties before their acceptance was urged by Fred G. Singer, manager of the tariff division, in the development department of E. I. du Pont de Nemours & Co., of Wilmington, Del.

FREER MARKETS NEEDED

"Freer markets are essential if world trade is to flourish and make its contribution to free-world economic development," Secretary Wormser declared.

"Experience indicates that the Federal Government invited problems which are difficult to handle whenever it takes action to disturb supply-demand relationships. It is quite a trick to employ man-made economic devices without diluting or destroying the competitive influence that generally can be relied upon to cut production or use down to size.

"Furthermore, it has been my observation that any movement to initiate one type of Government intervention in commodity markets, if successful, leads inevitably to another."

GIVES ADVICE

"My advice to any businessman who would seek to solve an immediate production on marketing problem by asking for some kind of direct Government assistance is simply this. Think twice before you offer to sell any portion of your economic birthright for a mess of Government pottage.

"Give Washington a particularly wide berth when markets apparently misbehave.

Secretary Wormser did not deny that Government, in a modern economy, has an important economic role to play, but he stressed time and again, that the trick is to do so "without stifling individual initiative or without using Government power to favor one group or another."

UTILIZATION OF RESOURCES

Adams K. Stricker, Jr., asserted that "the free play of competitive forces set in motion by businessmen's day-to-day decisions over the long run will be more successful in insuring that the world's resources are put to the most productive use than the decisions of well-meaning bureaucrats.

"The truth of the matter is that none of us is smart enough to plan regimented world economy."

BLASTS AGREEMENTS

Mr. Stricker dealt at length with the problems involved in the use of international commodity agreements.

Said he: "We are sympathetic with the problems of countries whose national income and well-being are involved with the markets for a few basic commodities."

Experience does not hold any promise, however, that these countries will prosper from Government-controlled schemes.

If we can maintain a high level of gross national product in our own economy, we assist the underedeveloped countries by our demands in the world markets for primary commodities. This is our greatest opportunity to help others while helping ourselves.

SCORES U. N. PROPOSALS

Any attempts to regulate raw material will sooner or later lead to proposals to extend such controls on synthetic products in the same fields as well. Mr. Stricker scored these as particularly vicious attacks on free markets.

"In recent United Nations debates, suggestions have been made that controls should be exercised, presumably by the Commission on International Commodity Trade, over the production of new synthetic materials which displace natural products. They were, of course, thinking of the market problems arising from the competition of synthetic fibers with cotton and wool and synthetic rubber with the natural product. I need not tell this group what would happen to free markets if such controls were in effect."

ROOTS FROM ITO

"Our experience with wartime price and allocation controls within the United States, with previous rubber and coffee schemes, with our efforts to stabilize domestic agricultural incomes, and with the national materials conference, does not give us a basis to expect Government controls to be superior to free markets."

Du Pont's Fred G. Singer devoted his analysis to the role to be played by intergovernmental agreements rather than specific commodity agreements.

"I am in favor of cooperation, but I have serious reservations when it comes to merging our American way of life into a single world picture."

He was critical of the attempts now being made to salvage some parts of the International Trade Organization under the Habana Charter, despite the fact that Congress considered it as contrary to the American concept of private enterprise.

"You may think that meant the end of ITO," Mr. Singer said, "but that would be to ignore the extraordinary patience and persistence of international bureaucracy.

"In letting the main plan die we did not kill all the roots. Three little roots survived. One of these had sprouted by 1950 and started an independent life. The other two roots were kept more or less hidden in the General Agreement on Tariffs and Trade. The roots, which are only now showing above ground, are the interim Commission for an International Trade Organization and the interim Coordinating Committee for International Commodity Arrangements."

It is these roots, Mr. Singer claims, must be watched very carefully unless they'll be coming around one of these days to bite you.

Texas Nominee

EXTENSION OF REMARKS
OF
HON. JACK B. BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. BROOKS of Texas. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Dallas Times-Herald of May 8, 1956, concerning the recent Democratic precinct conventions in Texas, which strongly endorsed Senator LYNDON JOHNSON to head our State delegation to the national convention:

TEXAS IS EXPRESSING PREFERENCE FOR MIDDLE-OF-THE-ROAD NOMINEE

The victory of the Johnson-Rayburn forces in the precinct conventions Saturday means that Texas is certain to have a strong voice in the choice of a Democratic nomination for President.

Speaker RAYBURN has already been chosen for permanent chairman of the national gathering, and it is now certain that the delegation sent up from Texas will be seated. This is important, for a delegation must necessarily be accepted before it can take part in the proceedings.

This Texas development increases the chances that a moderate candidate for President will be nominated by the Democrats. Speaker RAYBURN has never been among the liberal extremists. He is by nature a conservative. And Senator JOHNSON is a middle-of-the-roader.

Many factors account for the RAYBURN-JOHNSON victory, but one of them, outstanding in its importance, was the appeal that both JOHNSON and RAYBURN have to the thousands of rural and smalltown Democrats who are neither extremely liberal nor extremely conservative. JOHNSON's fine record in Congress won him designation as favorite son.

Texas, by naming its own favorite son, and by sending a middle-of-the-road delegation to the national convention, will say in effect that it favors nomination of a moderate candidate.

The defeat of Shivers does not mean that Texas is repudiating the doctrine of States' rights. The average Texas Democrat is still opposed to Federal encroachment upon State sovereignty and the centralization of government in Washington. JOHNSON and RAYBURN have been among the leading champions of States rights. They are moderates in their views and they are concerned about all the numerous problems faced by the Nation. They have faith in the Democratic Party, and their influence in the national convention will be for the kind of presidential nominee that middle-of-the-road Texas Democrats can conscientiously support.

The reuniting of the plain Democrats of the rural areas of Texas and the conservative elements in the big urban centers will have a wholesome effect on the future of this State.

Nineteenth Anniversary of I Am An American Day

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. BOGGS. Mr. Speaker, Sunday, May 20, 1956, marked the 19th anniversary of I Am An American Day.

As national cochairman of the Helois Foundation and I Am An American Day Committee, I should like to pay tribute to Mrs. Paul d'Otrenge Seghers, founder of I Am An American Day for her untiring work in awakening true Americanism among the citizens of our great country.

The celebration this year drew over 500 distinguished guests to the estate of Mr. and Mrs. Seghers at Sunnyhill Farm, Huntington, Long Island, where they assembled to renew their faith in the ideals upon which our country has been built and to become still more devout disciples of the American way of life.

The theme of this 19th annual celebration was "Peace with Freedom for All" and was dedicated to the Latin American Republics and the Dominion of Canada, whom we joined in paying homage and tribute to the people of the capitive European Nations.

I quote below a few of the many testimonials received from distinguished citizens of our country:

Hon. EARLE C. CLEMENTS, United States Senator from Kentucky:

" 'Peace with freedom for all' is a completely appropriate theme for the annual I Am an American Day program.

"A peace that would mean enslavement of the bodies and souls of freedom-loving peoples of the world would be a living death. As we work toward peace in the world, we must even be on the alert to guarantee that the rights of all people to life, liberty, and the pursuit of their own happiness shall be safeguarded."

Hon. IRVING M. IVES, United States Senator from New York:

"On this significant day, when each of us expresses his gratitude for the Divine fortune which has made him an American and has blessed America, our thoughts turn with compassion to others less fortunate. We think particularly of the millions of silenced and oppressed human beings behind the Iron Curtain.

"I am most pleased that the sponsors of the 'I Am An American Day' celebration for 1956 chose as their theme 'Peace with freedom for all.' On this day, when Americans give thanks that they have peace and freedom, we pray that the people behind the Iron Curtain may likewise soon enjoy those blessings.

"In addition to our prayers, we send those people our sympathy for their plight and our encouragement for their efforts to shake off their bondage."

Hon. HENRY M. JACKSON, United States Senator from Washington:

"It is only fitting on this 19th 'I Am an American Day' that our theme should be 'Peace with freedom for all.'

"We need to remind ourselves today and every day that there are vast areas of the world where people are not free.

"This is especially true at a moment when the new turn in Soviet foreign policy is in danger of obscuring the fact that 100 million freedom-loving peoples are still captive behind the Iron Curtain.

"We say to the world: If the Soviet Union really wants to show good faith, it can return to these peoples the freedom that once was theirs. This is an important message to tell the world. But this alone is not enough.

"Equally important, we must continue to protect and strengthen our freedoms at home as a symbol of hope for captive peoples everywhere. And we must pledge our untiring efforts to help free them from their bondage."

Hon. THOMAS H. KUCHEL, United States Senator from California:

"The whole world recognizes the courage and tribulations of the oppressed peoples behind the Iron Curtain. The free world joins with them in prayer that once again soon they will see the light of liberty and freedom from fear.

"Our generation continues making progress in determining and overcoming those modern dangers to the cause of our freedom. The basic hazards of Communist aggression and intrigue is not one for the people of the United States alone. They are the concern of all free peoples, and it will be in concert with them that we shall continue to oppose the Communist ideology. Each succeeding American generation has preserved American freedom, and has resolutely clung to the same self-evident truths which the patriots laid down 170 years ago. Ours has been a history of progress and we mean, under the providence of God, to continue that progress in the years and generations which lie ahead."

Hon. WARREN G. MAGNUSON, United States Senator from Washington:

"More people than many of us realize in today's world cherish the words, 'I am an American'—perhaps even more than some of us who obtain that right at birth.

"In this respect, it is significant that many who utter the words, 'I am an American' at the 1956 observance will be members of naturalization classes to whom the words 'liberty' and 'freedom' have a vastly deeper feeling because of actual background experiences on foreign soil.

"This individual can also add the word 'tolerance' and really means it because in his mind it is synonymous with the phrase, 'I am an American.'

"America looks to the persecuted and the oppressed for its very founding. Since that time, much of its greatest achievements have come from men and women—the Dr. Einsteins—who teach us the true meaning 'I am an American' by living the words in addition to speaking them."

Hon. GEORGE SMATHERS, United States Senator from Florida:

"On this 19th I Am An American Day, it is fitting that we in the United States extend our prayers to those behind the Iron Curtain who live in bondage and who have lost, or never known, the rights of free men accorded in our own country.

"While we enjoy—and sometimes take for granted—our individual sanctity under the Constitution, we must not forget that the flame of liberty has been extinguished in many parts of the world. No nation is an island unto itself, and when the bell tolls for a free people abroad, it tolls for us in America too.

"'Peace with freedom for all'—this theme of the 19th I Am An American Day sums up the ideal for which we stand firm. I know that the observance will achieve success equal to last year's drive by the Helios Foundation for unity in the Western Hemisphere."

Hon. H. ALEXANDER SMITH, United States Senator from New Jersey:

"I am happy to send these words of greeting to the Helios Foundation on the occasion of the 19th I Am An American Day.

"It is with special gratification that I note this year's theme, Peace With Freedom For All, and the tribute your group is paying to the millions of captive people behind the Iron Curtain.

"We must never cease our peaceful efforts to restore to those people the freedom, independence and self-determination they once enjoyed before their subjection to Communist totalitarianism."

Hon. Thomas B. Stanley, Governor of Virginia:

"The annual observance of I Am An American Day affords the opportunity of rededicating ourselves to the underlying principles of free citizenship and of bringing to the attention of our neighbors of the Americas, as well as people throughout the world, the great contribution we can make with them to safeguard individual liberty and national integrity.

"I am glad to join with the sponsors of this celebration in reemphasizing the imperishable values we enjoy as Americans and I invite the people of Virginia to take the occasion to reaffirm their adherence to the basic tenets of government and freedom which are responsible for our status as a bastion of liberty today."

Hon. STUYVESANT WAINWRIGHT, Member of Congress from New York:

"As usual it is a pleasure to send the message to you and the wonderful people doing the work of the Helios Foundation.

"I can think of no greater message than to report to you the sentiments of a young 11-year-old lad who won Suffolk County's Americanism contest.

"He said:

"'Of all the many things for which America stands, that which means most to me is liberty.

"'At the age of 11 I am not too familiar with the deeper meanings of personal liberty. But I do know from a study of my history books that men have been fighting and dying for it since the beginning of history.

"'Now that I am reading current events and newspapers reporting from all over the world, I have been surprised and saddened to learn that peoples in the other countries do not enjoy the same personal freedom that I take so much for granted. To think that there are lands where men may not travel without police cards, may not worship God as they choose and may not be governed by officials of their own election is enough to prove to me that personal property is America's greatest blessing.

"'I am proud to pledge allegiance and ask God's guidance on the great system of government that promises each of us so much.'

"Doesn't this accurately report our mutual feelings in this great matter of Americanism?"

Hon. Carmine G. De Sapio, Secretary of State of New York, Speaks Before a Dinner of the National Council of Business and Professional Men, New York, N. Y.

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1956

Mr. KLEIN. Mr. Speaker, on Monday, April 16, 1956, the Honorable Carmine G. De Sapio, secretary of State of New York, and New York State Democratic Committeeman from New York, spoke before a dinner meeting of the National Council of Business and Professional Men, Inc., in the New York Times Building, in New York City. Because of the talk and its eloquent understanding of the true place of an alert citizenry in a representative government, I wish to extend, under leave, my remarks and insert both the address of Mr. De Sapio and the introductory statement of Mr. Irving V. Gellis, New York public relations counsel and chairman of its public relations committee, as well as chairman of this dinner committee:

Mr. GELLIS. Ladies and gentlemen, as you know, the National Council of Business and Professional Men, Inc., is a nonpartisan organization, composed of progressive, patriotic, civic-minded citizens, dedicated to the advancement of the welfare of our Nation, State and city. Its recommendations are articulately heard in the Nation's Capital, in the United States Senate, and the House of Representatives, as well as in the council of the city of New York, legislatures of the several States, and in capitals throughout the world.

The eminence of our guest speaker and his importance on the current political scene is sufficiently attested by the record attendance here tonight. Because you are all aware of the role he has played in giving new dignity to the meaning of representative government, I feel it superfluous for me to say anything further. It is, therefore, with a great deal of pleasure that I give you our guest speaker, the Honorable Carmine G. De Sapio.

Mr. DE SAPIO. Mr. Levy, Mr. Bayern, Mr. Gellis, ladies, and gentlemen, it is a very great pleasure for me to meet this evening with the members and friends of the National Council of Business and Professional Men. I know of your work and your purpose and I am very grateful for this opportunity to exchange views with one of the most alert and civic-conscious groups in our community.

And yet, when I think of the millions of men and women in our country who are affiliated with organizations such as yours, I often find myself wondering whether, in our earnestness to uphold and to advance our great democratic philosophy of the rights and the opportunities of the individual, we do not sometimes tend to overlook the equally great importance of mutual assistance and cooperative action to the strengthening and perpetuation of our American way of life.

This is a question about which I have very firm personal convictions and which, I believe, has not received the attention which its seriousness demands.

As a practical politician—as a man whose daily professional activities bring him into close and constant working association with the problems of community life—I cannot too strongly emphasize the importance of public participation in the governmental—and, therefore, in the political—affairs which influence and which often determine the course of social progress.

And I believe, my friends, that only through intelligently distributing and sharing the burdens and the responsibilities of community affairs, can we effectively advance the public welfare and improve the social and economic atmosphere in which we live.

It is, therefore, the duty—and the very great privilege—of every individual citizen to bring his particular talents and abilities into play in the formulation and implementation of a constructive public approach to the daily problems which form so vital a part of our contemporary social system.

A disturbingly large number of our fellow Americans remain unaware of, or insensitive, to the basic facts of political life. Many of these people cling to the outmoded belief that politics is a mysterious branch of human endeavor, shut off from the normal stream of social activity and presided over by a strange, unapproachable group of men and women who meet in secret conclave to perform strange rites which bring forth the public policies which guide the destinies of their countrymen.

We know better, of course, but it is sometimes very convenient to forget what we know—to substitute inaction for effort—and to permit ourselves the luxury of unawareness in order to avoid the necessity for fulfilling our obligations to our fellow citizens.

I am, quite frankly, very much disturbed by the apparent indifference which some of our most prominent business leaders display toward the facts and the realities of political life.

My friends, I have actually heard successful business men and women declare with apparent sincerity that they simply have no time for politics, that they cannot afford to be bothered with the problems of community life, that the urgency of their business concerns and activities must take primary importance in their lives, to the exclusion of virtually all other considerations.

It is evidently the belief of these people that it is enough for them to have complete faith in the ability of government to get along without their assistance.

Such people may, indeed, have great faith in the efficiency of the governmental agencies which have been developed through the years to protect their rights and their interests as American citizens. But, what they lack—tragically—is faith in themselves.

And if that may seem to be a very strong statement of the case * * * then it is also a fair measure of the serious damage to our national philosophy which is represented by so negative an approach to the fundamentals of citizenship.

For if the businessman may reject his obligations as a member of the community in which he lives and works and raises his family, then the businessman's employee—by the same token—has as much right to disclaim all but the most superficial attachment to the company which employs him.

Imagine, my friends, the staggering effect upon our business economy, if our commercial enterprises were obliged to operate under such conditions * * * if the average employee functioned in a state of economic anarchy, without accepting the moral and ethical implications of his employment.

Imagine, if you will, the chaos which would result if millions of salaried workers were to disregard the executive directives of their employers; if they were to pay no attention to sales orders and shipping instructions; if they were to brush aside the mechanics of production * * * for no better reason than that they had complete faith in the ability of commerce and industry, of their employers, to get along without their assistance.

Yet this absurd theoretical situation, which our business leaders could not conceivably tolerate in their professional activities, is very much the same as that in which some of these same business leaders place themselves with regard to their own civic responsibilities.

You and I know that it is not possible to reconcile such behavior with the physical facts of contemporary American life.

In many respects, it is astonishing that we have succeeded, as a Nation, in building the greatest, the most productive and the most efficient industrial and commercial national community the world has ever seen * * * and that we have managed to develop a system of government which provides for the continued growth and expansion—and for the protection—of our economic society.

To any serious student of present-day political, social, and economic life and custom, there can be only two possible explanations for this phenomenon.

The first is that we have succeeded through divine guidance alone * * * that we have enjoyed the benign protection of a Creator who is disposed to overlook and to excuse our insensitivity to our obligations as members of a communal society.

The second is that we have had the great fortune of calling upon the services of a relatively small, but very dedicated, group of men and women who, in their realization of the immense importance of safeguarding our democratic way of life, have been willing to shoulder the burdens of community responsibility for the rest of the Nation.

Actually, our success is attributable, I believe, to a virtually exclusive combination of these factors. Thus far, we have not materially suffered for having permitted such a situation to perpetuate itself. Each successive generation has brought forth a new reserve of capable public servants upon whom we have been able to depend for the maintenance and the preservation of the ideals and the philosophy of Americanism.

But can this state of affairs be allowed to continue indefinitely? Have we the moral right to permit a handful of our neighbors and associates to go on doing our work for us?

My friends, I submit to you that no American has the right—or can find any valid justification—to accept the advantages and the privileges of citizenship without accepting as well—both in spirit and in practical application—the responsibilities of citizenship * * * no more than he has the right to accept employment and wages without performing the services which are the basic condition of his employment and for which wages are paid.

Each of you, as a substantial and respected member of your community, has the opportunity to serve as a liaison officer between business and government.

And, as leaders in the economic affairs of your communities, you have yet another responsibility, that of lending your talents, your abilities and your awareness of the significance of the complex social and cultural elements which contribute to our country's well-being, to the improvement of all phases of community relations.

As leaders of commerce, you have the opportunity to serve, too, as major contributors to social progress, as the business advisors to our political—to our American—way of life.

Through your vigorous and forward-looking championship of the ideals of free and purposeful business enterprise, you are also preparing for the future—for the time when new generations of Americans may take their places at these very meetings, in the same spirit of good fellowship and good citizenship which pervades this room today.

And through active, civic vigilance, you can, in a very real and measurable sense, help to secure the rights of your children to the same, and, in many instances, to greater, opportunities which you have enjoyed as American business and professional men, and you can help as well, to carry the message, the ideals and the working spirit of America to all of your fellow human beings who subscribe to the principles and to the realities of democracy.

In the final analysis, my friends, you can insure the ability of your fellow citizens to look forward to a future in which all men may live and work and raise their families in an atmosphere of peace and good will, with decency and with integrity, and in a spirit of hope and fulfillment.

Thank you very much.

Radio Union Opposes H. R. 4090

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1956

Mr. PELLY. Mr. Speaker, the following news item appeared in the May 25, 1956, issue of the Seafarers Log, the official organ of the Seafarers International Union. It indicates that the Radio Officers Union recognizes that H. R. 4090 is bad legislation:

ROU RAPS BILL FOR NEW SHIP RADIO CALL GADGET

WASHINGTON.—A bill pending in the House of Representatives calling for installation of automatic radio-telegraph call selectors in United States cargo ships has met considerable opposition from both union and shipowner sources.

The purpose of the device is to service ships with less than two radio operators. It would make it possible for a shore station to get in touch with a ship at all hours by sending out the ship's call signal. The automatic call selector would respond only to the signal of the ship it is installed on and would sound a bell, waking the radio operator.

The Radio Officers' Union, an affiliate of the Maritime Trades Department, is on record against the device as offering no advantages over the present automatic alarm systems. Automatic alarms, which are required by Government regulations, are keyed to respond to the international distress signal whether from ship or shore station.

An ROU spokesman explained that the automatic call selector would be of little advantage in an emergency because a shore station would have to know the specific call numbers of all vessels that happened to be in the area. Most shore stations would not be in a position to know which ships were in a given vicinity.

NOT PERFECTED

The ROU also felt that the equipment was not perfected as yet. One steamship company, Moore-McCormack, had installed some of the call selectors, but subsequently testified against their adoption.

As far as ROU is concerned, the proposed installation "is one more piece of complex equipment aboard and another headache for the radio operator."

Youth Appreciation Day

EXTENSION OF REMARKS
OF
HON. CHARLES RAPER JONAS
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. JONAS. Mr. Speaker, last Sunday, May 27, 1956, was observed in Charlotte, N. C., as Youth Appreciation Day. Similar recognition was given youth in a number of other North Carolina cities, in five other States, and in a Province of Canada.

The idea of designating a special day for adults to pay tribute to youth was originated by T. Earl Yarborough, a fine public-spirited citizen of Charlotte. Mr. Yarborough thought up this idea last year when he served as director of Optimist Club boys work in North Carolina. He thought it would be appropriate to use a date for Youth Appreciation Day between the dates designated as Mother's Day and Father's Day in order to focus attention upon the importance of home and family relationships.

The Yarborough proposal was endorsed by the Charlotte Association of Civic Clubs. Harold Smoak, another outstanding civic leader of Charlotte and president of the Charlotte Optimist Club, was designated as chairman of a committee to inaugurate the program in Mecklenburg County. Mr. Yarborough served as State chairman and devoted his attention to selling the idea to other communities in our State.

The observance of Youth Appreciation Day in Charlotte in 1955 was so successful that it attracted the attention of Optimist International. The officers of that fine civic organization were so impressed by the possibilities for good in such a movement that they decided to throw the great weight and influence of Optimist International behind it. The Optimists do not plan to claim this program as an exclusive promotion but are inviting support from all other interested groups in their efforts to expand the observance of Youth Appreciation Day throughout the country and abroad.

Governor Hodges of North Carolina has endorsed the idea and issued a proclamation calling upon all parents to "rededicate themselves to the responsibilities of parenthood and urging all citizens to join in the celebration, to become aware of youth as earnest, helpful citizens, to recognize their accomplishments, and to credit them with friendly confidence."

Earl Yarborough explains the idea behind Youth Appreciation Day as an effort to encourage adults to express their faith in youth. He points out that 95 percent of our youths are not delinquent and that it is not fair for this great majority to be denied the recognition due them because of the dramatization of the problems created by the other 5 percent. "There is a need to dramatize decency instead of delinquency," Mr. Yarborough says, and then proceeds to take positive action to inaugurate a movement to do just that—a movement I predict will spread across the entire country."

This movement will spread because we have long needed a Youth Appreciation Day—a day on which we can take time out of our busy lives to tell our boys and girls how much they mean to us and to our country's future.

Many adults think that stern discipline is the only answer to the problem of juvenile delinquency. I do not discount the importance of discipline but am inclined to believe that it should be mixed with a generous portion of understanding and confidence. A little praise occasionally for a job well done might also pay dividends.

"As the twig is bent so is the tree inclined." As the youth of this great country of ours develop into wholesome and disciplined strength, so will our national safety be assured and thus will our country prosper.

A salute to T. Earl Yarborough and his associates who had the imagination to think up this idea in the first place and the initiative to put it into effect.

The Right To Know

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. COUDERT. Mr. Speaker, my attention has been called to an interesting and provocative book, The Right To Know, by an old friend, Kent Cooper, executive director and former general manager of the Associated Press. At any time and under any circumstances, anything from Mr. Cooper on the subject of news gathering and dissemination would be worth while. At this time, when the United States is struggling painfully with the difficult dilemma of reconciling the necessity of keeping news of strategic value from potential enemies with the guaranties of the Bill of Rights and the necessity of having an informed and intelligent electorate, this book is most timely.

It is of vital importance that all responsible Government officials should continue to actively concern themselves with the problem of releasing legitimate news of the Government business to the greatest extent possible to the people by press and radio. As Cooper so dramatically points out, the surest way to destroy free government is by suppression and tainting of news sources.

While I do not agree with all of the conclusions and comments contained in this interesting and readable book, I do commend it wholeheartedly to readers interested in this vital subject.

What Inspiration Can Do for You

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 31, 1956

Mr. MARTIN of Pennsylvania. Mr. President, I have been very much impressed with the sermon by Dr. Norman Vincent Peale of the Marble Collegiate Church on the subject What Inspiration Can Do for You, in which he makes reference to Dr. Edward R. Elson, pastor of the National Presbyterian Church, and pastor of our President.

I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

WHAT INSPIRATION CAN DO FOR YOU

(Sermon by Dr. Norman Vincent Peale)

(Scripture: Acts 17: 28)

How is your supply of inspiration? Do you have lots of it? Are you filled with joy and eagerness and dynamism? Ore are you lethargic, apathetic, dull? Has your inspiration, your enthusiasm, run down?

Your answer may indicate how well you are, how dynamic, how vital. For inspiration is a healthy thing. A minister told me of a very interesting case. A doctor telephoned him that he was sending a patient to see him, a man who claimed he just didn't feel good, had no zest or enthusiasm. The doctor's tests and examination had shown no particular reason for the man's condition, so he said to the minister, "I haven't any medicine for him; surgery isn't indicated. But you and I both know that a man can get sick in his spirit and it will manifest itself in his body."

And he made to this minister a wise suggestion. "Give this patient a good shot of inspiration," he said. "Give him an injection of the spirit. Get his soul toned up."

The minister, over a period of time, did just that. As the man's spirits rose, so did his enthusiasm and sense of well-being. He went back and reported to the doctor that he felt fine.

You must remember that before we are flesh and blood we are spirit. There are thousands of people crawling through life on their hands and knees, as it were; half dead, half asleep. And they are of all ages. They haven't that dynamic desire for vital living that Almighty God put in them. What they may very well need is a big shot of inspiration. And how to get this is explained in a passage from the Scriptures: "For in Him we live, and move, and have our being."

We are created by God; you can never get away from that. And when you cut yourself off from God you cut yourself off from life, because only in Him do we have vitality. In Him we move, have energy, have dynamism. In Him we come to the full completion of our being. It is a great text. And one thing it teaches us is that we must keep in contact with the life force which is spiritual inspiration. That keeps us alive all our lives.

A few months ago I stood on Mars Hill in Athens where Paul made the speech including this passage. This great rock in the middle of Athens, just below the Acropolis,

was apparently a gathering place in those days for the philosophers and scholars. They were smart, sophisticated men, and they thought to have sport with this man who was preaching to them. But he was smarter than they were, and he was very much alive. From within him came an emanation of life that transmitted itself to them. Paul was not a healthy man, physically. We do not exactly know what that "thorn in the flesh" was of which he spoke. He had been beaten; he had gone through all manner of physical peril; he had been shipwrecked and imprisoned. Yet when he stood there that day, overlooking a marvelous panorama of sea and sky, there came from him a flow of life force which those men felt. And this speech of his on Mars Hill goes down in history as one of the greatest speeches ever delivered. Paul told those people that if you keep in contact with God through the mind and soul, you can overcome the deterioration of the body, you can keep very much alive.

Just a few months ago my father died. He was 85 years old. I never knew anyone who loved life more than he did or got more out of living. Shortly after his death I received a letter from an old friend of the family, a retired physician who now lives in California, but who once practiced in New York. His name is Dr. Clarence C. Lieb and, 20 years ago, I had taken my father to him because of his critical physical condition.

"I am saddened," the doctor wrote, "by the news of your father's death. He lived much longer than his physical condition of 20 years ago promised. I am confident that it was his fine mind and superb spirit which added greatly to his longevity. It was a privilege to have served him professionally. I bless his memory."

Charles Clifford Peale was not only a minister, he was also a physician. His intellectual curiosity and his mental vitality were tremendous. He read prodigiously and was able to master and explain books which other people, including his son, had great difficulty in comprehending. Fulton Oursler once told me that it had taken him four readings to write his condensation of duNuey's Human Destiny for Reader's Digest. Of course, Fulton did a masterful job as always. He said that my father helped him greatly, as he had mastered the difficult book so thoroughly that his explanations were amazingly clear.

My father didn't give up very easily, and he didn't permit his sons to give up. He always told us, "The Peales never quit." When I was writing my book, A Guide to Confident Living, I became discouraged with my work and literally threw it away. He rescued the manuscript and found a publisher for it.

He loved to speculate about the world and everything in it, the stars, and man, and God. He reveled in philosophy. He loved all of nature and, strangely enough, became one of the greatest amateur authorities on snakes. Even after arthritis crippled him so that he could hardly use his hands, and a series of strokes confined him to a wheelchair, he could always think, and think he did. He became interested in astronomy and studied the heavens from his chair. He was one of the finest conversationalists I ever knew and discussed the greatest questions with charming wit and inspiration. People loved to sit at his feet and listen. He put the touch of glory on everything he handled intellectually.

Finally, the day came when a new stroke took away his speech and he could no longer form words. The last thing he ever said to me, and I had to get right down with my ear to his mouth to hear it, was: "I am studying heaven. Scientists say, 'It's in the Milky Way * * *' Tonight look at the Wilky Way."

When he died the doctor came from the room and said, "The light of reason was in his eyes until I closed them." How my father would like that statement.

Charles Clifford Peale lifted himself above his physical difficulties by a mighty upthrust of courage and spirit and mental alertness and faith. And it was that which kept him alive 20 years past his time. Crippling limitations and pain could not dim the happiness that welled up in him in each of those 20 new years that followed his first desperate illness. He lived in the mind and spirit and in the soul, and so life never lost its fascination for him.

A distinguished English physician once said, "There is no tissue in the body that is not governed to one degree or another by spirit." That is why the body that contains an active and a curious mind and a spirit that is in touch with spirtual greatness is not—and cannot be—defeated by disease or illness.

You will pardon me, I am sure, for talking about my father in this way, but I had a deep filial affection for him, and have the profoundest admiration for that spirit in him which somehow kept in touch with the life force. He was an actual demonstration of the great words, "For in him we live, and move, and have our being."

That inspiration I am trying to drive into my own consciousness. We do not need to give way under the burdens of this world, if we keep alive in the mind. That is where we live and move and have our being—in our thoughts. Don't go around telling yourself how badly you feel, how hard are the troubles you see ahead, what difficulties. Pull yourself up in your mind. Don't let yourself down. Remember that in Him you live and move and have your being.

How do we do that, you ask? The answer is very simple. Feed yourself inspiration. We feed our bodies food, don't we? Our bodies want food. They need to have it three or more times a day. How, then, can we expect to have inspiration unless we feed our spirit which also requires sustenance?

How do you feed your spirit? One way is to go out into the country and commune with God in His natural beauty. One day last autumn I rode from Syracuse to Elmira, N. Y. through the Tully Valley. In Switzerland a few weeks earlier I had said to my wife, "This makes the scenery in the United States look pretty tame." Well, in a way it seemed to me that it did, for outside the High Sierras in California or the Rocky Mountains in Colorado we haven't such magnificence. But I asked the Lord to forgive me for that statement as I rode through the beautiful Tully Valley that glorious sun-kissed fall afternoon.

I used to live in the old David Harum country in New York State. There the green valleys stretch between verdant hills. In autumn the Lord bedecks them with marvelous coloring. This recent sight of that valley filled my heart with inspiration, for life was so radiant, so beautiful. I was feeding my soul on the beauty of God's world.

But, you say, you live in New York City or some other city and there aren't any such valleys to be found. Not as such, to be sure, but did you see last night? Before I went to bed I looked out across Central Park. The stars were brilliant. Great ships of the air were passing overhead, coming in and out from the airport, their lights gleaming like diamonds against the night sky. There were long streamers of light from the cars passing along the avenue and through the park. The silvery light of the moon bathed the city in glory. There is mystery and romance and beauty in a great city at night. There is beauty everywhere, if you look for it. Feed your soul upon beauty.

My honored friend, Dr. Edward R. Elson, minister of the National Presbyterian Church in Washington, D. C., is the trusted pastor of the President of the United States. He tells how the President feeds his soul on inspiration. "He has a serene faith." Dr. Elson says, "and he loves to come to church, I looked down at him one Sunday during the singing of a hymn. He had his glasses on and was peering into the hymnal in that characteristic way of his. There was that wonderful serenity on his face and he was singing:

"'Cumbered with a load of care?
Blessed Saviour, still our refuge
Take it to the Lord in prayer.'

He, the most heavily burdened man in the world, was feeding his soul on inspiration."

In some ways this is a neurotic generation. And the reason is that so many need inspiration, but have not learned to have their spiritual life renewed. The inspiration that makes life normal, healthy, and strong comes from God. Every day of the world feed your soul on God and Christ.

"Inspiration" means to put spirit into. When the mind is full of courage, the soul of strength, then, no matter what difficulties we have to face, we have the spirit with which to do it. There is no getting away from the fact that life is difficult. It rains discouragement down upon us. We are given all sorts of blows. But, if you have been inspired, then really it doesn't make any difference what happens. With the Lord's help in keeping your spirit high you have sufficient strength to meet anything.

The people who have to overcome the most—yes, even those who seem to win the least—are the real victors in this life. It isn't what you accomplished, how high you rise, how much you get. It is your ability to stick, to see things through that counts. And that is what inspiration does for you. It in-spirits you.

The other day I heard the inspiring story of a boy named Ike Skelton. He had infantile paralysis when he was quite young, and it completely paralyzed his legs and his arms. After a while he regained the use of his legs, but not his arms. They flapped at his side, absolutely useless. In preparatory school, he knew he could not play football, or baseball, or tennis but, as he watched the boys running around the track, he decided that he could be a track man. He talked to the coach about it and, while he was kindly, he tried to discourage him. But Ike insisted, "Let me come down and try anyway."

The coach put his arm around him and said, "O. K., Ike. You come down and run all you want to." So Ike ran all through his freshman year and never made the team, of course, but he kept at it. He plodded around the track all his sophomore year and again didn't make the team. All during his junior year it was the same story. He kept plodding around the track, arms hanging loosely by his side, but he didn't make the team.

And finally came the spring of his senior year and the day of the big meet. Ike went to the coach and said, "Coach, let me run in the meet, won't you?"

The coach loved this boy and said to him, "All right, I will let you run." They took his arms and pinned them to his sides to keep them from flapping. "You can never run without your arms, Ike," people said.

They shot the gun and the runners were off, but the crowd had eyes for only one person, Ike Shelton. As the finish of the race came they all stood and a mighty cheer went up as Ike Shelton crossed the finish line. And the students surged down out of the grandstand, picked him up, put him on their shoulders, and carried him across the campus.

Did Ike come in first? No. Did he come in second? No. He came in last. But he came in, and they say that there was never such a finish in that school as was made by this boy who had inspiration, who was inspirited by a faith that couldn't be defeated. He inspired the whole school just as his life has inspired many since.

The secret of victorious living is in that text, "For in him we live, and move, and have our being." That is where we must go for inspiration, to the Lord. If we live in Him, the life force which flows from God

comes to us, and from us into the world. Inspiration can put power, meaning, and joy into life for you and for me. Inspiration channeled through us can bless people everywhere.

Prayer: Our Heavenly Father, we ask Thy blessing upon all of us. Grant that we may so completely open ourselves to Thee that we may feel a new surge of life in soul and mind and body. This we ask through Jesus Christ, our Lord. Amen.

Retirement for Professions and Self-Employed

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. KEOGH. Mr. Speaker, I direct the attention of our colleagues to the excellent piece entitled "British Lead Way in Providing Tax Break for Self-Employed" in the U. S. News & World Report of May 11. We who have been urging our colleagues to approve the bills by Mr. JENKINS and myself along the lines of the British proposals are anxious that there be no further delays in granting our self-employed taxpayers a similar type of relief on saving for old age. Why should the self-employed in the United States be denied tax equity with the employed in the matter of pensions when Britain is in the process of granting such equity? The article calls attention to the similarity between the British proposal and the bills by Mr. JENKINS and myself. A perusal of the financial bill now before the House of Commons will indicate that the similarities are even greater.

The article follows:

BRITISH LEAD WAY IN PROVIDING TAX BREAK FOR SELF-EMPLOYED

LONDON.—Self-employed business and professional people in the United States will find in the new British budget a plan that they have been trying to get for years. It is a program to give self-employed individuals—and many others—a grant of tax freedom on some of the income they set aside for retirement.

American businessmen and professional workers—doctors, lawyers, others—have petitioned Congress for this privilege for a long time. A plan actually was approved by the House Ways and Means Committee last year, just before adjournment intervened, but no action has been taken so far this year.

Now, self-employed Britons are to get this privilege first. As a part of the British Government's new budget program, the plan is all but certain to receive quick approval.

TAX-FREE INCOME

The plan to help self-employed people save for old age is an extremely simple one.

Britons will be permitted to lay aside up to one-tenth of their annual income to build a personal fund for retirement. Income saved under the system will be tax-free. Money put aside in this way will be used to purchase special annuities from insurance firms, or can be put into retirement funds created by business or professional associations.

The American plan includes these same rules, but with a difference. For Britons, the annual limit on income to be made tax-exempt in this way will be $1,400. In the United States plan, the annual limit would be $5,000—with a lifetime maximum of $100,000.

Older self-employed persons in England, moreover, apparently are to be denied a special favor that has been talked about for Americans. Starting on a retirement plan late in life, Britain's older self-employed persons will have less time to salt away tax-free income under the annual limit. And no easing of the $1,400 maximum is planned for Britons.

In the United States, if the plan goes through, individuals already approaching retirement age will be permitted to put aside more than 10 percent of income, and more than $5,000 a year. A self-employed doctor who is age 65 when the plan begins, for example, will be allowed to save 20 percent of earnings, up to $10,000 a year, on a tax-exempt basis.

The United States program would enable self-employed people to buy substantial annuities with their tax-free income, assuming they were able to save. Annuities would be taxed when they paid off. But, in retirement, most individuals expect to be in lower tax brackets.

Effect of the United States plan, its supporters explain, would be to put the self-employed person on a par with millions of other employees. These are employees who already receive tax-free income in the form of contributions that their employers make each year to company pension funds. Self-employed people have enjoyed no comparable opportunity.

Both plans—British and American—include specific rules as to what a self-employed person can do with his tax-free income.

Whether the exempted income goes into personal annuity policies, or into group retirement funds, the money will be tied up until the individual retires, or until he dies or is disabled.

On this point, however, the British plan has one advantage. Britons probably will be able to get their payoff at age 60 if they like. Americans would have to wait till age 65.

The British plan will also grant the tax freedom to those British employees—in addition to self-employed persons—who have no company pension plan.

This means that, in Britain, some 10.5 to 11 million individuals—about 1.5 million of them self-employed—are in line for the new program.

An obvious result of the program is to be a tremendous spurt in the annuity business of British insurance firms. It's hard to say how many people will save how much tax-exempt income under the plan. But Britain's tax system offers a clue.

At $5,600 of taxable income, the British tax rate is 52.5 percent. Britain, thus, takes more than half of an income over this level. And the rates rise so steeply that Government takes 92.5 percent of all taxable income over the $56,000 level. Individuals keep 7.5 cents of each dollar they earn above that figure.

With such rates, a grant of tax freedom for saving offers a powerful incentive to lay aside income for old age. This incentive is to be heightened by a new plan to give insurance firms a tax exemption for income earned by invested annuity premiums.

The British decision to grant this new retirement program for the self-employed is bound to create renewed demand—and hope—for a similar plan in America. The self-employed in United States now are likely to be telling Congress: "If Britain's Government can do this so can ours."

Statement of Dr. Howard A. Rusk on the Proposed Mutual Security Program

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. FOGARTY. Mr. Speaker, on May 18, 1956, Dr. Howard A. Rusk, of New York University, appeared before the Senate Foreign Relations Committee at hearings on the proposed mutual security program. He addressed himself that day to the great possibilities inherent in the international field of rehabilitation of the disabled.

Many of you know Dr. Rusk as the associate editor of the New York Times and the author of the column on medical health which is regularly carried in that newspaper. I should like to point out, however, that in addition to those accomplishments Dr. Rusk is recognized as one of the world leaders in the field of rehabilitation—an area in which he has devoted most of his professional life.

As consultant in rehabilitation to the United Nations and as president of the International Society for the Welfare of Cripples, he is in a unique position to observe the impact and effect of sound rehabilitation programs on world thinking. His address before the Senate committee emphasized his belief that—

Rehabilitation of disabled children and adults is one of the sharpest tools and most effective instruments which we in the United States have for making friends—a tool which can penetrate any iron or bamboo curtain to reach the minds and the hearts of men.

With this statement I certainly concur and I hope that the doctor's recommendations fall on fertile soil for I am convinced that any effort this country makes toward the better health of the world will do more to help us attain eventual peace than any program that has yet been tried or suggested.

Mr. Speaker, the statement of Dr. Rusk has so impressed me that I thought it should be brought to the attention of every Member of this body. Therefore, Mr. Speaker, under leave to extend my remarks I include it in the RECORD and commend it to the attention of all my colleagues:

FORMAL STATEMENT OF DR. HOWARD A. RUSK BEFORE THE SENATE FOREIGN RELATIONS COMMITTEE, MAY 18, 1956

My name is Howard A. Rusk. I am a physician and chairman, Department of Physical Medicine and Rehabilitation at New York University-Bellevue Medical Center; director, Institute of Physical Medicine and Rehabilitation, New York University-Bellevue Medical Center; associate editor, the New York Times; Consultant in Rehabilitation to the United Nations; and president of the International Society for the Welfare of Cripples. I am appearing before you today as a private citizen whose primary interest is the rehabilitation of the disabled.

It is my belief that rehabilitation of disabled children and adults is one of the sharpest tools and most effective instruments which we in the United States have for making friends—a tool which can penetrate any iron or bamboo curtain to reach

the minds and the hearts of men. It is natural for all of us to take improved agriculture, industry and utilities for granted but men often regard these developments as somewhat remote from their immediate problems. Rehabilitation, however, makes a personal and significant impact not only upon the disabled person himself and his family but on those with whom he comes in contact. This as well as all international activities in the field of health are one aspect of our foreign assistance program which meets all yardsticks of economic soundness, simple humanitarianism and political expediency.

In his report to the Congress on our mutual security program covering July-December 1955, John Hollister, Director of the International Cooperation Administration, wrote: "The people of the United States recognize the value—economic, social and moral—of health and the fact that health is a common need. We are also coming to recognize the vital relationship of health programs to any hopes we may have of helping to create conditions of economic progress, political stability and democratic social development in the many areas of the world outside the United States, where our future national security is deeply involved."

Mr. Hollister then cited estimates from competent authorities that until recently the economic loss from malaria alone in India was $224 million a year, from bilharziasis in Egypt $57 million a year, from malaria and tuberculosis in the Philippines $660 million a year. Also, that we in the United States pay a hidden 5 percent additional cost for our imports from malarious countries because of disease-affection production.

It is, therefore, surprising that our contributions to bilateral health programs were reduced from $43 million in the 1955 fiscal year to $33,767,000 in fiscal year 1956, and that of this amount less than $50,000 was spent on all types of rehabilitation services throughout the world.

From the economic aspects alone, it would seem logical that our investment in international health would be increased rather than decreased. Over and beyond the economic implications, there are great social, moral, and political values in our support of international health activities.

These values are well illustrated by international activities in the field of rehabilitation. In this country and in the other developed parts of the world we have seen a remarkable growth of interest in rehabilitation in the last decade. This interest has not been prompted by humanitarian motives alone. It has resulted from the growing incidence of physical disability resulting from prolongation of the life span, increased public assistance costs because of disability, and our need for manpower in our expanding economy.

But what lies behind the interest of Indonesia, Korea, the Philippines, Mexico, India, Burma, and Thailand in the provision of rehabilitation services for their handicapped? It is not the need for manpower, for these nations have far more manpower than they can profitably utilize in their present stage of industrial development. It is not to reduce public assistance costs, for few of these nations have any social schemes whereby the disabled become a responsibility of the state. It is not to reduce demands for medical, hospitalization, and social services, for the chronically ill and disabled in most of these nations are wards of their families rather than of the state.

The real reason is that many of these nations, particularly those of the Africa-Asia area, have, after years of colonization, recently achieved the long-sought dream of political independence. Now they are desperately looking for ways of proving to the world, and more importantly to themselves, that they have the political and social maturity to justify their political independence.

Long before the Government became concerned with international health projects, the Rockefeller Foundation, W. B. Kellogg Foundation, China Medical Board, and other private groups had years of experience in the administration of such programs. As a result, we have more know-how in the conduct of international health projects than in some other forms of technical assistance and are able to administer such projects more effectively.

Health projects are welcomed by the nations in which they are undertaken, for such projects are initiated only at the request of host countries. They are cooperative projects involving both joint planning and administration.

Host countries furnish a part, frequently the major part, of the funds for such projects. The $6 million contributed in 1955 to joint health projects in Latin America by the United States was expanded by $19 million.

Since our Federal technical cooperation health programs, known popularly as point 4 projects, began more than 13 years ago, they have cost our citizens less than a penny a month a person.

It is reported that last year Russia graduated 27,000 physicians from their medical schools and 20,000 the previous year. At the present time we are graduating slightly more than 7,000 in the United States per year. It is granted that the level of education of these physicians is far below that of our physicians, but even so the health services they are providing to the country are so superior to those ever before available to the people, to them it is considered a miracle.

It has also been reported that at the present time there are more doctors than can be readily absorbed in the health services of Russia and the physicians are being used for the kind of job that we would ordinarly assign to nurses and technicians. If the production continues and the excess increase, it is rather obvious what the physicians will do. They will carry the skills they have learned along with the concepts of communism to the backward parts of the world. We must meet this challenge, and we can for our physicians are better trained. By using total professional personnel, therapists, sanitary engineers, public health administrators and educators, we can do a better job. But time is running out.

Here is one example of what could be done. The Veterans' Administration has, since 1946, conducted an extensive artificial-limb research program which is carried out by nonprofit contracts with universities. The Army and Navy cooperate by supporting prosthetic research laboratories within their medical services. Work in the universities and armed services has been coordinated by the Prosthetics Research Board (formerly the Advisory Committee on Artificial Limbs) of the National Academy of Sciences—National Research Council under a contract between the Veterans' Administration and the Academy.

The need for a research program in artificial limbs became apparent early in 1945 when, at the request of the Surgeon General of the Army, the National Research Council brought together a group of scientists, engineers, surgeons and prosthetists for the purpose of establishing standards for procurement of prostheses. At this meeting it was soon learned that the development of artificial limbs had proceeded through the years without the benefit of a scientific approach, whereupon it was recommended that the Government support a research program in this field.

As the result of this program our own disabled veterans have prosthetic devices far superior to those found anywhere else in the world.

Just as we are interested in sharing the technical advances in nuclear energy for peaceful purposes with the rest of the world, we could make a significant contribution to the effective understanding of American ideals of democracy and the value we place on human worth and dignity, if through an appropriation of $1 million or $2 million a year we could share our advances in artificial limbs with the world. Through demonstration centers, consultations, mobile clinics, and the training of foreign personnel in the United States, a magificent program could be established. With the sum of $1 million a year for 2 years both the administrative and professional overhead cost of such a project could be met; highly qualified American consultants could visit all parts of the world and survey what is available and what is needed; 4 completely equipped mobile prosthetic shops, each staffed by a qualified American prosthetic technician and physical therapist, could be sent to southeast Asia, the Near East, north Africa, and South America to spend 4 to 8 weeks in a given community rendering direct patient services in fitting prosthetics and training wearers in their use; permanent demonstration prosthetic shops and training centers could be established in key parts of the world; and the components to provide modern artificial limbs could be made available to over 40,000 amputees; over 100 trainees could be brought to the United States for training in prosthetics; and all of the available technical literature and visual aids in prosthetics here in the United States could be translated and published in various languages for international distribution.

These prosthetic trainees would then join the 400 health workers receiving advanced trained by the United States under the auspices of the International Cooperation Administration. They and hundreds of others trained under the auspices of private foundations, their own governments and their own resources, are permanent ambassadors of our democratic ideals. Such persons make particularly effective proponents for democracy because as professional people they work intimately with their handicapped patients and have their confidence and trust.

Somewhere within the spectrum ranging from direct relief to long-range economic projects there is a need for significant, tangible, short-range projects that can be seen and easily understood. The Russians produced such a project when they paved the main street of Kabul in Afghanistan. Our foreign-aid projects there have been of economic importance, but their impact on the daily lives of the people will not be felt for many years. In contrast, several times each day the residents of Kabul have reason to be grateful to Russia.

This is the kind of an imaginative, constructive project which can be easily seen and understood. There are many hundreds and thousands of disabled persons throughout the world, each of whom could also become a living, dynamic example of American democracy. To illustrate their potential contributions I should like to tell you the story of a little Bolivian boy, age 10. He was born without arms and legs, with four little, sensitive fingers coming out of each shoulder, and 2 normal feet coming from the hip joint, but with no bony connection. When he was a year old he was abandoned by his father who then deserted the family, and has not been heard of since. The boy spent the next 8 years of his life in an American mission in La Paz, where he had love and kindness, but could not walk. To get from one place to another he rolled like a little ball. He was seen there by a young physician from the United States, who called me and said he had met this little boy, who was exceedingly bright, and who, if he had a chance, he felt, could be a great force in the world. Pictures and case reports were sent, and by coincidence seen by the Secretary of one of our distinguished citizens. She made possible his trip to the United States.

Two weeks before he arrived I had the Vice President of Bolivia and the Bolivian Ambassador to the United Nations for luncheon. They knew all about Juanito and were excited about his coming. In the middle of the meal I said to them, "You know, if we bring Juan here, it is going to cost you a very large fee."

In consternation, they said, "How much?" I said, "The fee is this. First, that when he returns, you must promise him the best education your country affords, and second, if we can demonstrate in the most severely disabled child you will ever see what can be done, you will establish a national rehabilitation program in Bolivia."

Without hesitation, the Vice President said, "You take the boy; we pay the fee."

When he arrived, he spoke no English. Within a month, he had a vocabulary of more than 300 words. Special prostheses were designed and he now is walking. He has "grown" more than twice his height. He is doing well in school and one day soon will be ready to go back and take his place in his own country.

Several months after he was in the United States, the story was published in a national magazine. A few weeks later, a letter came to the editors which read as follows:

"Congratulations on a brilliant piece of reporting. Am referring to your (February 21) on Juanito Yepez, the congenital quadruple amputee from Bolivia. * * * For those of us who are in and out of Central and South America we found your article on Juanito gained us more friends (and respect) than all the millions our Government is pouring into these countries. We noted no sudden pro-United States of America feeling in Brazil as a result of the $75 million donation (given Brazil by the United States), but we were pleasantly surprised with the many compliments for what the United States of America is doing for Juanito. I do not know what your circulation is in Latin America but can tell you the peons in the backwoods knew all about Juanito within 24 hours after the issue was on the streets."

"E. E. BUTLER,
"Master, S/T Adrias.
"TAMPICO, MEXICO."

What we need in the United States are friends like Juanito Yepez all over the world, with the recognition that in the United States we believe in the dignity of the individual and because of that belief want to share the things that we have learned in our country. We are not doing this to make friends—we are doing this to give service. If the service and the spirit are there, then we can't help but have their friendship.

Into the Daylight of New Living

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD I should like to include an article by John Herling from the Washington Daily News for Tuesday, May 29, 1956, entitled, "Into the Daylight of New Living." This article deals with the dedication of 10 memorial hospitals in the mining areas of West Virginia, Virginia and Kentucky, which have been built and financed and will be operated by the United Mine Workers Welfare and Retirement Fund for the benefit of miners and their families, and also of others in the community. These hospitals, along with so many other benefits, are the product of the inspired leadership of John L. Lewis, president of the United Mine Workers of America for the past 37 years. At the time of dedication of these splendid hospitals, this coming weekend, I should like to add my word of praise and good wishes for the great organization that they represent. The article is as follows:

NEW LEWIS EFFORT FOR MINERS: MEMORIAL HOSPITALS—INTO THE DAYLIGHT OF NEW LIVING

(By John Herling)

This is a Decoration Day story with a slight difference.

Once upon a time, the American coal miner thought he was the loneliest, hungriest, and most exploited man alive. He would look at his wornout, hard-worked wife, his constantly growing family, his wretched shack of a house, and he would think dark thoughts. He believed himself so forgotten that nobody cared whether he was dead or alive.

Every once in awhile, the miner would have to prove he was actually alive. He would stand on his hind legs and yell for dear life. Then stories would come storming out, telling of uproar and strikes in places like Harlan, Ky., and Williamson, and Beckley, W. Va., and scores of other places, like Cabin Creek, Man, and Hazard—all with names which were allegories of his plight.

The miners were sure enough raisin' hell. Sometimes their demands were not too clear or even misrepresented. The miners didn't much care. There were so many things to protest against, they didn't bother which particular thing it happened to be.

DISASTERS

Sometimes, indeed, the rest of America would be swept by a great sense of guilt and pity: Mine disasters.

The picture of grief became almost a fixture of the American social scene; this recurring tragedy piled on the endless misery of the miners' way of life. But men or miners could not live on the cake of compassion. They needed more than a relief basket or a brisk flurry of Red Cross activity.

So, on and off for 66 years now, the United Mine Workers have been talking up for the coal miners. Unless you can understand this background of the miners union, you can't grasp why the miners union was a marching, often growling crusade, sometimes singing, always fighting, maneuvering, and punching. You have to remember this to grasp the meaning of the power and the influence of a man like John L. Lewis.

STANDARDS

President of the miners for the past 37 years, John L. Lewis has yearly, year-in, year-out, directed massive will and supple intelligence to one chief end: the raising of the living and working standards of the coal miners and their families. He has led them out of the shadow of isolation into daylight of community living.

Recently, Dave Dubinsky, president of the Ladies Garment Workers Union, who is quick to point to the geologic faults in the Lewis personality, told me he considers Mr. Lewis the greatest and most creative labor leader of the past quarter century, not merely the most colorful.

Considering Mr. Dubinsky's own major achievements, this was a generous estimate of another leader. But this coming week end, Mr. Dubinsky could add something more spectacular to the Lewis list.

In honor of unnumbered miners who suffered and died before this era, many thousands of coal miners and their families are gathering at Beckley, W. Va., to dedicate officially a series of 10 "memorial hospitals," built, financed, and staffed through the United Mine Workers Welfare and Retirement Fund.

There will be hospitals in Harlan, in Williamson, in Beckley, in Pikeville and McDowell, in Middleboro, Man, Hazard, Whitesburg, and Wise—coal towns stretching over three States—Virginia, West Virginia, and Kentucky, a distance of 300 miles, connected by winding mountain roads, once separated from the world outside.

These 10 hospitals are being financed out of the 40 cents every coal operator has to pay for ever ton mined in a unionized mine. Ten years ago, they paid a nickel. Mr. Lewis raised it to 40 cents.

In an area once witheringly described as a "hospital wasteland," these 10 hospitals will be the most complete, scientific establishments in the medical field. Although the first responsibility will be toward the 400,000 miners and families in that area, the hospital will become community centers, available even to those whose families never dug coal.

Civil Rights Proposals

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. ABBITT. Mr. Speaker, there is growing up today in the South a strong resentment to the so-called civil rights proposals which are being pressured upon the Congress during this time. Few issues in our history have ever brought forth as much debate, confusion, and discord as have been created by the Supreme Court decision on school segregation and the civil rights bills.

Typical of this resentment is a letter prepared for the Richmond Times Dispatch by Mr. Walter F. Ford, attorney at law at Emporia, Va., which I would like to include herein with my remarks.

I want to commend Mr. Ford for setting forth in brief and explicit terms the whole issue involved in the civil rights proposals as viewed by our people. I commend this for the reading of the Members of this body.

Mr. Ford's letter follows:

EMPORIA, VA., *May 22, 1956.*
EDITOR RICHMOND TIMES DISPATCH.

SIR: The Republican administration, at the instance of the NAACP has introduced and is now attempting to get a so-called civil rights bill through Congress.

This nefarious legislation, prompted and approved by the President of the United States, is just another attempt to put the South under carpetbagger rule, and fill our States with Federal snoopers, turn our courts into tribunals of inquisition, harrass, intimidate, and humiliate the people of the Southern States, and disrupt and destroy southern traditions and take from the States their constitutional rights to regulate their own affairs.

The motivation behind this proposed legislation, and its primary purpose is the same that prompted the scalawags and carpetbaggers to disfranchise southern people and divide the South into military districts, after the Civil War, in order to put over the 14th amendment to the United States Constitu-

tion, which had been rejected by Southern States.

The NAACP has gone punch drunk since they figure they have backing of the Supreme Court by its unconstitutional decisions, and the present Republican administration. My prediction is that they are riding to a fall.

My advice to our southern Senators and Representatives in Congress is to fight this ill conceived civil rights bill, so-called, to the last ditch, and if necessary tie up all legislation indefinitely until this attempt by the Republican Party and its allies is killed.

We, of the South do not want, nor do we need a Federal Gestapo to manage our local affairs. The Federal Government has already infringed upon States rights with the assistance of a New Deal packed Supreme Court, and if this policy is continued there will be no States rights, we will have a dictator, and a centralized government.

This is supposed to be a government by the people, and for the people, not for office holders, bureaucrats, and dictators, and it is time the people of these United States woke up and demand their constitutional rights.

The southern people have always managed their own affairs, including the race question, and there would have been no race question in the South but for interference by outside agitators. The southern people and the Negro have always understood each other, and worked together for the benefit of both races, but there are some people in the world who are never satisfied unless they are disparaging someone else or undertaking to meddle in affairs that do not concern them.

The Republican Party and the northern Democratic Party appear to be of the same stripe in their aims and purposes in relation to the South, and unless a candidate sympathetic to southern ideals and traditions is nominated, I see no alternative but the formation of a third party by the southern people and others opposed to unconstitutional encroachments upon their rights and traditions.

Yours very truly,

WALTER F. FORD.

Mutual Security Legislation

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. ADAIR. Mr. Speaker, as we are about to consider the Mutual Security Act for this year, I think the views of Mr. George Sokolsky upon this important question are worthy of note. Accordingly, I include, herewith, a recent column of his:

To the taxpayer, foreign aid is his contribution to national defense year after year, limiting his prospects of establishing a family reservoir of savings. Therefore, foreign aid has to justify itself by what it accomplishes in terms of the national defense. Its charitable phases have not been stressed by those who favor the program.

There are those who argue that foreign aid has some higher and nobler motive such as the redistribution of wealth from the richest Nation on earth, meaning the United States, to the weak and backward countries that have accomplished little with whatever advantages they may have. This noble cause is highly commendable as long as we have the money but for nearly a decade now, under such titles as the Marshall plan, mutual security, economic development, point IV, defense support, etc., etc., we have been spending tremendous sums of money and the question arises, what have we got for it?

By the end of the fiscal year 1956, the economic and military aid, contributed by the American taxpayer, will amount to approximately $55,800,000,000, according to the investigations of the Hoover Commission. Thirty-four agencies of the Government are directly or indirectly engaged in or related to foreign aid.

This goes far beyond the conception of most Americans, few of whom realize that the amount is so gigantic. The Hoover Commission found that 115,250 persons were employed in the distribution of this money of whom 84,569 were not Americans. The aid goes to 55 countries and involves about 2,000 projects.

EVEN MORE PROPOSED

Although there is considerable opposition to the continuance of aid of this enormous scale, the administration actually proposes increases which they justify as competition with Soviet Russia. Heretofore, Soviet Russia only aided its own satellite countries, but since Khrushchev has taken over, Soviet Russia is engaged on a salesmanship of aid, seeking to outdo the United States.

While Soviet Russia gives the impression that it engages in these financial enterprises with no strings attached, it actually has worked out an unusually ingenious method of utilizing experts as propagandists and while appearing to apply a doctrine of noninterference in the domestic affairs of a country, it uses the native Communist Party for exactly the purpose of taking control of a country's affairs.

The Hoover Commission strongly advises against "making loans to countries to support their defense, which they cannot repay."

The Hoover Commission also recommended that when grants or loans are made "an inspection service to insure complete adherence to the policies, objectives, and programs for each country" should be established. One of the recommendations of the Hoover Commission is bound to upset many of our representatives abroad who play at being bigshots. The recommendation is:

"That the overseas nonmilitary personnel of United States agencies be subject to the line authority and direction of the United States Chief of Diplomatic Mission in each country."

HOOVER CLAMPS LISTED

Certain recommendations of the Hoover Commission are of tremendous importance, as, for instance:

"That as all the countries in the original North Atlantic Treaty Organization have the highest degree of technical proficiency, the technical assistance by American personnel in these countries should cease.

"That as the original North Atlantic Treaty Organization countries are well able to send technical staffs to the United States at their own expense, the United States should cease to pay for this service.

"That no economic aid should be granted for projects or undertakings where private investment capital is available for such projects.

"That, as recommended in our Surplus Property Report, we emphase the desirability of using excess and surplus property in connection with our foreign assistance programs."

It is interesting to note that all but one member of the Task Force on Overseas Economic Operations of the Hoover Commission had had some direct relationship to this problem and therefore any suggestion that their studies were theoretical and their recommendations impractical does not bear the test of study and investigation.

Private Versus Public Utilities—An Essay by Janice Ehegartner

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. RIEHLMAN. Mr. Speaker, it has been my privilege for several years to attend the annual party sponsored by the Lake Shore Republican Club in my district. Each year they have offered three prizes to students in the North Syracuse High School for the best essay written by them on current issues. This year I was honored by being permitted to award the prizes and listen to the reading of the papers. The first prize winner was Janice Ehegartner. Her subject was Private Versus Public Utilities. I was much impressed with this student's knowledge of the subject and therefore wish to include her essay as part of my remarks:

PRIVATE VERSUS PUBLIC UTILITIES

(By Janice Ehegartner)

Fear and mistrust of Communist principles have made free people all over the United States suspicious of socialistic advances in our own country and in the entire world.

Often it is not easy to recognize such undesirable influences in a democracy such as ours. And, for this very reason, citizens of our Nation are unable to detect the creeping socialism present in the practice of Government ownership of various power utilities throughout the country.

Public versus private power has been a main subject of debate in Congress for many years. It is a problem which is vital to the future well-being of the American people. It affects every community in the United States, for people all over the Nation enjoy widespread, economical electric service.

A recent survey in 1936 showed that 95 percent of the total power supply in the country was maintained by private utilities. Therefore, it is obvious that nationwide furnishing of electric power was overwhelmingly due to private enterprise. Today, a much smaller percentage of power comes directly from privately operated companies. The cause of this somewhat abrupt change is traceable to Government management of many powerplants in the United States.

Forty years ago agitation for Government ownership was centered on the railroads. Meanwhile, power utilities were raised to a high degree of efficiency, but the railroads were beset with many perplexing problems. Therefore, advocates of public ownership were in favor of having the Government take over some industry already raised to a high degree of efficiency by private management, and claim that efficiency a result of Government operation. This, of course, led to the Government's establishment of various powerplants throughout the United States.

The Dixon-Yates controversy in 1955 revealed old arguments concerning public and private power. The center of these arguments was the TVA, the oldest of the Government's large power development projects. In 1933 the TVA was planned to develop industry, agriculture, and navigation and to prevent floods. The power from these operations was sold to the people in the Tennessee Valley at low rates. However, this organization was attacked by leading Republicans

and Democrats as a form of socialism. They maintained that private enterprise was successful in such power developments and would be capable of handling the Tennessee Valley problem.

Dixon-Yates proposed taking over power operations in the Tennessee Valley at the discretion of the Atomic Energy Commission. However, many Congressmen and officials of the Government opposed this project. They claimed that taxes would be increased and the destruction of TVA would be threatened. Mr. Dixon replied that there naturally would be a small increase in taxes. Private utilities have to pay taxes but public utilities such at TVA do not.

How can this be justice? Why should our great Nation be socialized by the evils of Government ownership and operation of electric utilities? The utilities business has been singled out for such an attack because it is both sound and prosperous, and because it would be a great step toward the socialization of our industries. It is true that the Government can afford power at low rates, but there is no tax on their operations. This is not fair to the American people's future.

The Federal Government has been successful in its power projects. However, there are many defects in these operations. The Columbia River power development is so far away from a large market for power that it is a burden to the taxpayer. Nevertheless, these Government establishments have supplied economical power to the people in their respective surrounding areas. They are situated all over the United States, ready to supply our military needs when the time comes for action.

Will we be in the tide of socialism—the basis of Communist rule—when the call is sounded? We must stop this creeping socialism before it attacks our entire country. It is doubtful that President Eisenhower's concept of a public-private, local-Federal partnership will prosper. We must, therefore, preserve our democracy by keeping strong hold of the democratic principles under which our great Nation was founded.

Consequently, it is extremely necessary to prevent the growth of Government ownership of public utilities and encourage the rise of private enterprise to save our great democracy.

Recognition of Organizations of Postal and Federal Employees

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. HOLTZMAN. Mr. Speaker, I am today introducing in the House of Representatives a bill which would amend section 6 of the act of August 24, 1912, as amended, with respect to the recognition of organizations of postal and Federal employees.

This is a companion bill to the one introduced by Congressman GEORGE M. RHODES, of Pennsylvania, and would extend to any national employee organization representing postal or other Federal employees, the right to present in behalf of such members any grievances to the department or agency concerned.

In my opinion, passage of the union recognition bill would do much to boost the morale of our Government workers, and, in addition, would permit them to discuss, through their representatives, the policies affecting their working conditions, safety, in-service training, labor-management cooperation, methods of adjusting grievances, transfers, appeals, granting of leave, promotions, demotions, rates of pay, and reduction in force.

Employees of the Federal Government as well as those in private industry are entitled to job protection, and I believe that this will be a step in the right direction.

I urge the members of the House Committee on Post Office and Civil Service, to which the legislation has been referred, to give it prompt and serious consideration at this time, with a view toward reporting it out in the near future.

The bill is as follows:

A bill to amend section 6 of the act of August 24, 1912, as amended, with respect to the recognition of organizations of postal and Federal employees

Be it enacted, etc., That section 6 of the act of August 24, 1912 (U. S. C., 1946 edition, title 5, sec. 652), as amended, is hereby amended by adding a new subsection to read as follows:

"(e) (1) The right of officers or representatives of national employee organizations or local officers of such national organizations representing employees of a department or agency or subdivision of such department or agency, to present grievances in behalf of their members without restraint, coercion, interference, intimidation, or reprisal is recognized.

"(2) (A) Within 6 months after the effective date of this act, the head of each department and agency shall, after giving officers or representatives of employee organizations having members in such department or agency an opportunity to present their views, promulgate regulations specifying that administrative officers shall at the request of officers or representatives of the employees' organizations confer, either in person or through duly designated representatives, with such officers or representatives on matters of policy affecting working conditions, safety, in-service training, labor-management cooperation, methods of adjusting grievances, transfers, appeals, granting of leave, promotions, demotions, rates of pay, and reduction in force. Such regulations shall recognize the right of such officers or representatives to carry on any lawful activity, without intimidation, coercion, interference, or reprisal.

"(B) Disputes resulting from disagreement between employee organizations and departments or agencies on the policies enumerated in subsection (e) (2) (A) shall be referred to an impartial board of arbitration to be composed of one representative of the department or agency, one representative of the employee organization, and one representative appointed by the Secretary of Labor who shall serve as chairman. The findings of the board of arbitration shall be final and conclusive.

"(3) Charges involving a violation of this subsection shall be referred to an impartial board of arbitration to be composed of three members, one to be selected by the organization making the charge, one to be selected by the head of the department or agency involved, and the third, who shall act as chairman, to be designated by the Civil Service Commission. The findings of this board of arbitration shall be final and conclusive as to the fact of violation and the head of the department or agency involved shall take such action as may be necessary to cause the suspension, demotion, or removal of any administrative official found by the board of arbitration to have violated this subsection.

"(4) This subsection shall not apply to the Central Intelligence Agency or the Federal Bureau of Investigation."

Twelve Guides for Businessmen

EXTENSION OF REMARKS
OF
HON. JACK B. BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. BROOKS of Texas. Mr. Speaker, as we continue our work in the home stretch of the very busy and fruitful 84th Congress, a remarkably well done set of guides for businessmen who are actively interested in legislation has come to my attention.

This list of guides was compiled by the Beaumont, Tex., Chamber of Commerce and is being widely distributed by the chamber's governmental affairs committee.

A great deal of our time and effort here is devoted to securing more efficiency in government; and every successful businessman is vitally concerned with the efficiency of his own business as well as the Government. This splendid set of guides, I believe, would help both the businessmen and Members of Congress to do a better job in understanding mutual problems. In following these general principles, the businessman would communicate more effectively with his Congressman, and in turn, the Congressman would have a better opportunity to know and work with the businessmen of his district.

I feel sure every Member of the House will be interested in looking over Twelve Guides for Businessmen and I would ask consent of the Members that it be included in today's RECORD:

TWELVE GUIDES FOR BUSINESSMEN

Don't look down on government and politics. They have their faults but so has business. A disdainful attitude is an expensive luxury these days.

Be understanding. Put yourself in a legislator's place. Try to understand his problems, his outlook, and his aims. Then you are more likely to persuade him to do the same in understanding business.

Be friendly. Don't contact your legislator only when you want his vote. Invite him to visit your place of business. Invite him to be a guest at your business organization functions. Take pains to keep in touch with him throughout the year.

Be reasonable. Recognize that there are legitimate differences of opinion. Never indulge in threats nor recriminations. These are confessions of your own weakness.

Be thoughtful. Commend the right things which your legislator does. That's the way you'd like to be treated.

Don't be a busybody. Legislators don't like to be pestered or scolded or preached to. Neither do you.

Be cooperative. If your legislator makes a reasonable request, try to comply with it. Don't back away for fear that it's a deal or that you're getting into politics.

Be realistic. Remember that most controversial legislation is the result of compromise. It always has been so and it always will be so in a democracy. Don't ex-

pect that everything will go your way, and don't be too critical when it doesn't.

Present accurate facts and good arguments. The mere fact that you want or do not want a piece of legislation to go through isn't enough. If an issue goes against you, don't rush to blame the legislature for failing to do what you wanted. The failure may be yours. Make certain first that you did a good job in presenting your case.

Give credit where it is due. If an issue goes the way you wanted, remember that legislators always deserve first credit, for their votes decided the issue. And remember also that on all the big issues, many organizations and individuals participated on your side. Do your part to make certain that credit is shared by all of them.

Learn to evaluate the issues. The introduction of a legislative bill doesn't mean that it will become law. Whether you're for it or against it, don't get excited about it until you learn the who, what, and why of it. And don't use a cannon to kill a fly. An absurd bill generally kills itself. It's not wise to attract too much attention to it.

Support your legislator actively, if he's running for reelection and if you believe he deserves it. Don't become aloof at the time when he needs help the most.

The Late William T. Granahan

SPEECH

OF

HON. WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1956

Mr. GREEN of Pennsylvania. Mr. Speaker, in the death of BILL GRANAHAN this House has lost a Member, who for 10 years has distinguished himself as an able, conscientious legislator, who discharged his duties scrupulously and who worked tirelessly for the best interests of his country and the constituency that sent him to us.

It was my privilege to have known BILL GRANAHAN for more than 20 years. For more than 10 years I served with him here in the Congress. I knew him socially. I met him in the furore of political campaigns. I worked with him on this floor, in committees and in conferences and at all times and in all places he impressed me, as he did all the Members of this body to whom I have spoken, as a man of character, determination and ability. He will, indeed, be missed by all of us.

BILL GRANAHAN was a pleasant, affable man and a very wise and discerning student of his fellowman. In the many, many years that I have known him I doubt that he ever made an enemy. His gentle manner will linger with his friends always and yet he could fight for the right with the best of them. BILL GRANAHAN just got along with everybody and stirred up no animosities. He was friendliness personified, a quiet, engaging gentleman. I deeply regret the loss of so fine a friend. The Nation, the Members on both sides of the aisle and particularly the West Philadelphia area are poorer for his passing. To his devoted wife, Katherine, and to the other members of his family, I extend my deepest sympathy.

Address of Hon. Edith Nourse Rogers, of Massachusetts, at Dedication of Billerica, Mass., High School

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1956

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by myself at the dedication of the new high school at Billerica, Mass., on May 30, 1956:

Mr. Hines, Commander Walker, Mr. O'Brien, veterans and other distinguished guests, students of the Billerica High School, and other schools, ladies and gentlemen:

It is always a very great pleasure for me to come to Billerica and visit with all of you who have been such wonderfully fine and loyal friends over so many years. This is indeed a great occasion both for this community and for me. It is extremely thrilling for me to contemplate the full meaning, if that is possible, of the event we are celebrating here this afternoon. To be invited to address you on this significant and unusual occasion is for me a great honor—an honor which I shall always remember.

In the complex social and economic structure of our country there is no unit of that structure more important and more basic than the family unit. Upon the development and strength of the family unit depends the strength and future of America. As fathers and mothers you are concerned and anxious to have your children receive the very best preparation, the best possible education for the responsibilities they must eventually assume and the leadership they must provide. Your children are concerned too and are anxious to obtain the very best preparation for that future time when they must be the leaders and shoulder the responsibilities of not only this community but also those controlling our Nation's destiny.

Just as it has been in the past, it is more a fact today that superior leadership is very scarce. As our country continues to grow and develop, as life and conditions continue to change, the need becomes greater and greater for persons well trained in their respective professions and possessing excellent judgment, able to make the right decisions and able to initiate and originate new methods and new solutions, for the complex problems of our civilization. Basic and fundamental education is now, more than ever before, a necessity. It is a requirement if our country is to maintain its top position in world affairs.

Education may be divided into three necessary parts. There must be the ability and the will to learn among the youth and our Nation's young men and women. There must be adequate numbers of excellently trained teachers in a profession made attractive in principle as well as a way of life. There must be adequate physical facilities, such as buildings, libraries, and laboratories, such as this fine new high-school building we are here to dedicate this afternoon. America posseses all of these, but not in the right proportions or in adequate numbers.

There are increasing numbers of students with the ability and will to learn. There are not enough teachers, largely because the present income of teachers is not sufficient to guarantee a comfortable way of life in comparison with other professions. This fault must be corrected. There is still much to be done in the construction of adequate physical facilities. This new Billerica High School is an example of the improvement that is taking place all over the country. As time goes on the education of the children of America will continue to improve, and as a result our country will be a greater and finer nation.

Only a few days ago with mixed emotions we read of the successful explosion of a hydrogen bomb dropped from an airplane with a devastating force of 20 megatons. We were astounded, shocked, proud, and, without question, sad. These were our mixed emotions. Exemplified by this explosion and many other great achievements is the tremendous march of the knowledge of science in our country today. In his perseverance, constantly raising the curtain of the unknown, man has reached the frightening crossroads where if he makes the wrong decision he will destroy himself, for within his hands there is this power.

In the vast area of physical and scientific knowledge there are many secrets. As mankind discovers these secrets and unlocks the forces they hold, man can either use these forces for benefit or destruction. To unlock the doors to fission and fusion, the intelligence of man has given to civilization a very great power. If this power is used to make for mankind a greater and more beneficial type of civilization, then these discoveries are indeed fine and good. If, on the other hand, these forces which are now completely in the control of the intelligence of mankind are used for destruction, then indeed they are wrong and bad.

If in his knowledge and wisdom and perseverance mankind has discovered forces which, uncontrolled, will force those of you here and in every community throughout America to carve out caves of safety in the sides of the great rocks or construct shelters deep in the ground, just as mankind lived in the days of his dawn on this earth, can it then be said that with all his knowledge man has indeed progressed? At the crossroads which I mentioned stand all of us, you and I. As we choose our path we must be right. The path we choose for our Nation to take must be right. The decisions we must make now which concern all of us must be right. The alternative to right is now completely beyond all comprehension.

If we concentrate upon these tremendously important decisions which face us an individuals and as a nation, now and in the future, we can so easily comprehend the significance of this unusual event we are celebrating this afternoon. On this Memorial Day afternoon, we are engaged in the dedication of a magnificent new building devoted entirely to education, one of the great essentials in our American way of life. But this education so important to mankind, must be channeled into benefits and not be the cause or the way of the annihilation of civilization.

Many of you here this afternoon are parents of young men and women who will experience all there is in this great new education institution. Many of you here are parents of children who will be absorbing much of the knowledge that is to be offered here in the years to come. And here today also are present, students who will experience the next 4 years in this magnificent new structure devoted to basic knowledge. Also here are children, tomorrow's young men and women, who will also have the wonderful privilege and honor of attending this wonderful new high school. All of you parents and students, both present and those of the future, have cause to be proud and cause to be happy that this great institution is actually in reality and waiting for you in this fine community of Billerica. You are proud and glad that this new institution is going to touch very basically all of your

lives and that you are going to be a part of it forever.

In an inspection of this new high school here in Billerica, it is only natural for many of us to look back over the years, at a comparison of this great modern institution with all its conveniences and physical equipment, to the high school of our day and its facilities. Compare, if you will, the buildings and equipment you used in your respective communities in your high-school days, as well as those which were available to your parents and grandparents, with this new modern high school. In any such comparison we know progress has in fact taken place, as it has taken place in every field of human endeavor. It would be, indeed, thrilling for me, and I know it would be thrilling for all of you parents here this afternoon, if we could somehow turn back the years and go back to high school in this wonderful new modern high-school building. Just as this would make our hearts skip a little faster, I am sure this wonderful new high school is a source of pride and an anticipated, exciting experience for you children, those students who will in fact have the great advantages in this modern new Billerica High School in the years to come.

This is an age of science. It is often referred to as the atomic age. It is an age when man's competition against man, requires knowledge and judgment to survive. Important as science is, important as is the whole field of knowledge, there are other values which are just as important, and are a significant part of our successful living and the future of our country. These values relate to a strong and well developed body, to a strong and well trained mind, to a great spirit that fears only God. These values relate to such qualities of life as fine character, the intellectual honesty and the courage to know the right and to stand and die for the right. These values relate to conscience, to understanding, to kindness, to thoughtfulness, to unselfishness and to moral integrity. These values all are involved in the necessity of community cooperation, in the work of the Nation, and in the peace of the world. Without these values man will use the great power he now possesses to destroy his own civilization. It is upon these values that man must depend, if his world and his civilization are to be saved through the control of these gigantic forces he holds within his power.

Here in this beautiful new Billerica High School all of these values which I have mentioned will be developed in the young men and women who have the honor and the glory of attending this new modern institution. Science, literature, languages, history, and all of the arts represent fields of basic knowledge. All are necessary and all have their use in the educational process. Important as learning is, however, it is more important to know how to use one's knowledge properly for the benefit of improving life and living during one's time and privilege upon this earth. Here in this new Billerica High School all of you parents will see your children enter as children and graduate 4 years later as well trained, well balanced young men and women. In addition to basic knowledge gained, they will possess strong bodies, strong minds, a strong faith and a God-fearing spirit. They will be prepared and ready to take their next step, whatever it may be, in the direction of future leadership.

Just as we compare this new Billerica High School with the physical facilities of years gone by, it is also possible to compare the quality and methods of instruction and teaching, for in this noble profession there also have been great strides of progress. In the days years ago, one teacher gave instruction in all of the subjects in the curriculum, and in some cases instructed all of the classes. There was one teacher for the entire high school. Today our teachers are specialized and only teach the subjects in which they are specialists. They are fine scholars in their respective subjects and are expert in their knowledge and presentation of all the elements involved in their particular subjects of instruction. As a result of this specialization, teachers in our high schools today, as well as in our colleges and universities, only instruct in 1 or 2 subjects but in doing so teach hundreds of students.

A teacher in the modern high school is a part of a very important and a very great profession. Just as our Government has done much, and is doing more and more to improve the physical facilities of high schools, through the erection of fine new modern buildings, such as this new Billerica High School, so also must the Government aid in every way possible, in the improvement and the making more attractive, the noble profession of high school teaching. This is progress which cannot be overlooked. It is progress that must be accomplished in the near future. I am confident it will be done.

As we look across the valleys to the far off horizon and focus our attention on the possibilities of the future we know in fact that, knowledge is power. Among the young men and women who will have the privilege and opportunity of attending this fine new Billerica High School, and among the young men and women in communities like Billerica all over the Nation, America must depend upon its leadership of the future. Among the students of future years, who will graduate from here, there may be a great scientist, there may be a great teacher, there may be an inspired leader of the church, there may be a great actor, there may be a great doctor or lawyer, or a great musician. Among these students there might be a future Member of Congress, a future United States Senator, yes, there might be a future President of the United States. It is from among these students our leaders in all walks of life must come. The teaching they receive here, the inspiration and values they develop here, the fundamentals they acquire here, all will have a bearing upon the type and quality of the leadership they bring to our country in the life of tomorrow.

Ladies and gentlemen, like you I love my country, the great principles of its foundation, the great accomplishments it has achieved over the years for the benefit of mankind everywhere, its enormous sacrifices and contributions to maintain and establish freedom, its freedom of religion and the right of everyone to worship God in their own way and all of the rights and privileges we enjoy as Americans.

I am proud of our power and strength as a Nation. I am proud we possess the power of the hydrogen bomb. But over and above this pride, I am proud that our America will never use this power aggressively, to injure or cripple mankind anywhere. I am proud of the fact our leadership today possesses the balance and judgment necessary to make the right decisions at the crossroads.

Many despair of the future. Many are fearful man is on the threshold of his own destruction. I do not possess this fear. On the contrary, I possess the confidence the march of scientific discovery and knowledge in America will always be shaped and molded into benefits for mankind. This confidence I possess is inspired by the countless numbers of the young men and women of America I have talked with, observed, and appraised, like those here in Billerica, who will have the privilege and honor of attending this magnificent new high school. I have this confidence because I know that within their ranks is endless material for greater, wiser, and more unselfish leadership than any we have experienced and known thus far.

The young men and women who are attending our high schools today, know full well the great responsibilities they must shoulder in the near future. They are preparing themselves. They are getting ready and when their time comes, I know they will be ready. It is because of this confidence that I have in them, the young men and women of today and tomorrow, that I know our great country is safe. I know they will find the solution to ultimtae peace throughout the world. I know that in the life to come, they will meet their tests and challenges successfully, and the march of knowledge and science will be channelled into peaceful processes, for the benefit of mankind throughout the world.

June 2, 1956, 10th Anniversary of Italian Republic

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1956

Mr. RODINO. Mr. Speaker, one of the most remarkable comeback stories of the postwar years has been the restitution of Italy into good standing as one of the democratic nations of the Western community. Its record of internal reconstruction and rehabilitation and international cooperation, since the birth of the new Republic on June 2, 1946, has been outstanding. There is no doubt that the world has gained a new and stable democracy.

This Italian comeback was no easy task. The war had shattered Italy's economy; inflation was rampant, and the rate of unemployment was unusually high. Furthermore, this economic disorder bred political instability, hunger, and despair, providing fertile ground for the expansion of communism on the peninsula. Eagerly and industriously, however, the Italian people under the astute political guidance of Alcide de Gasperi—the first Premier of the Italian Republic—set to work to rescue the suffering country from the brink of chaos.

We can, incidentally, take pride that our aid program helped the Italians in their struggle to get back on their feet.

In addition to achieving internal economic stability the infant Italian Republic has gained prestige internationally. Italy became a partner in the North Atlantic Treaty Organization and eagerly supported a policy directed toward military and economic integration with Western Europe. Again with United States assistance, under the Mutual Defense Act, Italy has equipped her army, navy, and air force with modern military equipment and material and has become an effective unit of the Western defense system.

Today is the 10th anniversary of the birth of the Italian Republic. When one considers that Italy has achieved internal economic stability and international recognition in these few years, it makes the story of her comeback even more astonishing.

It is with intense pleasure that I join with all America in applauding Italy's tremendous progress on this anniversary day.

Fred A. Seaton

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. WEAVER. Mr. Speaker, just a few days ago a distinguished citizen of my district and my home State of Nebraska was selected as Secretary of the Interior. This appointment, tendered by the President, was enthusiastically and wholeheartedly received by those who know Fred Seaton and have worked closely with him. Likewise, it has been favorably received by the press, generally, because of his splended record of public service to Nebraska, the Midwest, and our Nation.

Fred Seaton is a man of firm convictions—a loyal, conscientious, and capable person who will perform in this job, as in any other, in a most commendable manner. This is an appropriate recognition of his caliber and ability. It is a signal honor for Nebraska—previously accorded to only two other outstanding Nebraskans, J. Sterling Morton and William Jennings Bryan.

I urge all of you to read the editorial comment from the Washington Post and the Washington Evening Star, as well as what the home folks think of Fred—from the two leading metropolitan newspapers of my district and Nebraska, the Lincoln Evening Journal and the Lincoln Star:

[From the Washington Post of May 29, 1956]

CHALLENGE IN INTERIOR

President Eisenhower has used splendid discretion in nominating Fred A. Seaton to be the new Secretary of the Interior. Mr. Seaton is one of the most sensitive, progressive, and broad-gaged members of the Eisenhower administration. He is admirably equipped to give the Department the sort of nondoctrinaire direction it needs in order to protect the Nation's natural resources and provide for their judicious use. There is special reason for gratification because the President disregarded the pleadings to appoint a mere replica of former Secretary McKay.

Mr. Seaton, a liberal Republican who was among President Eisenhower's early supporters, was mentioned for Secretary of the Interior after the 1952 election but reportedly declined the appointment at that time. That he enjoys the deep confidence of the President has been shown by his role in the White House, where he has been an assistant in charge of administrative liaison. A Nebraska newspaper publisher and stock raiser himself, he has served as a troubleshooter on agricultural problems and had a great deal to do wtih the soil-bank proposal. Previously he served as Assistant Secretary of Defense for Public Affairs, a post in which he demonstrated an awareness of the public interest in adequate information—an awareness which unfortunately has not been displayed at top levels in the Pentagon since he left. As interim Senator from Nebraska appointed after the death of Kenneth Wherry in 1951, Mr. Seaton voted his conscience without regard to political consequences. He flew back from Germany in order to vote against the McCarran internal security bill.

Mr. Seaton can be relied upon to scrutinize carefully the charges of giveaway that have been leveled at tlhe Department of the Interior. He also can be relied upon to have little patience with the notion that the protection of public resources against private encroachment is socialism. It will not be easy for him to remedy all the weaknesses in departmental administration under the regime of Secretary McKay or to disavow the narrow policies of his fellow Nebraskan, Under Secretary Clarence Davis. But Mr. Seaton will assuredly give the Department conscientious, enlightened and responsive direction. We congratulate him and the President on a fine appointment.

[From the Washington Evening Star of May 29, 1955]

SECRETARY SEATON

It is doubtful that the President has made any appointment which has received more widespread approval than his choice of Fred A. Seaton to take over the hot spot in the Interior Department.

At his May 9 press conference Mr. Eisenhower, with a show of understatement, said there were difficulties in finding exactly the right man to succeed Secretary Douglas McKay, who left the Interior Department to go forth and give battle to Senator WAYNE MORSE in Oregon. In turning to Mr. Seaton, however, the President has come about as close as possible to finding exactly the right man for this important and politically sensitive job. It is significant in this respect that Senator MORSE is among those praising the appointment as a very good one.

Although he is only 46 years old, Mr. Seaton has had a rich and varied experience. His background in his home State of Nebraska is that of newspaperman and cattle raiser. He came to the Senate by appointment after the death of Kenneth Wherry, and also served as Assistant Secretary of Defense for Public Affairs. Recently, as a White House deputy, he has served as a topnotch troubleshooter for the President. As liaison man with Congress, Mr. Seaton has been especially effective in the fight over the farm bill.

If there is any dissatisfaction with the appointment, it will be found in the more conservative wing of the Republican Party. But Mr. Seaton is wholeheartedly committed to the Eisenhower brand of republicanism, and there is no doubt that he will battle faithfully and effectively for the President's policies. And as a sort of extra dividend, his advancement to the Interior Department post can be expected to blunt the Democratic political assault on the so-called giveaway policies of his predecessor.

[From the Lincoln (Nebr.) Evening Journal of May 29, 1956]

MORE OR LESS PERSONAL: A CHAT WITH THE EDITOR

Fred Seaton, of Nebraska, is admirably qualified for the secretaryship of Interior. He knows the needs and aspirations of the West, and the realities of government and politics, and of course he is intimately in tune with President Eisenhower's progressively conservative philosophy.

His elevation to the Cabinet measurably strengthens the Eisenhower administration. Conservationists generally will acclaim it.

SECRETARY SEATON

The dispatches on the national news wires do not begin to suggest the extent of Fred Seaton's qualifications for this tremendously important assignment. A successful businessman, he is identified with not just one, but with 5 of the 17 reclamation States—having publishing interests in Nebraska, Kansas, South Dakota, Wyoming, and Colorado. As such, he has participated actively in many phases of the development of the natural resources of the Plains, and for years has lent support to every sound conservation cause. As a former United States Senator, who made his weight felt in a very short time on Capitol Hill, he has applied to each subsequent assignment a splendid understanding of the executive-legislative relationship. As an assistant secretary of defense, to whom fell some top priority tasks of a non-publishable nature, and later as deputy assistant to the President, he has demonstrated unusual administrative skill.

In recent months, from his White House desk, Seaton actually has been performing in some respects as a sort of secretary of natural resources without portfolio, helping co-ordinate the resources functions of the Interior, Agriculture, and Defense Departments.

A trusted Eisenhower adviser from the very outset of the 1952 campaign, Seaton has handled an endless variety of ticklish problems with finesse and good judgment, from the Nixon flareup of 1952 to the farm problem of 1956, and has proved to be a shrewd, even brilliant, strategist. With the successful execution of each successive assignment, he has grown steadily in stature and in the confidence of the President.

Ike knows exactly what he is getting in the Cabinet—a moderate progressive of skill, judgment and complete integrity, and an energetic doer.

Fred did not seek—or want—this job; it has come to him as a genuine surprise. It is of course a bitter personal disappointment to another splendid Nebraskan who has proved his mettle in Washington, drawing on his head a good deal of undeserved and unfair criticism. But Undersecretary of Interior Clarence Davis proves his own stature again by his decision to stay on the job despite the disappointment. Seaton and the administration need his experience and talent.

If anyone had "earned" the secretaryship, Davis probably had, having actually run the Department perhaps as much as Secretary McKay, having hammered together the President's report on water resources policy which even the most vociferous critics of McKay and Davis admit is a constructive document, and having sat in the Cabinet on many occasions. But he is too experienced in Government himself not to understand that you do not "earn" this particular position. He knows the peculiarly personal relationship between the President and his Cabinet, and the nature of the Cabinet as the President's own personally chosen circle of advisers and administrators.

This relationship, as much as his excellent qualifications, made Seaton a perfectly logical choice.

RAYMOND A. MCCONNELL Jr.

[From the Lincoln (Nebr.) Star of May 30, 1956]

OF MEN AND THINGS

(By J. E. Lawrence)

To our way of thinking, the President could not have made a happier selection for Secretary of the Interior than in his choice of Fred A. Seaton, Hastings publisher. We do not anticipate that Mr. Seaton will carry a flaming torch for public power. But at least he will know what it's all about, his natural sympathies will be in the right direction, and he has the rugged courage to face up with realities. Foremost among the realities today is that the Department of the Interior needs the capable, competent hand of Seaton, reinforced with the knowledge of the responsibilities of any Secretary of the Interior fully in tune with the times.

CONGRATULATIONS TO HIM

This is to extend heartiest congratulations to Mr. Seaton, native of Kansas, an adopted Nebraskan, and a man, we believe, with an enlightened forward-looking sense of public service. He has a job on his hands. We can be happier for Mr. Seaton than the new Secretary of the Interior can be for himself. An impression has taken root among a very considerable number of people, particularly those living in the 17 reclamation States, that under the administration of former Secretary Douglas McKay, who resigned to par-

ticipate in the Oregon primary for a Senate seat now occupied by WAYNE MORSE, reclamation policy has suffered. The great giveaway became a dinner table byword at altogether too many tables. While denials were many and on occasion vehement, the fact remains that there was a substantial feeling in this country that McKay and his two chief assistants, Clarence A. Davis, of Lincoln, and former Governor Aandahl, of North Dakota, had reshaped power policy more to the liking of the private utilities. They were said to be the chief exponents of the partnership doctrine—the partnership between Uncle Sam and the friendly electric companies, privately owned. And while the battle has not reached the boiling point, the fact is that any long-term thoughtful view of the program of conservation of natural resources in this country inherently is stoutly opposed to turning over the Nation's resources or spending the Nation's tax money to add to private profit for private enterprise. Mr. Seaton naturally endorsed the partnership program—is yet to give it application.

Mr. Seaton is more liberal, more enlightened and, we believe, closer to the heartbeat of the American people than Assistant Secretary Davis and possibly any other Republican Mr. Eisenhower could have chosen. Some steps may have been taken which are irreparable in their long-range consequences. We are in no position to pass judgment on that. And we recognize that these steps which we mentioned represent an honest difference in viewpoint and are open to criticism only on the basis of a conflicting philosophy with reference to the administration of the Department of Interior.

GREAT OPPORTUNITY BECKONS

Nebraskans who know Mr. Seaton will rejoice at his selection. He is a good man for the job. There are many tapelines to provide a measurement of him. He likes to work, is not afraid of long hours, grinding toil. If he chose, with his varied interest we believe Mr. Seaton could hoist his feet upon the desk in front of him, lean back, and take it easy. A great many men would choose that pattern if they occupied his place, instead of throwing themselves into the throbbing, punishing millrace which is Washington official life, its headaches, its sacrifices, and its physical burdens. Yet above it all, Mr. Seaton's appointment opens the door to him for signal service to the American people. In the development of river basin planning, the battle against floods, the expansion of irrigation so vital in this western country, the preservation of the forests and the care of the national parks—in this and in untold other matters Mr. Seaton has the opportunity for outstanding, unselfish public service.

We do not anticipate that he will be a crusader filled with the zeal and enthusiasm of one with a holy mission, but we have every confidence that he will turn out to be a most welcome replacement for Secretary McKay. This is to express a fervent wish for his fine success and faith that his vision will be clear-cut, his good right arm strong and purposeful.

The Late Alben W. Barkley

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks I would like to include the following resolutions adopted April 30, 1956, at the regular meeting of the Democratic League of Delaware:

MEMORIAL

At the regular meeting of the Democratic League of Delaware held Monday, April 30, 1956, the following resolutions were unanimously adopted:

"*Resolved*, That as members of the Democratic League of Delaware we record this expression of our sorrow at the death on Monday, April 30, 1956, of our fellow member, Alben W. Barkley.

"His long and unselfish service both to the Government of the United States and to the Democratic Party made him known, respected and loved by all who hold dear the finest traditions of our American way of life. His vigorous and tireless efforts to further these traditions will ever live as one of the outstanding glories of the democratic ideal. Though we have lost his sparkling companionship and though his eloquent voice is now forever stilled, yet shall his memory live in our hearts as the symbol of the best of American initiative, political courage and moral force.

"*Resolved*, That we extend to his family our most heartfelt sympathy in their bereavement, and that a copy of this memorial resolution be sent to them."

For the Democratic League of Delaware:
JOHN J. CLARKE, *President*.
JOHN A. HULL,
W. R. STEWART, Sr.,
HARRIS O. BUNEL,
FRANK T. DICKERSON, *Secretary*.

The Eloy Alfaro International Foundation

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks, I insert the formal presentation speech of Mr. Herman A. Bayern, American provost of the Eloy Alfaro International Foundation, given on Monday, April 16, 1956, at which time the Eloy Alfaro grand cross and citation were bestowed on the Honorable Carmine G. DeSapio, secretary of state of New York and Democratic national committeeman from New York, in the New York Times Building in New York City. I also include the acceptance speech of Mr. DeSapio:

Mr. BAYERN. I am delighted to have the honor, as American provost of the Eloy Alfaro International Foundation, to confer upon you, Carmine DeSapio, the jewel of the foundation, in view of the fact that I have heretofore, 2 years ago, given you the citation of this famous foundation.

The late General Alfaro served 10 years as President of Ecuador at the turn of the century. This foundation was created to perpetuate his memory, not as President, nor as general, but as one who strove all his life to bring to his fellow men in Latin America the blessings of medical care and education, and liberty, and peace.

In this tradition, you, Mr. DeSapio, have labored. As chairman of the Democratic Committee of New York County, as national committeeman from the State of New York, and as secretary of state, you have advanced the liberal causes of this country. By your astute political leadership you have led in electing the Honorable Robert F. Wagner as the mayor of New York and Hon. Averell Harriman as Governor of the State of New York, and, who knows, you may succeed in electing a President in 1956.

For these activities, so close to the spirit and purposes of the Eloy Alfaro International Foundation, we are pleased to confer upon you the foundation's jewel, and I now call on Mrs. Elaine Verdi Greenspan to pin this jewel on our distinguished guest of honor.

You now join a goodly company—President Eisenhower, former President Truman, General of the Armies Douglas MacArthur, Mayor Wagner, and Commissioner Robert Moses.

Mr. DESAPIO. I am deeply grateful and greatly honored to receive the grand cross and citation of the Eloy Alfaro International Foundation. I shall always cherish this honor and regard it as an inspiration to accelerate my efforts toward promoting the ideals of democracy so well championed by Eloy Alfaro. Thank you.

Remarks of Gov. Robert B. Meyner, of New Jersey, Third Anniversary Dinner Herbert J. Pascoe Educational Scholarship Foundation of New Jersey

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include the following address made by Gov. Robert B. Meyner, of New Jersey, at the third anniversary dinner of the Herbert J. Pasco Educational Scholarship Foundation of New Jersey:

It is a pleasure for me to meet with the Barbers" Association of New Jersey on an occasion where they are both honoring a good friend, and at the same time doing something constructive for a New Jersey community. I confess that I did not know until this invitation was extended to me what the Herbert J. Pascoe Educational Scholarship Foundation of New Jersey was. I assume that my lack of knowledge would be shared by a great many others in the State, and I assume they would also be as surprised and pleased as I was to discover what the aim and purpose of your foundation is.

There are many ways in which we can honor our friends. We can give them gold watches and hope that either the watches will run well, or will have enough loan value to help a man who later falls into trouble. We can give him a big dinner, and hope that the indigestion he suffers will be somewhat relieved by a feeling of warmth and good fellowship on the part of those who sponsored the affair. We can even erect a statue in a public square, hoping that the effect of the weather and the elements, not to mention the pigeons, will leave something of the spirit we sought to honor in this way. Lastly, we can present him with a scroll inscribed by hundreds of persons whose names are not well known to him, and trust that in spite of the bad handwriting, he will realize how much he is esteemed by other people.

It seems to me that this foundation has taken a much more practical way of honoring a person who had a foresight in what he was attempting to do for public education in our State. Today, talk of high real

estate taxes is heard everywhere, but we should realize that if it had not been for the efforts of Pascoe and others like him, the situation would be far worse.

Prior to the passage of the Pascoe bills on education in 1947, almost the entire amount of State aid for education was provided by a State school tax levied on local real estate. The revenue from this tax was turned in to the State treasurer and 90 percent of it was returned to the local districts on what was presumed to be a kind of equalization formula. The effect, however, was simply to put another tax on real property which already bore almost the complete load for the financing of education in New Jersey. It was largely through the leadership of Herbert J. Pascoe that the idea of State aid for education based on general State revenues derived from other than real property taxes became a possibility. While those first sums appropriated, actually $13 million, seem rather small in contrast to the more than $76 million of State school aid which we will distribute to local districts in the next school year, they represented an important change in the concept of local and State government.

We were stating in this legislation the very practical principle that not all children had a minimum educational opportunity. As the years have passed we had continued to give some aid to all school districts and to help in greater proportion, those districts where children suffer in their educational opportunities because there is not sufficient wealth to support an adequate program.

It takes more than money or buildings to provide the kind of education we want for our young people. It takes a good teacher who is well trained. It has been said that no one can measure the ultimate influence of our good teachers, or can calculate how many lives they affect in their period of service. As I speak, I am sure everyone of you can remember a fine teacher you had somewhere during your school days and the help and inspiration you received from that person. The purpose of your foundation is to provide scholarships for future teachers who might otherwise not be attracted to the profession. In doing this you are really affecting the lives of thousands of young people who will pass through the schools in the generations ahead. What could be a more fitting memorial for a person who is so interested in education when the watches have ceased to run, when the dinners are gone and forgotten, and when the statues are shaky on their pedestals, the living memorial to Herbert J. Pascoe will continue in the lives of the teachers and the students whom they teach because of your gratitude to this outstanding citizen. I hope that your work will prosper and that through the success of your efforts more and more fine young people will enter this important career to the benefit of all the boys and girls in New Jersey.

The Port of Hampton Roads

EXTENSION OF REMARKS

OF

HON. PORTER HARDY, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 29, 1956

Mr. HARDY. Mr. Speaker, there is no more progressive port in the world than that of Hampton Roads, which serves my district. It is not only the world's greatest natural harbor, but it is blessed by a community that recognizes its importance in the economic life of the world.

The port of Hampton Roads has served the Nation well in peace and in war. It is with a great deal of pride that I observe the increasing activity in our harbor year after year. It is attaining that position of preeminence in our Nation's foreign commerce which its facilities, its economic advantages, and the leadership of its people so richly justify.

Mr. H. M. Thompson, executive vice president of the Hampton Roads Maritime Association, has for many years done a magnificent work in carrying forward the interest of our maritime community. Recently he made a most illuminating and comprehensive address on the history and growth of maritime trade in the port of Hampton Roads. That address is reprinted below. I feel sure it will be of much interest to my colleagues—those who represent maritime districts may find it challenging and those who represent inland districts will recognize that the port of Hampton Roads offers economic advantages to their constituents who are now, or subsequently may be engaged in foreign trade.

ADDRESS BY HARRY M. THOMPSON, EXECUTIVE VICE PRESIDENT, HAMPTON ROADS MARITIME ASSOCIATION, BEFORE THE PROPELLER CLUB, PORT OF NORFOLK, APRIL 26, 1956

I have been asked to speak to you today on the history of the development of the maritime trade of Hampton Roads. It's an impressive sounding title—and a big order. But I am not like the old fellow who said he had lived almost 80 years and had seen a lot of changes, and that he was agin 'em all. I've seen a lot of changes, too, but I am for most of them—because they represent progress. And so I shall try to recall for you a few things that some of you may be too young to remember, and the rest of you may wish you were.

Many things and many people have contributed to the development of the great port of Hampton Roads that we know today. It is my opinion that in any attempt to review the efforts and causes that have led to its present stature we must go back a great many years, because I believe, as did the old blue-nosed down-East Yankee skipper who considered himself something of a philosopher, that "everything that happens in this world is because of a previous relation."

So, with your indulgence, I will try to go back half a century, to the year 1906, when I began my career in the shipping business in Hampton Roads.

At that time the business of the port was almost entirely coastwise. I entered the employ of one of the larger and more important coastwise steamer lines. This company operated a fleet of seven steamships between Norfolk and New York, a dozen or more steamboats to points in Virginia, and a fleet of harbor tugs, barges, and lighters. The Merchants and Miners had regular service to Boston and Providence, the Clyde Line to Philadelphia, the Norfolk and Washington Line to Washington, and the Baltimore Steam Packet and Chesapeake Steamship Co., known as the Old and New Bay Lines, to Baltimore. There was one small line operating through the inland waterway to North Carolina.

These coastwise steamer lines were successful largely because of a differential rate situation which obtained, and in connection with several dispatch routes to the Southeast and Central West, such as the Cumberland Gap Dispatch; Virginia, Tennessee and Georgia Airline; and the Kanawha Dispatch. These rates extended as far west as Chicago and Denver, and south to Birmingham and Atlanta, and provided a nucleus of the cargoes which made it profitable for these ships to operate, rather than the port-to-port cargoes, which never aggregated a great deal in total tonnage.

The coastwise lines, and the trade they represented, served their time and age, and made an important contribution to the development of the port.

The automobile was still in its infancy. Trucks represented no threat to established transportation. Rail service of course was available, but, between certain points, steamers were the only means of transportation. Perhaps some of you saw an article in the Ledger about a week ago, in the 40-year-ago column, that a party traveling by automobile fought mud all day long in a drive to Richmond, and on arriving there, shipped the car back to Norfolk by steamer and came home themselves by train.

Since the port business was primarily coastwise, we find Norfolk's waterfront still lined with old wharf structures that were designed especially to serve this business, beginning at the foot of East Main Street and extending all along the Elizabeth River, to what is now Fort Norfolk.

The Norfolk & Western coal terminals at Lamberts Point were placed in operation in 1885; those of the Chesapeake & Ohio at Newport News 8 years later, 1893; and the Virginian, the last to establish at Hampton Roads, opened its Sewells Point terminals in 1909.

Somewhere before 1900 the Norfolk & Western built two piers at Lamberts Point, which were used for handling overseas merchandise, but these have practically disappeared. One is now used as a layup berth.

On the Portsmouth side, the Seaboard Air Line constructed wharves just above and below the ferry slip. The Atlantic Coast Line and the Southern Railway had wharves at Pinners Point. The Coast Line pier was used exclusively for coastwise business, but the Southern operated two coastwise piers, and one, now known as Pier 4, for overseas business.

The Security Docks in Atlantic City were built about 1912 or 1913, but were never used extensively as waterfront facilities. Adjacent to these docks were some smaller wharves and facilities of various types, and then came the Cotton Docks, where for many years a compress was operated.

The Chesapeake & Ohio piers of course have been in use for a long time. The coal terminals were opened for business in 1893, and the merchandise terminals go back a year further, to 1892. Piers 5 and 6 were burned and rebuilt in 1898. Pier 8, destroyed by fire in December 1944, was rebuilt in 73 days. One wharf, which no longer exists, Pier A, was used by the smaller passenger vessels which operated to Richmond, Smithfield, Battery Park, etc.

At one time the C. & O. operated two grain elevators at Newport News, but these were later destroyed by fire, elevator A in 1917, and B in 1933.

Although we had a wonderful harbor then as now, and I remember we did just as much bragging about it, the port did not develop too rapidly prior to World War I. However, our coal business was important. The record shows that 50 years ago our coal dumpings were almost 7 million tons annually, and by 1918 had grown to 18 million. We were growing as a cotton port, with exports of 500,000 bales a year. By the early twenties, our tobacco business was approximately 225,000 hogsheads a year. With the opening of the Panama Canal to commercial business in 1914, and the resultant trade with the Pacific coast, particularly lumber, new impetus was given to our port business. The coastwise trade showed steady and consistent gains. Overseas business was relatively unimportant, but a limited number of ves-

sels were operated in this trade from both Norfolk and Newport News.

The first record of a Hampton Roads overseas steamship line appears somewhere between 1895 and 1897, when Furness, Withy & Co. operated a line for the C. & O. Railway to London and Liverpool. The names of the ships were typically Virginian—*Shenandoah, Rappahannock, Kanawha, Chickahomany, Appomattox, Rapidan,* and *Greenbrier.* This service, and the ships, later were acquired by Furness.

In keeping with the times, just prior to World War I, Norfolk City came to a realization of the potentials of its port, and began to plan toward a development of its overseas business. It acquired property at Sewells Point—formerly held by the old Norfolk Country Club—and actually began the erection of a pier.

Then came World War I:

The Government took over this property and constructed two piers on it—which are now the Army Supply Base—or the Hampton Roads Army Terminal. I believe World War I first showed us what the port was capable of—and we began to plan for an orderly growth—and time and events have since proved the wisdom of this course.

When the war was over, and thoughts could once more turn to normal events, the city of Norfolk continued its plans to establish Norfolk as a world port, and created the Norfolk port commission, of which the late Barton Myers was chairman. The Port Commission acquired a site at Sewells Point upon which ultimately piers A and B, and the grain elevator were built. Soon after the war, the port commission employed Arthur King, whom many of you will remember, as Norfolk's first port director. Mr. King had gained considerable distinction in the Armed Forces during the war, and also valuable experience as manager of the Canton Terminals in Baltimore—and he immediately put all of this to work for the port of Norfolk. The port commission was an important factor in stimulating business.

Under its program, one of the first developments was a movement of export tobacco out of Hampton Roads which had previously moved almost entirely out of northern ports. While we had earlier developed a coastwise tobacco business, this commodity had never been exported from this port.

The importance of imports was not overlooked, and many of the commodities which were attracted to the port at that time, still are important in our import trade today: Logs, paper, Turkish tobacco, burlap and bagging, cotton and fibers.

The Norfolk Port Commission was able to persuade the railroads to extend the service of the Norfolk & Portsmouth Belt Line by utilizing the tracks of the Virginian Railway to the east side of the Elizabeth River, thus providing shipside deliveries with absorption privileges to the terminals located on the Norfolk side—the Army Base, Sewells Point, and so forth. This was a very important factor in the development of the port, as it largely obviated the necessity of expensive lighterage in Norfolk Harbor.

About this same time, the wharfage charge was eliminated against vessels loading and discharging.

Following close on the war's end, it became apparent that there was a need for facilities through which to ship materials and supplies to rehabilitate Europe. This was causing serious congestion at the northern ports, and an opportunity appeared to move some of these cargoes through this port. The Norfolk Port Commission, in 1919, through a lease arrangement with the United States Shipping Board, began what continued for nearly 10 years, the operation of the Army base as a commercial overseas terminal, using the supporting warehouses for transit and other storage purposes.

At Newport News, an extensive group of war-built warehouses on the C. & O. tracks at Morrison were placed in commercial operation by the Hiden interests. These operated under switching arrangements to and from the piers, and provided the practical equivalent of waterfront storage.

These warehouses had been operated during World War I in conjunction with the Hampton Roads Port of Embarkation, which during World War I—as was the case in World War II—was headquartered at Newport News.

When the Norfolk municipal terminals at Sewells Point were built in 1922–23, the city entered into a lease arrangement with the late Harvey Miller of Philadelphia (who was represented here for many years by Jimmy Moore), and the Shipping Board, for the joint operation of the Army base and the Sewells Point terminals. Later the city withdrew from the actual operation of the terminal and the Harvy Miller operation continued until the Army base contract was given to another concern, and the Sewells Point terminals transferred to the Norfolk & Western Railway.

When the country found itself with a surplus of war-built ships following the close of World War I, these were placed on various trade routes where cargo was available—under the terms of the Shipping Act of 1920—and this really gave the port its start in the overseas steamship business. As the business developed, of course, foreign-flag lines entered the picture to meet the competition, and regularly scheduled services were established. Today, a majority of the important American and foreign-flag lines serve Hampton Roads on frequent schedules.

The American merchant marine received its second "shot in the arm" with the enactment of the Merchant Marine Act of 1936, sponsored by the late Judge Otis Bland, of Newport News. This provided a definite method of subsidizing American-flag vessels, both from a construction and operation standpoint. This bill and its later amendments have without doubt encouraged American capital and ingenuity to engage in the shipping business. The result is 1,073 active and 2,158 inactive ships, or a total of 3,231 ships in the American merchant marine—with vessels of the type of the *United States, America, Constitution,* and *Independence* carrying the flag of the United States into the ports of the world. This, of course, has had an important effect upon all ports—Hampton Roads included.

The ambition for a home-owned line was realized in 1928, with the inauguration of service to the United Kingdom and Northern Europe by the American-Hampton Roads Line. A few years later—the Baltimore Mail Line inaugurated direct freight and passenger service between Hampton Roads and ports in France and Germany on a weekly basis. This service later was extended to England.

Even with the concerted and effective effort that has been made to develop the port and its commerce, it is only fair to say that some of the port's most important and most lucrative business—and that which has contributed most to its growth—has been the result of favoring economic conditions.

Our overseas business came about largely because the Shipping Board found itself with surplus ships after the First World War.

Our tremendous oil business is the result of a transformation of coal-burning ships to oil, and later the introduction of diesels, and the tremendous increase in domestic consumption of petroleum products.

Our ore business is the result of increased production of steel in the United States, and the development of iron-ore deposits in various parts of the world—because of a fear of exhaustion of iron-ore deposits in the Mesabi Range.

Our grain business is primarily the result of advantageous lease arrangements made with one of the country's largest grain dealers, supplemented by the fact that the facility was available in the port.

Our more recent export coal business, which has placed the port in first place among Atlantic Coast ports in export tonnage, is the result of improved economic conditions abroad.

Even the two world wars, which have been in our time, have had their part in the development of our port—because each time the port has risen to the emergency, and each time, it has demonstrated its potential for efficient operation—and port interests have been spurred into greater effort.

When World War II came along practically all normal operations ceased, and the entire facilities of the port were devoted to the winning of the war. However, port planning continued, and my own organization, though it lent its full aid to the war effort, had a Postwar Planning Committee that did some very important work—and many of the plans made in that committee have since become realities, and are helping Hampton Roads to make a name for itself.

In World War II, as in World War I, the United States engaged in an all-out shipbuilding program to meet its war needs and those of the Allies. Vessels of the *Liberty* and *Victory* types were rapidly placed into operation, as had the *Lake* and *Hog Island* types in the First War. But again—after the war—surplus:

Here, however, it is evident that we have profited by past experience, because these ships are receiving much better care than their counterparts in World War I. The 83d Congress made provision to keep many of them in usable condition. Large numbers have been used to store grain. The Government has also continued a program designed to assist in providing new vessels for the American merchant marine. In addition, extensive ship replacement programs are underway by several private lines.

Backtracking a little bit, it may be said that the economic and physical change that has come about in the Southern Branch of the Elizabeth River exemplifies that of the entire area. Years ago, the Southern Branch was lined with sawmills, but as the timber was cut back from the port area, naturally, the point was reached where it was no longer profitable to bring lumber from southeastern Virginia and North Carolina into this area for processing—and these sawmills gradually disappeared.

The next business to emerge into prominence was the fertilizer mixing and distributing industry. This came about at a time when foreign materials were used largely in the manufacture of fertilizers, and waterfront facilities were necessary because the material was brought in by ship.

Another business that goes back a long time in this community is wood preserving. The old Norfolk Creosoting Co., now operated by Eppinger and Russell, was one of the first plants of its kind to be established in the United States.

Later, with the introduction of oil for commercial, residential, and marine purposes, many of the larger petroleum companies acquired sites on the Southern Branch, where they located tank farms for the storage and distribution of petroleum products.

The Southern Branch has been deepened from 22 feet to care for this changing industry, and now has a draft of 35 feet throughout its length.

A few ship repair yards are located on the Eastern Branch of the Elizabeth River, but this area never has gained the prominence, from an industrial or economic standpoint, that the Southern Branch has. There are two reasons for this. The first is that it lacks proper railroad connections—although

it is crossed by the Virginian & Belt Line pretty well up the branch—but the second, and primary reason, is because the entire area is surrounded by residential developments which, of course, hamper industrial development.

The value of industry to port commerce is something that cannot be overestimated. A majority of our local manufacturers depend upon shipping for the receipt of raw materials and the distribution of finished products. As an example, one industry, located in the port area in recent years, is importing nearly 500,000 tons of raw materials annually, and shipping out more than 10,000 carloads of freight a year over local railroads.

An oil refinery rapidly nearing completion at Yorktown and another projected at West Norfolk will not only materally round out our industrial structure, but will give tremendous impetus to the business of the port.

Any consideration of port activity must by all means take into account the extensive shipbuilding and repair facilities located in Hampton Roads. The world's largest private shipyard is located at Newport News. Here vessels of the type of the *United States* and *Forrestal* are among the latest to come off the ways, but they are all descendants of old hull No. 1, built in 1890, small tugboat—still in operation in Hampton Roads—the *J. Alvah Clark*. It is said that you could place 145 vessels the size of the *Alvah Clark* on the deck of the *Forrestal*.

At Norfolk, extensive ship repair facilities—which were materially augmented during World War II—provide splendid service on this side of Hampton Roads. There is available at both Norfolk and Newport News equipment capable of handling underwater work on vessels of any size.

Other factors which have contributed to the growth of the port are the railroads—steamship lines—freight forwarders—customhouse brokers, and others who have provided services, and through their extensive connections in this country and abroad—carried on effective solicitation programs.

Equally important to the smooth operation of the port are the ship-repair yards, tugboat companies, fueling stations, fresh water suppliers, stevedoring concerns, ship chandlers, ship watching firms, pilots, consular representative, marine surveyors and underwriters' agents, banks, etc. The generally satisfactory labor relations which have obtained in the port over the years deserve special mention.

There has been a tremendous growth in port business—and a material strengthening of port facilities and services—at Hampton Roads in recent years. A great upsurge has occurred in the overseas coal traffic. Grain exports reached an all-time high last year. Imports of residual fuel oil, ore, gypsum rock, are impressive. General cargo commodities are becoming more and more important and diversified in both the export and import trades. Hampton Roads is continuing in first place among Atlantic coast ports in export tonnage. Import tonnages are moving upward.

Pier N, one of the finest piers of the Atlantic coast, was placed in operation by the Norfolk & Western in 1947. Extensive additions have been made to its warehouses at Sewells Point. Further additions are planned at Lamberts Point.

The Southern Railway has recently completed a dredging program at its piers 2 and 4 at Pinners Point (Southern Tidewater Terminals).

The Virginian has in advance planning a $2 million expansion of its pier facilities at Sewells Point.

Ore facilities are being made available at Newport News by the Chesapeake & Ohio. Esso Standard Oil has placed in operation a bunker oil terminal on the Newport News waterfront, which will permit fueling of ships while loading or discharging at C. &. O. piers.

The storage capacity of the grain elevator has been more than doubled in the past few years. A marine leg for discharging grain direct from vessels has been added.

Extensive additions have been made to the coal handling facilities at both Norfolk and Newport News.

The vessel movement at Hampton Roads last year was the highest on record. More than 7,000 vessels called at the port. Exports exceeded 31 million tons—practically double those of 1954. Imports advanced from 2,600,000 to 4,388,000 tons. Customs receipts increased almost $4½ million.

One of the most important things that has occurred, however, has been the impetus given to the development of the port through an awakening by the people of the community—and as a matter of fact, the people of the State of Virginia—to the importance of the port to the economy of the entire State. A realization that the prosperity of Virginia's ports is important to the prosperity of all of Virginia.

And so—in 1948, the Norfolk Port Authority was created, to stimulate business for the port of Norfolk.

Shortly thereafter, the Virginia State Ports Authority—which was originally created by the General Assembly of Virginia in 1923 as the Hampton Roads Port Commission, later operating as the State Port Authority of Virginia, and still later, as the Virginia Division of Ports—was reorganized along much broader lines, with more adequate support—having for its objective the development of all Virginia ports—and under the leadership of Admiral Clark is doing a splendid job. It maintains soliciting offices at strategic points in this country and abroad.

More recently port commissions have been formed at Newport News and Portsmouth.

The Maritime Association, the oldest port organization in Hampton Roads, was organized soon after World War I, and in the years since, as most of you know, has made important contributions to the growth of the port, and provided valuable services for the shipping people.

It has been successful in securing many harbor improvements, improvements to steamship services, improvements to port facilities.

It endeavors to keep port services, charges, customs, regulations, and practices of every character in line with those of competitive ports. To insure a fair and equitable administration of the numerous Government regulations that affect shipping, it keeps in close touch with all legislation affecting ships and shipping, and takes appropriate action in each case—strongly supporting that which appears beneficial—and opposing with equal vigor that which is felt to be detrimental to the shipping industry.

It maintains a close liaison between the military and commercial interests in the port, and at Hampton Roads the military is an important factor.

Included in its service to members is an extensive ship reporting service, which not only includes current reports on vessel arrivals and sailings at Cape Henry, but expected arrivals, and other pertinent information concerning the movement of ships in the port.

Port statistics compiled and disseminated by the association provide a valuable basis for studies of port business.

It publishes a port annual which ranks high among such publications. By means of this annual, information on the port, and its facilities and services, are placed in the hands of those directly concerned—ship owners and operators—and shippers and receivers of cargoes—around the world.

Among its more recent accomplishments has been the disposal area at Craney Island. This will materially facilitate dredging in Hampton Roads and the harbors of Norfolk and Newport News for many years to come.

A new belt line bridge—now under construction—was long advocated by the association.

The deepening of the channel of the southern branch has been one of the projects of the organization for 30 years.

Also high on its agenda is the improvement of the Thimble Shoal Channel, the widening of the Norfolk Channel off the naval base, and additional anchorage space off Lamberts Point.

Going back to the early days, it was instrumental in the location of the United States Public Health Service Hospital on Hampton Boulevard.

There is one other thing I would like to mention—and that is, the Maritime Association was, in part, responsible for the formation of the Propeller Club in this port. Back in the middle twenties, there was a strong movement to organize a club within the Maritime Association, where the shipping fraternity could meet and discuss mutual problems, and for social contact, and working from this idea, we cooperated closely with the late Joe Godwin in organizing this club.

At the present time our organization is headed by Barron Black, prominent admiralty attorney. We number among our members outstanding firms in shipping in the entire port area—as well as firms and individuals in the ports to the north of us. Our directors and committees are well qualified to direct the important affairs that affect this growing port.

It is expected that the association will be housed in its own building in the very near future. This will serve to stabilize the organization in the community, and will enable it to perform a more comprehensive service for its members.

When we think back over the years about the port, many names come to mind. Names of men who have made important contributions that will be remembered for years to come: Capt. J. D. Wood, onetime mayor of Norfolk, who developed the tugboat business onto a workable basis. Capt. W. R. Boutwell, of the Virginia Pilot Association, who 30 years ago visualized Hampton Roads with a tunnel from Old Point to Willoughby; the Craney Island disposal area completed; a bridge across the James River—all of which are now becoming realities. To Barton Myers, chairman of the Norfolk Port Commission, goes a great deal of credit for the development of our port facilities and services; T. S. Southgate, who developed Southgate Terminals, and William Holmes Davis, one of the early presidents of the Maritime Association, who foresaw the growth of the cargo business of the port.

At Newport News, P. W. Hiden and Homer Ferguson were outstanding port figures—and no discussion of this character would be complete without naming my good friend, the late Mr. A. B. Schwartzkopf, who coined the phrase, "The port's the thing," and who served as president of the Maritime Association for two decades—and many others.

I believe you will agree that the growth of the ports of Hampton Roads is a culmination of many years of effort—by many people—all fired by a common ambition—a greater Hampton Roads.

When we can look backward with pride, we can look forward with confidence. Therefore, in conclusion, I salute those who have labored for the port in the years that are gone—and with you—place my trust in the younger men now at the wheel. God willing, nothing can stop Hampton Roads' progress.

Preventing Parched Acres

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. HILL. Mr. Speaker, I wish to include as part of my remarks an article by Robert E. Struthers, agricultural economist, Denver, Colo., taken from the Reclamation Era:

PREVENTING PARCHED ACRES
(By Robert E. Struthers)

For the third consecutive year, Colorado-Big Thompson project supplemental irrigation water in 1955 spelled the difference between success and failure of crops in many parts of northeastern Colorado.

Drought began in 1953, the same year when project construction, started in 1937, reached the stage of permitting delivery of large quantities of western slop water diverted through the Alva B. Adams Tunnel.

By 1954, the project was ready with water to combat what had become the most severe drought Colorado farmers ever experienced. The 301,000 acre-feet of project water used in that year meant an estimated $22 million boost in crop value.

The drought cycle continued into the 1955 season—again calling for emergency water delivery from the project storage system. The 240,000 acre-feet of transmountain water furnished in 1955 represented one-third of the total surface irrigation water in the area served by the Northern Colorado Water Conservancy District. And it likewise accounted for one-third of $51,210,000 in crops, or $17 million.

Normal inflow to the district averages about 900,000 acre-feet annually. By the reuse of return flows, this initial supply is multiplied to the extent that actual measured diversions throughout the district total 2,200,000 acre-feet. Another half million acre-feet are supplied by well irrigation, all of which arises out of the initial inflow.

The average supplement to be provided by the Colorado-Big Thompson project is estimated at 257,000 acre-feet. Approximately the same rate of recurrence is expected of this water, and the beneficial effects will thus be felt throughout the district as well as in the areas of initial application.

The project is expected to furnish about 22 percent of the district's annual supply. In 1954, however, the project water was 45 percent of the supply and in 1955 it was 34 percent.

Availability was even more important in 1955 than quantity. Throughout the unusually dry spring months project water was heavily used. For the season the Colorado-Big Thompson supplied 58 percent of the stored water used.

The same drought conditions that multiplied the uses at the same time prevented replenishment of storage. At the end of the year the 804,000 acre-feet of project storage capacity contained only 239,000 acre-feet of water. As the spring of 1956 approached, however, a heavy snow pack in the mountains held forth hope that total storage may increase even while full demands are met for supplemental irrigation water.

The water content of snow on the Colorado River drainage above Granby Reservoir, the project's main storage, was 160 percent of the 20-year average at the end of January. Should the rains be scant and the suns hot again in the summer of 1956, there still is assurance that near adequate supplies will be available for the district and the seven towns served with municipal water.

Crop production within the district increased about 8 percent in 1955 over the previous year, offsetting a 6-percent price decline. Farmers were not entirely spared the expenses and frustrations of drought, seeing sugar beet and corn plantings lost and having to replant to beans and sorghums.

The Big Thompson farmers commiserated with their fellows elsewhere in Colorado who had no means of supplementing their irrigation, or had no irrigation at all. Winter and spring moisture deficiencies destroyed the plantings on thousands of acres. The production of wheat, the major dry-land crop, was only 40 percent of the past 10-year average.

Abandonment of croplands over the State amounted to 43 percent of the cropped acreage. These failures, coming on the heels of 1954 when 39 percent of the crop acreage was abandoned, had an extremely depressing effect on the Colorado farmers' economic status. Business was down in drought-stricken communities and mortgage debts increased.

Business traditionally prospers or declines in western farming communities in direct proportion to moisture conditions. It follows that local merchants are among the most enthusiastic supporters of the Colorado-Big Thompson project.

Retail sales tax collections are an indicator of general business conditions and volume of spending. In the northeastern and southeastern irrigated valleys of Colorado, widely divergent trends in retail sales tax collections are evident, although both areas have been affected similarly by drought.

In the Northeast, where supplemental water has been available, a progressive growth trend has been established. In the Southeast, where drought-induced water shortages remain uncorrected, retail sales have declined with serious effects on the valley towns.

Such indirect effects are well known and accepted in irrigated communities. The Northern Colorado Water Conservancy District, contracting agency with the Government for construction of the Colorado-Big Thompson project, is organized under a pioneering law passed in 1937; under the law, the general population of 160,000 is helping to support the project through ad valorem mill levies. This form of support recognizes that the project means added stability and new wealth, not only for farmers but also for townsmen. Many similar conservancy districts have now been formed throughout the West.

The project provides an important service to Western Slope irrigators. Western Slope project reservoirs include storage sufficient to replace any project-induced shortages among irrigators on that side of the Continental Divide. In addition, 95,000 acre-feet of storage capacity was provided on the west side for future irrigation expansion.

In 1955 Western Slope irrigators drew 39,000 acre-feet of water from this storage to offset shortages in their own supplies. This was water that otherwise would have been lost in the surplus spring flows, and it was provided without cost to the Western Slope irrigators.

These farmers could join the farmers of northeastern Colorado in a hymn of praise. Both groups are able to tell anyone of the wisdom and foresight of the individuals, private and public, who brought the Colorado-Big Thompson project into existence.

Available water supply in Northern Colorado Water Conservancy District

[Acre-feet]

	Normal year	1953	1954	1955
Local supply:				
Inflow to district	900,000	671,800	314,700	472,300
Local storage		+36,700	+59,600	−10,700
Total	900,000	708,500	374,300	461,600
Project water	257,000	177,500	301,000	240,000
Combined gravity supply	1,157,000	886,000	675,300	701,600
Growing season precipitation	540,000	355,000	234,000	483,000
Total available water	1,697,000	1,241,000	909,300	1,184,600

Lloyd Thurston Rips the Bradley Report to Shreds

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent, I am extending my remarks to include the complete text of the dynamic statement before the House Committee on Veterans' Affairs by the Honorable Lloyd Thurston, past commander in chief of the United Spanish War Veterans and an outstanding member from Iowa in the 69th, 70th, 71st, 72d, 73d, 74th, and 75th Congresses, as follows:

First, I might say that I was honored by being selected as Commander in Chief, United Spanish War Veterans, for the year ending September 1955. At present I am a member of the committee on legislation and its administration of the organization. I am reimbursed for my actual traveling and subsistence expenses but receive no salary.

I served as a private in the 51st Iowa Volunteer Regiment in the Spanish War and in the Philippine Insurrection.

It is with some hesitancy that I appear before your committee to submit comments in regard to the President's Commission on Veterans' Pensions, more commonly known as the Bradley Commission.

I have been afforded the opportunity to examine the statements made by the American Legion, the Veterans of Foreign Wars, Disabled American Veterans, and the AMVETS, so I doubt if any good purpose would be served by making a complete or minute analysis of the matters set out in this report. However, I do feel that there are a number of factors which are related to and I believe are highly pertinent to the general subject matter, so I will ask the indulgence of the committee to permit me to briefly explore this field.

READS LETTER TO BRADLEY

When our organization was first officially informed of the appointment of this Commission, I was then the commander in chief, and through the press and otherwise had

learned of the apparent intention of the President to have a survey made which would undoubtedly recommend the incorporation of veterans' benefits with those of some social agency maintained by the Government, so I sent a letter to General Bradley, the chairman, which I desire to now submit to your committee:

"The directive of the President of the United States to the Commission on Veterans' Pensions, requesting a survey be made 'that steps be taken to examine the entire structure, scope and philosophy of our veterans' benefit laws in relation to each other and to other Government programs' was received.

"Therefore, the study of your group must necessarily examine into every material branch and department of the Government as related to expenditures, not only for veterans but also other Government programs.

"It is to be regretted that no mention is made of the debt of our Government to those who served in the defense branches, and likewise, the resulting profits and gains of those who directly or indirectly increased their resources because of the protection afforded by those who served. Commodity, stock exchange and other important indices during the past decade must be evaluated. The quantum merit—the value of the service—must be first determined so that the sum of the debt may be known. This is elementary, perhaps, but a principle so fixed that it is a law of human action.

"It is obvious that the economy of the Nation is coupled with all of its obligations to those who served in the civil as well as military forces. There is concern as to the ability of the country to sustain a large outlay for the groups mentioned, but if and when the untold billions of dollars now being distributed over other nations in the world are sharply curtailed or discontinued, the same economy which now sustains these gigantic gifts likewise can be applied to civilian and veterans' benefits. The complaint against the veteran might well be a smokescreen for the thousands of persons who travel over the world hunting ways to further distribute the resources of our land. This item alone would cover the present and proposed expenditures for veterans for many years to come. This is one major item to be surveyed."

RETIRED GENERALS ARE VETS

"As the pay of officers in the defense branch has been materially increased in the past few years, which, of course, increases the three-fourths pay, or pension, of such retired officers—an appreciable increase having recently been sponsored by the President—brings the category mentioned in the same list as the discharged enlisted man and the temporary wartime officer when benefits are surveyed. A retired general is a veteran just as much as a discharged enlisted man. All of the veterans of the country will be interested in learning the suggestions made in this respect.

"Each member of the Commission is familiar with the provisions in the Federal Constitution, which prohibits the taking of private property for public use without just compensation, but the draft laws of the Nation sanction or call the young man for service, and what is important to him is his health, his property (which is diminished when he is in the service because of low pay), even his life which can be taken without "just compensation," so it logically follows that a debt is thereby created in favor of the veterans against the Government, whether he be drafted or a volunteer. The low pay of the serviceman, whether enlisted or commissioned, must be weighed and considered before he is listed as a dependent citizen.

"Your attention is specifically directed to paragraph 5 of the President's transmittal letter, wherein it is stated 'there is no means of taking into account the degree of the veterans' need.' Which veteran? The retired general, or the discharged enlisted man? One may be drawing several thousand dollars a year, while the other may not receive one-tenth of that sum. Why not be honest and say that the income of a veteran, general or private, is none of the Government's business? The phrase mentioned would penalize the veteran who might be thrifty or have accumulated modest holdings through frugal living. Why choose the veteran for this harsh, unfair discrimination?

"The needs clause is only applied to the discharged soldier when he becomes a veteran. Nowhere in the salary structure of the Government is this after requirement exacted. Gentlemen, just think of asking a retired general officer, or a retired diplomat of the Foreign Service, if his income exceeds $1,400, single, or $2,700 married. If this rule did not work such hardship on the veteran, it would be considered humorous; instead, it is insulting."

DISPARITY IN PAY

"An important phase of this subject should now be mentioned. The low pay of the serviceman, as compared with the income of the civilian during war periods, means that the serviceman has contributed a sum to the Government which in fairness may later be applied to the benefits he receives. Compare the earnings of those employed in Government projects, public or private, with the pay scale of the veteran. This disparity can be clearly set forth.

"There is a philosophy involved in veterans' benefits which many citizens and public officials have never considered. The owner of physical property takes out insurance policies to cover possible losses, and pays the premiums thereon, although he may never have any losses. Such expenses are charged to business operations, with no complaint about the cost. But those who have amassed considerable property as a result of the protection afforded to their property—not to mention their family—loudly protest over veterans' benefits when required to pay deferred insurance premiums called pensions. Good sports? Well, some might say they were ingrates. If the budget fails to balance, the same beneficiaries set up the cry that it is the veterans' benefits which prevent a solvent program. But sheltered softies have more callouses on their lungs than on their hands.

"When alluring posters depicting the glories and wonders of the defense services are exhibited in public buildings throughout the land, is the "needs clause" mentioned? Are not these posters used to encourage enlistments? A private employer who would make representations to those seeking work, and who would then bring forth a needs clause as a condition to retirement pay, would be haled into court for such a repudiation. Your Commission should meet this situation headon.

"An economy wave blew into Washington about 20 years ago, and many are surprised to learn that the dust is being removed from this relic. The prime purpose at that time was to trim the veterans so as to have more funds for domestic purposes; more recently, it appears that there are no boundaries to these operations, but must it be at the expense of those who have served?

"The veterans of the United States do not intend to occupy any secondary position in the national structure. They are willing to be considered in the entire economic picture, but unfair curtailments and inferior classifications will not be tolerated.

"Not only veterans but also the whole citizenship of the country will be deeply interested in the findings to be made by this Commission. The 'survey of veterans' benefits and other Government programs' will enlighten the country as to the major benefits provided by the tremendous expenditures in all fields of Federal activities.

"A nation waits a complete and impartial report.

"LLOYD THURSTON,
"Commander in Chief."

Both requisites, just mentioned, were absent—neither complete or impartial.

COMMISSION DID NOT COMPLY

I would call the committee's attention to the first paragraph requesting a survey be made "that steps be taken to examine the entire structure, scope, and philosophy of our veterans' benefit laws in relation to each other and to other Government programs," which of course would require the Commission to explore the entire field of Government expenditures, so that the relation of funds available to veterans could be considered alongside all other major activities of the Government.

Of course, a narrow investigation into veterans' benefits alone, without a comparison to other expenditures would only disclose about 7 percent of Federal expenditures. As veterans' affairs are closely woven with the entire national fabric, it is to be regretted that the Commission did not comply with the President's directive as mentioned just above, hence, those who study this report have been denied the right to know about the entire fiscal program of the Government, and especially the relation which a part, the veteran's part, plays in the entire picture.

In a number of instances the report makes reference to the large amount devoted to veterans' purposes, but nowhere mentions a sharply increasing national economy which results in the distortion of relative facts.

In a judicial inquiry or a survey to be made of any important phase of our national life, it is pertinent to inquire as to the background of those interested with making such a survey. The interest, or bias or prejudice—or lack of them—of the members would doubtless be reflected to some degree in their findings. In the instant case, probably three or more of the members are former officers of high rank, receiving three-fourths retirement pay; the other members having little first-hand knowledge of veterans' affairs. Therefore, it is proper to analyze the approach made to the subject of the inquiry.

I wish to interpose here and say that I have the highest respect for the able, brilliant men who have in the past and who now constitute the commissioned personnel of our armed services. I am only surprised that some of the members would seek to do a great injustice to the enlisted or discharged enlisted men of our forces in preparing to demote the proud status they have held for many years.

RANK DOES DOWNGRADING

Having had the opportunity to make rather considerable observations in regard to the relationship existing between the commissioned and enlisted personnel of our armed services, I had gained the impression that officers of field or high rank occupied a position comparable to a parent or guardian in their contact with the enlisted men, and especially, the civilian soldier. It goes without saying that I was deeply grieved and pained to learn that general officers who had been educated in service schools at the public's expense, and who served until they were discharged in the highest ranks of the military service, with three-fourths retirement pay, amounting to $15,000 or $20,000 per year, should be the first to propose that the discharged, enlisted veteran, should be downgraded and listed in a relief category. It never occurred to me that those who had attained a high military rank through the trials, sweat, pain, and blood of the enlisted man, should want to bring humiliation to those who had made it possible for others to reach positions of high distinction.

Doubtless the citizens of our Nation were greatly surprised to learn that a temporary body, partly composed of persons who had no firsthand knowledge of the subject matter, should be entrusted to make a report to cover the entire field of veterans' affairs, when there were many members of both the Senate and the House of Representatives who had served on committees having jurisdiction over the subject matter from 10 to 30 years; that probably a majority of that number had seen active service in the several theaters of our recent wars. The qualifications of these Members of the Congress was, and is, so greatly superior to that of the personnel assembled in this Commission leads a disinterested person to readily conclude that the findings, either in commission reports or legislation, would be of a much higher degree of competency than the hurried ill-considered and somewhat prejudicial viewpoints of this temporary research Commission.

As to the interest or want of interest of the major elements in the Commission, in a number of places in the Bradley-Eisenhower report, reference is made to "the obligation of citizenship which should not be considered a basis for future Government benefits," also, to the duty of male citizens to respond to military duty when the Nation might require their services; likewise, references to the fact that most of the enlisted personnel were in better condition when separated from the service than when they enlisted.

If the foregoing is accepted, then it follows that those in the commissioned grades owed a duty to serve, and because they had better housing, food and medical attention, their physical condition would be even better than that of the enlisted personnel, so if their services were to be based upon the altruistic philosophy and duty to serve, and better health after serving, why should they be entitled to three-fourths pay upon separation, and then baldly suggest a denial of the benefits to the discharged enlisted man?

I recall, gentlemen, when a group of general officers called on a member of one of your committees and asked it to take hasty action. This took place before a committee to increase the compensation of the Regular officers; they did not mention the enlisted men. Well, I think they finally beat a rather hasty retreat on that occasion, because I asked them if a group of enlisted men could come up and ask for an increase in pay, and what would happen to them. They failed to reply. I said, "They would be court-martialed, wouldn't they?" The enlisted men did not have representation quite often when those matters were considered.

Apparently, no thought was given to the financial or economic phases involved, such as the sacrifice made by the veteran who left his home, business or means of making a livelihood, which of course entailed a substantial loss. The fact is that the pay of the soldier as compared with the prevailing wage of the citizen received no consideration in the conclusions reached in this report.

COMMISSION SELF-PREJUDICED

A reading of this report and recital in the 415-page document discloses that the members of the Commission did not miss an opportunity to suggest action which would provide a better status for the commissioned personnel in the services, such as their warm endorsement of the Hardy bill which proposes that the beneficiaries thereunder would receive several times as much as a dependent or an enlisted veteran, so with this disclosure established, inquiry might properly be made as to the bias or interest in other phases of the report. The future of the career officer is a matter of deep concern to this Commission. Elsewhere, reference is made to organized pressure, the inference being that the enlisted veteran was able to obtain greater benefits than merit warranted. Of course there was no reference to pressure in which might have been exerted by those who might be interested in the betterments mentioned.

To epitomize the findings, it was asserted that all veterans' benefits should be based on "need;" that a veteran who had been industrious, frugal, economical, and through many years of intense application and had built up a modest competence, should be denied any benefit if his annual income, single, exceeded $1,400 annually, or, if married, $2,700 per year; that if the veteran should come within the limitations mentioned, the Government was thereby freed from a definite obligation it owed to the veteran because of the low pay he had received while in the service. I now assert that such a policy is devoid of common honesty and would virtually permit the Federal Government to take bankruptcy and discharge this fixed obligation.

The retired member of the judicial, the legislative or executive branches of the Government are not subject to such limitations, and many of these individuals never made any particular sacrifice in the discharge of their Federal employment.

Having in mind the high cost of medical and dental service, as applied to the aged veteran or his widow, the high cost of housing, and other necessary incidentals of life, when the individual does not have the best medical service accorded to retired officers without expense, plus their right to purchase considerable part of their living expenses at the PX at cost, would it not be interesting if those who proposed that assistance of $70 per month single, or $105 per month for a married couple as a fair living allowance, tried the luxury of the generous living scale mentioned?

Whatever contributions any of these persons might have made toward the retirement fund very likely was matched by the veteran in the inadequate pay he received while in the service.

NO FAIR RELATIONSHIP

It is even suggested in the report that there should be a difference in the amount paid the veteran living in different sections of the country. This proposal is so impractical and preposterous that no further comment is necessary.

Projections in graphs and tables are submitted as to future cost of veterans' benefits, and while such totals deal in large amounts, the value of the service of those who serve the Nation is not mentioned or considered in the approach to a fair relationship between those who served and those who benefit by such service.

Possibly, 1 or 2 members of the Commission might have had some dealing or firsthand information in regard to the operations of the Veterans' Administration, so the portion of the report dealing with this splendidly manned Government unit is of little value when compared with the knowledge gained by constant contact of the Members of Congress for many years with the unit of the Government mentioned.

A longstanding recognition of the services and sacrifices of veterans was inaugurated many years ago when preference in civil service employment was accorded to veterans, through a credit of 5 percent for all veterans, and 10 percent for disabled veterans, shown on page 319. Recommendation No. 46, without any reasons assigned, proposes that such privileges should be abolished as follows:

Recommendation No. 46: (a) The reemployment rights program fills a positive function in assisting ex-servicemen to return to employment. Inconsistencies in the statute should be clarified and resources augmented. (b) The Commission believes that veterans' preference in entering civil service and the special appeals procedure for veterans should be provided for a limited period after discharge (say 5 years), but should not continue for nondisabled veterans after a reasonable period for readjustment has been provided. There is no justification for special retention rights for nondisabled veterans, beyond crediting toward length of service the time spent in the Armed Forces during wartime. For veterans with significant compensable service-connected disability, a permanent preference both in hiring and retention seems justifiable, since their disability may put them at a disadvantage both in obtaining and retaining jobs. Such permanent preference should not be given, however, to those with only minute disabilities certainly not to those with less than 30 percent ratings.

Why this Commission should arrogate unto itself the authority to make such a determination is another evidence of their incompetence to deal with any material phase of veterans' affairs. In other words, these seven commission members are telling the Congress to repeal statutes on this subject that have been voted upon by several thousand Members during the period of the existence of this statute; the presumption of these temporary members of the Commission to make such a recommendation borders upon a presumption without a precedent.

It would not only be interesting but highly informative if all the correspondence engendered by the proposals of the Bradley Commission which have been sent to veterans' organizations could be physically presented.

This committee could then realize the fear that has been generated through press reports released by the Bradley Commission and news agencies. As many of the veterans and their widows are dependent upon the pay which they receive from the Federal Government, one can understand how concerned these aged persons would be when it was reported that the Government intended to curtail, in some instances omit, the pensions or compensation they are now receiving.

Therefore, it would be an act of human kindness if this committee could give assurance to these citizens in regard to the ultimate action to be taken on the recommendations of this Commission.

HAS INSTILLED FEAR

Because of the wide publicity given to the proposals offered by this Commission, a fear has been instilled into the minds of thousands of veterans and their dependents to a degree that is deplorable to those who are in constant contact with these servicemen and their dependents. If this committee should promptly table the entire report, a great wave of relief would be accorded to these aged persons who are so deeply concerned about the implications in the report of the Commission.

The Commission has been rather generous with the time and talents of others when they so blandly suggest that it is the prime obligation of young men to follow the colors. I say it is the prime obligation of the Congress of the United States, acting for the millions of citizens who have profited through the sacrifices made by the veterans, to see that fair and equitable provisions are made to those who have done so much for others.

In conclusion, it can be fairly said that this Commission did not investigate or report as to the necessary and pertinent facts which could be the basis for major legislation with regard to veterans. It is apparent that the Congress has the talent and the knowledge to fairly legislate in behalf of the veterans and their dependents. It is doubtful if any of the self-serving declarations of a part of the membership, plus the lack of information possessed by the others, will have little if any influence upon the future course of the Congress in this respect.

In closing, I would be remiss if I did not again mention that the Spanish War veterans are unanimous in their support of a pension bill introduced by Congressman O'HARA of Illinois, wherein he has proposed to increase the pension of their widows from $54.18 to $75. We earnestly hope that this measure will receive early and favorable consideration of your committee.

The American veteran whether an officer or a private, has just reason to be proud of the splendid record made by our Armed Forces, and he would feel humiliated beyond expression if the proud status he now bears and holds should be downgraded by either their comrades or the Congress. No human agency should presume to bring such a disaster and humiliation to those who wore the uniform of our country.

Federal Scholarship Loan Act

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. MULTER. Mr. Speaker, on August 2, 1955, I introduced in the House of Representatives a bill to increase the educational opportunities of needy students through a Federal loan fund.

Titled "The Federal Scholarship Act," the bill would set up a scholarship fund with an initial 2-year appropriation of $15 million. The fund would be on a self-liquidating basis, and would provide loans to enable needy and scholastically qualified students to continue post-high-school education.

I wish to stress that the fund should not cost the Government anything and would help to alleviate a general manpower shortage in certain fields, while at the same time increasing the opportunities of the youth of America.

All loans would bear only 1 percent interest and be repayable by the student during a 10-year period commencing upon the completion of his schooling.

The bill provides that any shortages in the fund shall be made up by the States according to the amount of assistance their students have received, thus making the Federal Scholarship Act a self-sustaining, Federal-State cooperative venture. The interest charge should pay all expenses of operation of the program and may eventually be reduced or eliminated.

The Federal Scholarship Act would grant qualified students $1,000 per year for 4 years in any institution of college grade studies, or $1,500 per year in any institution of post-college-grade studies. My bill provides that the States shall set qualification standards under which loans shall be granted, and that States will receive grants in proportion to their congressional representation.

The basic plan for Federal scholarship aid has been the subject of bills in every Congress since 1949. We had had a temporary wartime measure, the student war loan program, which granted $3⅓ million in its 2 years of existence during the Second World War. Since then, more than three-quarters of this sum has been repaid. About one-third of 1 percent of the loans, or about $13,000 out of over $3,300,000, is probably uncollectible according to the Deparment of Health, Education, and Welfare. The great majority of the 11,053 needy students who received loans have completed or are completing their repayments.

Twelfth Annual Charles Coolidge Parlin Memorial Lecture

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. KEOGH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following 12th annual Charles Coolidge Parlin memorial lecture given by Frank Stanton, president of the Columbia Broadcasting System, Inc., before the American Marketing Association in Philadelphia on May 15, 1956:

Despite Mr. Minnelli's kind introduction, I want to say at once that my feet do not fit the tracks made by those who have delivered the previous lectures honoring the memory of Charles Coolidge Parlin. For the men you have invited to give them up to now have come from two groups: students of marketing and practitioners of marketing. And I am neither.

Most of my life has been spent in the mass media of radio and television. While broadcasting has a part in the marketing process, I do not feel I qualify as a member of your profession. All the more, then, I appreciate the part you have invited me to play in this annual tribute to one of marketing's great leaders.

And so it is from my experience with an instrument of marketing, rather than that of student or practitioner, that I talk to you this evening.

The Parlin Memorial Lectures are not very old—at least by my standards. The first one, by Prof. George A. Lundberg, was delivered in 1945—just after V–E Day, but just before V–J Day. The shadow of World War II was still so heavily on us that even second lecture, by Prof. Edwin B. George, given just 10 years ago, bore the title, "The Role of Marketing in War and Peace."

Since that time, there have been some kaleidoscopic developments in and around marketing. Those who thought that the great American drugstore had reached its zenith of complexity had, as it turned out, small vision; they had seen nothing yet. Moreover, if drugstores could sell alarm clocks, phonograph records, light bulbs and screwdrivers, why, some bolder thinker asked himself, could not grocery and delicatessen stores sell drugs? The answer was, of course, they could and now they do. In a New York delicatessen—a small one, about the size and shape of a Philadelphia streetcar—I recently counted between 50 and 60 proprietary drug items for sale alongside the pastrami and the yoghurt.

There have been other and more significant changes since the war. There has been the discount house, that economic mystery to the plain man. The soaring rise of the supermarket and the shopping center represents more dramatic and significant new concepts in retailing.

Coincident with the rise of the supermarket and the shopping center we have some relative decline in the importance and attractiveness of the old concepts of Main Street and downtown. We have also witnessed the extraordinary suburban shift; not to old suburbs only, although even these have boomed, but to new suburbs, sometimes tailor made to the needs of new industrial communities.

Our markets thus grow bigger—and bigger still. But the significant thing to me is that as markets grow bigger today, they also grow more supple and better articulated between themselves. The Delaware Valley and the Hudson River Valley are slowly merging. Now we are apparently going to build an intercontinental set of superhighways from coast to coast and north to south—52 billion worth over the next 13 years—that will surely destroy the last vestige of isolation in America and force regionalism further and further back into our past.

Sociologists and political scientists may write the books that comment on our changing America, but it is the successful marketing of goods that makes the changes; that causes the great ebbs and floods of populations from here to there; that makes one community thrive and another grow stagnant. I am not trying to set up buying and selling as the be-all and end-all of our activities here on earth; I am asking for a more realistic recognition that the search, either for new markets, or new goods to satisfy old markets, is the search that has expanded our civilization from a small camp huddled on the shores of the Mediterranean to the dimensions we understand and are able to manage today. From this point of view, market research can take on a dignity and importance that has not often been accorded it in its brief modern history. And this age-old process is still accelerating; I believe it true that, just physically considered, markets in the United States have changed more, and more for the better, during the last 10 years than they have changed in all the 20th century before that.

In some of these changes, in some of this market growth, in some of this dis-isolation, if I may use the word, television has played an important role. For television had the good fortune, in contrast to Miniver Cheevy, to have been born just at the right time—and, for that matter, just at the right place. If I may turn my glance back again to Professor George's lecture of a decade ago, marketing, as the title of his talk indicates, then had a dual role—in war and in peace. So far and fast have we come since then that it is hard for us now to remember that when Professor George's great lecture was new, it was still all but impossible to buy a new passenger automobile. There was a black market in Christmas tree ornaments, and if you wanted to hang a picture in your living room you probably had to use string because your local hardware store was still out of picture wire. These were the days in which we talked about "the inflationary gap"—the gap between the ample supply of dollars and the short supply of goods. War production had never absorbed more than 40 percent of total United States output, but that cut into civilian supply left our everyday economy gasping for breath.

When peacetime production began to resume, its first effort was, in the language of the day, to "refill the pipelines." Seen in perspective now, this process was quick. So great was the incentive to produce, and so great did the production become, that had it not been for the rise of marketing techniques and researches to meet it, this country could shortly have been confronted with such an insoluble glut of immovable goods as could have plunged us into acute economic indigestion from which we might not have recovered for years. But this was precisely what did not happen. Many bold innovations were responsible for our increasing ability to produce and consume and keep

these two processes in step, but none deserves more credit, or has had less, than what went on in the domains of marketing and distribution.

I like to think that it is not just the fumes of the Madison Avenue buses which convince me that television played a substantial role in helping market the tremendous output of this country's postwar productive facilities. And as a market-shaping and market-changing force of some considerable magnitude, television rose from a force of virtually zero at the end of World War II to a force embracing 6 hours a day of the time of 34 million families in the United States 10 years later.

But, tempting as it may be, I am not here this evening to tell you about the effectiveness of television as a tool of marketing. Rather, I want to discuss with you some coproducts of marketing's use of this tool of television. For what television has done for marketing is known to you. What your use of television has done for television, and has made it possible, in turn, for television to do for the people, is of the highest importance in our land.

Hand in hand, television has served American business and risen to become a remarkable social force in American life. Television has been able to grow, more rapidly than any other industry that I know of, not only because it has, by and large, given the American public what it wants, but more important because it has given to the viewers what they want without any further payment once they have bought their sets. It seems to me self-evident that television would not have developed so well or so fast had there been a penny of cost to the owner other than for the purchase and maintenance of his set.

What is significant, and what can be so easily overlooked, is that the marketing function—which is the sole source of television's income—pays not only for the great entertainment programs which the public has come to rely upon and enjoy so much. It also pays for the other programing activities which have given television its social force and status—its functions in the public service. By this, I mean its function as a part of the press—its news efforts, its programs devoted to the major issues of the day, its broadcasts devoted to carrying from one end of the country to the other the great events of our daily history, when and as they happen, the functions of education and culture, from opera to Dylan Thomas to Shakespeare to the study of the Constitution and the life of African Bushmen.

Television has brought to this Nation a wholly new form of journalism—electronic journalism—which gives the people an opportunity to see the great events as they happen, and see the leading protagonists of the main issues of the day—see and hear for themselves firsthand, so that they can make up their own minds. This, I submit, is a great instrument of pure democracy existing as a coproduct with the marketing function.

This year—1956—is, in fact, a year of special importance in this area for television. This, in many respects, will be the year of the television conventions, the television campaigns, and perhaps even the television election. As we approach convention time the news from Washington and elsewhere makes it abundantly clear that television is a focal point in the planning and shaping of the conventions and campaigns this summer and fall.

This year 1956 will be only the second year in television's life—and, in truth, in some respects even the first—in which these events will have fully national, fully professional television coverage available to all of the 99.2 percent of the people in the United States within range of at least one television signal. Philadelphia, the birthplace of so much else of moment in American history, is the birthplace, too, of national political coverage by television. Television coverage of national conventions began right here in Convention Hall in 1948 when the Republican Convention nominated Governor Dewey and the Democratic Convention nominated President Truman.

(If I might interrupt myself here for a moment, I would like to say that earlier that same year WCAU–TV was the first station to join our own New York station to begin what is today the CBS Television Network of 218 stations. In a sense, this was network history repeating itself, for in 1927 WCAU was the first affiliate of the CBS Radio Network.)

Convention coverage this summer will present a very special challenge to television, requiring the most exacting kind of thought and planning, and huge resources in both manpower and dollars. The cost of CBS Radio and Television convention coverage this year will run to over $5 million. Over 300 members of our networks will be working directly on this giant task. Planning for this year's convention coverage began in earnest in September 1954—23 months before the first call to order. And because the two conventions are scheduled so closely together in time, and so far apart in space, we will have the unprecedented task of transporting between 10 and 12 tons of delicate electronic gear 2,000 miles by air—having it in working order in San Francisco's Cow Palace 24 hours after the final gavel falls in Chicago. This is just about the tallest order ever faced in the history of communications. But the organization and resources of the nationwide networks are, I am certain, fully equipped to meet this order.

I find it more than a little ironic that I should feel it even relevant, not alone necessary, to remind ourselves that tasks such as these can only be performed by networks and that, if there were no networks in 1956, someone would have to invent them promptly, simply because necessity is the mother of invention. I find it ironic, too, to feel it appropriate, at this stage of television's life when networks and their program product have such pervasive impact and such explicit public attention, even to pause for a moment to underscore the obvious truth that only networks can provide live nationwide television service such as this.

The importance to the marketing function of live and simultaneous nationwide television service needs no emphasis from me to you. Marketing students and practitioners know well the significance of the flexible, simultaneous commercial message at a predictable time and at a predictable place in the program schedule—put there through a simple order which exposes the message to a potential 100 million customers at once. Only a network can do this.

And, apart from the commercial message, it is only a network which can provide on a nationwide basis the real magic of television—its real vitality—the live program, seen by the Nation just as it happens and just when it happens. I do not for a moment deny the entertainment and informative qualities of some film programs. Indeed some programs require film and are better for it. But good as film programs are—and many of them are very good—it is the live quality that gives television its truest excitement and strongest vitality. Never forget that it was the live program that launched television—Milton Berle, Ed Sullivan, Arthur Godfrey, Studio One, and the World Series, to name but a few. And it is the live feature that gives television an extra dimension today—the spontaneous, instantaneous slice-of-life, not something whose end is guaranteed at its beginning. Try to imagine a program like the $64,000 Question as a filmed show; you cannot do it, because the whole point is that you know only that you don't know what may happen the next instant.

Even more important, it is the networks and their ability simultaneously to communicate events as they happen, and people's thought as they are articulated, which gives to this Nation its most effective means of nationwide visual communication in time of national crisis. Network television has brought a cohesion among the people to a greater degree than has existed before. And it has provided the national with the potential of an incalculable benefit in terms of national interest, for it makes available a means by which, in time of national crisis, we as a Nation are afforded a mobility—an ability to turn on a dime—which may even be a condition to survival if we should ever have to meet totalitarianism head-on. For network television has made it possible, and will make it possible, for the people to act promptly and on an informed basis because they want to act. And that, I submit, is a far surer way for a nation to respond—a way far more certain of success—than to act without understanding and just because that is the action which some distant, disembodied terrifying voice has ordered.

These benefits to the Nation are benefits of the nationwide means of simultaneously communicating sight and sound. They are, as I say, benefits of incalculable worth which the distribution and marketing leaders of this country have helped give to the Nation through their use of television networks.

They are benefits which should and must be preserved. You will agree, I know. Yet I think it important that I urge this point on you this evening. For although I find it hard to believe, these benefits are now being attacked—heavily. We have in Washington at present a strange spectacle. One of the most ardent champions of the withdrawal of Government regulation of business proposes now to regulate the private radio and television networks—from transmitter to receiver—as public utilities. A most vigorous advocate of private enterprise, free of Government supervision, would now, suddenly, straight-jacket advertisers by formulating new ground rules perhaps affecting program service, station coverage, network affiliation policies and rates. In other words, the marketing of goods and services would be forced into agonizing, artificial economic patterns.

And only yesterday he was quoted by the Associated Press as saying a Government "checkrein" may be needed to make sure television networks broadcast unbiased news. According to the story, he cited this as an additional reason why he believes Congress should hold hearings on his bill to put networks under Federal regulation.

This gentleman is Senator JOHN W. BRICKER, of Ohio, who now appears before the Nation as a 20th century King Canute, ready to tell the electronic signals that they must turn back at the edge of a town. If he is not moved in his proposals by misinformation, or by ignorance, then we shall have to guess what other motives he may have for his proposed suppression of an essential part of our national communications system. For he would say to you that your marketing efforts must concentrate on fewer people rather than more—or, alternatively, to deny the fact that more people live in a big city than live in a small town. Senator BRICKER seems unaware that it is the radio and television networks that interconnect the Nation; that give small towns the same programs as big cities.

The attack on networks is serious. It is serious to the marketing function of television, and it is serious to the public service function. Should the enemies of networks ever succeed in destroying them, a serious deterioration in television programs and national coverage would be a swiftly following consequence. The entertainment function of television could continue, mostly through

the use of films. But the live and instantaneous linkage provided by the nationwide networks, whereby Twin Falls and Tampa are in the same bloodstream with Philadelphia and New York, would disappear.

There could be television without networks—but only in the same sense that there would still be banks if the Federal Reserve System were abandoned, or that automobiles would still run even after the destruction of the Nation's turnpikes. In a day when our American pride is that our national interconnections are becoming greater and greater; when we are building superhighways and the St. Lawrence seaway to achieve greater and greater accessibility with one another, the hamstringing of networks would be a monstrously grotesque backward step.

But assuming that this backward step is never taken, I see the growing interdependency of markets and communications as a great and good thing in the future. I feel quite sure that the new mass communications, far from rendering everything bigger and more brittle and harder to manage, are more likely to render things more plastic, better articulated, more understandable, and in many ways will turn many matters away from specialists and back into the hands of the people. An era of flexible and closely articulated decentralization seems to me to be the era we are most likely to enter. Although "regionalism," as meaning conflicts in tastes and customs, will tend to disappear, "regionalism" as meaning more autonomy for district and local managements is almost bound to increase. The idea that fewer and fewer groups of bigger and bigger moguls will manage the whole country from New York—or from Washington—is obsolete. The flexibility of democracy must win out, over the rigidity of imposed control at the top.

Television and marketing, together, are only at the threshhold of their contributions to the American people. For the viewing screen in the living room today can bring back to American politics the spirit of the town meeting, in which all citizens know the looks, the voice, the demeanor of the man who is asking for their confidence. The viewing screen in the living room can bring back to business dealings the intimate face-to-face confrontation, the ability to demonstrate, the person-to-person simplicity that flourished in earlier days—when the lady of the house went out to the peddler's cart to see for herself; when she did not need to take a carriage, or a steam train or an electric street car to a metropolitan trading center, to buffet the crowds of downtown and of Main Street, to come home with a coffee-grinder or a broom, or 5 yards of cheesecloth.

In short, it looks to me as if American life would in some ways resume the aspects of the intimacies of 100 years ago, as opposed to the heavy, unresponsive and, in many cases, arrogant, institutions of the 1880's 1890's, and the 1900's, when the dominant phrase was not Charles Coolidge Parlin's "the consumer is king," but was "the public be damned" of the monopolist. Politically, I think the mass meeting is on the way out—along with torchlight parades and red fire, and the crowds in the street waiting for the magic lantern in the newspaper office to project a hand-drawn slide onto a bedsheet hoisted between two wooden telegraph poles, to tell the public of the day that McKinley was running ahead of Bryan.

And what modern technology adds to this older pattern in our lives—this new simplicity, I would be willing to call it—boils down, in essence, to one great thing: the ability to throw the demagogue or the thug, or the bore, or the snake-oil salesman, out of the house, out of consciousness, if he does get in there, by a gentle twist on the knob that says "off."

And with an expression of gratitude to you for your attention tonight, and with this final word of homage to the pioneer we honor in Charles Coolidge Parlin, I turn that knob on my own self now.

Military Family Housing

EXTENSION OF REMARKS
OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I present the statement of Gen. Curtis E. LeMay, commander in chief, Strategic Air Command, before the Committee on Banking and Currency of the House of Representatives, made on May 24, 1956. We are all interested in our military personnel and I feel this statement will be of general interest. The statement is as follows:

Mr. Chairman and members of the committee, I have been asked to express my views on how the shortage of adequate housing affects the combat capability of my command. I am particularly grateful for this opportunity as I am vitally interested in this subject. For several years, I have been in the position of demanding that my people work long hours under constant pressure, to insure that we are capable of performing our mission in case of an enemy attack. At the same time I have been able to give them very little in return.

The primary mission of SAC is to be strong enough to convince any potential enemy that a conflict with the United States would be unprofitable—that he would certainly lose more than he could possibly gain. Secondly, should an enemy miscalculate and launch an aggressive strike against us, SAC must have the capability of striking the base of the enemy's air power with such promptness and force that his ability to continue an effective attack is destroyed.

Planes and bases alone will not give us this capability. We must also have highly trained professional airmen, and we must have them close enough to the planes that they can be gotten into the air at almost a moment's notice at any time in the day or night.

Adequate housing, within reasonable distance from the base, is without question one of the major factors necessary to the retention of our trained airmen, and to their almost instance availability for duty.

Appropriations for military construction have never been sufficient, nor within the foreseeable future are they expected to be sufficient, to provide a significant number of family quarters to satisfy our requirements.

It was particularly gratifying to me that Congress saw fit to enact legislation last August to provide family housing for military personnel. Public Law 345 offered the hope of a decent home to thousands of Air Force families and eventually a more stable, professional Air Force. However, it provides too little time for awarding of construction contracts on more than a small percentage of our requirements before the law expires on September 30 of this year.

The lack of adequate housing on or near Strategic Air Command bases has three direct, immediate, and inevitable bearings on the ability of this Nation to survive a major nuclear war and has, in addition, a long-range effect on our capability to build and maintain a professional force.

I. IT DELAYS THE MANNING, TRAINING, AND DEVELOPMENT OF COMBAT CAPABILITY IN NEW UNITS

Since 1948 it has caused the combat capability of my command to be seriously retarded. Because of the lack of family housing, I have been forced to reduce manning and make selective assignments of officers and airmen to certain bases. Specifically, I found it necessary to restrict manning at 4 bases, each designed for one or more wings, and to thereby delay obtaining combat readiness for these units for periods up to 8 months. These delays have resulted in a direct increase in costs ranging from three to twelve million dollars in attaining combat readiness at each of four bases. Although I have now been forced in the interest of national security to abandon the policy of restricting manning at bases where housing is not available, the separation of my men from their families is seriously affecting their peace of mind and thus the quality of their work.

II. LACK OF ADEQUATE HOUSING REDUCES THE CERTAINTY THAT OUR COMBAT-READY WINGS WILL BE FULLY EFFECTIVE IN THE EVENT OF HOSTILITIES

Right now we have a given number of wings ready to go to war. Ready, that is, with one qualification. Because much of the housing in the vicinty of our bases, and on our bases, is inadequate, many of my key operations personnel and combat air crew members have been forced to go from 10 to as much as 50 miles from the base to find acceptable homes.

What does this mean when a sudden red alert occurs? Can we be sure that our pilots and other key men will be able to fight their way to their base with roads probably choked with civilian evacuation? Under such conditions, it is probable that many key men would never reach their duty stations in time. This would mean that many of our bombers would never reach their assigned targets. Primarily, these targets are, as I previously indicated, the enemy long range Air Force that is capable of reaching American cities with nuclear bombs.

Thus, as you can see, the lack of adequate housing on or adjacent to our bases will reduce the survival insurance we are paying for and need.

III. THE LACK OF ADEQUATE HOUSING HAS A SERIOUS, IMMEDIATE AND LONG RANGE EFFECT ON OUR AIR POWER

In the last year, United States intelligence estimates indicate clearly that the Soviet Air Force is rapidly expanding its strategic air arm. It appears that they may surpass us in numbers of long range jet aircraft by the 1958 to 1960 period. This trend is significant in that it endangers our superior capability for deterring attack, which is basically our best defense. As a result of this trend, we cannot afford to continue losing our skilled personnel, who are to a large measure responsible for our present capability. Under these circumstances, it is more necessary than ever to make an Air Force career worthwhile for our Air Force people.

I have never believed that Air Force officers and men should be forced to live as second-class citizens. They are too important to the security of this Nation to be expected to accept substandard conditions. Certainly, one of the most important factors in making Air Force life attractive is insuring the individual that his family will have a decent house in which to live.

In my opinion, not one man conscripted the day war starts will get into the decisive phase of the fight. The survival of this Nation in an all-out nuclear war will depend

on the character, the capability, the readiness, and the determination and courage of the men who are in the military establishment at the onset of hostilities.

It is a well accepted conclusion that our increasingly technical air power can only be sustained by professional personnel. We cannot maintain a qualified professional force unless we are able to obtain and retain high caliber men in our Air Force. At present, we are not attracting sufficient high caliber men to maintain such a force. This type of personnel has more assurance of providing their families with adequate housing and other advantages if they go into civilian industry.

In the past 4 fiscal years, the Strategic Air Command alone has lost approximately 108,247 airmen through failure to reenlist. The cost of training the replacements for these men was $1,610,000,000. This does not include the cost of the officers we have lost. Unless something is done to make an Air Force career attractive, those costs will be recurring indefinitely.

When Public Law 345 was enacted, I instructed my staff to take all possible measures to insure the expeditious construction of housing. However, even with this effort I find that the Strategic Air Command will get less than 9,500 housing units under construction before the law expires in September. Strategic Air Command will require approximately 13,900 additional houses for officers, 22,800 for noncommissioned officers, and 18,500 for lower grade airmen on its bases and for tenant units on the bases belonging to other commands.

You will note that I have included housing requirements for lower grade airmen for whom quarters allowances are not provided under permanent legislation. Many of these airmen are assigned to key positions in SAC, such as critical electronic work and ground crews and are indispensable to getting aircraft in the air. Furthermore, these lower grade airmen are the source of our future noncommissioned officer personnel. If we are to expect these men to stay in the service and assume greater responsibility, it is necessary to provide them with a decent place to live. It seems that every time I activate a new base the housing rentals in the nearby communities jump far above their true value. Since my married lower grade airmen draw only $50–$70 a month in quarters allowances, they are being forced to live generally in quarters that could only be called hovels. With this situation in existence they are naturally going to want to get out of the service. For these reasons I feel that it is essential to provide housing for the lower grade airmen as well as for officers and upper grade airmen.

When Congress, recognizing our problem, enacted Public Law 345 last year, I am certain their intent was to provide housing in which our airmen and officers could live with dignity. However, during the months since the law was enacted certain problems have been encountered that tend to nullify much of the benefit expected of this law, with the result that the intent of Congress has not been realized.

Generally, the problems stem from procedural practices that delay the start of housing projects up to 18 months in many cases, and cost limitations that will not permit the construction of adequate housing in many areas.

With this in view, I believe that the following considerations warrant your attention:

1. Legislation for title VIII military housing should be extended for a period of at least 3 years.

2. The cost limitation for housing should be increased in order to provide adequate housing in all areas of the country to make allowances for varying building cost indexes.

3. The cost of site development should be excluded from the cost limitation placed on the housing. These costs often amount to more than $1,000 per unit.

4. The low bid received for construction of housing on any base should be accepted as sufficient evidence of the value of the housing project and permit award of a contract, provided that it is within the cost limitation specified by the law.

With legislation including such provisions, I believe that it will be possible to provide my people with the housing they require in a reasonable time, as I am certain Congress intended.

With adequate housing, plus increased pay for skill, and appropriate dependent medical care, commissary and exchange privileges, and educational benefits to active duty personnel, we will achieve the strong, professional Air Force we need with an overall substantial net saving to the taxpayer.

Orin Lehman, President of Just One Break, Inc.

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks, I wish to insert in the CONGRESSIONAL RECORD an article entitled "Only Human," by Sidney Fields, which appeared in the New York Sunday Mirror of May 13.

The article refers to the wonderful work that is being done by Orin Lehman, president of Just One Break, Inc., an organization devoted to the task of placing the physically handicapped in productive jobs.

J. O. B.'s efforts in this direction are most commendable, and it is hoped that other business firms throughout the country will extend a helping hand to those whose potential abilities can be developed into valuable assets.

The article follows:

Since Orin Lehman began J. O. B., or Just One Break, in 1949 over 2,000 physically handicapped people have been placed in productive jobs. Orin has an abiding interest in the handicapped. During the war he lost his left leg above the left knee and the other was badly crushed.

Until J. O. B. found work for them their communities kept the 2,000 at a cost of $3 million a year. Even figured at the minimum wage, they now earn over $4 million a year. The cost of placing them was $250,000.

"More important," says Orin, "we've opened up the minds of industry to the idea that there are 3 million handicapped in America who can do a job. So indirectly J. O. B. has placed more than 5,000 in productive work. But we're not too interested in numbers. We're more concerned with human beings and their feelings for each other, whether they're employees or employers."

Orin, 36, a bachlor, soft-voiced, fair-haired, and quietly determined, is part of the Lehman Bros. banking family, and nephew of Senator HERBERT H. LEHMAN. As soon as he got out of Princeton in 1942 he went into the Army as a 2d lieutenant, piloting a Piper Observation Cub and serving as a forward artillery observer.

When he was discharged in 1947 he was a captain with a Distinguished Flying Cross and a Purple Heart. He was hit by a shell near the Rhine on March 1, 1945. How did he react mentally?

"As a civilian you never expect it to happen to you. In the Army you know it may happen. The surgery is quick. Then you look around and see men of your own age in the same fix: I remember one, burned and bandaged from head to foot screaming for water, which he couldn't have. When we came out of it no sympathy was wasted on each other. In fact we kidded about our handicaps. But look, actually the disabled vet is a minority. There were only 17,000 military amputees in World War II and 130,000 civilian amputees in the same period."

Anyway Orin rejected self-pity, went to work for a few years in his father's banking firm, liked it, but it wasn't enough. He returned to school at night, is about to receive his master's degree in history from New York University, and is headed for a doctor of philosophy. He bought up four unprosperous weeklies and one daily newspaper in upstate New York and is busy reviving them.

He's a trustee of Montefiore Hospital, serves on the boards of the George Junior Republic, and the National Society for Crippled Children and Adults. But he spends most of his days with J. O. B. As a result he was appointed to Eisenhower's Committee on the Employment of the Physically Handicapped and last March was made chairman of Governor Harriman's Committee on Employment of the Physically Handicapped.

"The idea for J. O. B. belongs to Dr. Howard Rusk," Orin says. "He was in charge of rehabilitation for the Air Forces during the war and found it did little good to patch them up and just send them home to vegetate."

But Orin is president of J. O. B., and one of the founders along with Bernard M. Baruch, Thomas J. Watson, Bernard Gimbel, John Hancock, and others. Mayor Wagner has proclaimed this Monday J. O. B. Day, and Monday night J. O. B. holds its annual dinner-dance at the Waldorf.

In less than 7 years J. O. B.'s influence has been widespread and weighty; not only in new hope for all the handicapped, and a new attitude by industry, managers, supervisors, personnel directors, but even the medical profession.

"Doctors recognize a man's disability," Orin says, "but they do not recognize that the man's measured ability can be fitted to the needs of a job. It's interesting that those groups who raise tremendous sums for research of specific afflictions are now getting around to what happens to the victims after they're helped or cured."

In a recent survey of 300 people J. O. B. retrieved from the human junk pile it was learned that most of them had married, raised children, had savings accounts, and bought homes and cars. The Federal Security Agency estimates that for every dollar spent on rehabilitation of the handicapped they return to the Government $10 in income taxes.

National business firms like Metropolitan Life, Sperry, IBM, Lever Bros., have become ardent J. O. B. supporters. Several hundred civic groups and cities have asked J. O. B. to help them set up similar operations in their communities.

"In peacetime it's economically wise and good business sense to employ the handicapped," says Orin, "but in a national emergency it's a downright necessity."

And such sense cuts across national lines and boundaries. The United States is rooted in the concept of equal opportunity. Until recently that concept has been ignored with the handicapped. They were looked on as a burden, not a potential asset. But what better way can America exemplify the glory of equality than to show the world that it can rehabilitate its own handicapped and the handicapped in other nations. We did

it with hundreds of thousands of war-maimed Koreans, who might now be beggars.

"The vital thing," says Orin, "is that we give the handicapped neither sympathy nor charity; we give them back their dignity."

Foreign Aid

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I enclose a portion of an address made by me over KWKH radio station, Shreveport, La., on Sunday, May 27, 1956, on the subject of foreign aid. The remainder of this address dealt with local and domestic matters. The speech is as follows:

Ladies and gentlemen, the perennial foreign-aid bill is now before the House of Representatives and a vote will occur within the next few weeks. After a lot of good work in reducing the amount of money included in this bill last year, we had confidentally looked forward to a smaller recommendation to be made in the giveaway program during the coming year. We were, of course, rather disturbed when we learned that Secretary of State John Foster Dulles had set a goal to increase last year's gifts by 40 percent for the coming year. The presure has been on, and we who have steadfastly insisted on reductions in this program have been under fire from those who want to give away more money.

When Secretary Dulles appeared before the Foreign Affairs Committee of the House, he asked for $4,965,275,000. The committee has cut his request by $1,109,000,000—a considerable figure but not yet a big enough cut. I believe the Congress will further reduce the amount; and unless it is cut to the bone, I may vote against the entire bill as a protest against the huge giveaway program.

While the committee has reported a bill carrying with it the sum of $3,563,475,000 for foreign aid, this does not give the entire picture. This amount is to be used for administration expenses of the far-flung organization; it is to be used for the point 4 program; the military aid program, and the economic aid program. And this new money, over $3.5 billion, is to be supplemented by the additional sum of $6,800,000,000, which is carryover money; that is, the money appropriated by Congress during past years which has not been spent, and, as they say, is in the pipeline, and is being carried over for use during the coming year. If you add the amount of money carried over as unexpended to the new money appropriated, you will have the total figure of money available for foreign aid of some $11 billion—yet they want more than this to give away. This sum is so huge that it will take years to finish giving it away even if the Congress stops appropriating money at once; and the foreign aid organization of the State Department will be in existence 10 years hence even without receiving another cent.

One of the projects to receive money under this program is the Aswan Dam and Reservoir to be built along the upper Nile River in Egypt. It is to be built, according to plans of our State Department, to cost $1.3 billion—a sum so large that even at the rate of $100 million per year, it will require 13 years to complete our promises. And this dam and reservoir is to be used for the purpose of impounding waters of the Nile River in Egypt to be used for irrigation and to reclaim the dry sands of the Sahara Desert. Some 3 million acres of land can be successfully irrigated with this water, and, of course, according to the Egyptian Government, this irrigated land is to be used to grow cotton, to send to a world market in competition with Louisiana-grown cotton, now in surplus supply on the world market.

Our Government is using this money in foreign lands today for the purpose of teaching these foreign people to grow cotton in competition with our own southern-grown staple. I have seen some of this cotton with my own eyes and held it with my own hands. I know what I am talking about. I have seen it in the fields where American-trained personnel showed the local people how to grow this staple.

To show you how ridiculous this situation is, I have to remind you that this week the House passed a new farm bill, creating a soil bank recommended by the administration, which will cost our taxpayers $1.2 billion per year to administer. This is necessary according to Secretary Benson, because of the tremendous surplus of American agriculture crops.

We added to the bill an item which I consider small but very important for our cotton people. This provision requires the State Department to sell 5 million bales of American cotton on the world market in competition with world prices. For some time, Congress has been urging that American surplus cotton be sold on the world market. Other countries have taken advantage of our price-support program, which has kept the domestic price of cotton at a reasonable level. They have increased their own production of foreign-grown cotton, and when it has been increased they have sold it on the world market at prices slightly lower than the support prices of American-grown cotton.

Of course, these countries are going to yell to high heaven when we sell 5 million bales of our surplus cotton. This fact alone will hurt their sales in foreign markets, and I expect the State Department to take its customary position against selling our local product so as to permit foreigners to get a price for their own staple. Nonetheless, the sale of 5 million bales of American cotton on the world market will reduce our surplus of cotton to the point that it will not be a serious threat. It will take the pressure off the domestic price and will have the effect of bringing us to a point where our further curtailment of planting cotton may not have to last long and we may not have to be so rigid in applying it.

This Midweek Holiday

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1956

Mr. RAY. Mr. Speaker, under the unanimous consent granted me, I urge that all Members and all others who read the RECORD give careful attention to the following editorial which appeared in the New York Daily News on May 30:

THIS MIDWEEK HOLIDAY

The main purpose of today's legal holiday, of course, is the honoring of our Nation's dead. The growing United States custom, however, is to regard Memorial or Decoration Day also as the year's first chance for a real look at the out-of-doors. And, when May 30 happens to fall on a Friday or Monday millions of Americans are able to enjoy a 3-day break.

This year, though, those extended joys are out. Our erratic Gregorian calendar has granted just a 1-day holiday for 1956. For 99 percent of us, it'll be back to work tomorrow.

And if you'll flip your calendar leaves a bit, you'll discover that other possible 1956 triple-decker holidays have been washed out. This Fourth of July will fall on a Wednesday. Christmas arrives on Tuesday. Only Labor Day, because it's always scheduled for a Monday rather than a date of the month, will provide one of those refreshing 72-hour vacations.

The proposed world calendar

FIRST QUARTER

January							February							March

																			*	W

*The year-end world holiday, W or Dec. 31 (365th day), follows Dec. 30 every year.

**The leap-year world holiday, W or June 31 (an extra day), follows June 30 in leap years.

Dozens of proposals for calendar reform have reached Congress and other countries' legislative bodies, and have been approved tentatively by some United Nations members. One is the World Calendar, reproduced above.

DATES HAVE SHIFTED

It would cure most of the exasperations of the ancient job the Western world is struggling along with now. The calendar you have on your wall or desk was first whipped together some 2,000 years ago for Roman Emperor Julius Caesar by a Greek mathematician, one Sosigenes. It was reworked by Pope Gregory XIII in 1582, and was imposed on the American colonies by Great Britain in 1752. The British at that time decreed that the day following September 2, 1752, should be called September 14—a loss of 11 days.

That messed up George Washington's birthday (originally February 11, 1732) among others, and also casts a different light on the feelings of some religious and historical organizations that our present days of the week have always been set that way.

On the other hand, some of today's orthodox religious groups do point out that time switches such as those proposed by the World Calendar with its "Worldsday" would seriously disrupt their present 7-day sabbatical cycle.

Calendar reform advocates and representatives of the faiths affected have, so far, failed to reach agreement on the Sabbath question. The best minds on both sides,

however, are still working on the problem.

In the meantime, our own United States Congress could be doing us a real and more immediate favor by decreeing that all legal holidays except those of religious significance shall hereafter fall on Mondays, like Labor Day.

CONGRESS CAN ACT

In most cases, there would be little problem. Even now, for instance, our Independence Day is celebrated on a Monday whenever our inconsiderate calendar happens to spot July 4 on a Sunday. A regular Monday observance of this holiday would give us all a 3-day break at the steaming stretch of year when we need that respite most.

It's too late to do anything about Memorial Day this year. But, should you feel sufficiently resentful as you slog back to the job tomorrow, why not inquire of your Congressman what, if anything, he is doing to eliminate such calendar annoyances in years to come?

H. R. 6588, which I introduced on June 1, 1955, would provide that all legal holidays except those of religious significance shall fall on Mondays. That bill has aroused a good deal of interest over the country. Similar legislation is now pending before several State legislatures. There has been some, but not much, opinion adverse to the plan but it has not assumed serious proportions. Personally, I should like to see the calendar reform adopted, but I am quite sure that would take a long time. In the meanwhile, I hope sufficient interest will be stirred up in H. R. 6588 and similar bills to induce their passage.

More About WOC's

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. MULTER. Mr. Speaker, in view of the discussion on the floor today with reference to WOC's, I think the following item from the Florida Times-Union of April 1, 1956, is most apropos:

HEADS OF THREE INDICTED FIRMS SERVING AS UNITED STATES ADVISERS

WASHINGTON, March 31.—The Agriculture Department said today the presidents of 3 firms indicted this week in a cotton antitrust case are serving as unpaid Government consultants on cotton.

In response to queries, Assistant Secretary Marvin L. McClain said the three are members of the 10-man Export Advisory Committee advising the Government on how to get rid of a huge cotton surplus.

The three are Allison H. Pell of Pell Cotton Co., Charlotte, N. C.; Roger L. Dixon of R. L. Dixon & Bros., Inc., Dallas; and E. F. Creekmore of E. F. Creekmore Co., New Orleans.

A Federal grand jury in New Orleans on Wednesday indicted 8 corporations and 4 individuals on charges of engaging in an unlawful combination and conspiracy to restrain competition.

The Pell, Dixon, and Creekmore firms were among those indicted but they have denied any charges of wrongdoing.

The indictment alleged the defendants—8 companies and 4 individuals—violated the antitrust laws through collusive bidding in the purchase of more than $20 million worth of Government-owned cotton.

McClain said that while the Export Advisory Committee was considering questions involving the cotton surplus, its recommendations were not binding on the Department of Agriculture.

"The Department makes its own decisions," McClain said.

The Department is expected to announce soon a plan for disposing of the surplus.

One question involved is whether some cotton shall be sold competitively in the world markets, or whether it may be subsidized by the United States.

McClain said the Government never disclosed how the advisory committee members vote on such questions.

Promises, Politics, and Performance

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. ADAIR. Mr. Speaker, under leave to extend by remarks, I include an address recently delivered by the Honorable Earl L. Butz, Assistant Secretary of Agriculture:

PROMISES, POLITICS, AND PERFORMANCE

(Address by Earl L. Butz, Assistant Secretary of Agriculture, United States Department of Agriculture, before Federal Reserve Bank Assembly, Nicollet Hotel, Minneapolis, Minn., April 24, 1956)

This is open season for politicians in rural areas of America. They are at once the hunter and the hunted. Both the frequency and intensity of burst will increase during the next 6 months. Charge will be followed with countercharge, propaganda with counterpropaganda, and promise with still more glittering promise.

It is fairly traditional in American politics for the party seeking to gain control of the administration to exploit areas of potential unrest.

It is unfortunate, from the viewpoint of the minority party, that in 1956 there are relatively few areas of unrest among our people. Issues that capture the imagination of masses of voters are difficult to find.

But agriculture is in a relatively soft position, as compared with the rest of our economy. This is a fact concerning which there is no dispute. The disagreement arises over the cause of the farm price decline, and what should be done about it.

This means, therefore, that a disproportionate share of the total campaign effort in 1956 will be in the agricultural arena.

It will not always be easy to view the agricultural problem objectively. Frequently, more heat will be generated than light. And that kind of heat is never conductive to rational analysis or sound solution.

The foregoing discussion points up some of the great dilemmas in the farm policy debate. Should Government farm programs be based upon economic soundness or upon political expediency? Should the solution we seek be long-run or short-run? Should answers to our problems be sought in the company of statesmen or in the arena of politicians? In short, should principle rule politics or politics override principle, as we treat the illness of a basic American industry?

This is not to infer that long-run and short-run solutions are always incompatible, that principle and politics are always in conflict. They are not. But, whenever they are, principle and soundness should prevail.

FARM PROBLEM IS ECONOMIC, NOT POLITICAL

There is a growing number of farmers and farm leaders who are convinced that the farm problem is economic in character, not political. Its solution must be sought in sound and constructive measures, not in political platitudes.

We are witnessing a tremendous political struggle to curry the favor of the United States farm vote. After 3 months of hearings and debate, the Congress 2 weeks ago adopted an agricultural bill which the President felt, in good conscience, he could not accept.

The bill passed by the Congress contained many good points, but it also represented such a hodgepodge of legislative proposals that many people and important organizations felt it would do more harm than good. It was largely a political bill, in response to the President's recommendation last January for legislation that would seek constructive solution to our farm problem. The bill which the President vetoed represented primarily an effort to seek solution to the farm problem in politics, rather than in sound economics.

Let us think together for a few moments about the problems of our agriculture—problems of an agriculture beset for the last 5 years by declining prices and incomes, in the midst of an economy otherwise fat with prosperity. We must look at the basic causes of that decline if we are intelligently to discuss remedies.

The farm price slide is now 5 years old. It started in February 1951, some 8 months after the Korean war began. At that time the farm price parity ratio stood at 113. Last month it was 82. Some political sharpshooters would have you believe that the decline is all of recent origin. This simply is not true. Three-fifths of it, or 19 points, occurred in 2 years before Ezra Taft Benson became Secretary of Agriculture. Only about two-fifths of the decline has occurred in the 3 years since he became Secretary. The decline has slowed down markedly in recent months. Prices received by farmers turned up slightly the last 2 months. Our next job is to restore the index to a level that will assure satisfactory incomes.

The most serious price-depressing factor in agriculture today is the tremendous hoard of farm products under Government ownership. Nearly all sectors of agriculture feel the price-depressing influence of heavy supplies, either directly or indirectly. The Commodity Credit Corporation has approximately $9 billion invested in commodities owned or under loan to the Government.

FARM INCOME CUT ONE-FIFTH BY SURPLUSES

It has been reliably estimated that, were it not for the presence of excessive Government-owned surpluses, farm prices would be from 10 to 15 percent above present levels, and farm income last year would have been some $2 billion higher. This would have meant a 20-percent increase in net farm income.

It was logical, therefore, for President Eisenhower in his message of last January to recommend to the Congress an acreage-reserve program in the soil-bank plan. This was designed to make a frontal attack on the surplus problem. It would attack the problem where it occurs.

It was significant that the soil bank feature of the bill passed by Congress 2 weeks ago had almost universal support in both major political parties. The President, in his veto message, urged the Congress to pass the soil bank promptly so that it could be made operative yet this year with fall-seeded crops. It should be possible for the Congress to do this, since both Houses of Congress and both political parties are agreed on the desirability of having the soil bank.

The thing that split the Congress wide open during the debate on the bill was not the soil bank, but half a dozen other controversial issues added to the legislation. It is imperative that we get the soil bank authorization promptly, if we are to move as aggressively as we should in attacking the chronic surplus problem. But we need new legislative authorization as well as new appropriation. To get the one without the other is to be critically restricted in what the Department can do to solve the surplus problem.

For a number of years, one of the major arguments in farm legislation has revolved around the level and method of farm price supports. This argument has taken the form of high, rigid versus flexible supports.

The Agricultural Act of 1954 provided for a gradual shift to flexible farm price supports, beginning with the 1955 crops. However, when flexible supports first became operative in 1955, the more than $8 billion worth of agricultural commodities which had accumulated in Government hands under previous price support programs had such a price depressing influence that the more moderate and economically sound provisions of the Agricultural Act of 1954 scarcely had a chance to demonstrate their merit.

PRICES DECLINED UNDER RIGID SUPPORTS

Practically the entire decline in farm prices and farm income which we have experienced in the last 5 years occurred under operation of the rigid price support system. This all occurred while we have been arguing the question of rigid vs. flexible farm price supports in the legislative halls of America—indeed, while we have been living and operating under the high, rigid price support system itself.

If the high-price-support philosophy were the answer to our problem, we would have no farm problem today. We have been operating under that system for a number of years. Congress continued wartime price support laws too long into peacetime in order to protect farm income. However, these laws obviously failed to protect farm income. Under their operation, the Government acquired tremendously increased holdings of a wide variety of food and fiber. But even that could not stem the decline in farm prices and farm income which had already been in progress for two years before Secretary Benson assumed office, and which has continued less rapidly since that time.

But that was not all. This system of uneconomic price supports brought other important and undesirable consequences. It stimulated excess production abroad as well as at home. It encouraged substitute products to rob our markets both in this country and in other lands. It helped destroy our export outlets, as expanded production abroad robbed us of traditional markets. It even attracted foreign production to our shores, to compete with domestic output. It brought upon our farmers the most strenuous set of production and marketing controls in the history of American agriculture.

These controls are just as unpalatable to us in Government as they are to you who operate our farms and our marketing institutions. They are the undesirable product of an uneconomic system of price manipulation. They portray the futility of seeking solution in expediency rather than in integrity.

It is now abundantly clear to all that rigid price supports and rigorous production and marketing controls are the Siamese twins of agricultural policy.

And yet there persists strong sentiment in the Congress and even among some farm groups to etxend he very system that brought this yoke upon our farmers.

POLITICS WITHOUT PRINCIPLE

This represents the victory of politics over principle, of promise over performance. In the long run such a victory will become hollow; in the short run, it can be damaging.

The inconsistency of this position is like forcing a farmer to eat green apples to cure his stomachache he got from eating too many green apples in the first place.

Even the stringent production and marketing controls currently imposed upon our farmers do not prevent growing accumulations of Government-held surpluses. And yet, producers of cotton, tobacco, wheat, and rice have been cut back on production quotas to the point that many of them face liquidation.

Producers of basic crops with compulsory controls as is true of cotton, tobacco, wheat, and rice, have so small an allotment that many of them find it difficult to meet operating and living costs with production so curtailed.

A cotton farmer with a 3-acre allotment, a tobacco farmer with his 1-acre allotment, or a wheat farmer with an allotment only 60 percent of what he used to grow, needs something besides 90 percent of parity. One hundred percent of parity would not solve his problem. There isn't much that any kind of price-support program can do for him. His crying need is for an opportunity to expand his production.

When a commodity gets itself into the fix of producing for the Government rather than producing for a growing market, it almost inevitably finds a ceiling placed on opportunity.

Burley tobacco provides an excellent illustration of where you ultimately get with production controls. The Congress has established five-tenths acre as a minimum allotment for any individual burley tobacco farm. When acreage reductions were called for, the cut fell most heavily on larger farms. No farm is reduced below five-tenths acre.

TOWARD A NATION OF PEASANT FARMERS

But it is impossible to make any kind of decent living for self and family on five-tenths acre of tobacco. Indeed, it is very difficult even to be an efficient producer on an allotment of size.

Yet last year, of a total of 317,000 burley tobacco farms in the United States, more than 60 percent of them were at the minimum level.

This means that your Department of Agriculture is now in the business of rationing poverty among burley tobacco producers.

The same trend is taking place, although to a less marked extent, among flue-cured tobacco producers in the Southeast. Interestingly enough, just in the last couple of years, the world's largest market for flue-cured tobacco moved from Wilson, N. C., to Salisbury, southern Rhodesia. We have no control over southern Rhodesia producers, who are moving into the European markets our farmers once supplied. And while this takes place, American farmers are being severely curtailed by government in their opportunity to exercise their God-given right of initiative, imagination, and production in a healthy atmosphere of economic freedom.

There is no Government program that can provide a decent living for a family with a cotton allotment of 4 acres, a tobacco allotment of less than 1 acre, a wheat allotment so small that necessary equipment can't be used efficiently, or a corn allotment cut down to the size that the rigid price support program would impose upon our Midwest farmers.

We have gotten ourselves into this incredible mess primarily because many of our people believed, or at least hoped, an act of Congress could brush aside fundamental supply and demand relationships. for many years we have set out to legislate price at artificial levels, without effective measures to maintain consumption rates to curb production increases.

We have shackled price as an economic throttle, and provide no substitute regulation, other than Government controls. In most cases, these proved to be too late and too lenient. Indeed, to impose the kind of controls necessary to make this system work would have been to destroy the very freedoms that our farmers hold dear.

When production and marketing controls are imposed, they always strike hard at the small farmer. It is true we have the minimum acreage allotments below which a farmer will not be reduced. Under this system, the biggest relative cuts are taken by the large producers. On the other hand, the minimum acreage allotments established are usually so low that an individual farmer finds it impossible to make a decent living for himself and his family on his minimum acreage.

When farmers have been throttled down to an uneconomic production base so small that it hurts, they can have their level of price supports set at 150 percent of parity, and still not be guaranteed an adequate living.

They need an opportunity to produce. They need to know that if they are efficient and ambitious, they can expand their production and therefore increase their income. They realize now, perhaps too late, that income is the result of production times price. The high price guaranteed by the Government means nothing, if that same Government removes from them the right to produce. Their incomes fall, living standards suffer, and disillusionment follows.

What do these small farmers then do? They are forced either to resign themselves to a miserable level of living, or to seek employment off the farm. In the latter case, many of them drive anywhere from 25 to 50 miles each way daily for off-farm employment, and then do their farming operations on weekends and evenings. After a while, their principal source of income is off the farm, with farming operations more or less incidental. Their production begins to compete with legitimate farmers whose principal source of income is on the farm. Then the farm situation is still further complicated, and still additional small to medium-size farmers are forced either into liquidation or into seeking additional off-farm employment. And so the cycle goes on and on, with large numbers of small farmers being forced into liquidation by the very system that set out initially to improve their incomes.

It is significant further to point out that the great bulk of price support benefits goes not to the small farmer, but to the large farmer. For example, a year ago the top 1 percent of all Government loans made on wheat included 12 percent of total dollars loaned on wheat. Corresponding figures were 8 percent of total loans on cotton, 6 percent on corn, 11 percent on oats, 24 percent on barley, 8 percent on flaxseed, 11 percent on grain sorghums, and 8 percent on soybeans. These figures are indicative of the extent to which Government price assistance goes to the large farmers.

It is obvious why this is so. A small farmer limited to a couple of acres of cotton, half an acre of tobacco, 10 acres of wheat, or 15 acres of corn, has insufficient total production to benefit very much from any Government guaranteed price.

GOVERNMENT CONTROLS ARE BACKWARD LOOKING

Few if any agricultural commodity groups have ever expanded after accepting the "favor" of Government high price supports, and the necessary production and marketing controls which follow. On the contrary, the production of many price-supported commodities has shrunk in recent years.

When the benevolent hand of Government is called upon to control prices and direct the flow of goods, opportunity to produce and market is usually rationed among producers. Farmers are limited to a percentage of some historic base of what they have produced in the past.

Government production and marketing controls are essentially backward looking—not forward looking. Under these circumstances, producers with above average managerial capacity and ambition are severely limited in what they can do. They suffer, consumers suffer, and all America suffers.

We must not continue to injure our small to medium-sized farmers throughout America. We don't want to see their opportunity to expand and to become more efficient thwarted by the very Government that sets out to help them. We don't want to see them progressively throttled down and down until they are forced to abandon their farming operations because their Government would not permit them to produce enough to make an income sufficiently large to support self and family at a decent level.

AGRICULTURE IN THE POLITICAL AUCTION RING

This is a political year. It is a season when unscrupulous politicians feed on unrest. Some agitators even seek out and foment unrest. Promises are made which defy performance.

It takes political courage to face reality, and to recommend an economically sound course of action, even though it doesn't promise any white rabbits out of the hat, any political nostrums, any patent medicine panaceas.

In the 6 months ahead, frequent attempts will be made to place agriculture on the political auction block. This is unfortunate. American agriculture is not for sale to irresponsible bidders in the political auction ring. American agriculture is neither Republican nor Democrat, and its welfare must not be sacrificed on the altar of partisan politics.

The problem of agriculture today stems in part from the fact that for at least a decade many political leaders whose public heart bled for farmers had their private eye on the ballot box.

When such people come to you in the months ahead, ask yourself then whether they are really interested in your vote, or in your long-time welfare and freedom. If the answer is the former, subject them to the light of truth, and unmask them for what they are. If the answer is the latter, join with them, regardless of political affiliation, in a constructive and economically sound approach to a solution of our farm problems.

In this way our great agricultural industry surely must move toward increasing prosperity, progress, and freedom for millions of Americans who choose to live in close communion with the soil.

The Late Hon. William T. Granahan

SPEECH
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. KLEIN. Mr. Speaker. It was with a deep sense of personal loss and shock that I learned of the passing of my friend and colleague, BILL GRANAHAN. BILL'S tolerance and understanding, his sincerity and his conscientiousness will long be remembered. I learned to know him, not only as we sat side by side during committee hearings, but during our travels to South America with the committee and it was during these days that I grew to admire his ability and his devotion to his fellow man, characteristics which he hid beneath a cloak of great modesty.

The respect in which he was held by his colleagues was unsurpassed; his friendship was genuine; his smile ever ready and cordial. He will be sorely missed by all of us.

My deepest sympathy goes out to Mrs. Granahan and the other members of his family.

Address of Hon. Barry Goldwater, of Arizona, in Dallas, Tex., May 16, 1956

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the speech delivered by the Honorable BARRY GOLDWATER, Senator from Arizona, in Dallas, Tex., May 16, before a large group of the people of Dallas County. It is my hope that my colleagues will find great merit in the principles and the reasoning of Senator GOLDWATER presenting his views. I was particularly impressed with his remark about the common man philosophy which is so antithetical to the American's creed and beliefs as expressed in the Declaration of Independence and our Constitution:

It's a pleasure, as a Republican, to come to Texas without fear of being horsewhipped. Of course, I realize that, like the fellow who passed up filet of skunk, the "name of the animal" still bothers a lot of folks; but as long as we are together on the fundamental ideals of American Government I'm not too concerned about party labels.

I am glad, though, to see signs of the development of a two-party system in Texas. We went along for too many years in Arizona under the delusion that only Democrats were entitled to hold public office; but now, having experienced success in recent elections, Arizona Republicans no longer hide beneath the cloak of defeatism.

When the voters of this district elected BRUCE ALGER to Congress, they opened the way for the release of the fundamental Texas philosophy of conservative, free enterprise government. Not only did they send to Washington a man of the highest caliber and character, they also said to the Republican Party: "We are tired of New Deal socialism in America. The leaders of the pseudo-liberal Democrat Party of today can't, or won't, save our liberty. Here's BRUCE ALGER to help Republicans do the job for Texas and America."

Believe me when I say that Texas can be proud of this decision. Your confidence in BRUCE ALGER has been fully justified. You can do no better than to continue his service for you in Washington.

BRUCE has one quality above all others, which authenticates him as a Texan—he brags. He brags about Texas—its traditions, its institutions, its opportunities—and I suggest that this is a trait which could well be developed to a greater extent by all Americans with respect to those principles of freedom which have enabled us to build on this continent the most perfect form of government yet devised.

There is something going on in Texas today, however, which leads me to believe that you people aren't going to be content with boasting the wonders of your State. In fact, when someone told me the story the other day about the fellow from Texas who was struck by lightning while he was swearing, I replied that there was nothing so strange about that. Indeed, it would only be unusual if lightning should strike a Texan when he wasn't swearing.

The truth of the matter is that people in Texas aren't the only ones cussing these days. In Arizona, folks have been swearing pretty lustily for 6 years or more. It's done them some good, but they still aren't satisfied; and if I know Arizonans they'll keep right on swearing, just like Texans, until the efforts of the self-styled, pseudoliberals to substitute their socialistic pipedreams for our proven system of constitutional, free enterprise government are effectively and completely combated.

Despite what might be said by your philosophical critics, you Texans aren't really moss-backed reactionaries. This kind of epithet is invariably hurled at men and women who believe in liberty and who want to preserve the creeds and institutions which created that liberty. It represents the only ammunition of the sordid crowd of New Dealers who have been trying for years to convince our citizens that we have reached the zenith of freedom's promise and must now revert to an antiquated theory of slavery and regimenation.

This attitude, of course, they advance in the name of liberalism; but I suggest that it is the New Dealers who are the true reactionaries—the revolutionists—who want to take America back down the jagged road to tyranny, who want to take from us the liberty for which we and our ancestors have fought and bled.

Texans brag because they know that there are no commen men in their midst—that, in fact, there is no such thing as a common man in America.

Texans recognize the wide diversities our country has in races, nationalities, religions, occupations, and income levels.

Texans believe in treating our citizens as individuals, with sacred rights and freedoms, and opportunities greater than anywhere else in the world.

They do not subscribe to the collectivist theory that Americans—or Texans—are cast from a common mold.

The preachers and prophets of gloom in our country—the New Deal revolutionists—have long leaned heavily, in the name of liberalism, upon the theme of the common man.

They have employed the tyrant's tactic of division and disunity by appealing to the lingering prejudices of a system of ranks and class which pure freedom does not recognize. When they speak, they speak not to all Americans as Americans, but rather they set labor against management, farmer against worker, black against white, Jew against gentile, Catholic against Protestant, rich against poor.

In other words, they classify Americans according to race, color, religion, and occupation, and they say to each group that they are the common men who are being oppressed by the privileged few.

This privileged few, of course, in the eyes of the Socialist-minded, pseudo-liberal, is anyone who has enjoyed a measure of success and prosperity that is greater than that of the particular group to whom he is speaking.

For many years, the Democrat Party has applied this strategy. It has portrayed itself as the people's party, while Republicans have been described as the party of the special interests—in other words, the common man in opposition to the privileged few.

This claim is utterly false, but the self-styled liberals who have, unfortunately, gained control of the mechanism of the Democrat Party, have pressed it so boldly, for so long, and in so many forms that they have achieved for it a substantial measure of popular acceptance.

It is a flagrant example of the big lie in politics.

No major party could function successfully in a country of the size and diversity of the United States if it served only the common man or the privileged few.

It is one of the virtues of our nationwide two-party system that the voters may switch from one major party to the other and find each one an adequate instrument to serve the Nation as a whole.

If this were not true, our political system would soon degenerate into a multiplicity of small special interest parties not capable of governing.

The very health and vigor of our two-party system—each one drawing strength from all four corners of the Republic—belies the Democrat Party claim.

These statements by so-called liberals who have corrupted the traditional Democrat Party philosophy are so absurd that I often wonder just how stupid they think the American people are.

In his acceptance speech before the Democrat National Convention on July 15, 1948, Harry Truman said, for an example:

"The people know that the Democratic Party is the people's party and the Republican Party is the party of special privilege."

He said further, at that same time, "The Republican Party favors the privileged few and not the common, everyday man."

Adlai Stevenson, in a speech at Chicago on November 19, 1955, said:

"In whatever direction we look—tax policy, resources policy, credit policy or whatnot—we see the sharp outlines of what can only be described as special interest government in Washington, something we haven't seen since Republicans were there last."

Another instance of this pseudoliberal, common-man approach to Democrat partisanship may be found in the Report on Congress issued by the CIO in September 1954. This report says, on page 20:

"The question is not whether there will be any tax relief, but who will get it. The Democrats wanted it for the people. The Republicans wanted it for the upper brackets and the corporations."

As recently as April of this year, according to a story which appeared in the Washington Evening Star on the 13th of last month, Democrat Senator SAM ERVIN, of North Carolina, said:

"The Republicans believe in government for a few elite; the Democrats believe in a government serving all the people."

The big lie marches on.

One reason behind the Democrat Party claim that it is the party of the common man is the fact that for years it has labored hard to mold the American people into common men.

Secretary of Labor James P. Mitchell called attention to this tendency of the Democrats to turn our people into common men in an address at Flint, Mich., on January 20, 1956, when he said:

"The keepers of this doctrine were interested not in individual men but in collective man, massed man. For them social problems were quite simple. One merely had to determine what was good for collective man and then shove it down his throat like castor oil. The Government was of the people, for the people, but by the social planners."

Dr. James B. Conant, former president of Harvard University, put his finger on the source of the doctrine of massed man when he wrote:

"The Soviets seek uniformity and strict adherence to the creed of Marxism-Leninism."

In that creed man is nothing as an individual. He exists only as an unidentifiable atom in a collective mass; and men and mass exist only for the state.

Recent history shows the many steps through which the Democrats, who were in control of government, deprived our people of their individuality.

Democrats centralized the government of everyday affairs in Washington, leaving less and less for people to do in their home States and localities. They handed out billions in relief, grants, and aids from Washington, making people dependent upon the Great White Father at the Nation's Capitol.

Through social security, they reduced the individuality of persons to numbers in electronic computing machines. They forced men into unions to bargain collectively.

By raising great citizen armies to fight in foreign wars, they put the GI stamp of uniformity on every mother's son. By spawning Government housing developments they scattered clusters of identical brick and frame boxes from one end of the country to the other.

The list of laws, acts, and regulations which systematically robbed people of their individuality and piled them up in collective masses could be extended a mile long.

No one can deny that the Democrats intended to do good by these operations. No criticism need be leveled against relief programs, social security, collective bargaining, and public housing. Yet, it cannot be denied that an inescapable and most harmful byproduct of such operations has been the weakening of individual personality and self-reliance.

The Democratic Party has done its utmost to pour our people into the mold of common men and to deal with them in the mass. This is the basis of their political philosophy and voting appeals.

While they have had some measure of success, especially where our technical progress has emphasized collective or mass action, this success has been superficial because deep down our people are proud and jealous of their individuality. They resent being compressed into the mold of the common man.

Behind the mass production and the collective this and that, our people still have wide diversities and at heart remain individualists. This is clear when we examine some of the deep-seated diversities in American life.

Where Democrats are sincere in making the claim to be the party of the common man, as some of them undoubtedly are, they see the forest and not the trees. They look at the material uniformities in American life—the same trains, hotels, restaurants, cooking, and newspapers—and quickly come to the conclusion that all our people, too, are of a common mold.

What they fail to see is that this conformity is merely an expression of our technical, material progress. They fail to understand, or deliberately close their eyes to the fact that beneath the common material veneer is a people still highly individual in talents, aspirations, and with the intense desire to fulfill their individual personalities.

Again, in his address at Flint, Mich., in January of this year, Secretary of Labor James P. Mitchell declared:

"We were told for some years that Government was supposed to minister to the common man. This doctrine of the common man was as singularly unfree a doctrine as we have ever witnessed in this country. The idea that we are all alike, a common mass, the products of some sort of biological punch press, seeking the same end, through the same means, with the same ideas, desires, and needs, is indeed a devastating one."

A similar view is expressed by James B. Conant in his latest book The Citadel of Learning, where he says: "We in the free world, through our schools, colleges, and universities, seek to perpetuate that tradition of Western culture which emphasizes diversity, controversy, and tolerance."

So where are we to find the common man the Democrats are always talking about?

Is he of the Anglo-Saxon, Scandinavian, Germanic, Latin, Slavic, Celtic, or the score of other races which make up our population?

Is he English, Irish, Scotch, German, French, Italian, Norwegian, Swedish, Czech, Polish, or among any of the other three score and more nationalities which people the United States?

Do we find that our common man is a Catholic, Methodist, Unitarian, Presbyterian, Baptist, Jew, or any othe other hundreds of religious sects which flourish among our people?

Is he the business executive, the local banker, the city or rural lawyer, the office clerk, the shop manager or foreman, the factory worker, the school principal, the teacher, the corner grocer and his wife, the chain-store manager, the garage owner or mechanic, the department-store clerk, the Army officer or private, the housewife, or in any of the other thousands of occupations which make up our working population?

We have over 65 million employed persons in all occupations today. Where is the common man in this total?

Is he the worker in manufacturing who numbers only 15 million of our nonagricultural employed; or the 1 million engaged in mining; or the 2 million doing construction work; or the 4 million engaged in transportation; or the 9½ million who work in wholesale and retail trade; or the million and three-quarters who handle finance, insurance, and real estate; or the 5 million engaged in service industries; or the 5½ million people who work in Federal, State, and local government?

Is the common man to be found among our 8 million farmers? Is he the soft or hard winter wheat farmer, the cotton farmer, the rice farmer, the truck gardener, the cattle rancher, the cattle feeder, the peanut grower, the dairy farmer, the sheep raiser, the poultry and egg producer, or among the hundreds of other farm producers in our vast lands?

Does he come from the 7.6 percent of consumer units who have a family personal income of $1,000 per year or under; or the 15.1 percent whose income ranges from one to two thousand dollars; or the 18.9 percent with income from two to three thousand dollars; or the 19.3 percent with income from three to four thousand dollars; or the 12.8 percent with income from four to five thousand dollars; or the 14.8 percent whose income is from five thousand to seventy-five hundred dollars; or the 4.8 percent with incomes between seventy-five hundred and ten thousand dollars; or the final 4.5 percent who have incomes of $10,000 and over?

What do these facts show?

They show one thing above all else: That there is no such thing as a common man in the United States.

Every man and woman is an individual, with talents, interests, needs, hopes and dreams of his or her own. Each person seeks freedom to live his own life, to develop his own personality, and a fair opportunity to get ahead in the game of life on his own merits.

When young we dream of making a professional career, starting a small business, operating a farm, owning our own home, establishing a family, and building a competence for old age.

America is the land which urges us to "hitch our wagon to a star," to plan and to build on the rich foundations of our freedom and the heritage of those who came

before us and provided for us, and for the generations of Americans yet to come, the opportunities we have had, as well as inspiration to move ahead to yet undiscovered frontiers in this sanctuary of freedom.

Democrat Party leaders who make the claim that theirs is the party of the common man are well aware that ours is a Nation of great diversities, and that there are no common men in our midst.

Still, they do not hesitate to develop and inflame class distinctions in their aim to separate a few of our people from all the others.

One doesn't have to think hard to find the reasons for such Democrat trickery. One reason, is that the Democrats have been running the Government on the doctrine of the collective man, massed man.

A second reason lies in the field of raw politics.

Political history shows that Democrat Party leaders will make any claim and follow any line which promises them the votes to gain control of the country and remain in power.

They have shrewdly calculated where the bulk of votes lie and they make their appeals accordingly. That is why they label Republicans as the party of the "rich," the "bankers," "big business," and the "privileged few." They know that such labels carry an unpleasant, even sinister implication; and that few votes can be had from those sources.

They label their own party the party of the common man, the average man, and include among these the farmer, the laboring man, the white-collar worker, and the small-business man because such labels sound wholesome and the bulk of votes can be drawn from those sources.

It apparrently does not trouble Democrats in the least that this deliberate inflaming of class distinctions can do great harm to the peace and unity of the Nation.

It apparently does not bother them to malign good men and women among our people.

Their consciences seem not to trouble them when it is pointed out that their party, too, has its share of millionaires, its quota of advisers from banks and big business, and a very sorry record of favors to the privileged few. It doesn't seem to bother them, either, that a great many of the things they have done with professed intentions to help the so-called little man have resulted in great harm to the bulk of our people.

In using the inflammatory phrases of class distinction, they have had but one thought in mind—to get in power and stay there.

We are reminded in the third chapter of the First Epistle General of John that "Whosoever hateth his brother is a murdered."

Isn't this, after all, the end result of these pseudo-liberal, common man appeals?

They are attempts to instill fear in the minds of our citizens—fear of one another, fear of those who are different, fear of the self-reliance which is the keystone of liberty.

What has happened to the faith of our fathers?

America was not made free by hate. Humanity does not move forward in a climate of fear.

America has grown great because its citizens have trusted wholeheartedly in God, in our country, and in each other.

If the deceit of this new New Deal-Liberal dogma of the common man is perpetuated, freedom's call will go unanswered, opportunities will go unfulfilled, and competence for the future will be destroyed.

We cannot continue to reap the blessings of liberty by incubating cowards. We cannot carry on America's tradition of strength and leadership by stifling ambition, curbing incentive, and abandoning faith.

We need—desperately need—the uncommon men of our Nation. We need the courage and unquenched spirit of adventure which inspired the freedom of these United States.

We need to remind ourselves and each other that the Federal Government doesn't give us anything that it does not first take from us, so let's stop looking to Washington for the blessings of life and start doing more for ourselves.

Let's encourage in all Americans the devotion and optimism that characterizes Texans so that throughout this Republic men and women will proudly boast that in the United States we have "the biggest, the most, and the best."

You who are gathered here tonight know this to be true, and you are dedicated, through the Republican Party and your love of freedom, to the task of assuring that it will always be so.

A Tribute to the Commonwealth of Virginia

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. TUCK. Mr. Speaker, under leave heretofore granted me to extend my remarks in the RECORD, I herewith submit a tribute to the Commonwealth of Virginia prepared by the Honorable C. Orville Hammack, of Sunnybank, Northumberland County, Va.

Mr. Hammack is an outstanding citizen, a Virginian who is proud of his heritage and who embraces the fundamental doctrines and principles upon which our country was founded. He is held in high esteem by the people of Northumberland County, and he served some years ago as a member of the House of Delegates of Virginia from that legislative district.

The tribute is as follows:

VIRGINIA

(By C. Orville Hammack)

This is Virginia. Mother of States, home of patriots, birthplace of Presidents. Virginia, where Indian braves fished and hunted and fought. Home of Pocahontas, true friend of the struggling colonists.

This is Virginia. Whose shores are washed by the Chesapeake and the Potomac. With her beautiful inland waters and magnificent mountains that rise as medieval castles, peak upon peak.

This is Virginia. Where the stalwart settler cleared the forests, built his rude home, tilled the soil and buried his dead. It was the vision of these pioneers, blended in the crucible of sacrifie and labor which carved out of a wilderness, the foundation stone of a nation.

This is Virginia. Where mothers reared their children, taught them by the light of the primitive candle, and when the days work was done, tucked them in their trundle beds, and then with tired fingers spun the yarn and knitted their garments, weaving therein the dreams and prayers of the pioneer mother.

This is Virginia. Whose soil is hallowed by the blood of the defenders of her sacred rights. The doorway to a great Nation, destined to be baptized in the blood and tears of suffering and sacrifice, that her people might know and share the immeasurable cost of unyielding valor and loyalty.

This is Virginia. Which gave to the Nation, Washington, "Father of his Country"—Monroe, author of the great historical document bearing his name—Mason whose vision and wisdom gave us the Bill of Rights—Jefferson, ardent supporter of independence—Henry, champion of liberty and a host of others who modestly wore their mantels of greatness.

This is Virginia. Home of the immortals Lee and Jackson. Birthplace of men and women whose names have added lustre to the Nation's history. Men and women, conquerors of the seemingly impossible, who with indomitable will and inflexible courage broke down the barriers of subjugation and political slavery, that unborn generations might breathe the wholesome atmosphere of freedom.

This is Virginia. Grown from an infant Colony into a great Commonwealth, with her schools and universities that have enriched the minds of here people—her institutions of mercy that have ministered to the needs of the unfortunate. Truly it may be said, that the fine culture and broad sympathies of western civilization were seeded in the vision and sacrifice of her pioneers.

This is Virginia. With her great farms and orchards—stock that graze peacefully in her rich valleys—fish that teem her waters and birds and game that inhabit her forests. Virginia with her modern highways uniting country and village and city, and her winding trails that lead through flaming rhododendron and fragrant mountain laurel.

This is Virginia. Land of gracious hospitality and friendly atmosphere, with her humble homes and colonial mansions, her flowering gardens and sacred shrines. Home of romance, tradition and history—land of chivalry and valor—this is Virginia.

Judicial Merry-Go-Round

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial entitled "Judicial Merry-Go-Round," which appeared in the Los Angeles Examiner for May 17, 1956:

Supporting testimony to a recent proposal that appointees to the United States Supreme Court should be required to have had several years of judicial experience, can be seen in the case of the railroad brakeman and his $90,000.

The Supreme Court, by 5 to 4, reversed its previous 5-to-4 decision affirming the grant of $90,000 in a damage suit brought by the brakeman.

The issue now goes back to the original district court that heard the trial. If the matter is tried again and it goes against the brakeman, he would be forced to return the money.

But he has already spent a good piece of it, and as the minority opinion in the latest reversal said, "there should be a finality somewhere."

This ring around the rosy adds to the number of split decisions and reversals that gives Supreme Court verdicts, as the supreme law of the land, a terrible beating in the public's estimation.

It emphasizes the fact that eight members of the court have had little or no judicial experience.

And of course it emphasizes the need of having on our highest tribunal men matured by actual experience on the bench.

Nowadays, even astute constitutional lawyers are bewildered as to what exactly is the law in many instances.

That is certainly not a warrant of continued public confidence in the august body which, by interpreting the Constitution, gives final direction to the administration of justice.

No One's Too Poor To Go to College

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. MULTER. Mr. Speaker, I have for many years been urging the enactment of a bill similar to my bill H. R. 7846. Under that bill, by means of a loan program, we would be sure that every boy and girl who is acceptable for admission to a college would be able to pay the cost of such education. In that connection I desire to call the attention of the House to the following article which appeared in the World-Telegram and Sun of May 5, 1956:

NO ONE'S TOO POOR TO GO TO COLLEGE

(EDITOR'S NOTE.—College is an expensive proposition—and getting more expensive every year. You would like to go. You have the mental ability and the drive it takes to be a good student. But where is the money coming from? There's no blinking at the problem; it's a formidable one, not only for you but for thousands of other students as well. In fact, 7 youngsters out of 10 probably run into money difficulties in planning to go to college. Nevertheless, American colleges are bulging at the seams. Nearly 3 million students are enrolled this year, the largest number in our history, and that figure is expected to swell to about 6 million by 1970. As these students pick up their diplomas and step into jobs, their numbers will only begin to meet the growing demand for university-trained manpower. There is still plenty of room for you provided you have what it takes, including, of course, the ability to pay your college costs. How to meet those expenses is a family-size question, and the time to face up to it is long before high-school graduation. Has something been put aside over the years? Good. Add what you believe you can earn summers and partime. Consider the possibilities of a loan, available at most colleges. And don't fail to look into your chances of getting a scholarship, even if you are not at the top of your class. With all the help that's available to serious students, no one's too poor to go to college.)

Is it worth going into debt to pay for a college education? To many an able youth the answer to that question spells the difference between going to college and not.

Few families would hesitate to buy a house, a car, a television set or a host of other items on credit. Many people even take "fly now, pay later" trips abroad. Why shouldn't you go to college now and pay later?

Certainly the value of a college degree can hardly be disputed. Colleges are teeming, and the diploma is becoming a basic requirement for more and more jobs.

Measured in dollars alone, the college investment pays off handsomely for most students. From the beginning of his career a college graduate generally makes more money than the average person without a college education earns at the top of his experience. What the other, intangible advantages of a higher education are no one can measure fully.

Granted that in principle you may be willing to go into debt for college training, you can't plan ahead without digging into a dozen down-to-earth questions. What will interest cost you? Will you have plenty of time to repay? How much can you borrow?

Until now, strangely enough, comprehensive information about college loans has been hard to come by. Here are some factual answers to most of the questions that will occur to you as you consider whether a loan can help solve your college budget problem.

How many colleges lend money? At least 800 do. The big universities generally have more to lend than the small colleges.

Is there enough money to meet current demands? Most schools have enough or more than enough funds. About a third of the colleges, though, say they could use a good deal more than they have.

How strong is student competition for loans? It's surprisingly light. Each year a sizable amount of loan money goes unused for want of applicants. Of the funds that were available for lending at colleges last year, less than half were actually borrowed.

What are a student's chances of getting a loan? On the average, quite good. In a group of about 300 colleges to which nearly 40,000 students applied for loans last year, 88 percent of the applicants were successful.

Are you permitted to borrow as much as you need? You are likely to find that a ceiling has been placed on the amount you may take. About a fourth of the colleges that participated in this survey lend as much as the full tuition for each year. More than half, however, permit you to borrow only the equivalent of 1 year's tuition. Some, though only a few, occasionally lend enough money to cover a student's full expenses for the 4 years.

Can the student with just average grades qualify for a loan? On the whole, yes. Loans are usually granted on the basis of financial need rather than marks. Most administrators would probably agree with the director of Taft College in California, who points out that many a student may not qualify for a scholarship but may make an excellent loan risk.

As a rule, colleges require that loan applicants maintain passing marks. In some schools loans are not available to freshmen or even sophomores. In others, a high school graduate who has been admitted to the college may qualify.

Are scholarship holders also eligible for loans? Yes. In fact, more and more schools are offering package arrangements that include scholarship, loan and job. The aim is to spread available money more widely and reduce loan burdens.

What are interest rates? Most loans cost 2 percent or less while the borrower is in college and 4 percent or less afterward. A good many carry no interest at all during the school years, and a few no interest at any time. Some, though, cost as much as 6 percent both during and after school.

How long do you have to repay? Chances are excellent that you'll be given all the time you need. Nearly half the funds included in the survey set no time limits. The rest give up to 6 years or more. Often you can arrange to extend the period provided that you keep up interest payments. Some schools encourage installment repayment; Harvard, for example, allows you to repay at the rate of $120 year.

When does repayment begin? Usually when you leave school. Quite a few of the loans, though, compute the repayment period from the date of the loan.

Are students usually able to pay off their debts? According to the director of admissions at Rensselear Polytechnic Institute. "The experience of almost every college is that there is virtually no loss by default." Last year colleges did write off as uncollectible an average of about $540 per school—that is, for every student who took a loan, schools wrote off a loss of about $5 from previous loans.

Do parents assume any responsibility? They are sometimes asked to sign the loan notes as comakers, which means that they are responsible in case of default.

Do college administrators encourage borrowing? Ninety-six percent of those who took part in the survey agreed that a student should think of his education as an investment for which he would be willing to borrower.

Does that apply to all students? Much depends on whether a loan would mean the difference between going to college or not. If you are headed for a comparatively low income field such as teaching or the ministry, you will probably want to borrow only as a last resort. Women students, too, often shy from the idea of carrying a college debt into marriage.

Which would be wiser: To postpone or interrupt college, or to take a loan? Nine out of ten educators say the loan is preferable.

Why don't more students use the loan funds? Students are generally reluctant to borrow, but loans would increase, say administrators, if college youths received better financial counseling. Apparently many young people are just not aware of how good an investment college is or how well they stack up as loan risks.

Is it wiser to take a loan than to do part-time work? No. Educators put jobs ahead of loans. The more you earn, the less debt you carry.

Are education loans available only at colleges? No. Many private foundations and organizations lend money to students. Some local banks offer education installment plans in cooperation with nearby colleges. Most officials say they would like to see a general privately financed fund set up for long-term, low-interest loans—one from which young persons would not hesitate to borrow.

Is the loan idea spreading? Yes. As time goes on, students will probably find it easier to borrow what they need for college. "Loans," says the director of financial aid at Harvard, "ought to be the most important development in student financing in the next 10 years."

Isn't a scholarship better than a loan? Sure, if you can nail one. But the intense scholarship competition among colleges for top-ranking talent sometimes elbows the ordinary fellow who also deserves a degree. Besides, many administrators think that students ought to be willing to shoulder some of the costs of their education. Readiness to borrow for college, they feel, signifies healthy maturity.

This school year about $55 million will be offered by colleges and other sources in the form of scholarships. As many as 175,000 students will benefit. However, more than 20,000 scholarships worth over $4 million will probably go begging, as they do each year, mainly because there is no one to claim them.

Here's how to know whether you qualify for a scholarship, and here is how to ferret out the grant that may be specially tagged for you.

Do only the top students get scholarships? Not at all, though nothing will give you as powerful a boost as a steady record of high marks. Selection committees generally base

their awards on a combination of elements: Above-average marks, financial need, good character. As a starter, see how you measure up.

Are you above average, or better still, in the top third of your class? Those are usually the minimum scholastic requirements, according to the College Entrance Examination Board, which made a study of about 450 scholarship programs. High grades were called for in only 5 percent of the awards. In many cases, however, candidates were asked to take aptitude tests.

HOW TO LOOK FOR A SCHOLARSHIP

Do you really need help? Colleges and private sponsors have been placing more stress on this element. About half the programs studied by the CEEB required proof of need.

Can you show evidence of general all-round ability, leadership qualities and worthwhile extracurricular interests? The College Board survey found these elements stipulated in about one-fourth of the programs.

For many scholarships you must meet other specific, and often very peculiar, requirements as well. Some insist that you study in a certain field, some that you live in a specific county or city or, in one instance, along a certain railroad line. In other cases you are eligible if you have one parent who was born in Sweden, if you are a Boston newsboy, if your father is a New York cabdriver, and so on.

Awards may run from as little as $50 to as much as full tuition and expenses for 4 years at the college of your choice. The averages are about $225 for an undergraduate scholarship and $638 for a graduate fellowship.

There's no telling where or how much pay dirt you will find until you look. And the time to start your prospecting is 2 or 3 years before you will need the help. What you discover may very well help you shape future college plans. The application itself should be filed early in your senior year to reach selection committees in time for spring decisions.

Organize your campaign. Much will depend on your thoroughness and ingenuity. Check the following sources:

Your high school: Consult your vocational counselor or principal. The school library probably has several of the books mentioned below. Keep an eye on the bulletin board for up-to-date announcements. Beginning this year, for example, National Merit Scholarships carrying full college expenses will go annually to winners of a nationwide high school competition. No doubt your bulletin board has details.

The colleges: They administer about a third of the available money. Write to all schools in which you may be interested, requesting not only regular scholarship information but facts about other special arrangements, such as tuition rebate programs and work-and-study plans.

Your community: Explorations in your immediate locality may turn up many surprising leads. Graduates of Cook County schools in Illinois can get help from the Chicago Community Trust, and high-school students of Worcester, Mass., can get help from the Alfred Pinkerton Fund. Similar scholarships are available in dozens of other communities.

Look for information at your local board of education, library, newspaper, board of trade, and service and fraternal clubs.

Industry: About 2,000 grants are offered each year by some 300 companies. Many are available on a national scale—for example, the General Motors awards—and your high school probably has details about the tests required. Most, however, are designed for employees and their children or for residents of the localities in which the companies have offices or plants.

Look into the college-aid programs of all large nearby companies, especially if a member of your family works for one.

Professional societies: If you know what field you are going into, follow the professional publications and write to the national organization. Magazines for librarians, as an example, often carry scholarship information that may not be found elsewhere. The Council on Social Work Education puts out an annual scholarship list, and other professional groups do the same.

Foundations: You may turn up a nugget if you go through the volume American Foundations and Their Fields at your library. Scan the section devoted to your State and the foundations listed under your field of study. A resident of Boston, Mass., for example, will discover that the Edwards Scholarship Fund is tailored to him.

Unions: Does a member of your family belong to a union? A carpenters' local in Tacoma, Wash., offers $400 to an above-average student recommended by his principal. Dozens of other awards are offered by local, State, and national labor groups, and many are granted regardless of union connections.

Your State: Three-quarters of the States give some kind of scholarship aid. In some the valedictorian of each high school graduating class is entitled to an award. In others you are eligible if you agree to practice medicine in rural areas when you graduate or if you plan to teach. New York State hands out more than 5,000 scholarships each year. Write to your State department of education for details.

Your church: Whatever your religious affiliation, you will probably find that some scholarships have been set up either by foundations or church organizations expressly for members of your faith. Consult your minister and your church's national organization. The Board of Education of the Methodist Church, as one example, publishes a list called National Methodist Scholarships.

Veteran's groups: If you are the child of a veteran, get the American Legion's booklet Need a Lift? available for 10 cents at local posts or from Scholarship Information Service, Post Office Box 1055, Indianapolis, Ind.

Most State governments give educational aid to the children of veterans, so write to your State department of education.

Veterans themselves, of course, are eligible for help under the GI bill. For details write to the Veterans' Administration.

The Federal Government: There is no general program of Federal scholarships. However, the following sources may be helpful:

For help in studying abroad, see The Handbook on International Study at your library; for additional information write to its publisher, the Institute of International Education, 1 East 67th Street, New York 21, N. Y. Your library may also have a copy of the UNESCO book, Study Abroad, published by the Columbia University Press, New York 27, N. Y. (price, $2).

For information in the field of physical and occupational therapy write to the Office of Vocational Rehabilitation, Department of Health, Education, and Welfare, Washington 25, D. C.

For more extensive lists of scholarships awarded each year see Scholarships and Fellowships Available at Institutions of Higher Education by writing to the Superintendent of Documents, Washington 25, D. C. The price of the book is 70 cents.

For details about special Army, Navy, and Air Force ROTC programs under which students receive practically full education costs, write to the individual services at Washington 25, D. C.

As you can see, a good scholarship lead may turn up almost anywhere. If you have what it takes in mental equipment to be admitted to college, add an extra bit of persistence and probably a touch of luck, and the chances are good that you can land the help you need to get through the college of your choice.

A few samples of college loans

School	What you may borrow	Interest	Time to repay
New York University	$1,000 maximum for 4 years	4 percent	Depends on individual.
Columbia	Up to amount of tuition. Freshmen in 2d semester.	2 percent during college and a year after. 4 percent thereafter.	Payable in 1 year or less.
Fordham	$200 annually	2 percent from day of loan	No time limit.
Pratt Institute	$300 average each year	1 percent after graduation	After graduation.
Rutgers	$300	5 percent	Repay each year.
Stevens Tech	$400 to $500	4 percent, some at 2 percent	After graduation.
Princeton	Flexible. $125,000 loan fund.	1 percent as student. 4 percent after graduation.	3 years after graduation.
Yale	$700 a year or $2,000 over 4 years. Freshman eligible.	None as student. 2 percent 5 years after graduation.	5 years after graduation.

Coerced Into Unions

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 3, 1956

Mr. HIESTAND. Mr. Speaker, there has just been brought to my attention a very able article by George H. Todt, in the San Fernando Valley Times of August 29, 1955. Touching upon the very important subject of coercion, I request it be included in the Appendix under unanimous consent previously granted me:

COERCED INTO UNIONS

(By George H. Todt)

LABOR BOSSING BY STRESS, DURESS

Should self-anointed labor bosses be permitted to impress free citizens of the United States against their will?

Should any American be compelled to join a labor union?

"Compelled," it says here—whether the exaction be caused by physical, mental, or moral duress, and regardless of its being either directly or indirectly imposed upon its victim.

Why should any free citizen who has been guaranteed the God-given right to life, liberty, and the pursuit of happiness, as decreed by our inspired Constitution be blackjacked by force into entering an association he may not wish to join if he were allowed his own free agency to decide for himself?

The word for this is extortion.

Extortion, as defined in the dictionary, is "to wrest from a person by force or any undue or illegal power or ingenuity; to wring from, to exact."

Now this is not to be construed as any attack upon the legitimate aims of labor. The writer is a working man himself, and enlightened self-interest causes him to side with those—and they are in the vast majority in the American capitalistic system, both

in the ranks of management and labor together—who wish to see working conditions constantly and consistently improved within the bounds of reason and commonsense.

Few informed persons will deny that labor and management have each made significant contributions to the welfare of the American worker, so that the latter is now the envy of the civilized world. So much so, indeed, that they have caused the false predictions of Karl Marx against capitalism to fall flat on their face. We have no downtrodden proletariat in the United States, where the workers average out better in conveniences and luxuries than the lesser nobility of Europe and all except the aristocracy of Asia and Africa.

Labor unions have played their part in this unparalleled improvisation of plenty, but theirs is not the whole part, nor necessarily even the largest part. The latter is a controversial matter which will demonstrate a wide range of opinions by the public.

At the present time, one-third of the American labor force belongs to unions—the other two-thirds, comprising the majority, do not. The reason the majority of these citizens have not become organized by labor bosses is, quite frankly, because they do not wish to be so organized. Actually, many who are already in labor unions have not joined of their own free agency—but because they have been forced under duress to do so.

Now we are told that the labor bosses are frantically organizing efforts to capture the balance of American workers who have not already been caught up to them.

There is nothing wrong with any citizen joining a union of his choice providing he is permitted to do so according to his own free agency in the matter.

But to force an American to join such an organization against his will, to force him to pay tribute he can ill afford to spare from his family, is reprehensible on the face of it.

This smacks of totalitarian tyranny and abuse against a free people.

The Prospects of a Part-Time President

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1956

Mr. MULTER. Mr. Speaker, the following excerpts from the New Republic magazine of March 12, 1956, are interesting and enlightening:

THE PROSPECTS OF A PART-TIME PRESIDENT

I. LIGHTENING THE LOAD

Although Leonard Hall's worst worry is over and Eisenhower has been signed up for the duration, this doesn't mean the Republicans can take a vacation. For the candidacy of a recovered heart patient compels them to anticipate and counter two fears in the minds of many an independent voter: will the President have the physical capacity to carry the full burden of his office, and is RICHARD NIXON morally and intellectually fit to take over command were that required?

The first task, therefore, of the defenders of the Republican cause is to downgrade the enormity of Presidential responsibility.

Even before Ike announced his intention to run again, Life and Newsweek, in their respective February 27 issues, neatly reversed the customary campaign procedure by grooming the office to fit their candidate.

Pointing to the sheer bulk of the duties that somehow have settled on this office, Robert Coughlan, the Life man, argues that reform is needed and long overdue. "President Eisenhower's recent illness, along with dramatizing the need, has given it urgent priority." He suggests that life could be made a lot easier for the President by delegating many of his duties to Mr. NIXON and Sherman Adams, by reducing the number of his visitors, and by cutting down the number of documents he must study and sign.

Not to be outdone at saving the President from his office, Mr. Raymond Moley, of Newsweek wants to see the number of documents requiring Presidential signature reduced to the point that they "would be no more strain than doodling on a scratch pad." He also wants to see the President surrounded by "agreeable, restful" companions during his leisure hours. "A bore," Mr. Moley warns us solemnly, "may be more deadly than a brink of war."

It appears that Mr. Moley considers it a ridiculous waste of time for the President to keep up with the world by way of the press. "There is no reason," he declares, "why a President must read newspapers except for relaxation. A Steve Early or a Jim Hagerty can convey press opinion to him." Although he ruefully concedes "the press conference probably must be continued," the Newsweek columnist holds that "the President could greatly help himself by cultivating a habit of fewer and shorter answers." This is a shrewd stroke, inasmuch as it will lighten still further the burden of keeping up with the press by drastically reducing the amount of news.

It is just plain silly, in Mr. Moley's estimation, for the President to be bothered with political questions. "Some individual, perhaps the Republican national chairman, should have precedence and, with 3 or 4 members of the President's staff and 2 or 3 Members of Congress, should form a political security council to formulate decisions for the President." Similarly with the Cabinet: it must be staffed with topnotch men who will accept responsibility and make their own decisions, because "second-raters always try to pass judgments to the chief."

As we get the picture, then, the President is to sign his name as infrequently as possible, read no newspapers, curtail his attendance at parties, banquets and balls (a feast may be more deadly than the Middle East), limit the number of his visitors, delegate political decisions to the Republican National Chairman, and policy decisions to his subordinates.

II. WHAT IS THE RISK?

If, during this campaign, the Presidency is made to appear less demanding than in fact it is, and Mr. Eisenhower's competence is made therefore more plausible, there is still certain to be continuing discussion of the relevance to the present situation of Mr. Eisenhower's categorical remark, made after a 4-day illness and published in his book Crusade in Europe:

"I learned a lesson I did not thereafter violate: A full measure of health is basic to successful command."

What is a "full measure?" What do doctors tell the average "recovered heart patient?" What can he and what can't he do? "The man himself really decides," says Dr. James Watt, director of the National Heart Institute.

"First he tries one thing, then another. What the doctor tells him is conditioned by what benchmarks he passes. It's difficult to measure the reserve of a man's heart. You can put it to a test, and if it does all right, you know; or you can put it to a test, and if it doesn't do it, you know that, too."

Above all, Dr. Watt points out, every physician must protect his patient from harm. The heart's strength, therefore, should be put to the test no more than absolutely necessary. Each time the patient shows that he can take an additional step the physician extends his limit a notch more—stopping at the point where "the patient is satisfied, where he can live the life he wants to live. You don't stretch it more than you have to."

In the President's case, Dr. Watt's analysis suggests, the demands placed on the heart might be stretched beyond that imposed on a private citizen following the safest course. This is especially true in that crucial but shadowy area, emotional strain. The President himself said in January that a major factor in his decision would be "the zip and zest that you can take into conferences when you have to get something done for the good of the United States." Measuring zip and zest is quite elusive in any man, Dr. Watt commments, "Call it a psychosomatic factor or simply part of the medical picture, it is a matter of deciding what is stress and strain to the man in question."

The psychosomatic approach to coronary cases has been sharply stated by Prof. Harold G. Wolff, of Cornell Medical School, a pioneer in his field, who showed in his study Stress, Emotions, and Cardiovascular Disease, published last year, that under stress and strain, the accelerator nerves stimulate the heart to work too hard. "Such unusual cardiac exertion evoked by anxiety implicitly requires restriction of demands on damaged myocardium (heart muscle)." He cites the case of a middle-aged man who suffered minor heart trouble and decided to slow down and assume fewer responsibilities for a brief period. As a matter of fact, however, circumstances so shaped themselves that such relaxation was impossible, and he was obliged to assume more than the usual workaday burden. Under these circumstances of conflict he became resentful and tense. * * * The picture was one of a man fighting with his back to the wall.

To apply this psychosomatic analysis to a specific patient, Dr. Wolff says, "you have to decide what types of people and situations upset him, and delete that, circumvent that, in his daily life."

But can any President who is more than a casual occupant of the White House avoid people and situations that upset him? More specifically, can Mr. Eisenhower who, for all his charm and benignity, has his flashes of hot temper?

One White House correspondent believes that what disturbs the President most is any sign of what seems to him disrespect or impertinence. It is then, as the Alsops put it, that the well-known telltale flush creeps up over face and forehead.

"Decisions distress this man," says another close observer of the President, "and coming up to one in the pinches is his toughest moment. His impulse is to go along with the thing that's easy or traditional." Obviously, in these circumstances, one of the many things from which Mr. Eisenhower will have to be protected is the kind of aggressive, provocative questioning that heretofore has marked successful presidential press conferences.

But what if the special strains of the Presidency were not at issue? What if we were talking about the future of Dwight D. Eisenhower, chairman of the board of General Motors? What would be his prospects?

Mr. A. Z., a 58-year-old executive in a large automobile company, suffered "a few small strokes." As heart attacks go they were minor, yet "the executive was retired from active participation in the business. Since retirement he has been enjoying better health and he has been able to regulate his own life according to his wishes, and not according to the dictates or needs of the business."

This case has been cited in Executive Health Programs, by Dr. George M. Saunders, medical director of the Socony-Vacuum Oil Co. Pointing to "the special stresses and strains which are exerted on the executive demanding peculiar qualities of resistance for survival," Dr. Saunders lists an electrocardiogram as 1 of 7 "musts" in executive health examinations. While stressing that it is still

not known "whether heart disease is an occupational hazard of business executives, it is known, however, that emotions such as anger, fear, anxiety, or pain may affect the heart profoundly, not only its action, but also the rate, the sounds, the electrographic tracing, and the blood pressure."

All life is a risk, the President's affirmative decision seems to suggest. As to the degree of risk which he is asking the American people to take, it is pertinent to consider how the professional risk-takers, the insurance companies, regard recovered heart patients.

The best statistical answer so far has been presented by the Metropolitan Life Insurance Co. in its 1953 study, "What Happens to Men Disabled by Heart Disease," which shows that 1 out of 3 recovered heart patients do not last 6 years, a conclusion drawn from the observation of 100 white male coronary victims between 50 and 64.

Because of such findings, insurance companies do not normally sell life insurance to recovered heart patients. Dr. Harry Dingman, vice president of the Continental Assurance Co., declares flatly in his standard reference work, Risk Appraisal (revised edition, 1954):

"Coronary disease is not an underwriting problem. The underwriter says "No." It is a claim man's problem. He deals with an impaired man. * * * Experimentally a few companies are insuring a few coronaries. Wisely? Future will tell."

III. WHAT ABOUT NIXON?

If Eisenhower's bad heart is the first worry of Republicans, the second is the distrust that persists throughout the Nation of the man who is and hopes to be within one heartbeat of the Presidency.

NIXON, the President affirms, can have the vice presidential nomination if he wants it. On the matter of NIXON'S wants at least there is no doubt. His campaign to eliminate the opposition to himself is underway, and is well expressed by NIXON'S personal friend and adviser, Representative PATRICK HILLINGS, Republican of California.

First, says HILLINGS, NIXON is indistinguishable from his leader on every aspect of the Eisenhower program. "To disparage NIXON is to disparage Eisenhower."

Second, HILLINGS declares, "The smear campaign against Vice President NIXON is being directed by the Democratic National Committee and certain leftwing elements in the country who have opposed NIXON ever since his exposure of Alger Hiss."

This second comment might seem to some, to confirm the charges of moderate men that Nixon debases the democratic process by identifying opposition to himself with treachery to the United States. Its accuracy is best judged by the comment of an ardent Eisenhower supporter, Walter Lippmann, in many Republican newspapers.

Writing 1 month before the President's declaration, Lippmann noted that if Eisenhower ran he would probably be reelected President, that his chances of serving out his term were at best problematical, and that he bore in consequence a heavy responsibility to the Nation in picking as Vice President one who sincerely shared his spirit and principles. Lippmann continued:

"He can give no such guaranty for Mr. NIXON. It is not a question of whether Mr. NIXON supports the Eisenhower legislative program. * * * Of course he does. The question is whether he represents the central thing which Eisenhower represents, the thing which has given Eisenhower such a hold on the American people.

"The central thing is that Eisenhower unites the country and heals its divisions. This is precisely what NIXON does not do. Instead of being a national leader he is a ruthless partisan. He is a politician who divides and embitters the people."

Dr. John Milburn Price

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. WRIGHT. Mr. Speaker, this month Dr. John Milburn Price completed 41 years of service to the School of Religious Education which he founded at Southwestern Baptist Theological Seminary in Fort Worth.

He has been, in truth, a pioneer in this portion of the Lord's vineyard. In 1915, under his direction, Southwestern became the first school among Baptists to offer vocational training in religious education.

In 1917 it became the first school in America to offer a religious education diploma.

In 1919 it became the first Baptist seminary to offer a doctors degree with a major in religious education.

In 1921 it conducted the first vocational conference on religious education and the first demonstration kindergarten in a Baptist seminary.

In 1922 it developed the first vacation Bible school among Baptists, and this is the oldest of such institutions.

In the following year, it began reaching out to those not blessed with the academic prerequisites and became the first school to offer special seminary courses for noncollege graduates.

In 1950 Southwestern erected on its campus the first building in America designed exclusively for teaching religious education, and in the following year it became the first school of religious education among Southern Baptists to become accredited.

All of this is a tribute to the magnificent leadership of John Milburn Price.

While a Marston scholar in Brown University, Providence, R. I., J. M. Price was inspired by the thought that he should train lay men and women to become Sunday school teachers. And in less than 3 years, while completing his theological training at Southern Baptist Theological Seminary, Louisville, Ky., the door of opportunity was opened through which he might enter and realize the achievement of his life's dream.

Dr. L. R. Scarborough, president of Southwestern Baptist Theological Seminary, Fort Worth, Tex., wrote Price a letter, which said in part, "It is now our purpose to establish a school of Christian Pedagogy. I think we have hold of the small end of a big proposition. We will have to do pioneer work and break new ground." Then he asked J. M. Price to organize the School of Religious Education in Fort Worth.

The offer was challenging and divinely inspired but somewhat disconcerting. Others were requesting his services, too, and a decision had to be reached immediately. He had been elected as Sunday school secretary for Kentucky (his home State) and he longed to stay there. Friends in Canton, China, urged him to join their faculty at the seminary there.

J. M. Price was a praying man and he turned to God often in those heavy hours in order that he might find his Lord's will. When the answer came there was no doubt in his mind that he was to go to Southwestern Baptist Theological Seminary. For, then, he could be in Texas, Kentucky, China, at the same time, through the students he would train and sent out.

In August 1915 he arrived in Fort Worth, Tex., to pioneer and break new ground in religious education for the Kingdom of God. The first year only 5 courses were taught and today 129 courses for vocational training in religious education are available to a student, as he desires to select.

Since 1915 there have been 6,000 students to enroll in Southwestern's School of Religious Education with 2,250 of them graduating. There are 880 students enrolled in the school today. These trainees have revolutionized Sunday school and training union work in the Southern Baptist Convention, at home and abroad.

Since 1920 the Southern Baptist denomination has increased from 3 million to 8 million members. Total gifts to all causes have increased from $35 million per year in 1920 to $332 million in 1955. The phenomenal growth is due, in part, to the teaching ministry of the church as provided by the teachers receiving vocational training in religious education, mainly in Southwestern Baptist Theological Seminary.

There are five Southern Baptist seminaries in America. Southwestern Seminary sends out 47 percent of the Baptist missionaries around the world. Of those going from Fort Worth, Tex., 50 percent, totaling 300 in foreign fields alone, have been trained in religious education.

Southwestern's School of Religious Education is first in the South—largest in the world among schools of religious education. It stands as a permanent memorial, vibrantly alive, to the man who dared to establish his life "by way of the throne of God," John Milburn Price.

Work and Play

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. MULTER. Mr. Speaker, I am certain that most of our colleagues are receiving inquiries, as I am, asking for the details of the number of days our President spends in Washington. The following excerpt from the New Republic magazine of March 26, 1956, gives that information as of that date:

WORK AND PLAY

At mid-March Mr. Eisenhower had held the office of President 1,151 days and had been away from the White House 517 days, roughly half the time. A check of White House records shows most of these absences described as work-and-play vacations.

Mr. Eisenhower's longest work-and-play period was 56 days in Colorado in the summer

and fall of 1954. Next longest was for 43 days in Colorado in the fall of 1953. Last year he had been in Colorado 40 days before he was stricken, and he thereafter spent 50 days in the Denver hospital, 37 days at Gettysburg, and 10 days in Key West.

Before his illness the President vacationed at a Georgia golf course 44 days on four different trips averaging 11 days each. Three brief business trips abroad took him to Ottawa, to Bermuda, and to Geneva.

The President's friends have said that his critics are unfair in calling him a half-time President; the problems of the Chief Executive, after all, are always with him.

Adlai Camp Beset by Pensions Issue

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks I would like to make the following statement and have inserted in the CONGRESSIONAL RECORD:

In recent days, much has been said about the record of Adlai Stevenson on old-age pensions while Governor of Illinois.

Stevenson has said that he vetoed an old-age assistance increase "because the legislature failed to appropriate the money." Several of his followers here in Congress have echoed this explanation. This is not so and I think it is time we set the record straight.

Furthermore, Mr. Stevenson has been claiming that pensions were increased during the first part of his administration. He failed, however, to give due credit to Congress, which voted a $5 a month increase to the States for old-age and blind assistance and a $3 a month increase for needy children which became effective October 1, 1948, and which made possible the increase to Illinois pensioners under Governor Stevenson's administration.

I would like to have inserted in the CONGRESSIONAL RECORD a column written by Drew Pearson which appeared in the Washington Post and Times Herald on May 28, 1956 and which gives more of the facts on the subject:

THE WASHINGTON MERRY-GO-ROUND
(By Drew Pearson)

ADLAI CAMP BESET BY PENSIONS ISSUE

Long-distance telephone lines have been burning up between California, Chicago and Washington over the question of Adlai Stevenson's record on old-age pensions when he was Governor of Illinois.

First to pick up the telephone were harassed Pat Brown, Attorney General of California, and worried Paul Ziffren of Los Angeles, both top strategists of Adlai's California campaign. They called Dick Finnegan, Adlai's campaign manager in Chicago, to say that George McLain, powerful leader of the old-age-pension movement in southern California, had published in his "National Welfare Advocate" a scathing review of Governor Stevenson's pension record, showing that he had vetoed a bill for a 10 percent raise in Illinois' aid to the needy.

Brown and Ziffren were worried sick over what this would do to the vote for Stevenson in southern California.

Dick Finnegan promptly did some telephoning on his own. He called Congressmen JIMMY ROOSEVELT and CECIL KING, both from southern California, both Stevenson delegates, and both friends of oldster-champion George McLain.

ROOSEVELT and KING promptly buttonholed McLain in Washington. They were in a good position to do this because both have introduced his bill to overhaul the entire public assistance section of the Social Security Act. This pertains to aid for the aged, the needy, the blind, the physically handicapped, and dependent children.

The shame list

What put Stevenson somewhat on the spot is that Senator KEFAUVER is the sponsor of this same bill in the Senate.

Quite a hassle followed between McLain, King, and Roosevelt despite the fact that McLain has been a stanch backer of both Congressmen, and went down the line for JIMMY ROOSEVELT for Governor in 1950.

Finally McLain compromised by publishing a statement by Congressman KING praising Stevenson's record for old-age pensions. McLain also omitted a previously planned account of Stevenson's record in O. K.'ing the shame list, the list of oldsters receiving Government aid, which is made public in Illinois and which oldsters bitterly resent.

However, McLain also ran a full-page photo of KEFAUVER on page 1 of his paper over the caption "KEFAUVER—Friend of the Needy," while on the editorial page he ran a letter from Warren Lamson, president of the Illinois Pension Union, giving Stevenson's record on pensions and on the shame list.

When McLain was asked by this writer why this information had not come out regarding Stevenson in the 1952 campaign, he replied:

"I did not know about it until I spoke in Chicago this spring and was shown pictures of members of the Illinois Pension Union picketing the executive mansion when Stevenson was Governor. I then investigated the record in Springfield and published it as soon thereafter as I could.

"My organization has 23 radio stations in California which are broadcasting the Stevenson record—almost every day."

Defense of Stevenson

Congressmen ROOSEVELT and KING, defending Stevenson, said: "On 134 occasions in 4 years the Republican Legislature of Illinois tried to pass bills for roads, bridges, pensions without appropriating 1 cent to finance them. Governor Stevenson insisted that the funds be appropriated before he would approve the bills."

The facts, as tabulated by the California Institute of Social Welfare, are that on August 3, 1951, Stevenson vetoed house bill No. 85 providing for a 10 percent increase for food, clothing, and personal incidentals for the aged and the needy.

But 1 month earlier, June 30, 1951, he vetoed amendment 2 of senate bill 556 carrying a $14,300,000 appropriation to pay for this 10 percent increase. Thus he vetoed both the appropriation and the authorization.

On July 28, 1951, Stevenson signed senate bill No. 485 which required each county department of welfare to publish monthly reports of those receiving pensions, disability assistance, blind assistance, and aid to dependent children. This is called the shame list and was passed contingent upon passage of a similar law by the Congress in Washington.

On October 1, 1951, Congress passed the Jenner amendment which activated the shame list in Illinois.

Illinois versus California

The California Institute of Social Welfare also compiled figures showing that pensioners in Illinois received an average of $60.50 a month, as against California's average of $70.11; that Illinois requires a lien on the oldster's home while California doesn't; that Illinois allows a single person to have only $400 in personal property and $600 for married couples, while California permits $1,200 for a single person and $2,000 for married couples.

Stevenson gave as one reason for vetoing the increased assistance bill in 1951 the fact that oldsters and blind people had an effective lobby while the children did not. Children were omitted from the bill.

He has also said: "We ought to work out a system that encourages an older person to work if he wants to instead of discouraging him. We ought to have a program for training people who have finished their regular work to do things they want to—things for which their age will be an advantage instead of a handicap.

"It is high time we started rebuilding this whole program around the central idea that we want to make life meaningful and worth while, all the way through."

The Late William T. Granahan

SPEECH
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. TUMULTY. Mr. Speaker, may I join in the tribute paid a great American and a great Congressman. I had the pleasure of meeting Representative BILL GRANAHAN in the last session and I found him to be a delightful personality, a good friend, a devoted husband and a great citizen. His constant thought was for the well-being of his district. Both my wife and myself are indebted to him for his help and hospitality. May our tears of bereavement crystallize as they flow and be worn as a rosary of remembrance for his beloved memory.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

Appendix

From South Dakota to South Carolina—An Invitation and a Challenge

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, June 4, 1956

Mr. MUNDT. Mr. President, on May 5, I had the opportunity to address for the second time the State convention of the South Carolina State Bankers Association. The meeting was held in Greenville, S. C.

My central theme was that it is fully as important that American businessmen understand the mechanics of politics and the science of political engineering as it is that they understand their machines of business and production or the science of economics.

My address was transcribed from the radio tape provided by the radio station broadcasting my off-the-cuff address to the convention, and I ask that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Thank you, very much, indeed, Mr. Chairman, for that altogether too generous introduction.

Distinguished officers of the South Carolina State Bankers Association, ladies and gentlemen of the convention, it really is worth the long trip from Washington to Greenville just alone to hear such a wonderful introduction as was presented to you by the distinguished chairman, a fellow politician of parts who accorded me all of the customary courtesies which extend between the members of our profession. However, I must make one slight correction in what we had to say because I recognize that it is dangerous enough for a Yankee Republican from South Dakota to come down into the sacred portals of South Carolina without having added to the uniqueness of the situation, a designation of having come from North Dakota. I come from far enough north as it is, and as long as there is an affinity between us which we have as South Dakotans and South Carolinians, I feel like I can speak with greater candor than if I came from that altogether strange land known as North Dakota.

They sometimes do confuse us, frequently confuse us, and I can understand why, but I like to point out the fact that there is at least one great distinction between North Dakota and South Dakota. It was brought out by the Associated Press statistics a couple of years ago which pointed out that the two States which have the greatest record of longevity from the standpoint of the people living within the boundaries of those States were North Dakota and South Dakota. For some strange reason, the climate or water or weather or something, the people there have a little slower rate of mortality than they have in any of the other 46 sister States. For some time it was a matter of chagrin to us, however, to realize that the people of North Dakota were a little bit better in their statistical averages than the people of South Dakota. Some way or another they cling to life a little more tenaciously, their mortality statistics were a little bit more optimistic than South Dakota. We thought, pondered, and worried about that for several months and tried to figure out what we could do to improve the living conditions of our State, and finally came to the inevitable conclusion that the reason why our good neighbors to the north hung on to life a little bit more persistently, were a little more reluctant to pass on, was because they cherished in their hearts the hope that before they died, they might live long enough to move down into South Dakota and become citizens of our State, and for that reason we are content to be only second high from the standpoint of those statistics.

Seeing you all here this morning brings to my mind a great many happy memories of my previous visit before this great association when you were in convention assembled over at Charleston. It brings to my mind many of the happy continuations and resumptions of those friendships which I have had during the intervening years as I have seen some of you here in South Carolina and have met some of you in other areas and as some of you have dropped into my Washington office to visit me.

I cherish greatly the friendships I have made in my visits into the South, and I rate none higher than those made in talking to this distinguished company of business people and their wives here from this great State of South Carolina. It is indeed a privilege to be back. I have tried to figure out since I received the invitation from Mr. Alexander just why I was invited back. You know there are two kinds of speakers that come back for a second time before the same audience; there is the kind they invite to come back, and there is the kind they dare to come back, and I imagine, perhaps, that I come under the second category, because I recall that I spoke to you with complete candor when I was here before, as I intend to do this morning, because in these busy lives which all of us lead, there isn't much use of our just sitting around listening to pleasant mouthings of unimportant things.

It is interesting, when, on occasion, people with different points of view can get together, however, and discuss the things which they have in common and discuss the things as well on which they differ, and to try and find out how we can harness together each other's ideals and energies and abilities and talents in the public interest. That shall be the purport of my message here this morning.

I suspect that during the past quarter of a century of world history there have been more important changes made than in any other like period of human history, and, in my opinion, none of these changes insofar as they affect the American scene are concerned, none of the changes on the American scene is more important than this simple but incontrovertible fact, and that is that 25 years ago, economics—the profession in which you gentlemen have specialized—25 years ago economics was the controlling factor of our political life, and today politics has become the controlling factor in our economic life. It seems to me that that tremendous change very well typifies many of the problems which confront us, and pretty well challenges our ability whether we are economists, businessmen, or politicians to try and find a way to correct any difficulties which may have eventuated from that strange reversal of the coin.

In the early 1930's and in previous eras of American history, the economic tone of the Nation in large part determined the voting behavior of our citizens, and decided the fate of our various national administrations. We had slogans about the full dinner pail; campaign platforms, and campaign promises, and campaign pronouncements were made dealing with the unemployment statistics, dealing with the earning power of citizens, dealing primarily with the economic situation.

Today, I think, few if any among us, will deny the fact that the Government has grown so strong and Federal spending has become so important that the political bias of our national administrations determine the economic tone of our Nation and the financial status of millions of Americans whether they be workers or farmers or businessmen. Not all change in my opinion is progress, and, in my opinion, we have gone too far in the direction of gearing our prosperity curves and our individual financial success to the political philosophies which dominate the White House and the Congress. To return to an era in which the operation of economic principles and policies once again have a dominant part in determining our national destiny, however, is going to require a substantial shrinkage in the power, in the spending, and in the regulations of the Federal Government.

America today is enjoying unprecedented prosperity. We hear of that as we study every financial report of virtually every successful corporation in the country. Optimism for the future prevails on every side. These rose-tinted conditions have developed from the fact that we now have a national administration which commands public confidence and a bipartisan Congress which respects private ownership and individual freedom. However, in any era, when the stock market stampedes up or down depending upon the readings of an electric cardiograph and when a public address by a member of the President's Cabinet can stimulate or retard vast industrial expenditures, there can be no denial of the fact that we are living in an era where political behavior has become the throttle which determines the speed or the success of economic expansion.

This being true, and I believe it to be true, businessmen, including bankers, including, may I say, especially bankers because so much of the rest of the economic community rightfully depends on bankers for counsel and advice, businessmen then, especially bankers, must reexamine their political prejudices and preferences and performances. I think the same is true in labor whose success is tied in so closely with the success of business but I am speaking here primarily to businessmen who, in my opinion, must become as well versed as to what is good for them politically as they are trained in what is good for their institutions economically.

To do less than that is to turn over the ultimate success of their enterprises to power-seeking professional politicians who consider politics solely as a device for achieving office and who use public power as a mucilaginous device for holding them in their positions of prestige and importance as long as possible. Those tactics have destroyed the economic strength and the political authority of many of our western de-

mocracies who less than 20 years ago were comparatively strong and stable. Those tactics, in my opinion, can deviatlize America as well, and unless we pay as much attention to the polilitcal machines as we do the machines of commerce that we use in our offices and in our factories, it can very easily happen in this great country that we call America.

Increasingly the strong arm of Government is moving into your shops, into your offices, into your every economic determination, and that my good friends, brings me to the theme which I desire to talk about. With that historic backdrop I think that I should discuss with you the machinery and the mechanics of politics as I have come to understand them after some 20 years devoted to a study and analysis of them from the inside following, as the chairman has said, 10 years of study of them from the outside when I was engaged in teaching college youngsters about the basic tenants of America. Because of that, I appreciate this invitation even more to come down into the Deep South to think out loud with you for a while about some of these conclusions or conjuctures which I have because I know that here I have always received respectful and responsible attention to the analysis.

AS DIXIE GOES, SO GOES THE WORLD

I come here not necessarily with any desire whatever to seek approval or acceptance of the suggestions that I make, but I always have the right to hope, and sometimes my hope is encouraged by some of the performances of recent history. I come here, however, primarily to discuss with you as honestly and as frankly and as faithfully as I can what I think is happening to America and what I think primarily can be changed in America only by the behavior politically of the people of the South.

I think of that when I get criticized by the people of my section of the country, when I turn down invitations as I had to do for today to talk about some pleasant subject before a noncontroversal audience, such as addressing a Republican convention about republicanism or talking to a woman's club about foreign policy or to a veteran's organization about patriotism or to farmers about farming in order to come down into this perilous atmosphere to discuss with you subjects which, in my opinion, are so important to be discussed here and before you.

But I have a prevailing feeling which has continued to evolve to greater and greater clarity and greater and greater emphasis, in my opinion. I have a prevailing conviction that what happens in Dixie in the next 10 years is going to determnine definitely what happens to America in the next 100. And this I also believe—that what happens in America in the next few years is going to pretty clearly determine what happens around the globe, because so many little people in smaller countries or less-developed areas are watching this great clash of the ideologies hoping that our system will prevail, but fearful that it won't, so I think that our capacity to make America work well is going to go a long way to determine what happens in other countries of this great world of ours.

I, therefore, welcome this opportunity to talk to important people in the most important area of the world, because what you do or fail to do, I believe, is going to determine the fate of humanity in the century just ahead. No other great area of the country or of the world by its own free choice has such an opportunity and with it, in my opinion, such a tremendous responsibility.

THE CURSE OF MODERN GOVERNMENT

I think the curse of modern government around the world is the fact that steadily and continuously and perniciously it has been constantly expanding the power of its functionaries in the capital cities of each country of the world. Without exception, in the countries of importance the power of people in political jobs like mine and in the executive department, and in the judiciary, and in the central cities of the land has been expanding steadily over the functions of people in private jobs like yours. It has brought disaster and war and unhappiness to large segments of the world. It has brought to Britain almost a collapse of its economic solvency. We in the United States have resisted this global trend more successfully than others, but few among us will argue that we have resisted it completely or enough.

We have gone downward on the same train, down the same hill; our brakes have held us back a little, but not enough to protect our economic and political safety. I believe, and I may have said this when I was here before, that future historians writing about the America of the thirties and the forties and the fifties, and future histories written about the pages of America which are yet unknown, looking for a point of departure, looking for a place in which to put a thumbtack marking the time and the date and the hour and the place where America changed from a complete and faithful following of certain economic, social, and political concepts to something strangely and dangerously different, are going to find that place and mark that hour as the occasion of the great national convention of the strong and great Democratic Party, to which you belong, which was held in convention assembled in the year 1936, in the city of Philadelphia.

I think they will mark that development in 1936 as they study what has been happening in America to such universally accepted American institutions and practices, for example, as private ownership, as our reward of merit system, as the great American concept of giving individual initiative unlimited opportunity to expand, or the great American and uniquely American concept of States rights and the feeling that in this Commonwealth of States which makes up the Republic known as the United States of America, States have functions and States have privileges and States have rights, along with maintaining a meaningful significant effective two-party system with adequate political machinery to make it operate.

As they inquire as to why America, blessed with all of those things preceding the thirties, has suddenly begun a concentrated attack upon them all trying to devitalize and trying to stultify them, trying at times to destroy them, they will also have to analyze what developments followed your actions in that convention. Why did it happen to us? No other foreign country has adopted a formula of economic or political behavior even remotely approximating the successes we had achieved. We had lived well and had gone forward with great rapidity regardless of whether your party or mine was in power in the White House. Under Republicans and Democrats alike in Congress or in the White House, America had gone ahead. We had become the envy of the world, the only country compelled to erect immigration barriers to be safe from being flooded out by all the rest of humanity that wanted to locate here so that they could enjoy private ownership, to locate here so they could enjoy the reward of merit system, to locate here so that they could give their individual initiative a chance to expand, to locate here where they could uniquely become a citizen of a state which had some rights and a governor and a supreme court and some mores and some customs and some laws of its own. From every other land they wanted to locate here because we had a two-party system. We had a political machine and political mechanics which made every man a king, gave every individual a right to help determine his own destiny. Why are we changing? Why have we changed? When did it happen and where?

A TURNING POINT IN AMERICAN POLITICAL BEHAVIOR

Historians will have to answer that. I think as I said that they are going to pick the place that I have mentioned, and the Democratic convention of 1936 as the hour, and the change of your convention rules as the cause—when the South was compelled to abandon your two-thirds rule reluctantly it was with far less a degree of reluctance, I am sure, than you would have shown had you known as clearly then what was going to happen as we all know now. In all of this when the South was compelled to abandon their two-thirds rule in Democratic conventions, and at the same time retain the unit rule which was a siamese twin companion of the two-thirds rule, we set in operation political machinery which has influenced completely our ensuing developments. The spirit of America has not changed; our basic goals have not changed; our objectives have not changed; but something has happened to the politics and the machinery of self-government in this beloved Republic of ours.

This whole thing we call politics—or the mechanics of self-government. Thus, it is political engineering and the machinery of politics which has changed your lives and mine, and which has altered tremendously all predictions for our future. By projecting forward the trends of the past 20 years we can rather accurately predict what lies ahead for all of us unless some sharp and permanent political changes are made by you good folks of the old South. We can now envision how political developments determine all human behavior and what you do or fail to do down here different from what has been your prevailing political behavior will call the tune for all Americans.

It isn't only upon your traditional Democratic Party that the break with the past which took place at the Democratic National Convention of 1936 had a propretic and determining impact. Actually that change in your convention rules had indirectly but definitely almost as important and lasting an effect upon our Republican Party. In a great 2-party country like ours, the behavior and bias of one of our parties always tends to influence the behavior and bias of the other. Anything which succeeds steadily for the one is certain to be emulated by the other. Anything that brings defeat to the one is likewise avoided by the other. Thus, our two parties learn from each other just as they tend to imitate and approximate each other at regular intervals.

When for a long time—a sorrowful and mighty expensive long time, I might say—campaign and convention tactics which were designed to appeal to mass voters in big blocs (especially in our metropolitan cities of the North) brought you stupendous and steady majorities to the Democratic or the New Deal Party, it was understandable and inevitable that my Republican Party started emulating some of those tactics. We started directing our appeals to those same bloc voters. Since, in the main, the interests and ideals of the South do not coincide with those of the CIO-PAC, or those of Americans for Democratic Action, or those of the "banana-bunch" type of voters who group themselves in ethnic, vocational, left-wing, or other pressure groups, it appeared for a time that the fine folks of the old South were to be left out of the picture altogether when it came to determining the political policies of either major party. You were on the way to becoming the world's largest group of enfranchised citizens whose voices were ignored in the making of party policy and in the selection of party candidates and whose votes were considered so safely in the bag that neither party paid you any heed.

Then came 1948, when four courageous States of Dixie signaled to the rest of the country that they had had enough. No

longer were they willing to be tied tight in the back seat of a political automobile which they were never permitted to steer.

And then came 1952. I sometimes feel that the Divine Architect of the Universe, realizing that America is His last chance to make decency prevail, to make freedom function, and to give law-obeying citizens a civilization which they themselves can regulate and control decides to step in to help us all set America right. Recognizing, for example, that if peace and self-government collapse here, they will have failed all over, perhaps He moves in just 15 minutes before it is altogether too late in order to give Americans and America another chance.

In all events, came 1952, and an unanticipated, and unexpected development took place. Americans, pretty much without any party designation whatsoever, turned to a great American leader in a military sense who himself had no political designations whatsoever, and both parties sought to secure Dwight Eisenhower as their candidate for President. My party happened to succeed. I don't suppose he would have been any different individual had your party succeeded. In all events, pretty much by acclamation, joined in, I am proud to say, by five great southern Democratic States and encouraged by the rest of them, the country turned to someone outside of political life, and said, "Mr. Eisenhower, you take over and be President of the country."

AMERICA NOW HAS A SECOND CHANCE—PROVIDED DIXIE LEADS THE WAY

That has given us a breathing spell; that has given us a chance for a second look. It has not, nor could it be expected to have, solved completely any of the problems and challenges that we are confronted with. It has not altered what, in my opinion, is positively going to eventuate as a result of what happened in that Democratic convention, or even what happened to my party as a result of that convention; it has not altered what is going to lie ahead once the Eisenhower era is over. I very frankly was one of those who thought for a long time after the President's unfortunate heart attack that he would not be able to become a candidate for office. I worried about that, because this I believe: Once Ike is no longer a candidate, America is going to face a showdown decision on basic principles the verdict of which is going to dominate the lives of all of us for the rest of our existence. I expected that to come in 1956.

I consequently worried about that 1956 decision because I knew America wasn't ready from the standpoint of political engineering to make that verdict honestly and effectively and on basic principles devoid of partisan prejudices. We are not yet ready to avoid old political affinities or to eliminate a lot of cloudy fuzziness in our elective machinery which makes it pretty well impossible today for right-thinking people in America to unite on a basic issue, regardless of where they happen to live geographically or how they happen to be registered politically. Unless we can develop the necessary political machinery to do that, I am going to tell you before this address is over who is going to write the ticket for Uncle Sam, and you aren't going to like the ticket, and neither am I. You aren't going to have anything to do about writing the ticket, and neither am I, unless down here you people rise up to one of the greatest challenges our civilization ever had and utilize the essential techniques of sound political engineering to write the right kind of ticket for the country and the world.

I know you are not ready for that in 1956, and that's one reason, I suspect, if I were to be completely frank, that is the greatest reason, I am so glad that Ike's heart has restored itself to the point where he can run again and thus give America until 1960 to develop the necessary political changes to preserve our cherished freedoms.

Some of you will like what I am going to say now, and some of you will dislike it, but I tell it to you as an observation I believe to be a fact: I think that if that heart holds up, as I believe it will, our present President is going to be reelected for a second term. I think our breathing spell, which looked like it was going to be cut short by 4 years, which wouldn't have given us much time for political engineering, is going to get a second breath, and that we will now have until 1960 to get ready for the showdown issues.

I think this breathing spell, this era of moderation, this middle-of-the-road consolidation of our position, this resistance to further movements in the direction of socialism, will carry on under Eisenhower's leadership until 1960. If it does, the question is, "Will we be ready then to answer the five prodigious questions you and I are going to have to answer then and could conceivably be called upon to answer even as soon as next November?"

FIVE BASIC ISSUES FACING US NOW—OR IN 1960

The first question is, "How big would you like to have the Federal Government become?" We have two opinions in this country. I don't discredit or disparage the patriotism of those who hold as many do that the Federal Government should grow on continuously. That 20 years from now State governors should not have any importance whatsoever except to perform ceremonial functions like a British king. State legislatures even less. People are entitled to that opinion. The British have had a unitary system of government without a breakdown into states' rights, and states' capitals, and states' functions for a long while. The British are a remarkable people. I have visited there many times. I respect their indefatigability and their courage and what they are able to do in their Island Kingdom. So few of them have affected the lives of so many. But that is something you have got to decide—how big do you want our Federal Government to grow? I'll make a guess with you. I know the people of South Dakota better than I know the people of South Carolina, but I can tell you this, that the people of South Dakota say, "Our Federal Government has already gotten too big, we want it smaller." I think you also believe that; I don't know; but if you believe that, I submit to you that we don't have the political machinery today with which you can effectively and easily join up with South Dakotans who believe like you. We've got to cut down the size and the interference and the power of the Federal Government. But still we lack effective political machinery for deciding the question in conformity with our convictions. If we decide that we want the Government bigger than it is, that's a permanent decision because once you socialize an industry, it can be power or it could be banking, and it's likely to be banking's big sister, the insurance industry before it actually is banking—once you nationalize a big industry, it is very difficult to denationalize it, to get it back to private owners. So remember we are playing for keeps. We are making a verdict for which there is not going to be a mistrial and a second chance, and in my opinion we are not ready to make that verdict properly with our existing political allotments. That is why I prayerfully give thanks for Eisenhower, who is going to give us time, in my opinion, to get ready for this big important decision in 1960.

Second question: "How much should the Federal Government cost?" There are good people in this country, patriotic people, who say they can settle this question: "Spend as much as you can. We only owe the money to ourselves. Why worry about balancing the budgets? Spend for everything, spend everywhere, spend all the time, you can always get it from the people in taxes." I don't question their patriotism. I question their economics. I deplore their judgment. I know they are preaching something which is anathema to the economic concepts which I studied in college; repugnant to the economic concepts which my people believe. I know my people don't like these spending sprees out in South Dakota. They think we are spending too much now. I think so too. I think you think so too, but if you do, there isn't any generally acceptable political machinery in this greatest country in the world today which will easily and effectively permit the people in South Carolina and the people in South Dakota in a national election to join forces to strike a blow for economy or to team up in voting for a party or a President pledged to perform economically and who will be faithful to that pledge.

Third big decision: "How much should the Government own and operate?" I don't know what you believe. I know there is a big segment of the South that believes that the power business should be turned over to the Federal Government. Maybe so. I certainly believe the Federal Government should own some things. Most of us surely agree it should run the Army, and the Air Force, and our post offices, but I think and I believe you think, and I know the people of South Dakota think that the Federal Government should cease expanding out as a giant competitor to private enterprises all over. I believe that you and I believe and I know the people of South Dakota too, believe the Federal Government shouldn't get into the automobile business, or the insurance business, or the banking business, that we shouldn't have socialized medicine, that we shouldn't have Government radio, we shouldn't have Government railroads, we shouldn't have Government newspapers. Now there are good Americans who believe otherwise. Some of them are in Congress now. We are going to have to decide this basic issue pretty soon. I thought, perhaps, we were going to have to decide that in 1956. With Ike a candidate, we'll have additional time, but in 1960 when we go back to bidding for the bunches of votes where they are and have to promise the bloc voters the things they want, it will be an issue. In fact, it could unhappily become a fact without ever having become an issue in the campaign, because if both parties start promising what your one party was promising in the forties, these things can become an actuality without your ever having a chance to vote upon them in the good American way.

How much should the Government own and operate?

I introduced a year ago in the Senate of the United States an amendment which was a simple amendment, I thought. I thought it would go through almost unanimously. I never had been as discouraged in 18 years in Washington as the day my amendment was defeated on a roll call vote. The President of the United States had sent up a request to Congress. It was a simple request. He said that we have discovered that there are over 2,500 different private enterprises in which the Federal Government is unnecessarily engaged. That your Government and mine was operating 50 coffee-roasting plants, a bunch of pop-bottling works, 2 or 3 barbed wire factories, some paint factories, some clothing factories, some furniture factories, all under the guise of supplying things for the armed services or of making them more economical for our give-away programs of foreign aid, whatever they were. I was aghast when I saw the President's report. He asked for permission to sell them back to you, the private citizens of America. I was a member of the Appropriations Committee so I

introduced an amendment to the Appropriation's Act implementing the President's request. Let's give the President the power to divest himself, and the Federal Government of all the socialistic enterprises not essential to our national defense or our national economy, I stated in support of my amendment. In a roll call vote, the United States Senate in the year of our Lord 1955 defeated that amendment. Why did they defeat it?

Some good, sturdy, strong private enterprise Senators voted "No" because it happened that one or more of those particular industries were located in their communities or in their States and the realities of practical politics induced them to vote that way. I am happy to say that we finally got an amended version of my proposal through which said that unless the Appropriations Committee itself resisted by resolution any divestments of economic enterprises by the President, he could go forward with the program. So through that hurdle and through that screen he has been able to get rid of some 500 of the 2,500. Two thousand of them still are run by you and me as collective entrepreneurs under a system as completely socialistic as anything the "B and K boys" of modern Russia could possibly conceive, because there isn't anything more totalitarian than the complete government ownership of an industry, whether you do it under the stars and stripes or whether you do it under the hammer and the sickle. If the politicians run it, they run it and it is in competition with the rest of the economy if competition is at all permitted. Anyhow a decision on how much further America should move toward national socialism is one which we shall have to make in 1960.

The fourth decision: "How much authority should government exercise as a device for influencing our individual lives? How much authority do you want to give to us in Washington, to determine how you live, what you can and cannot do, into what businesses you can or cannot go, what hours your laborers can work and what you might pay them, what you can raise on your farms and plantations and what you cannot raise, the social mores of your community, who can and cannot attend church with you or go to school with you or work with you—these are the questions to be decided by voters in national elections—I don't know.

Some very fine friends of mine in Congress believe that people like you and people like me cannot be trusted to be ethical or decent or chivalrous or Christian or honest in our behavior, so that you have to give to politicians down in Washington custody over the collective goodness of the country and let them project it out from their angelic countenances by the political power of unimpeded centralized government. I do not believe that. I don't denounce them for their beliefs. I simply say that I, myself, dissent from their conclusions. I think the people who elect the politicians are certainly as good as the politicians they elect, and that the collective judgment of our people is always better than the individual judgment of anybody they elect. Consequently, if we retain for ourselves some of the rights of decision, we vest those determinations in a better spot than if we turn them all over to politicians and the Federal Government.

This is an issue to be decided, if not in 1956, most certainly in 1960. You know what is going to happen in 1960 as well as I. You don't have to have spent 30 years studying political behavior of the great parties of this country to know that in 1960 the great bid is going to be to the groups of voters in the big towns who want to do certain things in America, and who say if you agree to do them, our millions of people will vote your way. So if one party promises it, as your Democratic or New Deal Party is most likely to promise it on the basis of the historic record, the other party is going to be compelled to promise it or be defeated.

Either eventuality would be almost equally calamitous insofar as resisting the expansion of political and economic power in Washington is concerned. Our political machinery isn't in order today so that those who resist these trends in the South can join your forces to those in the North resisting them. Divided as we are by antiquated and meaningless political labels and legends, we cannot win. This is another reason I am happy that things are happening as they are in 1956. We need at least until 1960 to develop some new political machinery.

The fifth big decision that we have got to make: "How far should the Government go to take us into the functions of the welfare state?" We all recognize our joint responsibility to people who are injured, disabled, too old, improvident, blind, diseased. How far do we want to go? How far is it necessary to turn over to Federal politicians in the Capital City the operation of our hospitals and our health-insurance programs; our clinics and our local relief activities? How far must the old cash and charity that used to permeate the heart of most Americans be collectivized in the office of a member of the Cabinet down in Washington? We are not going to go back. We are not going to abandon what has been started. I said earlier that it is difficult to desocialize. It's mighty hard to take away from somebody something he has been getting. Each Congress, though, each national convention, each presidential candidate is beleaguered by those who constantly say "We want more." We are going to have to decide where we draw the line, or do we draw the line; do we follow the example of Great Britain? I like it like they put it down on paper that hot sticky summer down in Philadelphia's Independence Hall so long ago when our wise, far-sighted constitutional forefathers knew what was likely to happen if they brought forward on this continent a new Nation dedicated to the proposition that the men and women living there could rule themselves, so they wrote it in the preamble.

At Philadelphia they said the function of this new Government is going to be in part to provide the national defense. To be free, we must be secure. To be secure, we must have a common national defense. The function of the Federal Government is to provide it. To tax the people for the arms that they need, to conscript the soldiers if you need them for a war, to win a war if we get in, to protect ourselves, to maintain peace if we can do it. We must be strong. The function of the Federal Government is to provide that defense. Our constitutional forefathers made that clear.

People were thinking about general welfare in those days also. The next clause in the preamble of our Constitution is an interesting one. Interesting because of the language that they used. They talked about general welfare. They had said that the purpose of the Federal Government is to provide the national defense. What about the general welfare? Note well the word that they used. To provide the national defense and to promote—and to promote—the general welfare. What a difference. That's the difference, isn't it, between the U. S. S. R. and the U. S. A.? It's the difference between Hitler's Germany and us. It's the difference between the welfare state and welfare assistance in this country. It could be the difference between two political parties. It could be an issue that we are going to decide in 1956 or 1960. Do you want to keep it that way? Does that make sense? Did it work out all right to have a great big Republic like this which provided the national defense and promoted the general welfare, made jobs available, made it easier for people to secure general welfare, did what we could to promote it without adopting a paternalistic Government so that everybody was fastened to the Federal pact? We are going to make that decision in this country not later than 1960. In my opinion, we are not ready to do it today because of our political machinery. And, in my opinion also, our American experiment not only worked out all right but it has provided living standards for all elements which are the goal and envy of the entire world.

I have said all this on an assumption that may be false or wrong or right and proper; namely, that South Carolinians, along with South Dakotans, will be on the side of limited powers of Government on these five major decisions. If I'm wrong, you have nothing to worry about, except that you have had to listen to a speech of no particular interest to you; but if I'm right, and you want what we want, you have some mighty serious thinking to do on a plane so much higher than partisan politics that it isn't even in the same range of atmospherical statistics. We have got some political engineering to do if you agree with my assumption. Let me suggest five things that might be done now, or that we can start to do now, to save us from the great big controlling bloc of votes and the socialistic trends that I am going to mention soon.

FIVE SUGGESTED REMEDIES

In the first place, we might develop the kind of political realinement that I was talking about when I spoke to you in Charleston some years ago. Getting the right thinking people of the country—let's not say that—let's be completely fair—getting the people who think alike in this country and who think conservatively and in terms of a modification and limitation of the powers of the Central Government; getting them into some kind of political party or political apparatus or political association or political instrumentalities so that they can vote alike for the same candidate on the same ticket regardless of what the party label is or where they live geographically.

We have made some headway in that direction. We haven't made it very fast. That's why I shuddered when I thought we were going to make these five great lasting determinations for the rest of my life in 1956, and why I hoped we could defer them for another 4 years to get ready to write the verdict. Then I'm content to live by it if most of my fellow Americans under a voting system which gives them a fair chance to vote in a national referendum desire the towering size of the omnipotent state, I'm willing to accept it. I suppose I will be a candidate again from the State of South Dakota, although I'm not going to be happy with all of that power because I know that it isn't going to be good for you. I think that under that kind of system I could talk up a speech that would be persuasive enough to be elected for the rest of my natural life out in South Dakota. I would have authority and I would have power and where I couldn't talk them into voting my way, I could seduce them to come over with a dam, or a bounty, or a pension, or a new post office or something else that I could bring by nature of loot from the Federal Government which by that time would be dominating all their lives. But I wouldn't like it. I would rather take a chance on trying to discuss with them the basic principles in which we jointly believe and win or lose on that basis.

I believe firmly in free choice by free voters. To get such free choice, however, and for freemen to reach sound political decisions, it is essential that we realine our partisan groupings in America. Southern Democrats and rural Republicans in this country have much in common. Their points of agreement on basic economic and political issues far outstrip their areas of disagreement. But we need to do some

political engineering so we can work and vote together. So long as we cancel out each other's votes for President, we help the trend toward the total American state and defeat our ideals and our own best interests.

A second device we tried, and may I say here that we tried this with the support of your two good South Carolina Senators in this session of Congress: OLIN JOHNSTON, whom I have known for a long time and with whom I have served on the Senate Committee on Agriculture, and Strom Thurmond, that new gladiator from down South that you sent up there, who has cut probably the widest swath in the United States Senate ever cut by so young a Senator in so short a time. We proposed to do some political engineering, to get ready for 1960. We offered a constitutional amendment that wouldn't do any good under any circumstances for 1956, but would take off from the neck of the Democratic Party of America and the Republican Party of America, the big foot of the big cities of America who now dominate in the main the thinking, the activities, and the trends of both political parties.

We proposed by our amendment to break up the bloc-system of electoral voting. We proposed to give both those who vote for the winning candidate and those voting against the winning candidate a chance to have their votes counted at the electoral college level. This proposed constitutional amendment would have driven a death nail into the domineering controls of the city machines and some of their associated pressure groups. It takes a two-thirds vote to get it through the Senate. We debated it for a week. We received a majority vote but we lacked six votes from getting the essential two-thirds majority required to pass a constitutional amendment, so it's back in the Senate Committee on the Judiciary again. It's called the Mundt-Daniel-Thurmond amendment. I'm presently corresponding with Strom Thurmond, who's down in South Carolina enjoying a short vacation before resuming his activities in Washington, and we are soon going to come up with a new version of this amendment which we hope the Senate will approve early next year.

I think it is tremendously important, for example, that we break up a system which means, as I put it during a Senate debate, that one sodden drunk can fall off of a park bench in Battery Park of New York City, and hitting the ground wake up and stagger and stumble into a voting booth on election day, not knowing where he is, and, in the heat of the election booth to keep from falling on his face in his drunken stupor, reach for an election lever as a support and accidentally pull the election lever down, thereby determining the entire outcome of a national Presidential election. Do you all fully realize this can actually happen? That one vote cast by Mr. Stumble Bum in New York City can put in action 45 electoral votes which mean more than all of the votes cast by intelligent people voting unanimously in 12 or 13 separate States of the United States. Break up that system of unit voting in the electoral college so that no one group, no one city, no one State, and no one collection of 12 metropolitan cities in this country can run the rest of us, and you are moving in the direction of modernizing and improving our political machinery. We would then begin giving like-minded people a chance to vote alike regardless of where they live politically or where they are registered geographically. We would be taking our elections out of the hands of pressure groups and big-city political machines and putting them back in the hands of the people where they belong.

The third available remedy is revising your State election laws. We can do something in all of our States to make it easier for people to cross party lines and make it easier for a second party to get into operation, to make it easier for people who happen to be registered with one party and want to vote for another party for a certain cause to do so. That's a local responsibility which, in my opinion, can and should be locally met and which was locally met courageously under the leadership of Governor Allan Shivers over in Texas prior to the last election. I hope it can be met with equal success in a great many other States of the Union.

Of course, other States may follow the example of South Carolina in the last election under the leadership of an old friend of mine and a great American, who, except for the political mechanics of our country during his prime might well have been a candidate and President of the United States. I'm talking about Jimmy Byrnes of South Carolina. Jimmy Byrnes in 1952 demonstrated a courageous and patriotic leadership which other States, I hope, and other Governors will follow. His example in the last election, when, ignoring parties and concentrating on principles and confidence in personalities, he supported a candidate not of his own political party for the highest office in the land, deserves emulation by other courageous Democrats who are neither Fair Dealers or New Dealers. It is the medicine in the bottle that counts—not the label on the outside of the container. Governor Byrnes came pretty close to running up the score for South Carolina in support of Dwight D. Eisenhower. He came close enough to help write some new American history. He came close enough to cause even the city machines to wonder if somebody might be trying to get out of the bag in which they have been held so long and on which the party bosses in the big towns thought they had tied the knot.

Senator HARRY BYRD, a great American in anybody's book, did the same thing in Virginia. Virginia voted for the man HARRY BYRD supported. Allen Shivers and PRICE DANIEL did the same thing in Texas. Texas voted for the man that they supported. I simply point out that there are times when principles prevail, when the perils of following the line of least resistance are so great, that men have courage like Jimmy Byrnes, whose golden wedding anniversary I was happy to note this week has been observed by Mrs. Byrnes and Jimmy. Men take leadership to get results. They are history-makers. As long as southern political traditions continue, that is one way to break out of the trap.

I have discussed this for many years in every State of the South as your chairman said, and I did it because of no partisan motive. I do it only because there isn't any other place that America can be saved from the consequences of the new controls which have been operating in this country as a result of what we all lost in the Democratic National Convention of 1936, and I use the word "we" advisedly. In the evolution and the development of the competent forces which now control the country, there is no way to escape those consequences except by some of the devices that I am mentioning. Changing the two-thirds rule in 1956 is a fourth method by which conservatives at the Democratic Convention could do the job. I think it may be hard to do but it could be done. Even breaking up the unit rule, which was a part of the two-thirds rule would help tremendously. It would once again have its same impact on my party as it has on yours, because parties emulate each other.

A FLORIDA LEGISLATOR SPEAKS OUT

It would move political controls in both our parties back to the hands of the people and out of the hands of political bosses and pressure groups. I was talking on this subject 2 months ago in Florida, and at a friend's home afterward, a man came up to me by the name of O'Neil Rogells, and may I say now that I use his name with his permission, came up to see me and introduced himself and said: "I have been a member of the legislature down in Tallahassee; I'm a Democrat. No northerner has ever come down and talked to us like this before. I'm more interested in America than I am in my political party or my political career." Mr. Rogells further said: "If you could promise me, Senator MUNDT, that your party at the next convention would write a strong States right platform, as strong as you did in your last convention in 1952, and nominate candidates who will support it and believe in it (Eisenhower will do if he is available), if you can promise me that you will get that kind of platform and perform on it in Congress, I'll register Republican in Florida despite I'm a member of the legislature of the Democratic Party in Florida."

I said, "Mr. Rogells, that is a very interesting suggestion, and a very encouraging one, because what does a political party mean in a war? Did you ever hear anybody come back from the war in Korea, and that was a war, did you ever hear anybody say 'We lost a skirmish down there because I told the boys in the troops that half of them belonged to the other political party and I wouldn't work with them'? You never heard that, did you? You forget all about political registrations when you get into the uniform of Uncle Sam. When you have a common cause, who cares if your Commanding Officer is a Republican or a Democrat or a North Dakota progressive or an Independent? You are concerned only about result."

So I said, "Mr. Rogells, your suggestion is challenging and interesting. As the issues confront us now, we are having a tough fight to hold our Party to an unfailing support of State's rights. I happen to belong to what we call the 'Thin White Line' of the Republican Party that's trying to keep our State's rights position alive; that talks about it openly and votes for it consistently; and tries to pursue it; and encourages the White House and the executive agencies and even the courts when we can, to remember and to sustain our State's rights. But we lose almost as many battles as we win. We are going to have a hard time at our convention. Those opposing the rights of States have been fighting us consistently since 1932 and driving us further and further into a corner. We could lose our fight in 1956 or 1960. Why don't you join us now? We need your help."

Mr. Rogells said, "I can't be sure that you are going to win it. I want to be sure." I said, "Look, my friend," I noticed he had a service button in his lapel, "You remind me of a situation where in a battle on a mountain slope, your side of the battle is up on the ridge with a thin and faltering line that is facing stupendous odds, and you send a runner back to a commanding officer who has a large platoon of troops about a half mile down the hill and tell him you need reinforcements quick or we'll lose the battle and the officer sends back the runner and says 'Keep on fighting boys and if you can get the enemy on the retreat, we'll come on up and join you with the cheers.' Mr. Rogells, we need you now, or we're apt to lose."

The conversation ended on that and then two weeks later I got a clipping from a newspaper down in Sarasota saying "Rogells Breaks With Demos." I read the article and Mr. Rogells tells how he is joining the Republican Party in Florida for the sole purpose of trying to be sure that they send to the convention Republican delegates who'll stand up and fight for a States rights platform in the Republican Party. He says I know we can't get it in the Democratic Party because we have tried it there and failed completely.

I wrote him a letter and told him I certainly appreciate that and that I was going to make a talk in South Carolina to the State Bankers' Association and I would like to mention his courageous action as another possible device if I may, but I wouldn't think of discussing our conversation or his name unless he gave me his permission. Here is his wire: "Senator MUNDT, appreciate your kind

remarks. You have my permission to use statement in any way you see fit, O'Neil Rogells."

I mention this action as another way to solve our political problems. I'm not necessarily advocating; I don't think perhaps that it is the most effective way in a completely one party State like South Carolina. I simply mention it as another remedy. If 500 of the most prominent Democratic families in South Carolina, for instance, were to register Republican within any given month and publicize it widely you could go far toward rewriting the future pattern for America. There are ways that free men can escape from the trap you're in. The formula followed by Mr. Rogells is a fifth such possibility.

I have mentioned five possible remedies. Suppose we don't take any of them. May I make one final prediction, then before we close? Unless some way or another this great section of the country becomes unpredictable, unchained, unless you can take the lead, the five biggest blocs of votes in this country are going to continue to dominate your party and perhaps mine. I'm perfectly frank to say that they have already influenced mine to a considerable degree. And to the greater degree to which they influence yours and the greater degree to which that brings victory to your Democratic standard, I'm frank to confess, to that greater degree we are going to go in the direction of total centralization of authority in Washington. Unless some of these things that I have talked about are done, and they can be done only in Dixie, and only by southerners in Dixie, and only by Democrats in Dixie, because most of the best people of the South are Democrats, then I know unless you do something different, socialism will soon again become a realistic menace in America.

FIVE VOTE BLOCS WHO KNOW WHAT THEY WANT

The biggest voter bloc in this country today that influences more political behavior in Washington than any other bloc, I suppose, including the Republican and Democrat National Committees combined, is this new organization known as the CIO–AFL–PAC. Two great labor unions have merged and they have told the world "We are going to whip our enemies and elect our friends." They have told the candidates in both parties, "If you will move in the direction that we want you to move far enough, we will support you, or we'll support the one that yields to our demands the most, even though he is your opponent and of a different political party."

Add them up my good friends; there are tens of millions of them, these voters incroporated in the CIO–AFL merger. They are going to control a great many public decisions unless we find a political mechanism so those holding a different point of view can work together. I say that without criticism of the CIO–PAC. Why shouldn't they do that? They are Americans. They are loyal. They have a right to organize. They have their points of view, and while it happens they belong to a certain class and they unhappily seem to be trying to develop a class consciousness in this country, which in my opinion is unconscionable in America, still their patriotism is unquestioned and they have a right to function in the political system if they are smart enough to do it, and if those opposing their excesses are stupid enough not to react effectively, who can complain? If they should bring socialism to America under Mr. Reuther as President some day, that would be their right is it is done by the ballot, and if we permit our political machinery to be controlled by their zealous leaders.

The second biggest bloc is your city machines led by politicians who play politics for pelt not for public service. These are bossed by men who discovered in the last quarter of a century that "There is gold in them thar Potomac hills" and they are no longer going to fool around merely with electing sheriffs and police judges in big cities like Chicago and New York. They have learned they can drive people to the polls by multitudes, many of whom can neither read nor write in the English language, who haven't studied American history, who don't know American traditions, and who come from countries which had paternalistic governments before they moved here. Yet, they can outvote all of the rest of us. You can forget about Dixie as you can forget about the Dakotas and Nebraska and Kansas, so long as you continue to give the bosses of the city political machines in the 12 major cities and the 8 big States of this country votes enough to bring about a determination in a national election because of our failure to change some of our political machinery, especially the method of unit voting in our electoral college. I don't complain about that. I simply point out that we should exceed them and excel them in their wisdom and in their determination. They have a right to do what they can to boss America. But we have a duty to make the reforms needed to prevent their successful domination.

The third big group, and I say this completely without any suggestion of criticism of the colored voters of this country, is the National Association for the Advancement of Colored People. The have a right to their opinion. In my opinion they have a right to vote. They have a right to organize, and they have become a great organized voting bloc in this country seeking successes from their standpoint. There is nothing un-American about that, but it's a tremendous appeal to politicians on every side in every party to say, "If that many votes are involved, from the third biggest voting bloc in America, why not get them? Why not solicit them?" They have become more important through their association than the collective vote of all of Dixie, and more important than the collective vote of the States of the Missouri and Mississippi Valley, and we think that we are important people. We would like to get back into the Union, and we would like to find a way to join you in adopting basic fundamental principles which are not swayed by emotional suasion and are not based on prejudicial points of view. We want you in Dixie to get back into the Union, too, insofar as your voting importance is concerned.

The fourth biggest bloc of votes in this country is what they call the ethnic groups, the hyphenated American organizations: People who come here and organize associations with the land of their ancestry and are attached to it. They read newspapers in the native language of their homeland, make frequent trips, write many letters back and forth, and maintain for many years greater attachments over there than over here. But, above everything else, they form voting blocs. This reminds me that a Democratic Congressman told me the other day in Chicago that all he needs to do to get elected is to see one Polish leader in Chicago and he's in. All of the Polish people, said he, in Chicago follow his suggestion. There is nothing wrong about that. It isn't illegal. I don't criticize it. I simply point out that we are living in a political era when blocs like that, which join at least in desiring more power for the central Government are going to control unless intelligent folks like you and me start living in the present and forget about the past and make at least as much of a study of political engineering as we have of mechanical and electrical and atomic engineering, in which fields we all have had to become educated.

The fifth largest pressure group is Americans for Democratic Action, a little association of self-protesting liberals who actually preach a doctrine carrying you back to feudalism when the king could do no wrong and the state was supreme. Americans for Democratic Action offer up their votes to the highest bidder. I'm happy to say that I belong to a political party which up to now has consistently refused to bid for the votes of that outfit and I hope that we Republicans continue to resist them even though we lose, because they are trying to push us as far toward socialism as is possible, as far as is favored by any sizable group in the United States of America today. They'll pack in a lot of people at their meeting a week from today in the city of Washington to write the ticket they are going to insist you Democrats adopt at your convention in Chicago this summer. I note a report in the papers of yesterday that they are inviting speakers including Elmer Davis, Kefauver, Stevenson, Walter Reuther of the CIO–AFL, Governor Williams of Michigan, Eleanor Roosevelt, Senator Lehman, Senator Humphrey, Senator Morse, and other like-minded and bewildered "liberals." I'm happy we Republicans have been excluded from the speakers' rostrum. I must point out that these people in the ADA are smart Americans and what they are doing is legal. I don't question their patriotism. They are just outsmarting the rest of the country. They point out that their main job in that convention in Washington next week is to further devitalize the influence of the South in the Democratic Party. That's why they are there.

I emphasize that you have a bigger bloc of votes in Dixie than any of the five great groups that I have mentioned provided you can develop a voting mechanism that will attach you some way or another to other right-thinking people in the North for specific purposes in specific campaigns. By doing that you can exercise the political influence which alone can save America.

I have nothing against any of these organizations: the CIO–PAC, the city machines, the organized colored voters, the ethnic voting blocks, or the ADA. I accept them all into our fraternity of Americans as good citizens, but I simply point out that, in my opinion, I wouldn't want any of those blocs, or all of them combined, to write the final political and economic ticket for America. I'd rather have it written by the people of the rural areas of this country, and by voters in our cities and on our farms who belong to no self-interested pressure groups. I'd rather have it written by the Republicans I know back home and the Democrats I know down here.

Yes, my good Democratic friends of the South, all I suggest is that we develop our abilities in the science of political engineering so that no longer will an imaginary line created by the War Between the States continue to divide into rival political camps people who have an identity of convictions and such close similarities of concept. It would be tragic indeed if a generation that has split the atom and harnessed its great power would let a problem in Semantics—an attachment to labels, tradition, and prejudice—cause us to continue to split people dedicated to identical high principles into rival camps under the comparatively meaningless names "Republican" and "Democrat," so that we are impotent and powerless to harness our great vote power into a single effective voting machine.

OUR 10TH AMENDMENT

I feel that next to our great written Constitution itself, the greatest invention of Americans in the field of self-government was the concept of States rights as set forth in our Bill of Rights by the 10th amendment. Other civilizations and other lands have contributed much toward the evolution and maintenance of human freedom. But it was left to freemen on this continent and in the early formative days of our system of government to establish by the 10th amendment formal recognition of certain inalienable rights of both States and individual citizens

which could be transferred to the Central Government only by the voluntary and specific delegation of those powers by those entrusted with them by our Constitution. This, then, is America's greatest contribution to the science of self-government and the endless contest of free citizens versus the Central Government. This, to a great degree, is the great genius of what we call the American system. This, then, we must preserve if our future is to be as resplendent as our past. And, finally, it is this great key to our success that we must support by proper changes in our elective machinery and our political procedures lest those who lack faith in this concept, or who find it a barrier to their ceaseless drives for power succeed in developing too many powers for too strong a Central Government in Washington. It is this challenge which Dixie—and perhaps Dixie alone—can successfully meet by recognizing its dangers soon enough and by taking the indicated steps required to meet and defeat it.

Good friends, I have suggested five possible remedial steps. Others may occur to you. I believe the challenge to all of us is crystal clear. I appreciate your close attention. You have been very kind. I have been very frank. These are days which call for blunt talk and unpleasant truths. I came here neither to try to please you nor to lure you away from your traditional political behavior. I came only to describe what I believe I know and to predict that which I know I fear.

I came especially, however, because I am positive that the people of Dixie can determine America's destiny for the next half century. By so doing you will chart a course for all the world. No other group in America has the homogeneity, the good judgment, the high patriotism, combined with the tremendous vote power of our Southern States. You can have it as you want it. You will get it as you merit it. You can call the tune for Uncle Sam or you can become the victims of inertia and remain docile and impotent while living through a future the nature of which you will have failed to help in fashioning.

In conclusion, let me suggest to you as bankers that you always keep in mind that it is more important to you to help determine what takes place in the polling places of America than what takes place in the teller's cages of your banks. I beg of you to divert some of your great genius and your many talents to the problems I have discussed with you to the end that we can solve them in the best interests of all America and all Americans. In our country, we must all remember always that there is never anything wrong with America that a single good election will not cure. Likewise, there is no immortality for our freedoms and no security for our property that a single bad election cannot jeopardize and perhaps even terminate.

I salute you as the custodians of our country's future and I wish you well.

Materials and Energy Supplies of the Future

EXTENSION OF REMARKS

OF

HON. THOS. E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, May 31, 1956

Mr. MARTIN of Iowa. Mr. President, the convention of the National Association of Purchasing Agents, meeting in Cleveland, was addressed by the Honorable Felix E. Wormser, Assistant Secretary of the Interior for Minerals Resources, on May 23. His paper was entitled "Materials and Energy Supplies of the Future." Secretary Wormser reviewed the operation of our present barter program, through which we dispose of agricultural surpluses and acquire strategic materials.

I was, of course, a Member of the other body during the 83d Congress. When Public Law 480, 83d Congress, was debated in the Committee of the Whole of the other body, it was my privilege to submit an amendment to protect the mining industry. The amendment I sponsored was adopted. Under this amendment, a supplemental stockpile was established for the minerals obtained both under the barter program and through the use of foreign currencies acquired by our Government in payment for surplus agricultural products. The Congress was given the sole authority to release any materials placed in the supplemental stockpile in time of peace. The text of this amendment and the debate on it may be found in the CONGRESSIONAL RECORD of June 16, 1954, at page 8363.

Secretary Wormser in his excellent address shows how the administration has implemented this legislation to the benefit of both our farmers and our miners. His address also reveals the consistent philosophy of President Eisenhower's administration to promote free competitive enterprise at every turn.

I am informed by the Public Printer that the address will make 2⅓ pages of the RECORD, at a cost of $187.

Mr. President, I ask unanimous consent that Secretary Wormser's remarks to this distinguished group may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MATERIALS AND ENERGY SUPPLIES OF THE FUTURE

(Address by Felix E. Wormser, Assistant Secretary for Mineral Resources, Department of the Interior, before the National Association of Purchasing Agents, Cleveland, Ohio, May 23, 1956)

It is a distinct pleasure to meet with men of your profession, with men who have an intimate knowledge of markets and marketing practices and the economic environment within which this great country has prospered. It is also a pleasant experience to speak to you as a member of the present administration's team, and to bring to your attention some of the fundamental concepts of President Eisenhower's economic philosophy.

The President's frequent endorsement of "free competitive capitalism" scarcely could have escaped your notice. It has been extremely gratifying to me to assist in the development of Government policies stressing the vital importance of free competitive enterprise in the growth of our Nation. It has been good to see the application of these policies stimulate American businessmen to progressive action. It has been a thrilling experience, also, to see a persistent reapplication of traditional American business principles in the administration of public affairs. The results speak for themselves and are there for all to measure or appraise.

A deep understanding of traditional American economic philosophy was needed to design the courses of action which facilitated the general business readjustment called for after the close of Korean hostilities. A sense of economic balance and courage were required to place these policies into practice. The rapid removal of direct controls over prices and wages was a bold but effective step in the face of the dire predictions of inflation. The restriction of public spending, despite the fact that it was accomplished without jeopardizing the Nation's defensive strength, was unpopular in some quarters, but it was the only certain way to lighten the tax burden. An attack upon the basic causes of weakness in the agricultural situation has brought political strife, but determined action on the problem is beginning to bring order out of chaos. The liberalization of trade has won enemies as well as friends, but it is the only sound way of solidifying free world economic strength. The partnership approach to resource development has been maligned, but it is a sensible way of returning misplaced Federal control over certain aspects of this important activity to the grassroots level.

These and other achievements, together with the curtailment of governmental activities that could be handled more effectively by private enterprise—as an effort to eliminate Government competition with industry—restored confidence and set the stage for the period of unequaled economic development experienced during recent years.

This administration recognizes the fact that the main source of our economic strength lies in American free institutions and the qualities of our people. Americans have always been characterized by their love of freedom, their ambition, inventiveness, skill, and their enterprising willingness to put forth their best efforts in behalf of self, family, and community. Consequently, actions taken to date are based upon this important principle, that each individual citizen should be permitted to pursue, within wide limits, his interests according to his own lights.

Consistent with this philosophy is the view that open markets and effective competition are the means of channeling materials and products, that normal supply-demand relationships should govern the distribution of productive effort, and that flexible prices are not something to be avoided, but are essential if resources are to be shifted to uses in which the rewards are the greatest. It has been said that competitive markets are as basic to the proper functioning of our dynamic economy as the secret ballot is to our political democracy.

Freer markets are also essential if world trade is to flourish and make its contribution to free-world economic development. In devising its foreign economic policies the administration has stressed the need for a freer system of trade and payments. It has taken the position that responsible governments should establish and maintain a trade environment within which private traders can carry out their transactions with the fewest impediments from exchange controls or other forms of trade restrictions.

The domestic agricultural situation with its huge surpluses has posed a stubborn problem. There has been a lot of head scratching over this one, which was inherited by the present administration. Government policies to foster a strong and vigorous farm economy are vital, but this does not mean that unrealistic price supports should be continued. This could serve only to aggravate the present conditions under which many agricultural commodities are not free to move in competitive world markets because of our artificial pricing system.

Experience indicates that the Federal Government invites problems which are difficult to handle whenever it takes action to disturb supply-demand relationships. It is quite a trick to employ man-made economic devices

without diluting or destroying the competitive influence that generally can be relied upon to cut production or use down to size. Furthermore, it has been my observation that any movement to initiate one type of government intervention in commodity markets, if successful, leads inevitably to another.

I think it might work out this way if the Government became seriously involved in the scrap-metal situation. During the past 2 or 3 years we have heard proposals to stockpile scrap, and others to control its export, depending, as I see it ,upon the direction of the trade winds at the particular moment. Some of these proposals persist, despite the fact that responsible Federal officials have agreed that there is no present justification for the Government to do anything about scrap as a defense mobilization measure.

My advice to any businessman who would seek to solve an immediate production or marketing problem by asking for some kind of direct Government assistance is simply this: Think twice before you offer to sell any portion of your economic birthright for a mess of Government pottage. Give Washington a particularly wide berth when markets apparently misbehave.

If we are sincerely devoted to our wonderful system of American free enterprise and free competitive markets, we must learn to take the bitter with the sweet—to take periods of business adversity in stride with those of prosperity—to endure the night as well as the day, winter as well as summer. We must destroy the illusion that Government controls can bring about an eternal spring.

Today you may remain certain that the Federal Government will not unnecessarily intervene in the everyday activities of its citizens. One of the greatest apprehensions a businessman can have is that legitimate Government interest in the economic welfare of its people may degenerate into an attitude of paternalism, and that reasonable Government regulation of private industry may deteriorate into arbitrary bureaucratic controls.

Please don't misunderstand these remarks. There is an all-important role for Government in modern economic affairs. We are in an extremely critical period in national and world history. Daily it becomes more evident that military and economic security are closely related. This, together with the fact that our economy has grown to staggering proportions and has become much more complex than it used to be, requires some central unifying or coordinating force. The trick in Government administration is one of learning how to use the so-called built-in stabilizing devices to moderate business conditions without stifling individual initiative or without using Government power to favor one group over another. The idea is to stimulate rather than to retard economic development.

In the crucial days ahead the one great hope for a lasting peace will rest upon our ability to lead the free world to a position of impregnable economic strength. The Communists have thrown a new challenge our way. Only recently we have seen a sharp shift in Soviet tactics. The new line of approach is one of economic penetration, and it is one that can prove highly effective in many underdeveloped areas throughout the world. To me the big cut in Russian military expenditures means that the Soviet plans to divert manpower and facilities from the production of guns to the manufacture of trading items. It is further evidence that the new Soviet plan of strategy for waging cold war is one of using every industrial and commercial weapon at its disposal. Incidentally, I might ask, how does a free enterprise country compete on even terms with one having only Government monopolies? It appears that the free world faces a period within which it must reckon with a new and ruthless competitive force. There will be an increasing amount of competition in certain markets and a new urgency undoubtedly will be placed upon the availability of raw materials.

Through a long siege of cold war the American public has become aware that the security of the Nation as well as its continued prosperity is heavily dependent upon the international political and economic environment and upon public policy to improve conditions. Programs for defense, therefore, embrace a concept of mutual security, and those for economic development envision cooperation with friendly foreign nations to increase total free world productivity and to reduce barriers which impede the flow of raw materials, finished goods, and capital. The continued growth of our own production is in no small degree contingent upon expanding resource development in other countries and upon an expanded world market for the products of American industry.

America's greatest asset is its productivity. We built more airplanes and tanks during the war than anyone thought possible. Our factories can turn out automobiles, refrigerators, and television sets at an amazing clip. The future by way of technological advances promises even more. We are just beginning to realize the benefits of automation. We have virtually opened up the universe by splitting the atom. Over the long run the effects of nuclear energy almost defy imagination. Even now private industry is spending a quarter of a billon dollars on atomic powerplant development.

One question looms large as we look over the eventful past and contemplate the challenging future. To all of you, who are daily engaged in the business of buying, it must appear obvious that sustenance of economic growth involves more than new technology and the expansion of productive capacity. The question is, can we continue to supply the material ingredients that make up the industrial mix—the raw materials that come from the land, sea, and air?

Fifty years ago the future availability of basic materials was far from being a principal worry to the American public. Our own resource base appeared inexhaustible, and it was relatively easy to obtain from abroad the materials we didn't have. We were still young, with a relatively small industrial economy. Now that we have grown up economically we are finding that more and more of the stuff that is digested by our factories must come from friendly foreign nations, particularly that of mineral origin. As a result we have been giving an increasing amount of attention to domestic natural resource development and to the availability of minerals elsewhere, in the first place to provide an assured supply of indispensable materials should another war come, and, secondly, to make certain that we can obtain the wherewithal to meet expanding industrial requirements.

Suppose we review some of the things your Government is doing to help lick the raw material problem. Permit me to say at this point that I will confine my remarks to minerals and metals, which are within my official field of interest. First, for purposes of defense.

This country does not and cannot economically produce from its own resources enough led, zinc, copper, manganese, tin, nickel, and a host of other strategic materials to meet its normal demands. We are void of many. In time of war foreign sources of supply can be cut off, so the only way of avoiding serious production bottlenecks is to build up inventories of essential strategic materials in advance. This explains very simply why the United States Government has become in recent years a big customer in world metal markets for military stockpiling. This has significantly reduced the availability of certain items.

The Congress, in enacting stockpiling legislation, attempted to avoid a disruptive impact on markets by specifying that stockpiles, to the maximum extent feasible, should be accumulated from supplies of materials in excess of current needs. Unfortunately, the Korean conflict, with its potentialities for widespread all-out war, led to considerable acceleration of the rate of procurement. For a time we were trying not only to meet the stepped-up demands occasioned by almost full-scale mobilization, but in addition, rapidly to accumulate stockpiles of these materials. We are now back to a position where military stockpiling should have a much lesser impact upon markets. Once the minimum objectives are met, it is the policy of the Government to pursue a more leisurely course in purchasing to meet long-term objectives. Further acquisitions are to be made only when prices are right, or when purchases would aid distressed mineral industries whose current production has been calculated as an essential component of the mobilization base.

In keeping with this general policy of exerting as neutral an effect upon markets as possible, the Office of Defense Mobilization has been diverting to industry certain shipments of aluminum, copper, and nickel, originally intended and scheduled for delivery to the stockpile. Since January 1955, for example, more than 450,000 tons of aluminum have been diverted from the stockpile to private industry. The Director of the Office of Defense Mobilization announced on May 10 that a diversion of 20 million pounds of nickel would be made in the third quarter and another of 20 million pounds in the fourth quarter. This brings the total nickel to be channeled into industry instead of into the stockpile during 1956 to some 74 million pounds. At the same time that the ODM was announcing the diversion to industry of nickel, it was authorizing the GSA to negotiate for the delivery of 40,000 tons of copper to the stockpile which previously had been diverted into industry. The ODM also announced that there would be no further deferments of delivery of copper in view of the easing supply situation in this commodity.

Generally speaking, the stockpile is in pretty good shape and future purchases for this account should have slight effect upon materials availability.

There is another avenue through which minerals and metals may pass into Government hands and this was opened up in an effort to relieve the agricultural surplus problem. For a long time the Commodity Credit Corporation has had congressional authority to exchange its commodity acquisitions for other materials and to sell the latter in the open market. This is known as the barter program, and it has gained prominence since the 83d Congress in Public Law 480 directed the Secretary of Agriculture to use every practicable means to export surplus farm products via barter for strategic and critical materials.

Public Law 480 also authorized the sale of $1½ billion worth of these agricultural surpluses for local currencies abroad. These moneys, among other things, are being used to acquire strategic minerals and metals and are being used to finance certain developmental programs within the purchasing country.

What is the effect of all this to be? For one thing it means that the Government will acquire metals and minerals over and above those needed for military stockpiling. These acquisitions are to be isolated—locked up tightly—from commercial markets, of course, in the same manner as those for the military stockpile. It means, also, that agricultural surpluses can be used to provide capital to lesser developed countries. This, along with other programs aimed to diversify the economies and thereby raise the standards of living of our less fortunate friends, may have great significance in terms of overall raw materials supply.

The Secretary of Agriculture is working closely with my Department to prevent these transactions from creating an undue amount of disturbance in metal markets, but it is only in line with economic reason to expect some price reaction when amounts of any material are bought and then solidly frozen. Actually, the trading of relatively small quantities of metal and minerals can generate international price changes, because these markets are particularly sensitive to shifts in supply and demand.

It may seem strange that we worry about agricultural surpluses and mineral shortages at one and the same time, but nature made a big distinction between the two. We can grow the things we eat, using the same plot of ground over and over again, if we put back a few of the minerals that plant life consumes. But we have yet to find a way of speeding up the geologic processes, whereby the fossil fuels are generated and whereby metallic substances are pushed close enough to the earth's surface to be within human reach. Once these are removed from the ground they are gone from it forever as far as countless future generations are concerned. Mining is a one crop business.

The search for these nonrenewable mineral deposits, their exploitation, and their processing is a unique business. It is a long-term proposition requiring an intimate understanding and application of almost every science known to man. Incidentally, it is a venture that involves large capital outlays and a high degree of risk. Years of patient research in the field and in the laboratory usually precede the introduction of new mineral products. For example, the topographer, the geologist, the mining engineer, the metallurgist, the chemist, the financier, and many others had a hand in bringing aluminum into common use. Here is a metal that means much to us today—yet for thousands of years it rested quietly in chemical union with other elements while man walked over it. Subsequently magnesium, now titanium and zirconium, are newer additions to our supply of useful metals. Still others will follow.

It appears, however, that some action by the public is called for if it is to enjoy the benefits of full and orderly development of mineral resources. The President's Cabinet Committee on Minerals Policy made a number of recommendations with this in mind, many of which are identified with the Department of the Interior. The committee observed that the development of these resources is primarily a function of private enterprise, but that the Government must continue to assist in many ways.

An adequate appraisal of the Nation's mineral assets is needed, first of all, and we have plans at this time to accelerate the Geological Survey's topographic and geologic mapping activities as rapidly as added funds and manpower are made available. The Department intends, also, to intensify the Bureau of Mines' program of mineral and metal research aimed at the development of latent resources, new mineral raw materials, and improved utilization of existing raw materials. We plan to coordinate these efforts fully with research performed by other agencies of Government and, as far as practicable, with private industry.

These activities have paid handsome dividends in the past. Two of the newer metals, titanium and zirconium, were produced initially in Bureau of Mines laboratories. Both are in commercial production now, although use will be limited to special purposes until costs can be lowered by further technological development.

A great concern to us in the Interior Department is the fact that we are rapidly depleting easily accessible high-grade reserves of the minerals and metals used most commonly by American industry. Furthermore, it is generally believed that we have found most of the higher grade easily worked deposits which can be located from outcroppings of ore near the earth's surface.

Much attention, therefore, is being devoted to the technology of handling lower grade ores. Much remains to be done in this field of endeavor despite remarkable accomplishments to date. The fact that some of you are buying magnesium obtained from sea water attests to the fact that mineral deposits in minute quantities can turn up in strange places. Again, some of the copper which you are purchasing today came from domestic ore deposits averaging only one-half of 1 percent of this red metal. Good grade ore in this country just a few years ago used to average better than 3 percent. Much of the iron and steel of the future will be derived from taconites. Not long ago I had the privilege of visiting the iron ore country and was agreeably surprised to see how rapidly large-scale mining methods, using modern equipment, have brought some of our vast taconite deposits into production.

The technology involved in the production of the mineral fuels has made rapid strides, also, in recent years. Better mining methods and improved equipment have increased productivity within the bituminous coal industry by approximately 50 percent since 1947, and the trend is still definitely upwards. Most of the natural gas that used to be flared is now captured and placed into pipelines or sent through refineries. The oil industry has learned how to drill to deeper horizons in the search for new petroeum reserves, and it has doubled the life of many existing fields through secondary recovery techniques. All of these developments increase availability and assist in keeping energy costs down to reasonable levels.

None of these things happened in a day. Increased productivity and economical production from low-grade deposits have become realities only because the groundwork was done years ago. In many relatively obscure laboratories research is proceeding at this time on plans to beat the cost factor and bring other meagerly distributed minerals into profitable production. Much of the metallic substance that you will buy 10 or 15 years from now will reach the commercial market at that time because of processes being developed now.

But enough of this long-range talk. I know that you must be thinking in more practical terms. What can you buy tomorrow and the next day and what will it cost? Making forecasts along these lines is a hazardous business, and I won't attempt to guess what the very near future holds for each basic commodity. I don't mind at all, however, risking a few predictions with respect to the general outlook for business in the near future.

I am optimistic concerning the days ahead. There may be a few minor setbacks, because economic progress never runs in a straight line, but everything seems to point to a continuing period of prosperity. Businessmen have regained their old confidence. Profits in most industries are satisfactory. Capital investment is increasing. Employment and wages are at record levels. The gross national product and the standard of living moves steadily upward. A greater number of industrial leaders are becoming research minded. As a result, technology will make increasing contributions for our comfort.

I look for even higher levels of economic activity, and I am certain they will come under the sound policies which have been placed into effect by President Eisenhower's administration.

This is an age of great challenge and one of great opportunity. Our spiritual, social, and economic freedoms are at stake. Let us make the most of our opportunities, meet every challenge, with faith in our way of life to keep America free. Certainly there is no one I know better qualified than the purchasing agent to appreciate the priceless asset we Americans possess in our devotion to freedom—and that must include freedom in the market place.

The Civil Rights Problem

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, June 4, 1956

Mr. LEHMAN. Mr. President, I ask unanimous consent that a speech which I delivered yesterday, Sunday, June 3, at the annual meeting of the Urban League of Greater New York, held at the Williams Institutional CME Church, 131st Street and 7th Avenue, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR HERBERT H. LEHMAN AT 45TH ANNUAL MEMBERSHIP MEETING OF THE URBAN LEAGUE OF GREATER NEW YORK, WILLIAMS INSTITUTIONAL CME CHURCH, 131ST STREET AND SEVENTH AVENUE, JUNE 3, 1956

I take this opportunity to pay my heartfelt tribute to the Urban League which has been working on the problem of intergroup and interracial relations for almost half a century.

Over the years the Urban League has made historic contributions to the solution of many aspects of the civil-rights problem. One of the league's main achievements has been to help expose and define its roots and manifestations, in terms of housing, schools, recreation facilities, and other phases of segregation and integration.

The Urban League has furnished a framework within which men of good will of all races could work together to achieve steady advances toward the goal of adjustment, focussing their efforts on the neighborhood and the community.

This organization has helped to show how vast are the ramifications of intergroup and interracial adjustment, what concrete and specific evils flow from discrimination and segregation, and what must and can be done about it.

Some people, including some of the leaders of our Government, act as though civil rights were a brandnew problem, which has just arisen and needs nothing so much as to be studied. And they indicate that as soon as they finish studying it, they will probably do something about it. And, of course, that may take a long time.

Others talk as if the civil-rights problem were like a sudden attack of virus and that all that should or can be done is to give the patient plenty of rest, and maybe a dose or two of some patent medicine, like a conference.

You and I know how unrelated to the facts of life these views of the problem are. We know that the problem called civil rights is one of vast complexity, some of whose manifestations will take time to work out, but all of whose aspects need to be worked on, without a moment's needless delay, urgently, deliberately, and zealously.

You and I know, and some of you better than I, how galling and intolerable are the

many aspects of injustice, discrimination, and segregation based on race, and how they involve almost every phase of neighborhood, community, and national life.

In basic respects, the civil-rights problem is as much a northern problem as it is southern. Harlem here is a glaring manifestation of the civil-rights problem in the North, and I shall speak more about that in a moment.

But, above all, the civil-rights problem is one which involves each of us and millions like us, in our personal everyday lives, either as victims of discrimination and segregation, or as those who, willing or not, or consciously or not, are the victimizers, the discriminators, or the segregators.

The civil-rights problem is reflected in the house or apartment we live in, in the street or neighborhood we call our own, in the job or profession we work at, in the shops we patronize, in the movie we attend, in the vacation we plan, and in the schools to which we send our children or to which we ourselves go. In short, the civil-rights problem touches us all in the most personal and intimate details of our lives, in one way or another, depending upon the racial, social, and economic group to which we belong.

These aspects constitute the real core of the civil-rights problem. Around this core are gathered the more dramatic manifestations—the legal and political manifestations which furnish the major approaches to the core and substance aspects of it.

In our concentration on these approaches, which are the obvious instruments of our efforts, we must never lose sight of the core and substance, which are the end objects of these efforts.

In recent months the civil-rights problem has sharpened into a national crisis. This crisis dominates our thinking today; it dominates our political life, too, unwilling as some are to recognize that fact.

Just as the possibility of atomic warfare overshadows our foreign policy today, so the possibility of a racial conflict overshadows our domestic policy.

The civil-rights problem is like a volcano, smoking and bubbling, in the full view of the Nation. All eyes are upon it. Endless words are now being spoken and written about it.

But that volcano has been there for a long time. Only a relatively few have paid much concentrated attention to it in the past, or tried to understand the teeming forces within it. Yet we must understand those forces or we will be unable to cope with them, or control their disastrous consequences.

Today, as I have already indicated, too many Americans, including, I fear, many at the highest levels of our political life, do not understand those forces at all, either as to their nature or their magnitude. And in this lack of understanding lies our greatest danger. Without such an understanding we will not be able to meet the crisis or mobilize the efforts needed to solve the deep-laid problems which underlie the crisis.

In my work in the United States Senate on the civil-rights problem, my efforts are necessarily limited to the tools with which I work. Those tools consist of national legislation and such influence as I can bring to bear, as a Senator, upon the executive branch of the Federal Government. I must further limit my efforts to those undertakings which have either some practical prospect of success, or indicate some possibility of having a constructive effect. None of us can operate on all fronts or move simultaneously in all directions.

At the moment in Washington I am devoting my efforts to the following fronts:

1. Legislation to guarantee to all our citizens the right to participate fully in political activity, in all parts of the country—the right to vote.

2. Legislation to guarantee to all our inhabitants physical security of person, and the equal protection of the law in the enjoyment of life, liberty and the pursuit of happiness—the right of equal justice under law.

3. Legislation to provide a greater degree of equality of opportunity—in jobs, in education and in access to the major avenues of personal fulfillment and realization—in other words, FEPC, school integration and nondiscrimination in all publicly-supported facilities.

4. Legislation to provide a greater measure of social welfare for all underprivileged groups, including minority groups—such as housing and medical care.

5. And, executive action to complete integration in all branches of the Government service, especially in the so-called elite services, such as the Foreign Service.

This is a big order. How much, if any, of this legislation will be enacted at this session of Congress I cannot predict. The prospects are not too bright.

But speaking for myself, alone, I am going to continue to fight for legislation designed to achieve these objectives, and will continue to press the executive branch for action and for leadership; to the full extent of my energies and abilities.

And if we are frustrated in Congress, I am prepared to carry the fight to the Democratic Convention in Chicago in August, and to the people, in the elections in the fall, regardless of whether I am a candidate for reelection or not.

I pledge that I will not spare my own efforts, or withhold any influence which I can exert toward these ends.

A few moments ago I said that the civil-rights problem is a northern as well as a southern one, and that here in Harlem we have both illustration and proof that the acute manifestations of this problem are not confined to the South.

Harlem is a community rich in tradition and culture. Its contributions to the mainstream of national life, politically, socially, economically and culturally have been many and varied. But Harlem is also a rebuke to us of the North, and a challenge to clean up our own backyard, even as we press forward with our efforts to bring justice and equality to the Negroes and other oppressed minorities.

Harlem is a ghetto. Harlem is an area of poverty, congestion, substandard housing and substandard schooling. These conditions rather than the race or national origin of the people who reside in Harlem, are primarily responsible for the high incidence of crime and juvenile delinquency in the area.

We need residential integration in New York City. Housing segregation is responsible for the high incidence of school segregation in our metropolis, the empire city of the Nation. I am afraid that the policies of our New York City planners have not helped the situation.

We have built too many housing projects, not on vacant land, but on congested land. We have cleared some slums only to create new and worse ones. We have constructed housing projects which were, by their location, forced into a pattern of segregation.

There are substantial elements, including the Urban League, which are working patiently, persistently and strenuously toward the solution of these aspects of the problem, which are as much a part of civil rights as the right to vote and FEPC. Residential segregation is the other side of the coin of school segregation.

One public official who, long before he became a public official, had analyzed this problem, focused on it and agitated consistently for its solution over a period of many years, is my old friend, Charles Abrams, whom Governor Harriman was wise enough to name last year as chairman of the State commission against discrimination.

I want to pay my public tribute to Charles Abrams for his long-time efforts in this field.

I was amazed and, may I say, deeply shocked when Charles Abrams was recently made the object of a political attack by a leading political figure in New York State. Mr. Abrams was accused of being a zealot in the cause of nondiscrimination. Well, if ever there was a cause which called for ceaseless dedication and agitation, this is it.

In this whole struggle I range myself on the side of the Charles Abramses in this, and there are quite a few of them in this country.

I cannot be a neutralist. I cannot stand above the battle.

I identify myself with the victims of oppression and discrimination, wherever and whoever they may be. If that is being a zealot, if dedicated efforts to uphold the law, the Constitution and the laws of New York make one a zealot, well, call me a zealot, too.

We need more and not less of this kind of zealot in the fight for civil rights. Of course, I do not mean that we need more intransigent extremists. I mean men of practical understanding and of patient energy, but also of unlimited dedication and devotion.

Yes, we need more men like Charles Abrams, in New York and in the Nation, and we need less who spend their time trying to understand the viewpoint of those who defy the law or the spirit of the law but who have little concern for the victims of illegal oppression and discrimination.

We need fewer public leaders who utter empty platitudes instead of proposing concrete plans for action.

There are too many in Washington and elsewhere in the North who, when they say "we must sympathize with the problems of the south," really mean—the problems of the southern whites, and particularly the problems of those southern whites who have a stake, political or economic, in the maintenance of segregation and the doctrine of white supremacy.

I think I understand the problems of the South, or at least I try to, but I have little sympathy for those elements of the South that are determined to defy the supreme law of the land and to maintain the practice of segregation for their own comfort, convenience and advantage.

I have genuine sympathy with those in the South who are sincerely working to bring about a change, in an orderly way, and with the least possible dislocation.

But most of all, I have sympathy for those long-suffering individuals—Americans like you and me—who, for all of their lives have endured the whiplash of discrimination and segregation. They are the ones whose plight calls for our first concern. They are the injured, to whom justice must be rendered.

Through the lowering darkness of this present crisis, the light of hope shines true. This is a right cause. Justice is on our side.

We may hope that God is on our side, too. At least, in the words of Abraham Lincoln, we can hope that we are on His side.

We must proceed, and are proceeding, without hate or rancor. Compassion and understanding are written on our banners. But we will not stay our efforts or be stayed. We are the upholders of the law, and we will not be denied.

Excerpts From Address by Hon. James H. Duff, of Pennsylvania, at Fourth National Convention of the Polish-American Congress

EXTENSION OF REMARKS
OF
HON. JAMES H. DUFF
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, June 4, 1956

Mr. DUFF. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, excerpts from remarks I made at the Fourth National Convention of the Polish-American Congress, in Philadelphia, on May 30, 1956.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM REMARKS BY SENATOR DUFF AT THE FOURTH NATIONAL CONVENTION OF THE POLISH-AMERICAN CONGRESS, AT PHILADELPHIA, MAY 30, 1956

In a period when there is the greatest known prosperity in the free world, the horrible and haunting tragedy of our time is that many once free people are now ground under the ruthless heel of a foreign communistic oppressor.

It matters not what the economic well-being of enslaved people behind the Iron Curtain may be. Several thousand years ago Pericles stated the eternal truth when he said: "There can be no happiness without freedom." And no people who have ever known freedom can ever be happy until they regain it again.

It is the devout wish of every American irrespective of national origin, that the wonderfully brave and heroic Polish people may be made happy again by recovering their freedom.

Despite all protests to the contrary, and despite the substitution of a forced smile by Khrushchev and Bulganin for the snarl and hate of Stalin, communism still remains what it has been from the very beginning, a fanatial and godless movement determined to conquer and destroy the government of free people everywhere.

Stalin today stands accused even by the present Communist leaders as a vicious and cruel murderer. Five thousand of his own officers were executed under his orders without trial merely because he was suspicious of their intentions. If any proof were needed, and it is not needed, this admission by present Communist leaders proves beyond any peradventure that 10,000 Polish officers who were captured under a promise of amnesty were ruthlessly and cruelly murdered by the Communist regime under Stalin in World War II.

The present Communist leaders were the disciples and agents for Stalin. They cannot escape the infamy of one of the most horrible violations of the rights of prisoners in all military history. Certainly no confidence and trust can be placed in the word or promises of men who now defame and downgrade Stalin, who when they were his agents and subordinates did not raise their voice against some of the most infamous acts ever recorded.

If Khrushchev and Bulganin really want world peace, as they repeatedly say they do, the first gesture of sincerity would be to liberate the countries which the Communists have so ruthlessly deprived of their liberties. That would indeed open wide the doors of the whole world to peace.

The only peace the Russians want is peace on the basis of their retention of the conquered countries. Even a thief would be willing to settle with the law if he were permitted to keep untouched all the loot that he had acquired by reason of his violation of the law.

I am aware that one of the main purposes of the Polish Congress is to reestablish Poland as a free and independent nation through the legislative and executive branches of our Government. No purpose could be more commendable and no effort more worthy of the support of all people who believe in freedom and who hate tyranny and oppression.

No group in America understands better than those of Polish descent the horrible menace of Soviet imperialist communism. The ancestral lands of the Poles have been overrun; the government of the people destroyed, all civil and religious rights of the inhabitants violated, and the iron heel of the oppressor felt throughout the length and breadth of the land. All this without cause or provocation or any assertion of the right by the Communists except their greedy desire for power and domination.

What happened in Poland is the pattern of what will happen everywhere unless the continuous advance of communism is brought to a halt.

I salute you in your determination that Poland shall again be free, and I join with you in your prayers that in due time under divine guidance these prayers may be answered.

Address by Hon. Alexander Wiley, of Wisconsin, at Dedication of Eisenhower Lock on the St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, June 4, 1956

Mr. KNOWLAND. Mr. President, yesterday a great milestone of construction of the St. Lawrence seaway was reached when the Eisenhower Lock was dedicated at Massena, N. Y., at a tremendously impressive ceremony. Several significant addresses were delivered on this memorable occasion.

One such address was offered by our distinguished colleague, the senior Senator from Wisconsin [Mr. WILEY], the man who is generally regarded, and rightly so, as the father of the St. Lawrence seaway law. He was introduced by the Assistant Secretary of the Army, George H. Roderick, who gave a well-deserved tribute to our colleague.

I send to the desk a brief excerpt from Assistant Secretary Roderick's introductory comments, together with the text of Senator WILEY's address. I ask unanimous consent that the text be printed in the Appendix of the RECORD.

There being no objection, the address and excerpt from the introductory remarks were ordered to be printed in the RECORD, as follows:

EXCERPT FROM COMMENTS OF ASSISTANT SECRETARY RODERICK

America's part of the St. Lawrence seaway has already reached 10 percent of completion, and is actually running ahead of schedule. That it has advanced this far is in great measure due to the men I will have the honor of presenting to you now.

The first of these is Senator ALEXANDER WILEY, of Wisconsin. Senator WILEY, one of the most able and distinguished legislators in the Government, has served continuously in the Senate for almost 20 years. Among his many high posts have been those of the chairman of the Senate Committee on the Judiciary, chairman of the Senate Foreign Relations Committee, and delegate to the United Nations General Assembly.

More important on this occasion, however, is the fact that he was one of the two sponsors of the St. Lawrence seaway bill, which President Eisenhower signed into law in 1954. He has been called the father of the St. Lawrence seaway. Senator WILEY had his teeth in the St. Lawrence project for over 17 years. And like a bulldog he held on and on until the Senate passed the bill which makes all this possible.

THE SIGNIFICANCE OF DWIGHT D. EISENHOWER LOCK: ENGINEERING FOR ATOMIC PEACE

(Address by Senator WILEY at dedication of Eisenhower Lock, Massena, N. Y.)

This is a great day in the history of Massena.

It is a great day in the lives of the tens of millions of people in the valley of the Great Lakes. It is an historic day in Canadian-American relations; and it is an inspiring day for peoples elsewhere throughout the world.

In the comments which have preceded mine, we have all heard with pleasure of the enormous significance of this lock, and of the other seaway installations to ourselves and to our good neighbor to the North.

Naturally, for those of us Americans who come from areas in the upper lake region, we are particularly looking forward to the completion of work—further up the lakes—on the deepening and improving of the connecting channels. We hope for all possible speed in approval of United States funds for this vital upper lake purpose.

In the meantime, however, we rejoice in the splendid progress, evidenced in every single step in this mighty waterway and power project—every step everywhere along the Lakes.

To myself, as one who has been proud to fight for this cause since the time I came to the Senate in 1939, this is indeed a day of real gratification.

And it is, of course, particularly appropriate that this lock be named in honor of our great President, an American and world statesman, who has contributed so much to the coming into being of this bi-national seaway, itself.

In the few moments that I have available, I would like to comment on the significance of the man from Abilene, the distinguished leader in the White House, Dwight D. Eisenhower.

I hope that the cable dispatches to overseas will fully describe our meeting today, for this dedication in his name to the free world, may this news come as further inspiration of what free men can do under Eisenhower-like leadership, and what they will achieve, with cooperation and teamwork.

This is the type of project into which we of North America gladly put our strength and our resources.

This is the only type of engineering we Americans really enjoy—engineering works that advance the well-being of mankind. There is no American, no Canadian—there is no thinking person anywhere in the world—who likes to see the genius of engineering, the genius of construction, devoted to weapons of destruction.

And so may the cables which will be read in Moscow tonight remind the leaders of the Kremlin that it is Dwight D. Eisenhower's and our most fervent hope, it is his and our prayer, that in the months and years up ahead, the people of this world may increasingly devote their energy to the building of other great works of peace.

This lock—this project symbolizes greater good for man—greater prosperity, greater harnessing of the forces of nature, for man's betterment.

It is but a symbol of what we can do and will do on an ever larger scale, in many other fields, particularly if the cloud of nuclear conflict is forever banished from our horizon, as it should and must be.

As one who is privileged to serve as a senior minority member of the United States Senate Committee on Foreign Relations, I hope that the worldwide significance of the event today will be fully noted by all peoples.

Let them note that we proudly apply the illustrious name "Eisenhower" to a mighty engineering lock of peace—not to a tank, not to a missile, not to a bomb.

Why? Because Dwight D. Eisenhower, although he has devoted a life of honored service in the uniform of his country, is a man truly of peace.

He knows that there is no goal in all this world dearer than the twin goal of peace and freedom.

Dwight Eisenhower knows and has said that "There is no alternative to peace." Modern nuclear war could be mutual mans' suicide—mass inhuman slaughter—mass destruction of edifices such as this.

That is why it is my earnest hope that we here today who dedicate Dwight D. Eisenhower lock will simultaneously rededicate ourselves to President Eisenhower's goals—world peace and freedom. But how to achieve those objectives? By continuation and strengthening of our policies of partnership with the free world, by mutual security with all likeminded nations.

These are policies to which our Canadian good neighbor is contributing with outstanding effectiveness.

Perhaps a somewhat brighter day in East-West relations may be ahead. Perhaps, for example, Molotov's resignation be taken as a further possibility for a bit more—I emphasize—just a bit more of easing of East-West tensions.

But I warn: the whole ominous Soviet record of the past, the record of treachery and doubledealing, the record of e. g. zagging Red policies and waves of purges—this dark record bids us to remain cautious and vigilant.

Meanwhile, however, thanks to the seaway, we are growing stronger with each passing day.

So, congratulations, my friends to all who have contributed to the arrival of this splendid hour. Congratulations to Administrator Lewis Castle, and to my able colleague, GEORGE DONDERO, and to all those, named and unnamed today, who dreamed great dreams, who worked and toiled and sacrificed that this proud event might come to pass.

Commencement Address Delivered by Hon. A. Willis Robertson, of Virginia, at Staunton Military Academy

EXTENSION OF REMARKS
OF
HON. BARRY M. GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, June 4, 1956

Mr. GOLDWATER. Mr. President, four of the most memorable years of my life were spent in the Shennandoah Valley of Virginia where I attended the Staunton Military Academy. The beauty of the surrounding countryside, the historic significance of the area, and most of all, the delightful sincerity and friendship of the people, have remained with me all the intervening years since my graduation. I feel as close to that part of Virginia as I do to my own home, and it is pleasing to me to have my two sons in attendance at that same school, where they, too, will add to their education and to their appreciation of the fineness of Virginia.

Yesterday, the distinguished junior Senator from Virginia [Mr. ROBERTSON] delivered the graduation address at my old school, and it carries such a message of importance to the youth of our Nation that I wish to make it available to my colleagues. Therefore, I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

GRADUATION ADDRESS OF SENATOR A. WILLIS ROBERTSON AT THE COMMENCEMENT EXERCISES, STAUNTON MILITARY ACADEMY, STAUNTON, VA., JUNE 3, 1956

It is a coveted privilege to address the Cadet Corps of one of the best military academies in the Nation, founded by a distinguished Confederate veteran and located in the second oldest city in the Valley of Virginia. While Staunton was not established as a town until 14 years before the Revolutionary War, it has been the county seat of Augusta County since 1745. At the present time, Augusta is just the second largest county in Virginia but when it was first created it was larger than the present State of Virginia because it extended to the Mississippi River, including all of what is now the State of Kentucky and the State of West Virginia, and even a small part of what is now the State of Pennsylvania.

I once heard a distinguished Staunton lawyer, Col. Rudolph Bumgardner, deliver an address which recounted a trip that George Washington made on horseback from Mount Vernon to Staunton after he had finished his second term as President. He first examined his land titles which were recorded in the clerk's office of Staunton and then proceeded through what is now West Virginia where he owned large tracts and into Pennsylvania where he also had holdings in what is now called Washington County, named by the grateful citizens of that Pennsylvania area for George Washington because when a boundary dispute arose between Virginia and Pennsylvania over who owned the land Washington urged the Virginia Legislature to cede it to Pennsylvania saying that Virginia would still have plenty left. And I am sure in your course on American history you learned that the first Declaration of Independence was adopted at a mass meeting in Augusta County and you also will recall that Washington said during the Revolutionary War, when many of his followers had gotten faint hearted: "Leave me but a banner to place upon the mountains of Augusta, and I will rally around me the men who will lift our bleeding country from the dust and set her free."

Augusta County furnished many brave soldiers for Washington's army and many brave soldiers to Stonewall Jackson's army of northern Virginia. It was, therefore, highly fitting and proper that William H. Kable, who later served as a captain in the Confederate army, selected Staunton as the site for a military academy, the primary aim of which was the development of character, of personal integrity and unselfish service. And needless to say, during my 23 years of service in the Congress, first as the Representative of this valley district, and since 1946, as the junior Senator from Virginia, I always have taken pride in saying that the Valley of Virginia is as fertile as the Valley of the Nile but more centrally located and that Staunton is a wonderfully fine place to send either a boy to get an education combined with military training or a girl to get an education and instruction in the art of gracious living. Incidentally, my mother graduated from Staunton Female Institute, now named for the greatest of all southern cavalry leaders, "Jeb" Stuart.

The goal Captain Kable set for character training at Staunton Military Academy has been kept constantly in sight by those who succeeded him in the leadership of this school, as is evidenced by the fact that its catalog says the aim of the academy is to send its students out into the larger world of adult life "with trained minds and bodies, adequate cultural resources, high personal ideals, and a sense of responsibility to society."

In looking over this catalog recently I was pleased to notice the personal word to parents, in effect warning them not to send boys here if they are looking for no more than military discipline which would harden bodies and mental discipline which would prepare minds for meeting college entrance requirements.

Those goals also could be acheived in a Communist school and, as a matter of fact, we have reason to believe that the educational system of the Soviet Union compares most favorably with the general run of schools in the United States in the fields of physical and scientific training.

Former Senator William Benton, who is publisher of the Encyclopedia Britannica, recently made a startling report on his personal observations of education in Russia. He said education has become a main theater of the cold war and that Russia's classrooms, libraries, laboratories, and teaching methods may threaten us more than her hydrogen bombs and guided missiles.

Benton said all children in Russia are required to attend school between the ages of 7 and 17 and that the standards of academic accomplishment set for them are higher than the best American high schools and would be comparable to the level of a junior college in the United States.

The Russian boys and girls go to school 6 days a week and 10 months a year. In addition to studying the three R's and algebra, geometry, and trigonometry, they are required to take 4 or 5 years of physics, 4 years of chemistry, 2 of biology, 1 of astronomy, 1 of psychology, and 6 years of a foreign language, preferably English.

After completing this general schooling graduates may go to 1 of 2,000 vocational colleges which train specialists for industry and technicians in the fields of medicine, education, and the arts or they may go to 1 of 800 institutions of higher learning which train engineers, doctors, dentists, lawyers, advanced scientists, and teachers.

But the objective of this system of education is not to train individuals for a life of happiness or to fulfill their potential in a free society. It is to discipline them for maximum service to the state. Teachers are given no academic freedom, nor are they allowed to criticize the political regime of the country or any official dogma. Students not only are required to follow prescribed courses in school but, once they have picked a particular profession and started training, they cannot change their minds about entering it and after graduation they must work 3 years at any assigned job. That last requirement, incidentally, might well be brought to the attention of any young man in America who considers it a hardship to be called for a limited period of service to prepare himself to help defend his country against any future attack.

Now, if our goals were the same as those of the Russians and the graduates of Staunton Military Academy were called upon to compete directly with the graduates of their

schools, I believe the boys trained here would acquit themselves with honor. I know that this academy was the first school in the South to be rated by the War Department as an honor school on the basis of the military aptitude, training, and efficiency of its ROTC unit. I know also that in one of the recent yearly examinations given in all the honor schools in the United States to select 10 boys to enter the Naval Academy at Annapolis, with each school permitted to name 3 candidates, all 3 of the Staunton nominees won appointments—a record equaled by no other school. And I know, also, the school's record for winning football championships.

I am thankful, however, that the goal of Staunton Military Academy is not the same as that of the Russian schools and that parents considering sending their boys here are specifically told in advance: "We cannot be satisfied with the fostering of only mental and physical accomplishments. Our higher trust is to instill in the boy a sense of responsibility, encourage in him a respect for the soundest virtues and, through a discipline which is firm, kind, and just, to teach him the art of self-discipline." Self-discipline, as Henderson said of Stonewall Jackson, is the root of all manliness.

It is primarily to commend that attitude toward education that I have come here today.

We live in an age in which man's ingenuity in the physical sciences has enabled him to produce weapons capable of wiping out civilization and there are some who believe that destructive result cannot be avoided. They have seen a generation which triumphed over one form of totalitarianism at the cost of unleasing the atom bomb now confronted by a more dangerous form of totalitarianism which has been held in check only by the threat of the hydrogen bomb. But, since the totalitarians also have that weapon now, and do not have our scruples to deter its use, there is ample ground for pessimism about the ultimate result.

I am not personally willing to concede, however, that men are now powerless to control their own inventions or that it already is too late to choose any road other than the one which leads to destruction of civilization. Tht start which this Nation had in development of weapons of total destruction and the means of delivering them anywhere in the world has bought us time. In the words of Sir Winston Churchill, they were sanctions which have preserved an uneasy peace. All the free nations of the world fervently hope for a program of international disarmament and a lessening of the heavy burden of defense spending, and even the nations behind the Iron Curtain pay lip service to such proposals. Until they evidence their good intentions with respect to peaceful coexistence by deeds, such, for instance, as the release of East Germany and withdrawal from Korea, we cannot afford to let down our guard. But while maintaining a defensive power well calculated to stay the hand of a possible aggressor every effort must be made to bring into line the spiritual forces on which ultimate victory will depend.

Commenting on why the United States entered the First World War one of our distinguished Federal jurists, Judge Learned Hand, said we were not so much afraid of a physical German invasion, if they won, as we were that the example of totalitarian success would convert mankind, including Americans, to a discipline after the German pattern. "Not the violence of enemies would undo us," he said, "but our own spiritual weakness, the shallowness of our convictions."

That statement, I believe, reflects the thinking of that great native of Staunton, Woodrow Wilson, who in 1917 sincerely sought an honorable alternative to war and was unable to find it; and when the war was over tried unsuccessfully to show us the road to a lasting peace based on spiritual strength.

Another Federal judge, Harold R. Medina, who studied under Wilson at Princeton, recalled recently some of the things he learned there which had made the most lasting impression on him.

He said Woodrow Wilson had taught three things:

"(1) That American democracy could not function properly without a constant renewal of its leadership from the rank and file, the men and women who today are boys and girls trying to get some sort of an education.

"(2) Colleges do not exist for the purpose of sharpening our wits for our own use, but rather to quicken our social understanding, instruct our consciences, and develop in us what he called a 'taste of unselfishness and self-sacrifice.'

"(3) Ideals and moral principles are 'of the very spirit of all action,' and we are put in this world not to twiddle our thumbs but to act."

Again in World War II our greatest danger was not a German invasion but worldwide acceptance of the principles for which Hitler and Mussolini stood. Under that system, of course, there could be no such constitutional democracy as we now have, based on recognition of individual worth.

And today, as I indicated when I told of Senator Benton's observation of Russian education, our greatest danger is not that our cities will be wiped out by hydrogen bombs but that we shall be pressed by economic and psychological weapons to the point where a minimum security guaranteed by government seems preferable to the risks and gains of private initiative—where we yield our civic and social responsibilities to a centralized bureaucratic authority and where the despotic figure of a paternalistic state blocks our vision of the dignity of man.

One of our chief bulwarks against that threat must be schools and colleges which, like Staunton Military Academy, pledge themselves "to promote the ideals of personal integrity and unselfish service." And I know of no city and no institution better equipped by heritage and tradition to carry on that program than Staunton and its military academy.

In 1864, just 4 years after this school was founded, the streets of Staunton echoed with the unusual sound of a nursery song played by a military band and sung by hardened soldiers.

In that dark hour for the Confederate cause the VMI cadets had been summoned from nearly Lexington to help defend Staunton. Although they were of college grade, records show that those boys were little older than the present students of SMA. The average age was 18, and 4 of them were just past 15. Their youthful appearance amused the older soldiers quartered in Staunton, and when one veteran detachment's band started playing Rock-a-Bye Baby the men took up the air, singing and rocking their guns as it putting a baby to sleep.

Two days later, however, those boys made their famed charge at New Market, and as they marched to the front, past the weary veterans they were relieving, there was no derision but rather an admiring shout of "Look at the seed corn battalion, look, look."

At New Market and elsewhere during that sad, fratricidal war much of the seed corn of southern youth was lost, and after nearly a century we have barely recovered from that sacrifice of young manhood. As a compensating factor, however, we have profited by examples of irrefragable courage and self-sacrifice that will never die.

The spirit which led the boys of VMI to New Market as volunteers in defense of their native State not only has been perpetuated at VMI, but it has been stimulated wherever their story was known. Robert E. Lee, at Washington and Lee University, and William H. Kable, at Staunton Military Academy, set the pattern for training the kind of leadership a Republic demands. Woodrow Wilson carried that concept from Staunton to Princeton, and in his writings and speeches urged it upon our Nation and the free world.

I congratulate you, who are graduating today, on the privilege of sharing a great tradition, and I charge you to apply the ideals of personal integrity and unselfish service to every duty that may be required of you, remembering:

So nigh is grandeur to our dust,
So near is God to man,
When duty whispers low, thou must,
The youth replies, I can.

The Importance of Clearance Laws and Regulations

EXTENSION OF REMARKS
OF
HON. GARDNER R. WITHROW
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. WITHROW. Mr. Speaker, on May 23, 24, and 25 at Omaha, Nebr., the Midwest Association of Railroad and Utilities Commissioners held its annual convention. The States comprising this association, in addition to my own State, are Illinois, Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, South Dakota, and Arkansas.

One of the major speeches delivered at this convention was that of Harry See, national legislative representative of the Brotherhood of Railroad Trainmen in Washington. Because of the alarming increase in accidents in the railroad industry, I insert in the RECORD the remarks of Mr. See, which deal with the subject of railroad safety:

THE IMPORTANCE OF CLEARANCE LAWS AND REGULATIONS

(Address of Harry See, national legislative representative, Brotherhood of Railroad Trainmen, Washington, D. C., before the Midwest Association of Railroad and Utilities Commissioners, Hotel Paxton, Omaha, Nebr., May 24, 1956)

I am especially grateful for the privilege of appearing before the Midwest Association of Railroad and Utilities Commissioners. While this is my first opportunity to visit and exchange ideas with your group, I have had the pleasure of attending other conferences of railroad and utilities commissioners, the most recent one being the convention of the National Association of Railroad and Utilities Commissioners held at Asheville, N. C., last October.

At that time I had the opportunity to discuss with several State commissioners matters relating to railroad safety, and this proved to be of mutual benefit. Ever since the Asheville meeting, I have looked eagerly toward participating in other meetings of that type.

I want to thank President Rasmussen for asking me to talk about clearance laws and related safety matters. This is a subject that is close to me, and I feel conversant with it. I have devoted a major portion of my brotherhood life to the improvement of safety conditions on railroads, and it is with growing pleasure that I see continued improvement along this line.

For 25 years I served as the State representative of the brotherhood in the State

of California. When I first undertook the job, California had very little in the way of railroad safety regulations other than a full crew law and some minor legislation. The legislature had delegated to the California Railroad Commission almost as much authority as the legislature itself had over railroads and other public utilities. The commission did have an old clearance order, which had not been kept up to date. That order was amended in January 1926 and has been improved several times since then.

I believe California was the first State to require more than 13 feet from center line to center line of parallel tracks, and the first order to base overhead and side clearances on the size of equipment to be operated alongside of or under those clearances. And I am sure it was the first order to require the placarding or the stenciling of extralarge cars and loads. These cars have to be moved in specified places in the train, and notices given to train crews and yard employees of those movements. Since that time several other States have followed California's example.

After coming to Washington 10 years ago to take over the post as national legislative representative for the Brotherhood, I continued to work in my spare moments for the adoption of similar orders in other States that had no regulations or inadequate regulations. During this period I have participated in the writing or revision of clearance laws in 20 States and the District of Columbia, and assisted in the passage of clearance laws in Massachusetts and Tennessee. At the present time there are pending before five other State commissions the Brotherhood's petition for standard clearance orders.

Many of you, therefore, are more than slightly acquainted with our work, and the position of the Brotherhood on this important subject of railroad safety, and specifically railroad clearances.

Some of you may have cause to wonder why the Brotherhood has been conducting such a stepped-up campaign in those sections of the country where no clearance regulations exist. It is not by chance that the great number of clearance orders now in existence have been issued or revised within the past 5 years.

As a forward-looking labor organization, we are interested in obtaining for our membership as much in the way of protection from occupational hazards as we are in securing wage increases. The concentrated effort to establish clearance regulations has stemmed from changing conditions on American railroads.

Railroad yards were not built to accommodate the increase in the size of freight equipment, which we witness daily. At the time of their construction, the yards were probably large enough, and the tracks were so spaced as to take care of the size of equipment then in use. That equipment was 10 feet or less in width, and the highest cars were about 12 feet high.

The space that was allowed between two tracks or between the track and a structure might have been sufficient with the old type of equipment, but with the new and larger equipment, it is entirely inadequate.

I recall several years ago reading an article about close clearances, and it was aptly entitled "Diet or Die." It was a satire on fat brakemen, and how squeezed they would be if they tried to ride cars through a narrow section of a railroad yard that had insufficient clearances. I might add that the point of the article was brought home through the humorous medium and had its effect on future negotiations with several carriers.

Following the close of World War II, when the attention of industry was again devoted to peacetime production, the railroad industry began to build longer, wider, and higher cars. Shortly after I went to Washington, I began to keep a running check on the increase in the size of freight equipment, and I am sure you will be as surprised with the startling number as I am.

We make it a point to check the Railway Equipment Register, which is published four times annually, for the increase in bigger equipment on every common and private carrier in the country. Our research department has compiled statistics, which we mail to our legislative representatives in the various States for their information and use.

In 1950, there were 557,379 cars that were 10 feet 6 inches wide or wider on the American railroads. By 1956 that number had increased to 875,566, or an increase of 318,187 in approximately 5 years. Similarly with cars that are 15 feet 1 inch high or higher to the top of the running board, the number increased from 17,030 in 1950 to 23,205 in 1956, an addition of 6,175.

The trend during all of this time has been only in one direction, and that is upward. At no time did I detect a decrease in the number of big cars, and so I feel it is safe to say that freight equipment in the railroad industry is changing by becoming bigger, wider, higher, and longer.

I recently read an article in Railway Age about the new cars being built in Canada to transport automobiles. While I was in Moncton, New Brunswick, last fall, I checked on this equipment, and find that experiments have been successful, and no doubt the scheme will be picked up by the American railroads. The Canadian cars are now in production and will be available for summer traffic.

The measurements of these cars strike an all-time high. They will be 78 feet long, 16½ feet high or possibly a little higher, and about 11 feet in extreme width. When you recall the average length, height, and width of a freight car a few years ago, it is easy to understand the greater danger presented by this new equipment, when the physical conditions of railroad yards have not changed materially to accommodate larger cars.

If shippers by rail require larger cars, then we feel it is the duty of the railroad industry to provide the cars to meet the demands of customers. But we also feel that it is the brotherhood's duty to insist that the men we represent in train and yard service be furnished with a reasonably safe place to work alongside of and on top of these cars.

It is this long-range and far-sighted building program on the part of the railroad industry that has made it necessary for the railroad labor organizations to also look ahead with regard to the safety of the men who work with and ride these cars. I am happy to state that 30 States now have some kind of standard clearance regulations or laws. In at least 21 of these States, the requirement for the distance between the center lines of parallel tracks is 14 feet. The point-to-point trackage in these States totals more than 81,000 miles. In some States the distance is only 13 feet 6 inches, but generally speaking these are older orders that are now being amended. The Ohio Commission, for instance, amended its order last year to provide for 14 feet between the center lines of parallel tracks.

Most clearance regulations obtained recently provide for 14 feet clearance between the center lines of parallel tracks, the overhead clearance of 22 feet, in some States 22 feet 6 inches, and a side clearance of 8 feet 6 inches. In several of the orders, specifications are set forth for clearances of platforms at different heights above the top of the rail. Clearance between team, house, or industrial tracks is usually set at 13 feet, and between ladder tracks 17 feet, while parallel ladder tracks take 20 feet.

Last month I traveled to Montana to meet with representatives of the carriers and the Montana Railroad and Public Service Commission. After conferences with carrier representatives and the commission, and a short hearing before the commission, it agreed to issue a clearance order, which I believe will contain most of the provisions I just cited.

I was happy to make the trip to Montana and to be given such a cordial reception by the commission. Members of the commission exhibited an understanding of our problem and their attitude was a sympathetic one. I have confidence in their judgment to issue an order that will be satisfactory to the railroads, and at the same time afford our members the safeguards they need to work with the large-sized equipment.

I was anxious to work on the Montana order, because it is the only outstanding State in the West that does not now have a standard clearance order. With the issuance of that order, the States in the Pacific coast and Rocky Mountain area will present a solid bloc of acceptable clearance regulations, that is a credit to management, the State regulatory bodies, and a real source of comfort to the employees.

And I want to compliment the Midwest on the progress it is making. Last year the commission of this fine State issued its first standard clearance order, and it is a good one. I hope this will kindle a similar interest in some of the other midwestern States and pave the way for other commissions to take action, just as the California order did among the Western States.

In the instance just mentioned in Nebraska, the Brotherhood received splendid cooperation from the Nebraska railroads and the Nebraska commission. This cooperation has generally been present throughout the West and Midwest, and is becoming more apparent in the Northeast. However, some of the railroads in the central and the southern States still do not seem to keep up with the parade, and from them we receive very little cooperation.

There are only 19 States that do not have some kind of clearance regulations. In some cases the Public Utilities Acts of these States do not empower the State commissions with the authority to pass upon such matters. I am hopeful, however, that in view of the general improvements in safety regulations all over the country, that these States will gradually get in line and make changes in their utilities acts, or take action if they are already clothed with that authority.

Those of us who are removed from the actual blood and toil of the work-a-day railroad world are inclined to lose sight of the fact that such protective measures as clearance orders are not merely details on the States' statute books, but necessary safeguards to prevent avoidable accidents. As I peruse the Accident Bulletin issued by the Interstate Commerce Commission each year, I am encouraged to note an improvement in the accident rate attributable to close clearances, although the figure is still depressing and means more work for those of us interested in saving lives.

I wish I could make the same statement for the accident rate generally, but unfortunately I cannot. While I have thus far discussed clearance regulations, close clearances constitute only one hazard in the railroad industry. The compilation of accident statistics for the full year of 1955, indicates an alarming increase that year over the previous year. In 1954 in employee classifications there were 208 persons killed, while the figure in 1955 jumped to 256. This represents an increase of 23.08 percent, too stout a figure to be complacent about. The number of injuries in 1955 also increased, but not quite so drastically. In 1954 there were 16,518 persons injured, and this figure rose to 18,299 in 1955, or an increase of 10.78 percent, in itself no small increase.

I have checked the preliminary reports for the first 3 months of this year, and I am unhappy to report that the same trend con-

tinues—an increase in deaths and injuries in employee classifications. A report issued last week by the Interstate Commerce Commission indicates that already this year there have been 63 railroad employees killed on duty and 4,611 injured, which is a substantial increase over the same period in 1955.

These figures may be surprising to some of you, and I can understand why. So many persons have the mistaken impression that as long as there is an Interstate Commerce Commission in Washington, all is well in the safety life of the railroad man. But we know from experience there is little comfort in that thought.

As you gentlemen know, the Interstate Commerce Commission does have jurisdiction or authority over certain matters, but I am one of those people who believe somewhat in States' rights, and I think it would be a mistake to give the Interstate Commerce Commission jurisdiction over all safety matters on a railroad. Take clearance orders as an example. There always comes time for an exception to an established rule to satisfy a particular local condition. And if the authority to make that slight change rested solely with a national agency, it would be necessary for the railroad or the industry to go to Washington to ask for an exception.

It is obvious this would work a hardship on many persons. But by leaving that authority with a State agency it is much less difficult to go to a State capital or make a telephone call asking for an exception, than it is to have to go to Washington. In addition, matters can be handled more promptly on a local basis.

As you know, the Interstate Commerce Commission's jurisdiction in safety regulations on interstate railroads is confined to four categories: the enforcement of the Hours of Service Act; the Safety Appliance Act; the Locomotive Inspection Act, and jurisdiction over signaling systems and devices. It is true the Interstate Commerce Commission also has within its jurisdiction the enforcement of the Accidents Reports Act, but even after exhaustive investigations, unless the matter falls within one of the above four categories, the Commission is limited to a recommendation.

For instance, a bridge or piece of track on a railroad might be in a very unsafe condition. Yet the Interstate Commerce Commission could not compel the carrier to reconstruct or repair the bridge or piece of track. It could only recommend that the carrier do so. On the other hand, the State either through its legislature or one of these enforcement agencies, does have the power to effect that correction.

All other safety regulations fall within the purview of the State commissions, where I feel they properly belong. As I previously mentioned, I have long been a "States Righter" when it comes to matters of safety on railroads, and I am pleased to see so many of the State regulatory agencies insisting on retaining their jurisdictional powers.

At the present time Congress is considering the proposals set forth in the recommendations of the President's Transport Policy Committee Report; hearings have just concluded in Washington. It has been the position of the Brotherhood, as well as all other railroad labor organization, that the sovereignty of the States in such matters must be recognized and maintained. We have been vigilant in watching this legislation to detect the slightest effort to invade the powers of the State in matters of this kind, and while it has not yet happened, I will be quick to oppose it if it does.

Most States have delegated the necessary authority to a State regulatory body to establish; promulgate and enforce regulations pertaining to safety on railroads. However, a few States have not taken advantage of this privilege. I hope these remaining States will realize the duty that accompanies the privilege and that their legislatures will give the proper State agency the jurisdiction it should have. The State fo Maine was the most recent to strengthen its Public Utilities Act, and the commission of that State lost no time in issuing a standard clearance order, once it had been empowered to act.

As the principal executives of your various State commissions, it is needless for me to mention the dependence the employees have on the interest taken in railroad safety matters. But it may serve as an item of information to some of you to realize there is a vast field in our industry over which there is no effective regulation.

Congress has not delegated authority in any law, nor has a like authority been assumed by very many State commissions in such matters as the handling of extra largesize freight equipment, oversized loads on open top cars, or the manner in which cars are loaded with lumber and pulpwood, poles, sheet metal, and scrap iron—all potential accident hazards. Through the process of education we hope to acquaint regulatory bodies such as yours with the new and everpresent dangers in railroading of today.

I spoke previously about causes of accidents in addition to those resulting from close clearances. If I may return to that point for a few moments, I would like to discuss a causative factor in the accident rate that is ignored in most calculations. For a long time I have felt there is a direct relationship between the accident rate and the maintenance of railroad equipment, rights-of-way, and structures. While my attention to this subject has been brief, I have nevertheless come up with some comparisons which are by no means coincidental.

From 1951 until 1955 we witnessed a reduction in the number of accidents to operating railroad employees. As I pointed out before, the year 1955 reversed the trend and the early months of this year indicate a continuation of the upward trend. This fact is also borne out by the latest reports from the Interstate Commerce Commission, which indicate a 14-percent increase in total accidents. The statistics used earlier in my address, as I mentioned at that time, covered accidents to all employees. The figure I now refer to includes just the operating employees, the group with which I am most familiar.

I have examined the statistics for the past several years, beginning in 1949 with the view in mind for ascertaining the casual connection, if any, between the number of accidents and the man-hours applied to maintenance of way, structures, and equipment over this period.

I have included at the end of my prepared address three tables from which it is more easy for me to demonstrate that the number of operating employees killed and injured follows the level of expenditures on maintenance of way and structures and equipment.

From 1949 to 1954, man-hours applied to the maintenance of way and structures and equipment were held at a high level. As a result of these consistently high expenditures, the year 1952 inaugurated a decline in the number of operating employees killed and injured, and this decline continued in 1953 and 1954. We may conclude, I believe, that the relatively high man-hour expenditures for maintenance from 1949 through 1953 was a direct causative factor in the reduction of the number of killed and injured operating employees in 1952, 1953, and 1954.

In 1954, however, the picture changed and the story was a different one—in fact, a discouraging development. In that year the man-hours applied to maintenance turned sharply downward, and the effect of this was obvious in 1955 when there was a 14 percent increase in persons killed and injured, and a shocking 44 percent increase in the number of operating employees killed on class 1 carriers. Anyone interested in the hazards of employment could not fail to inquire into these factors, when the increases in the numbers of killed and injured in 1955 mounted so sharply.

I feel the record is unmistakable that a high level of maintenance means safer working conditions and a reduction in the number of injuries and contrariwise, a reduction in maintenance means more hazards in employment and an increase in such accidents.

The relationship between man-hours of maintenance and the number of railroad employees killed and injured contains a lesson to which the railroad industry must give serious consideration.

I should explain that these data are for class 1 carriers, and that I have not taken money expenditures; instead I have used man-hours applied to maintenance of way and structures and equipment as reported by the Interstate Commerce Commission (table III). I have used man-hours to eliminate the disturbing factor brought about by fluctuating wage costs. Also, to insure accuracy in my compilation, I used the number of accidents per 1,000 operating employees instead of the total number of killed and injured, because I wanted to eliminate the variations in the volume of employment (table II).

I have confined myself to the rates on operating employees because the employees who take the risks and suffer the accidents are the employees who are most concerned with proper maintenance. I have also included a table (table I), which lists the average number of trainmen in service, total number of killed and injured and index numbers of the killed and injured for class 1 railways 1948–55.

I realize the importance of maintenance on railroads, and for that reason I dislike to read that a carrier is cutting down on maintenance as a means of keeping pledges to its stockholders, I know that reduced expenditures for maintenance will show up in the gruesome statistics of life and death of railroad operating employees. As a representative of the largest operating railroad union, I voice to you my concern that there is not some definite policy undertaken by the carriers to insure a high level of maintenance every year, even at the cost of dividends in a particular year.

What a stockholder may gain in 1 year by the deferment of maintenance, he will lose in a later year, and perhaps lose more than if the maintenance had been kept at a satisfactory level; because depreciation on railroads, like depreciation for other property, becomes greater the longer it is postponed. Maintenance can be deferred, but not avoided. It certainly cannot be systematically and irresponsibly deferred, if railroads are to remain in active competition with other modes of transportation.

It is my contention that adequate maintenance is good business. In addition to keeping our industry fit for today's keen competion, it also lessens the financial burden for the carriers by lower actual charges for maintenance, and improved safety conditions avoid the needless high cost of accidents.

And I do not want to pass over lightly this cost of accidents. If anyone doubts the hole in the railroad treasury the cost of accidents carves, let me cite just briefly the amounts the carriers have been compelled to pay during the years 1952 through 1954 as a result of personal injuries.

In 1952 they expended $101,550,342 for death and injury cases; in 1953 this cost amounted to $100,129,580, and 1954 this figure decreased to just under $1 million. The total for the 3-year period, however, was over $300 million. These figures include only personal injuries to persons in maintenance of

way and structures, maintenance of equipment, and transportation. There is not included injuries in other classes of employment.

This constant and gigantic drain in railroad resources should be motivation enough, without regard to the humane factor which is of primary interest to us and also of interest to the carriers, to make the carriers want to spend more on maintenance, and thereby reduce the number of avoidable accidents.

We hope those commissions that are represented here today which do not have adequate safety regulations will proceed to give this matter serious consideration, and perhaps join the large majority of other States that already have adequate regulations. The Brotherhood of Railroad Trainmen will be glad to cooperate with any of the State agencies in an effort to bring about the lessening of hazards in an extremely hazardous industry.

I will not at this time impose upon your patience any longer, although the subject of safety is one in which I have a consuming interest, and I could speak on it at greater length. I feel that I have touched upon the highlights in the general field, and at the conclusion, I will be very happy to answer any specific questions, that any of you might have either on certain portions of my address or on any related matters.

I have enjoyed this opportunity to appear before you, and I want to once again thank President Rasmussen, the other officers of the association for inviting me to attend.

I hope that I will have the pleasure and privilege of another invitation to future conventions. Thank you.

TABLE I.—*Average number of trainmen in service, total number of trainmen killed and injured, and index numbers, class I railways, 1948–55*

Year	Average number of trainmen in service	Total number of trainmen killed	Index numbers	Total number of trainmen injured	Index numbers
1948	282, 179	278	100	13, 152	100
1949	251, 250	195	70	9, 128	69
1950	252, 056	165	59	9, 633	73
1951	263, 921	202	72	10, 563	80
1952	255, 009	170	66	9, 230	70
1953	251, 487	145	52	8, 341	63
1954	230, 729	84	30	7, 071	54
1955	235, 541	123	44	8, 170	63

TABLE II.—*Trainmen killed and injured per 1,000 employees and index numbers, class I railroads, 1948-55*

Year	Number of trainmen killed per 1,000	Index numbers	Number of trainmen injured per 1,000	Index numbers
1948	0.99	100	46.41	100
1949	.78	78.7	36.33	78.0
1950	.65	65.6	38.22	82.3
1951	.77	77.0	40.02	84.0
1952	.67	67.7	36.19	78.0
1953	.58	56.5	33.17	71.4
1954	.36	36.3	30.65	66.0
1955	.52	52.5	34.69	74.7

TABLE III.—*Man-hours of maintenance-of-way and structures and equipment employees, class I railways, 1948–55*

Year	Man-hours (thousands)	Index numbers
1948	1, 613, 102	100
1949	1, 325, 733	82
1950	1, 248, 740	77
1951	1, 314, 543	82
1952	1, 241, 664	76
1953	1, 210, 866	75
1954	1, 005, 177	62
1955	1, 010, 811	62

Why Our Forests Are Important to Us—Essay by Dorothy Haus

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Monday, June 4, 1956

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a prize-winning essay entitled "Why Our Forests Are Important to Us," written by Dorothy Haus, a student at Brattleboro, Vt.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

WHY OUR FORESTS ARE IMPORTANT TO US

The first object Tom saw when he returned home from school one bright October afternoon was a large envelope on the hall table. When he examined the envelope closely, he noted with satisfaction that it was addressed to him, but it bore a foreign postmark. When he saw the return address, he discovered it was from his pen-pal, Eric, in Denmark. Tom had postponed writing to him for a month, and now Eric wrote to him first.

Eric wrote that he had had a very pleasant summer and described his bicycle trip along the picturesque countryside. He told of the fiords, colorful flower gardens, and a mountain 500 feet high, which he had climbed. He even enclosed a picture of himself, a smiling fair-haired lad of 14. The boy in Denmark seemed much less like a stranger now, and Tom was eager to write an equally friendly letter telling of his country.

One of the highlights of Tom's vacation had been a trip with his 4-H Club to Plymouth with a stopover at Coolidge State Forest, which the campers enjoyed immensely. It provided a picnic table and lean-to, and beautiful scenery. As Tom remembered the magnificent woodland view and the spicy fragrance of pine, he wrote eagerly about the charms of Vermont, best of all homelands.

"In all seasons Vermont is the most beautiful of all, as approximately 63 percent of it is forest land," he wrote.

Looking out the window, he admired the colorful foliage on the wooded bank and the rose and gold colors on Mount Wantastiquet against a clear blue sky.

Then he wrote, "Our Vermont woodlands are valuable for their timber, for cover on watersheds, for sanctuary for wildlife, for sport and recreation, and for sweet maple products."

Stopping to think of the many uses of wood even in his small room, Tom was amazed at the number of wood products he found. His desk, his bed, its rayon counterpane, the veneer on his bureau, and his plywood bookshelf are all gifts of the forest. Even his brush, clock, and pocket comb, which are plastic, are made from wood. It is quite an increase from 100 years ago, when people only had two main uses for wood, and they were timber and fuel for houses. Tom realized then why $2,500,000 is paid to Vermont tree growers each year. He could scarcely believe it when he had read it on a State bulletin with items about Vermont's 535 sawmills, 3 pulp and paper mills, and 182 other wood-using plants.

As Tom wrote to Eric about the fun of camping in Coolidge State Forest he had more appreciation of the Green Mountain National Forest Service. Now he knew how important the Forest Service must be with the Nation's rapid increase in population and the greater demand for wood products. "All 153 national forests are operated on the multiple-use principle as much as possible," he had read. The Federal authorities cooperate closely with Vermont foresters in conservation measures, especially of water. Forests protect the source of rivers and prevent floods. The roots of the trees hold back the soil which might be washed away and clog river beds and cause streams to overflow. A carpet of leaves underneath the trees, like a thick piece of blotting paper, soaks up heavy rains and melting snow. The Vermont idea of small upstream units with less than 250,000 acres of watershed is the aim.

Just how necessary land management is in providing a sanctuary for wildlife, Tom realized as he described to Eric the thrill of watching deer running across the hills, grey squirrels jumping from branch to branch, and chipmunks picking up crumbs. Benefits to wildlife are considered in cutting operations, most of which improve cover for game. Tom closed his letter with a promise to send a gallon of maple sirup so Eric could sample the product of the Vermont "sugar feast." As he reread his letter he had a better idea of how much his own Vermont forest meant to him.

DOROTHY HAUS.

BRATTLEBORO, VT.

Report to the People of Wisconsin

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, June 4, 1956

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a report to the people of Wisconsin by the distinguished junior Senator from Wisconsin [Mr. McCARTHY] concerning East-West trade.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

SENATOR McCARTHY'S REPORT TO THE PEOPLE OF WISCONSIN

Our committee (the Senate Subcommittee on Investigations) has just completed an investigation of current, United States-authorized strategic trade with the Communist nations. Since most newspapers have printed few, if any, of the hair-raising details of the committee's findings, I thought I should bring the principal facts to your attention.

The long and short of the matter is that you, the American taxpayer, are subsidizing the construction of the Communist war machine. This conclusion is inescapable since you are footing the bill for billions of dollars of American aid to so-called friendly nations, that, in turn, are supplying highly strategic war materials to the Soviet war economy.

The committee's investigation of this matter began in 1954 under my chairmanship and has continued up to the present in the face of strenuous efforts by the executive branch to keep the story from Congress and the American people. The committee discovered that in August 1954 our Government made secret concessions to our allies as regards what they could ship to the Communist bloc without losing American aid. As a result of these concessions, over 200 highly strategic items—such as machine tools, metals, and electronics, transportation and electrical equipment—were removed from the anti-Communist embargo.

I list below a few examples of the materials we agreed to let countries receiving United

States aid ship to Soviet Russia, together with an indication of their strategic value.

Electric power generators up to 60,000 kilowatts, turbines up to 85,000 horsepower, and motors up to 12,500 horsepower: This electrical equipment is used in making fissionable material for atom and hydrogen bombs.

Horizontal boring mills: These machine tools, which cost between $200,000 and $500,000 each, are used in making tanks, artillery weapons, aircraft, and atomic reactors such as those used on the submarine *Nautilus*.

Vertical-boring mills: Essential in making jet engines.

Dynamic balancing machines: Used in making jet engines and guided missiles.

External cylindrical grinding machines: Used in making guided missiles and radar equipment.

Surface griding machines: Used in making jet engine parts, guided missiles, radar equipment, and diesel engines.

High precision boring mills: Used in making jet engine and guided missile parts.

Copper wire: Next to fissionable materials, copper is the single most strategic metal. Thousands of miles of copper wire, for example, go into the engine of every bomber.

Aluminum: Indispensable in making aircraft.

Nickel alloys up to 30 percent: Used in making aircraft parts and tanks.

Molybdenum alloys up to 20 percent: Used in making jet aircraft parts.

Magnesium: Used in aircraft construction and in foot-soldier equipment.

In return for these highly strategic war materials, the Communists are shipping to the free world butter, cotton, and woodpulp.

The American people were not informed of these secret concessions to our allies; indeed, deliberate and (until our committee got on the track) successful attempts were made to conceal them. Here is how the strategic trade agreements were reported to the Nation by Harold Stassen, who was the central figure in the negotiations. The agreements, Stassen announced in the summer of 1954, "will result in a net advantage to the free world of expanded peaceful trade and more effective control of the war potential items."

Not content with misleading statements of a general nature, Mr. Stassen resorted to specific falsification when, as Battle Act Administrator, he made his annual report to Congress in November 1954. The following is a paragraph from Mr. Stassen's report: "Minerals and metals of basic importance to the Soviet military power such as aluminum, copper, nickel, molybdenum, cobalt, magnesium, tungsten, and titanium remain on the * * * embargo list."

Mr. Stassen's statement, with respect to aluminum, copper wire, magnesium, and alloys of nickel and molybdenum was, simply, untrue.

The seriousness of our concessions can be appreciated by taking a closer look at just one of the items being shipped to the Communists—copper. Mr. Stassen said that copper was still embargoed. He was right about unprocessed copper, but he failed to mention that the finished product, in the form of highly strategic copper wire, was taken off the embargo. The committee then learned the following additional facts: (a) Since August 1954, when the embargo was relaxed, over 200 million pounds of copper wire have been shipped to the Soviet bloc by countries receiving United States aid; (b) the principal shipper is Britain; (c) the United States is providing a direct subsidy to British copper mines in Rhodesia; moreover (d) copper is on the United States critical stockpile list, and because it is in short supply in this country, we found it necessary during 1954 and 1955 to divert 150 million pounds of copper from our strategic stockpile for industrial use. In other words, although copper is badly needed in this country for our own war potential, we are giving the British money to mine copper, which they then turn around and sell to the Communists.

Congress provided in the Battle Act of 1951 that the President must immediately terminate United States aid to nations that ship materials of "primary strategic significance" to the Communists—or that he must immediately explain to Congress why he is not doing so. In this case, aid was not cut off, nor were the facts of the 1954 embargo revision transmitted to Congress. The way Mr. Stassen, as Battle Act Administrator, got around the Battle Act was to determine that certain obviously strategic items were not of "primary strategic importance"—despite the fact they had been so regarded in the past. The executive branch thus brazenly defied the clear intent of Congress.

Later on in this session, Congress will be asked to appropriate some $5 billion for aid to nations that are now shipping the Communists strategic war materials. I intend to oppose that appropriation unless it is accompanied by an airtight guaranty that American money will not be used in the future to build the Communist war machine.

I should add that the executive branch is now studying British demands to relax the embargo against Red China. These demands must be resisted. I trust you agree with me that trading with any of our enemies, in any goods whatsoever, is contrary to American interests.

Award of Honorary Doctor of Laws Degree to Hon. Mike Mansfield, of Montana

EXTENSION OF REMARKS
OF
HON. JAMES C. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, June 4, 1956

Mr. MURRAY. Mr. President, today Montana State University will award an honorary doctor of laws degree to my distinguished colleague from Montana, Senator MIKE MANSFIELD. Last night at the university, where he studied and taught history and poliitcal science before coming to Congress, Senator MANSFIELD delivered the baccalaureate address to the graduating class.

I know that all of my colleagues, on both sides of the aisle, will be as pleased as I am to learn of the well-deserved honor to Senator MANSFIELD from his alma mater. I am pleased, too, that a fine editorial on Senator MANSFIELD and his contributions on the State, national, and international level has appeared in one of the popular newspapers in our State, the Hungry Horse News, published by Mel Ruder in Columbia Falls.

Mr. President, I ask unanimous concent to have this editorial inserted in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HONOR FOR MANSFIELD

We are delighted to see where Montana State University is awarding Senator MIKE MANSFIELD an honorary doctor of laws degree, June 4.

At the same time the university is conferring an honorary doctorate on Dr. Philip R. White, plant physiologist at Bar Harbor, Maine, and also a MSU graduate, who has become a leader in the field of plant tissue and organ culture.

The Mansfield honor comes at an opportune time.

These are the days just before the primary that we have the magnifying glass of public opinion directed at the men and women who would be our leaders in Government. Some of these candidates are mediocre, a few obviously unfit, and now and then one is outstanding.

It is hard to think in terms of MIKE MANSFIELD being a freshman Senator serving his first term, even though he's had the benefit of five terms in the House.

MANSFIELD is proving himself an outstanding Senator. He's prominent on the national and international scene and at the same time, a letter or wire to MIKE about a local problem always get some action.

The American political system recognizes that there shall be outstanding Republicans and outstanding Democrats in Government—some of both.

The Democrats can take a bow in MANSFIELD'S case.

Freedom: The Dynamic of the Free-Enterprise System

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, June 4, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Paul G. Hoffman on May 5, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FREEDOM: THE DYNAMIC OF THE FREE-ENTERPRISE SYSTEM

(Address by Paul G. Hoffman, Bernard M. Baruch School of Business and Public Administration, the City College, Baruch lecture, New York, N. Y., May 15, 1956)

The invitation of the City College to deliver the Bernard M. Baruch lecture this spring was accepted by me with great satisfaction. Because of the name it bears, it confers upon me "prestige by association," something the exact opposite of "guilt by association" which we have heard so much about. Perhaps I should remark that there are many who question whether either guilt or prestige legitimately can be conferred in this manner. Nevertheless, I am proud to be associated with Mr. Baruch, whom I greatly admire even in this rather synthetic way.

I am an ardent believer in the American free-enterprise system. I believe it so deeply that I have made an earnest effort to understand it and to identify those elements which give it its strength. I became peculiarly conscious of the need of doing so when I was administrator of the Marshall plan. I was operating under a congressional directive to sell America to the countries we were helping. I took on the assignment with enthusiasm and built up a sales story along standardized lines. I thought it was quite effective. It was full of facts about the high standards of living enjoyed by our workers and farmers, and the oportunities for everyone in education and social and cultural life—all supported with statistics about our thousands of schools and factories,

and the millions of automobiles, radios, and telephones we owned.

The people who heard me and read it seemed impressed, but somewhere along the line I became uneasy. In my own mind, my story was inadequate and inaccurate. It failed to take into account one very vital fact—that America was a great country in the times of Washington, Jefferson, and Lincoln, long before we had high standards of living; long before we had our radios and telephones, and, yes, even our automobiles. I had been dealing with effects, not causes.

We have, I believe, every reason to take pride in the fact that with one-sixteenth of the world's population and one-sixteenth of its natural resources, we turn out one-third of the world's total goods and one-half of all its manufactured products; that in America people of widely different origins and divergent beliefs work together so effectively for their common good; and that we have made even higher education available to practically every citizen who wants it.

But the question is: How did all this come about? Certainly not because we are a master race, because there is no such thing as a master race. We are, in fact, an amalgam of races. Anyone who has traveled in the world is well aware that the potential for growth and development is astounding within all people, wherever they are, whatever their color, their religion, or race. We all know there are brilliant Chinese, Japanese, Burmese, Negroes, Indians, or any other nationality or race you may name; brilliant Catholics, Jews, Protestants, Moslems, Buddhists, or any other religion you may name.

This forces one conclusion: that these things have happened in the United States because more people, since the beginning of our country, have had more opportunity to grow and develop than in any other country of which we have knowledge. As a consequence, we have had more than our share of individuals with the initiative, imagination, and drive, which are so essential to a country's progress.

What has brought this about? To find the answer we must go back to the founding of the Republic. Our Founding Fathers were profound believers in the dignity and worth of the individual. Many of them were deeply religious, holding all men to be children of God with certain inalienable rights as individuals. And even the few who were not in the formal sense of the word "religious" shared the conviction that society must serve the individual—that anything else would be a tragic return to serfdom.

They had in mind the creation of a society in which there would be not only equality but certainty of opportunity for everyone—a society whose every child would be born with the opportunity to realize fully upon his capacities for material, intellectual, and spiritual growth.

To give reality to this concept, they set forth two great principles that were to be the guidelines of the new Nation.

First was the guaranty of freedom and justice for the individual. In our Bill of Rights we Americans were guaranteed that our Government would not interfere with our right to speak freely on any subject we chose; to assemble freely with others for any peaceful purpose; to worship our God in our own way; to be equal with every other American before the law; to be secure in our persons and our property; to be free from unreasonable arrests or detention without real cause; and to a fair public trial if accused of any crime.

The second great principle was the limitation of powers of the Government. The Founding Fathers, thinking of the supreme rights of the individual, were deeply concerned about power. They would have agreed fully with Lord Acton's assertion that "Power tends to corrupt, and absolute power corrupts absolutely."

They were therefore careful to provide devices for a wide diffusion of decision-making. It was not to be the power of Government alone to make decisions affecting the lives of the governed. Government, in fact, was to make as few decisions as possible, and the governed as many as possible. A large field was left open to the individual for voluntary action.

So it is that every day you and I are making decisions that determine the course of our own lives, and we are joining with others to make decisions of mutual importance to us. These are decisions that, in most other forms of government, are kept within the power of the Government. But our forefathers willed to the American people not simply the privilege, but the responsibility of voluntary determination.

And voluntaryism has flourished almost from the day the Nation was founded. People in other countries poke fun at us because we are joiners. It is true that we are the greatest joiners in all the world. But this fact has had much to do with ours becoming the strongest society in all the world. We organize on a voluntary basis to improve our schools, our towns, our health, our spiritual life, our industries, and our local and national economies.

It was quite inevitable that a society committed to the two principles of individualism and voluntaryism would carry on its business activities under a system of free enterprise. Neither governmental monopolies nor private cartels square with these concepts. Conversely, we as businessmen should never forget that there is no free enterprise except in free societies. There is no free enterprise in Poland, Bulgaria, Rumania, or Russia. As a matter of fact, there is no Russian word for businessmen.

Therefore, it follows quite logically that if we want to keep the free enterprise system to which you and I are so devoted, we should give thought to how we can maintain and strengthen our free society.

A very special responsibility rests on us at the present moment, because along with the usual impediments to progress, we are faced with the menace of tyrannical international communism. I think it is important that you young people who are about to enter the business world give thought to this responsibility.

There are some who believe that we cannot meet this menace unless we accept an abridgment of our basic freedoms. They feel we must fight fire with fire, which means that to fight totalitarianism successfully we must use totalitarian techniques. This, to my mind, is a most dangerous notion. I believe that if we are to win out in this titanic struggle, which has been so aptly called the "struggle of the century for the century," we must keep our society free from any taint of totalitarianism; we must sharpen our determination to hold fast to those concepts which have made these United States the strongest of all societies.

If we are to keep this society free, we must make a living document of our Bill of Rights. That we cannot do unless we recognize that our civil liberties can be vitiated by social pressure as well as by legal action, and further, that they are being so vitiated today. Everyone pays lipservice to freedom of thought, but freedom of thought is a sterile and meaningless right unless we are free to discuss, to criticise, and to debate. And yet today there are a number of subjects which are taboo—for example, the question about whether Red China should be admitted into the United Nations. For a number of reasons, speaking personally, I do not believe she should, but that is neither here nor there. The important thing is that we can't hope for the right answer to that and other questions unless they can be freely discussed and debated.

The right of peaceable assembly is no longer sacred to many frightened American citizens. The use of a Los Angeles auditorium was denied for a meeting at which a respected and prominent clergyman was to speak. The reason given was that he was a controversial figure. In Indianapolis the American Civil Liberties Union was denied the use of several halls for a meeting to organize an Indiana chapter. The manager of the auditoriums, including the publicly owned War Memorial Building, simply acceded to pressure by uninformed groups, doing so even though the meeting was sponsored by some of the best citizens of the State, and even though the national organization itself—which is 34 years old—has been endorsed by Americans of highest repute.

The identity of the speakers and the groups in these examples is not the issue. Nor is the point as to whether we agree or disagree with them or their critics. The question is simply whether we are willing to deteriorate into a society in which people who are labeled as controversial are not allowed to speak their piece. In deciding that question, we shall do well to remember that among the most controversial figures of all history are Jesus, Moses, Mohammed, and Mahatma Gandhi.

The guaranty that American citizens will not be deprived of life or property without due process is also under challenge. We are faced with a newly evolved process of trial by innuendo, or public accusation. It is a process in which the accused is assumed guilty until proved innocent—a process by which one person can do serious and irresponsible harm to another person by whispering such words as "subversive," "pink," and "fellow traveler."

It is a procedure—a new form of Ku Klux Klanism—by which a group of Americans having no judicial status whatsoever can set itself up to pass judgment on the loyalties of fellow citizens, and gain a considerable measure of acceptance.

It is an atmosphere in which self-confessed ex-Communists can make charges of their own choosing that can ruin innocent Americans without legal proof ever being established.

I could cite numerous other instances showing how our civil liberties are being whittled away by the use of blacklisting, intimidation, and fear. Some of the people responsible have, to their own way of thinking, the best of motivations; others are sinister. In all cases their activities are voluntary. And here is the major joint I wish to make: If these un-American activities are to be thwarted—if instead of retreating we are to advance toward the great goals our Founding Fathers envisioned—our major reliance must be on voluntary action.

We are fortunate in having a President who understands clearly the issues which are at stake. He has spoken with clarity and feeling on the subject of civil liberties many times, but never more forcefully than in his speech at Columbia University in 1954, when he said:

"Here in America we are descended in blood and in spirit from revolutionaries and rebels—men and women who dared to dissent from accepted doctrine. As their heirs, may we never confuse honest dissent with disloyal subversion. Without exhaustive debate—even heated debate—of ideas and programs, free government would weaken and wither. But if we allow ourselves to be persuaded that every individual—or party—that takes issue with our conviction is necessarily wicked or treasonous—then indeed we are approaching the end of freedom's road."

I suggest that in addition to working within groups for freedom, we as individuals

should follow the example of the President and speak out for freedom regardless of whatever unpleasantness may ensue. We must also be ready to speak up for justice. Everyone concerned about freedom in America must be concerned about justice, too. One reason why we must encourage criticism is that we must encourage people to point out such injustices as remain in America and to fight for their elimination. An unjust society cannot long endure. An injustice against one puts all justice in danger. Only by safeguarding the rights of minorities do we safeguard the rights of majorities. Racial and religious discrimination, special privilege, inequality of opportunity for growth are on the wane in this country; but where they still exist, these and other injustices must be discovered and rooted out.

As a final word, I suggest that the business community has an unusual opportunity to render a significant service to our country. We are often falsely accused of being interested solely in the almighty dollar. Let's take the lead in speaking up for freedom and in speaking out against injustice. Let's dedicate ourselves anew to making in America a demonstration of a free, just, and unafraid society at work.

Let me illustrate what I mean by telling you of an incident which took place in Waverly, Iowa, last year. Waverly is a small town of about 5,000 inhabitants. Nearby is an Air Force radar station. An Air Force captain, Virgil A. Daniels, who had recently completed a long tour of duty in Korea, was assigned to this station. He was a Negro. His first problem was that of finding a place to live for himself, his wife, and three children. He was told of an apartment house in which there was a vacancy. He signed up for the apartment and paid a month's rent in advance. The day he was scheduled to move in the superintendent of the apartment called him and told him that four of the tenants had objected and asked him if he would be willing to withdraw his application. His answer was "certainly."

Then things began to happen. A Mr. Sherman Spear, who is the advertising manager of the Lutheran Mutual Life Insurance Co., which has headquarters in Waverly, told the story to Bud Lackore, manager of the Waverly Chamber of Commerce. Mr. Lackore immediately called his executive committee together and arrangements were made for Mr. Lackore and Mr. Spear to meet with all of the tenants of the apartment house.

To make a long story short, the 4 tenants who protested against the Danielses moving in signed a letter of apology and joined the other 17 tenants in urging them to come. A big celebration and housewarming followed.

The local paper, of course, published the story, which was picked up by the Des Moines Register and Tribune. The Fund for the Republic heard of it and decided to give the town of Waverly a $10,000 award for the contribution they had made to better racial relations. I had the pleasure of presenting that check to Mayor Willard Osincup, of Waverly. I shall always remember the response he made. He said, "We appreciate the honor and we can make very good use of the money, but it seems a little like we are being paid for believing in God."

That story was picked up by the United States Information Service and went around the world. It shows what can happen when a few individuals are willing courageously to speak out against injustice. No police system can keep news of this kind from reaching all peoples, even those behind the Iron Curtain. This is one of the ways that we can most effectively "portray to the world the true story of America and our Nation's peaceful and constructive desires."

You have been most gracious in listening so attentively to this lecture, the content of which is so far removed from such practical questions as how to get a job, how to get ahead, and how to make a better living. I have subjected you to it because you are young. If I may quote President Eisenhower again, he said, while speaking at the annual convention of the National Junior Chamber of Commerce, "Because you are both young and responsible, you know what is your greatest responsibility of all—tomorrow—the whole future of freedom." It is, after all, quite normal that this responsibility should be yours. You have just spent 4 years in an atmosphere where ideas like freedom and bravery are important. I hope you will continue to think that they are important, because, while making a living, and a good one, is a worthy ambition, living a good life—a free life—is even more important.

United States Observers at Geneva Urge OTC Membership

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1956

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Mr. A. M. Piper from the Council Bluffs Nonpareil of May 16, 1956:

UNITED STATES OBSERVERS AT GENEVA URGE OTC MEMBERSHIP

Four nongovernmental advisers to the United States delegation negotiating tariff agreements at Geneva, Switzerland recently reported to President Eisenhower.

They were: Elliott V. Bell, editor and publisher of Business Week and chairman of the McGraw Hill Publishing Co.; Homer L. Brinkley, executive vice president, National Council of Farmer Cooperatives; Bryan Essick, president of Essick Manufacturing Co., Los Angeles; Stanley N. Ruttenberg, director of research, AFL–CIO.

Their comments on the work of the United States delegation were most complimentary. After observing at firsthand the tariff negotiations in Geneva they told President Eisenhower that "the interests of our country have been well served," and went on to say they had been "greatly impressed by the competence of the career men from the nine departments and agencies of the United States Government, who handled these important negotiations."

The nongovernmental advisers were "particularly impressed with the unfailing concern of our negotiators to advance the broad interests of the United States. By no stretch of the imagination could the tariff negotiations, as we observe them, be called a giveaway program."

"The entire program," they emphasized, "is based upon reciprocal trade concessions and we found our negotiating teams and the Trade Agreements Committee to be bargaining in what seemed to us to be the best Yankee tradition. They insisted on obtaining concessions of full value for each concession made by the United States. There is great need for better public knowledge of these facts." As a result of their observations in Geneva, the nongovernmental advisers told President Eisenhower there is need for the permanent administrative machinery provided for in the proposed Organization for Trade Cooperation.

They pointed out that the setting up of this administrative machinery, subscribed to by all the interested nations would clearly be in our self-interest. It would help make all our trade agreements more truly reciprocal. It would also strengthen both the resolve and the ability of the member nations to continue their efforts toward an expanding and mutually profitable world trade.

It would provide an effective continuously operating instrument in giving fuller effect to existing commitments to remove such trade barriers as currency restrictions, quotas, discriminatory taxes, and other indirect devices that limit the exchange of our goods with other nations.

Failure on the part of the United States, the world's greatest trading Nation, to join in setting up the Organization for Trade Cooperation would cause great dismay and disappointment throughout the free world at a time when the Soviet Union is stepping up its foreign economic efforts.

As we have emphasized over and over again the OTC does not involve any new tariff reduction authority, does not change the present tariff law in any respect, does not give the President any additional powers.

President Eisenhower strongly believes American agriculture, labor, and business will be benefited by what OTC can do in expanding world trade.

Certainly, we need to expand our world trade. The bill authorizing United States membership in OTC has been approved by the Ways and Means Committee of the House of Representatives. It should be enacted into law during the present session of Congress.

More Arab Border Attacks

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1956

Mr. MULTER. Mr. Speaker, I direct to the attention of our colleagues the following item which appeared in the Israel Digest of May 11, 1956:

MORE ARAB BORDER ATTACKS

Despite the undertaking to observe a complete cease-fire, attacks against Israel from across the Arab borders continued.

Following is a list of incidents which occurred during the last week:

May 5: Infiltrators penetrated into the fields of Kfar Aza and attempted to reap the harvest. Egyptian soldiers opened fire as an Israel patrol approached.

May 6: Infiltrators from Jordan opened fire on a civilian car in the Kfar Saba area.

May 7: Workers near Motza were shot at by Arab infiltrators. Some shots were also fired at the guard of Neve Ilan.

On the same day, automatic fire was opened from the wall of the old city into the Israeli part of Jerusalem. Window panes in one building were shattered. There were no casualties.

Egyptian soldiers opened fire on workers near Nirim. Later during the day a platoon of Egyptian soldiers penetrated 300 meters into Israel territory. They retreated as an Israeli patrol approached.

May 9: Infiltrators opened fire on a civilian car between Ramat Hakovesh and Kfar Saba. Footprints led to the Jordanian border. There were no casualties.

On the same day, an Israeli patrol south of Nitzana Oz was fired upon. The shooting came from the Jordanian border.

An Arab infiltrator was killed in the Budrus Kivia sector, inside Israel territory when he opened fire on an Israeli patrol.

May 10: The new Beersheba-Tel Aviv spur was sabotaged for the second time in recent weeks by Arab infiltrators. The attack took place about 2 miles north of Beersheba.

The Israel-Jordon Mixed Armistice Commission failed to condemn Jordan for the blasting of a building at Kfar Yavitz, near Natanya, by infiltrators who fled across the Jordianian border.

The investigation revealed that a concrete house was almost completely destroyed on the night of May 5–6. United Nations observers followed the tracks of the attackers which led to the Jordan border.

While the U. N. observer responsible for the investigation twice reiterated that there was no doubt that the path taken by the attackers led to the demarcation line, the chairman of the Israel-Jordan Mixed Armistice Commission said that he was not convinced that the perpetrators of the crime had come from Jordan or returned there. The chairman abstained on the draft resolution submitted by the Israel member of the Commission and thus no resolution was adopted.

An Unfinished Letter to 2 Million Farmers

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, June 4, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "An Unfinished Letter," which was published in the Farm Journal for June 1956. My own personal comment is that the question dealt with by the editorial must always be an unfinished one.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN UNFINISHED LETTER

Editors get lost of advice, some of it pretty blunt. There's the fellow, for instance, who says "When are you going to have the courage to tell 2 million farmers that they ought to get off the farm and go work somewhere else?"

Well, O. K. We'll do it now. Miss Q., take a letter:

TWO MILLION FARMERS,
R. F. D., America.

GENTLEMEN: Please plan to leave your farms. They tell us you are not going to be needed—that you are surplus. You will want to keep on living, no doubt, so you'll probably have to look for town jobs. Your families—

Wait a minute. Maybe we had better not sent that letter just yet.

Who are these people? Why most of them are our friends. They're folks we know.

Nearly all of them really love the land. They are farming because that's what they know and like. Their fathers and grandfathers were farmers. It's in their blood.

They like being independent. They like to be their own bosses. They like to work out of doors. They may not pay much attention to the birds and wildflowers and sunrises and changing skies but they love all those things. They like to work with animals and see them grow.

Some of them have been struggling hard to stay on the land. They want their children to have a chance to choose farming, too, if the youngsters wish. They don't need to be told about hard going. But they hate to give up. They want to succeed at what they have started.

Who has the brass to say they must quit farming? And why should they? That won't solve the farm problem. Someone else will farm it and raise as much or more.

Sure, some of them will change over to other jobs. If doing so solves their problem, God bless them. Not everyone wants to farm just because he was raised on one. In fact, we hope any farmer who wants to go into other work or business will be able to find a spot. And, as generations before us, many of the farm youngsters will move on to better opportunities.

Suppose factory jobs are waiting for all these folks? What made those jobs?

Why, somebody, lots of people, have kept figuring all the time on new things to make. Rayon, nylon, radios, television, automobiles, electric devices, plastics, all sorts of chemical things. Took a lot of research and engineering and inventing. That's why there are so many new factories making new things. And people are earning good wages and salaries and making money in these new industries.

Why haven't we got new things farmers can raise and sell? Let's do like the factories. Put researchers and engineers to work. Find us new crops to grow, new uses for our crops, new places to sell stuff.

No. Let's not tell all these good farm folks to move to town. Let's get busier at finding ways they can make better money farming. Let's give them and their youngsters a better chance to stay on the land.

Let's not turn more farmers over to industry—let's borrow some of industry's ideas so more folks can enjoy profitable farming.

Never mind about that letter, Miss Q. No; we're not going to write it.

Cargo Preference Legislation

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, June 4, 1956

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the national commander of the American Legion, J. Addington Wagner, at the Maritime Day banquet of the Propeller Club in New York City on May 22, 1956. In making this request I invite the attention of my colleagues to the comments in the address with respect to the cargo preference legislation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY NATIONAL COMMANDER OF THE AMERICAN LEGION, J. ADDINGTON WAGNER, AT THE ANNUAL MARITIME DAY BANQUET OF THE PROPELLER CLUB, WALDORF-ASTORIA HOTEL, NEW YORK CITY, MAY 22, 1956

When President Eisenhower issued his recent proclamation at the White House, establishing this day, May 22, as National Maritime Day, he urged the people of the United States to commemorate an event which has changed the course of our history.

Just 137 years ago today a little vessel with a crooked smokestack, paddle wheels, and plenty of precautionary sails, was standing out of Savannah Harbor. She was flying the Stars and Stripes. Dead ahead was the wide Atlantic—never before crossed by a steamship. Named *Savannah* after her home port, this brave little ship, that could easily be carried on the deck of a modern vessel, used her steam engine on 14 of the 22 days en route to Liverpool. Together with Robert Fulton and other steamship pioneers, Capt. Moses Rogers and the *Savannah* gave the United States the distinction of being the leader in this new field of ocean transportation.

What is this merchant marine, which by Presidential proclamation and act of Congress we assemble once a year to honor?

To many who watch the street parades and water pageants, I fear it is simply a fleet of gallant ghosts, the *Savannahs, Flying Clouds,* and *Baltics,* hull down on the horizon of the past. But your group, of course, knows better. You know what our merchant marine, has been, is, and should be. You know the mistakes we have made in the past and the costly lessons we have had to be given before we learned they were mistakes.

But let's not look backward; let's profit by those mistakes and look forward.

We of the American Legion are deeply concerned with the future of the American merchant marine. We advocate a rugged defense system in this age of danger. The United States merchant marine, in two World Wars, has meant the critical difference between fighting those wars over there and over here. We fought them over there.

Today, seapower is absolutely necessary for our security. It will remain so, in spite of nuclear and other technological advances, as far into the future as reasonable men can see. And seapower cannot function without a powerful merchant marine.

Within the past few days, a dispute between the Army and the Air Force has gained public attention. While I would not offer judgment on the merits of that issue, I do believe that the Nation will profit from a full airing of the differences and their consideration by both the executive branch and the Congress. Certainly, one result will be greater public interest in the national defense and better understanding of its problems and cost.

But what is even more significant, I believe, is the fact that here you have leaders of two vitally important armed services battling hard for the things which they feel their respective service needs and can do. The Army leadership obviously believes in the Army—its importance, its mission and its potential. Air Force leaders feel equally strong about their service.

I say there is reassurance for all of us in the aggressive spirit shown in this conflict. It is far better, from the standpoint of the common safety, that our military leaders in their enthusiasm overreach their target than that they underreach it by reason of apathy or lack of concern for their assigned responsibilities.

The leadership of the merchant marine will do well to maintain a comparably vigorous fight for maritime power. Like the fighting services, yours is an indispensable arm of American security. You have allies, like the American Legion, who are eager and glad to stand with you. But the cause of our merchant seapower is primarily your cause, and upon you rests the lead responsibility for defending and sponsoring it.

The American Legion is acutely aware of the danger of weakening our present national policy on the merchant marine. Congress has displayed courage and foresight in originating legislation designed to sustain that national policy. In doing so, it has won the praise of every thinking American.

For our part, the American Legion supports Congress 100 percent in its unremitting efforts to foster and improve the merchant marine, particularly on the important question of the 50–50 policy which guarantees to American ships the right to carry half of those cargoes paid for by American taxpayers and shipped abroad for the aid of countries outside the Iron Curtain. This

guaranty has been enacted by the Congress on nine occasions in the past. It expresses the characteristically American philosophy of the even break.

Of course, there are critics of this program. It seems incredible that attacks on such an honest and cooperative policy should originate in the very nations which we are doing so much to help. Thousands of Americans gave their lives to liberate these countries from brutal oppression. Our citizens are not only being severely taxed to pay the expenses of that war, but are continuing to pay heavy levies to help rehabilitate and defend those nations. To deny to American ships the right to carry half of our agricultural shipments to these countries is simply unthinkable. But the attacks on our 50–50 policy, inspired by foreign shipping interests, continue, and constitute a real threat.

The American Legion, at its annual conventions has emphatically and unanimously expressed its view on the importance of maintaining the 50–$0 principle so that we may maintain a strong merchant marine as a vital corollary of national defense. We reaffirmed this policy pointedly at our 1955 National Convention, and even more recently on January 18, 1956 at the National Security Council meeting in Washington, in the following language, and I quote:

"This legislation (the Cargo Preference Act) is literally a matter of life or death to a significant part of the merchant marine, and of health or sickness to the whole industry.

"The real problem is that shipping interests in some foreign maritime countries have induced their governments to object to our 50–50 principle either as a bargaining lever or as an outright threat. This politically astute move kills two birds with one stone. It helps their government bargain for lower prices and it plays upon the fears of the most influential partner in our whole economy—the American farmer. Foreign shipping interests are thus trying to drive an artificial wedge between two great segments of this Nation, agriculture and shipping, which traditionally and in reality are partners."

The American Legion formally and firmly opposes any attempt to change this law. We believe it should remain on the statute books unaltered as one of the most practical and effective supports we could give our merchant marine.

It is appropriate that on this Maritime Day the American Legion should join with you distinguished leaders of our merchant marine industry in recognizing the importance to our security and our economic well-being or a strong merchant marine. It is far more significant, however, that our support of modern, adequate, privately owned and operated American merchant fleet is not reserved for Maritime Day or for occasions such as this.

Without fanfare or publicity, but with a firm conviction that we are fighting for what is right and necessary, the American Legion is constantly seeking to achieve the objectives so clearly stated in the merchant marine resolution adopted by our last national convention.

This resolution has but one purpose: to give America the finest, most modern merchant fleet in the world.

We know that our security and our prosperity depend upon such a fleet. We believe that America can have the world's best merchant marine if the following measures are taken:

The national maritime policy established in the Merchant Marine Act of 1936 must be maintained and supported.

The operating-differential payments to contract lines must be based in the future, as they are now, on the concept of parity with foreign-flag competitors.

Congress should keep governmental obligations incurred by these contracts on a current basis.

Further steps to stabilize the merchant marine industry and to attract more private investment should be encouraged.

The purpose and mechanics of the 50–50 law should be explained to the American people so that they will understand that this policy does not impede the disposal of farm surpluses or deprive foreign-aid programs of United States dollars.

United States exporters and importers should be encouraged to use American ships wherever possible.

These are some of the objectives of our merchant marine resolution. They are practical and necessary. Most of all, they evidence the American Legion's concern and the concern of the American people over the strength and effectiveness of our merchant marine.

We are determined that the maritime leadership given the United States 137 years ago today with the sailing of the Savannah across th Atlantic shall not be lost. We are determined that the Stars and Stripes will fly supreme on the Seven Seas.

NATO and Foreign Aid

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, June 4, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very timely editorial entitled "NATO and Foreign Aid," which was published in the Washington Evening Star of June 2.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NATO AND FOREIGN AID

Gen. Alfred M. Gruenther, in his typically impressive testimony before the Senate Foreign Relations Committee, has said things that ought to be taken to heart by any American who questions the importance of the North Atlantic Treaty Organization or who takes a pinch-penny view of military and economic aid to our friends and allies abroad.

There has been a good deal of loose and irresponsible talk in recent days about NATO's alleged disintegration and about how foolish the United States is to keep on pouring money into such a moribund alliance. But what is the basis for this talk? Is it justified? Is the Atlantic community really falling apart, as some of our inveterate defeatists say?

General Gruenther, NATO's supreme military commander, has answered these and similar questions with an emphatic and altogether persuasive "no". As he has told the Senators, it is true that France's troubles in Algeria and the bitter British-Greek-Turkish dispute over Cyprus have created strains within the alliance. It is true, too, that the whole organization is challenged as never before by an extremely dangerous propaganda campaign designed to undermine and dissolve it—a campaign on which the Soviet bloc is spending between $1.5 billion and $3 billion annually. But the reality still remains that the Western allies are basically united in a firm determination to maintain their common defenses.

An eloquent measure of this determination is the fact that our allies in free Europe are now spending $12 billion a year for defense, or almost twice as much as 5 years ago. This figure is enough in itself to serve as a fitting answer to those pessimists who speak so mournfully of NATO's demise and who also, in doing so, unwittingly give aid and comfort to the Kremlin. Actually, as General Gruenther has testified, the alliance continues to be very much alive, and very formidable in its potentials, and even if it were falling apart—which is most definitely not the case—our country would be urgently impelled to see it was put back together again.

The reason for this is that there is no substitute for NATO as a collective-security instrument to safeguard not only free Europe but the United States as well. In General Gruenther's words, the alliance is not "a community chest" to which we donate just for the sake of being generous. Far from it. For the contributions we make to it are "simply contributions to our own survival," and so we had all better realize that our foreign aid is not mere altruism and that the Kremlin's smiles and happy talk do not justify indiscriminate cuts in it.

Yet the House Foreign Affairs Committee has recommended a slash of $1.1 billion in the $4.9 billion requested to carry out such aid in the coming fiscal year. Clearly, considering what General Gruenther has said, and considering similar warnings from other high quarters, this is much too drastic a cut, and Congress will be taking a perilous risk if it enacts it.

Confusion Worse Confounded

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. MULTER. Mr. Speaker, the following syndicated article by Drew Pearson shows how terribly confused our executive departments are and how our distinguished President helps confound the confusion:

UNITED STATES BEHIND REDS IN MANY WEAPONS

American scientists and military men have made some shocking admissions lately. Their statements have appeared in separate, scattered parts of the newspapers or behind the closed doors of hearings. If you add them together, however, they show an alarming state of our national defense.

Here is a compilation of recent admissions by United States scientists, military men, and intelligence agents:

Earth satellite—United States experts admit Russia will launch an earth satellite ahead of us—probably in 1957. This will be 1 year in advance of the United States of America.

Guided missiles—Central Intelligence reports flatly and categorically that Russia is ahead of us in guided missiles. This means Moscow will probably build the dread intercontinental ballistic missile capable of flying from Moscow to Washington before we do.

Nuclear reactors—CIA representatives testified behind closed doors recently that Russia was ahead of us in building atomic reactors. This means Russia is making faster strides in converting A-energy to industrial uses, probably including an atomic plane.

Jet planes—The Defense Department has acknowledged that Russia is building more jets than we are. She is also outproducing

us in long-range jet bombers of the type that just dropped the H-bomb in the Pacific. It appears that Russia is building more of all types of jet planes except B–47 medium-range bombers.

Hydrogen bombs—Intelligence agents have reported that Russia is now only 1 month behind us in her stockpile of H-bombs. Hitherto our chief reliance has been on a long lead in the stockpile of H- and A-bombs.

Despite this, Secretary of Defense Wilson repeatedly states: "The Russians aren't 9 feet tall," and pooh-poohs congressional attempts to increase the national defense.

Despite this, also, President Eisenhower has consistently assured the American public that the present defense budget is adequate.

IKE QUOTED IN 1950

Military men recall that on March 20, 1950, 3 months before Communist leaders struck at Korea, General Eisenhower appeared before the Senate Appropriations Committee and assured them that the current defense budget of $15 billion was adequate.

Explaining that he had been asked to coordinate the needs of the different armed services, Eisenhower testified:

"I would say that I would add $500 million to the present budget (which has been cut under $14 billion). But I would be determined to stay somewhere below the $15 billion which always in my mind has represented the maximum, and I should be determined to stay well below that."

Three months later the United States found itself unprepared to meet war in the Far East and increased the military budget to a high of $38 billion in 1952. Of course Mr. Eisenhower did not foresee war when he testified in 1950; but military men say no one can predict war or peace today either.

CAPITOL CHAFF

Senator DENNIS CHAVEZ, Democrat, of New Mexico, has accused President Eisenhower of taking high supports away from American farmers, but granting them to Brazilian coffee growers. In a blistering private letter to framers, Chavez declares: "Each morning when you drink a cup of coffee, I want you to remember just one thing. While the President is unwilling to agree on any reasonable pegged farm price, he was willing to participate in the agreement signed in Brazil 2 months ago to fix the support price of coffee at artificial heights to prevent a collapse of the market because of a substantial coffee surplus. The complete lack of understanding of the President on domestic problems," adds CHAVEZ, "is appalling". * * * Secretary of Agriculture Benson, who opposes high supports at home, seems to favor them in Switzerland. At least, his Agriculture Department has issued a favorable report on Swiss farming which asserts: "In Switzerland, the policy of protecting, supporting, and promoting agriculture has been carried farther than in any West European country. This is due * * * partly to the desire, widely shared by the Swiss people, to halt the decline in farm population and to secure a high degree of self-sufficiency."

Drugs in the District

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1956

Mrs. GREEN of Oregon. Mr. Speaker, under unanimous consent, I insert in the RECORD two recent editorials from the Washington Post that remind us again of the courageous and distinguished service rendered to the people of Oregon and the United States by the senior Senator from our State. Thanks to his alert and vigorous action, the Senate, last week, struck from the narcotics bill a provision that, for the first time in our history, would have legalized wiretapping by the Attorney General of private telephone conversations. However, worthy the purpose this provision was to serve, any retreat on the wiretap issue would, as Senator MORSE pointed out, be an opening wedge for gross invasion of the rights of all Americans. As a result of Senator MORSE's eloquent argument, the Senate has refused to permit this breach of our individual liberties.

Because we are proud of WAYNE MORSE, it is a pleasure to record these editorial remarks of an outstanding newspaper which expressed some of the high regard we feel for him:

[From the Washington Post and Times Herald of May 27, 1956]

DRUGS IN THE DISTRICT

Senator MORSE did a courageous job of attacking some of the excesses in the proposed Federal narcotics bill. Atrocious as are many of the crimes connected with narcotics, the capital punishment provision and the authorization for Federal narcotics agents to tap telephone wires seem to this newspaper too severe a remedy. This sort of remedy would invite new evils of a different sort. Certainly these sections deserve the reconsideration which the Senate will give them later this week.

These objections do not hold, however, for the thoughtful proposals which Senator PRICE DANIEL'S Subcommittee on Improvements in the Federal Criminal Code has made for dealing with the disturbing illicit narcotics problem in Washington. This is a problem which was described in the report of the Council on Law Enforcement for the District of Columbia last year as "serious and tragic and expensive and ominous." Mr. DANIEL'S group recommends a three-pronged approach, more effective treatment and rehabilitation of narcotic users; tighter control of certain dangerous drugs, and increased freedom for law enforcement authorities in seeking evidence and making arrests. These recommendations are apart from the broader questions of national policy on narcotics debated in the Senate last week.

Regarding narcotic users, the subcommittee report begins with a recognition of the basic fact that drug addicts are sick people—people in need of hospitalization, psychiatric care, and help in the achievement of some useful place in society. The report recommends additional treatment facilities in the District of Columbia General Hospital, the establishment of a local narcotics farm for addict-patients, prompt commitment of narcotic addicts, including juveniles, supervision of addict-patients after they are released from hospitals and authority to arrest and prosecute the chronic or "incurable" addicts who are not amenable to ordinary treatment and rehabilitation. All of these suggestions strike us as thoroughly sound, although it is clear that the last of them will call for a large measure of humanity and restraint on the part of law enforcement authorities.

The subcommittee sees an extremely serious danger to the community in the absence of effective controls over the sale and use of barbiturates, amphetamines, and certain other dangerous drugs in the District. The so-called goof balls and thrill pills can lead to the worst forms of drug addiction, according to the subcommittee and the fact is, apparently, that possession of them even in large quantities by an individual is not illegal and distribution of drugs used in them by pharmaceutical firms is not subject to police inspection and control. Obviously this laxity ought to be remedied as swiftly as possible. The subcommittee has rendered a most useful service in bringing it to light.

Some of the restraints imposed peculiarly upon the police of the National Capital in dealing with the drug traffic seem excessive, and we readily agree with the subcommittee that they ought to be relaxed. Federal rules of procedure provide, for example, that warrants for searches may be issued on "probable cause" but may be served only during the daytime; in dealing with narcotics violations, night searches may be very necessary. Similarly, we agree that warrants should be issuable to Metropolitan Police officers as well as to Federal officers. We share the subcommittee's view also that the Government ought to have a right of appeal from District Court orders suppressing the evidence in narcotics cases.

In any event, the District bill ought to be considered on its own merits quite apart from the controversial issues of the broader Federal measure.

[From the Washington Post and Times Herald of June 1, 1956]

MOST DEADLY DRUG

The narcotics bill passed yesterday by the Senate was made much less objectionable by elimination of its wiretapping provision. Senator MORSE aptly referred to this provision as "the most deadly drug that can be injected into our body politic." The inevitable effect of giving Federal police officers authority to eavesdrop on private telephone conversation and to use the evidence so obtained in court would be, as Mr. MORSE put it, "to deaden our sensitivity to individual liberties." This went far beyond the Keating bill to authorize wiretapping under court warrant in cases involving the national security. The drug traffic, sinister and serious as it is, has very little to do with national security. And if Congress has been leery about authorizing the use of wiretap evidence in national security cases, there was the more reason for it to consider the implications of the proposal in connection with narcotics.

Senator DANIEL and other sponsors of the narcotics bill took great pains to point out that the wiretap provision had been recommended by the Attorney General, that the use of evidence gathered from wiretapping now conducted was necessary to obtain convictions of the big narcotics racketeers, and that the authorization would not set a precedent. But how could this measure escape being considered a precedent and being used as an argument to authorize use of wiretap evidence in other situations? The use of wiretapping has far outrun the legal sanction; the principal restraint is the inability to use wiretap evidence in court on Federal cases. If it could be said that wiretapping was warranted by the heinousness of the crime involved in drug peddling, why should it not be warranted equally in connection with other heinous crimes such as extortion, blackmail, rape, industrial sabotage or gang warfare? If the suspect were, as well might be the case, a physician suspected of giving prescriptions for narcotics too loosely, his private conversations with numerous wholly innocent patients might be recorded by police agencies. The dragnet character of this general search warrant should be obvious.

Drug peddling is a vicious, dangerous crime, and Senator DANIEL and his colleagues deserve credit for the exhaustive inquiry they have made. But the crime is not so prevalent in the United States that we need

to invite other dangers in order to counteract it. The bill passed by the Senate would allow juries to impose a death penalty for selling heroin to teen-agers or for a third conviction of selling the drug to adults. Long experience has shown that this kind of severity sometimes serves more to impede conviction than to diminish crime. A great deal needs to be done to check narcotics traffic and addiction—by facilitating law enforcement, by providing more Federal narcotics agents with more general authority, and by emphasizing education, medical care, and rehabilitation. When the House considers the bill it ought to recognize that many constructive steps can be taken along these lines without resorting to either the death penalty or legalized wiretapping.

Don't Kill the Goose Just Because It Lays an Egg

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1956

Mr. FEIGHAN. Mr. Speaker, on Wednesday, May 30, the New York Times carried a very significant feature article by C. L. Sulzberger, entitled "Don't Kill the Goose Just Because It Lays an Egg." This article analyzes a critical review of policy and activities which is now taking place within the United States Information Agency and the new and more difficult task which that Agency must face in meeting the vastly expanded worldwide propaganda effort of the Russians. Attention is invited to the severe cut in the appropriation request made to Congress by the United States Information Agency. Congress is warned never to forget that the Soviet Union employs 375,000 full-time and 2,100,000 part-time propagandists. This, coupled with the fact the the Communists maintain 600 special schools for the training of professional propagandists from all parts of the world, makes it clear that Congress must take more than a casual look at the program of the United States Information Agency and that Congress must begin to give more concentrated attention to the development of a more dynamic information program.

During the last session of Congress I introduced House Joint Resolution 433 which authorizes the establishment of a joint committee of Congress on United States international information program. The primary purpose of such a joint committee of Congress is to lay a solid foundation for the development of an international information program capable of winning the cold war as the surest way of preventing a hot war. A program as important as that charged to the United States Information Agency and having such a direct and vital bearing upon the winning of a just and lasting peace, demands more time and attention than Congress has given to it in the past. It is for these reasons that I introduced in the last session of Congress House Joint Resolution 433.

Mr. Sulzberger, of the New York Times, is to be congratulated for his frank and forthright analysis of the place of the United States Information Agency in the war of ideas between the Russian Communists and advocates of freedom everywhere in the world.

Under unanimous consent, I insert his article in the RECORD:

FOREIGN AFFAIRS
(By C. L. Sulzberger)
DON'T KILL THE GOOSE JUST BECAUSE IT LAYS AN EGG

PARIS, May 29.—American propaganda policy toward Communist Eastern Europe is now experiencing serious revision. Andrew Berding, Deputy Director of the United States Information Agency, has ordered a review of the entire program, "a country-by-country study of information policy with relation to the satellites to insure that program content takes into account the different situations in each country."

This column recently discussed certain prevailing weaknesses in our propaganda to the Soviet orbit. These included overemphasis of statistics, paucity of ideas, and insufficient stress on our ideals. It was suggested that objective commentary and calm, straightforward news are durable psychological commodities. The following recommendations were made:

1. That we "cease treating the satellite countries as an unimportant, uniform bloc, a mere adjunct of Soviet empire, and discuss with them their separate problems. These interests, beneath the gray uniformity of communism, remain disparate. Can we not explore diversities more skillfully?"

2. "Let us take advantage of ferment and press for publication of provocative books" such as Koestler's "Darkness at Noon" and Hemingway's "For Whom the Bell Tolls."

3. "There is deep-seated craving within the satellites to travel to the West and test comparative freedoms. Do we fear to let them satisfy this appetite?"

4. "Hankering for happiness is one of mankind's most contagious diseases. * * * Let us remind the East of the existence of life's simpler pleasures."

Two purposes

The policy review ordered by Berding was stimulated by these observations and has two purposes: "To determine which criticisms against United States propaganda in general can be applied to USIA" (as distinct from private organizations such as Radio Free Europe); and to take measures to improve output in accordance with the above recommendations.

Unfortunately, just as our only official information agency prepares to devise a more realistic approach to the post-Stalin Soviet empire and to exploit the present ferment there, it is having to fight a battle on an entirely different front. This is with an economy-minded Congress.

During the current fiscal year the USIA was granted a budget allocation of $87,400,000. It has requested $135 million for the 1957 fiscal year to develop new programs and advertise United States interest in world peace—a theme Moscow has been exploiting on its own behalf. The additional funds requested would promote the use of atomic energy and science for peace and President Eisenhower's mutual inspection plan. It is hoped to invest in worldwide television activities; low-priced books expressing the American viewpoint, above all in the Orient and Middle East; and an increase in broadcasting facilities to eastern Europe.

Cut in funds

Unfortunately, these ideas may be stifled at birth if Congress is not more generous. The House of Representatives voted to cut the organization's request for funds from $135 million to $110 million. The Senate has now raised the proposed allotment to $115 million. But this is still considerably less than is asked for to carry out a more dynamic propaganda program.

There isn't the slightest doubt that the USIA has made mistakes in the past. It may well do so again in the future. But one sure way of not helping to build up the agency is to cut down its funds. Propaganda is necessarily one of the most important features of Government policy during this era of competitive coexistence. It must be further developed and improved.

Congress ought never to forget that the U. S. S. R. employs 375,000 full-time and 2,100,000 part-time propagandists, that the Bolshevik Party maintains 6,000 special schools for training professional agents in that field. Should we reduce our efforts to combat this immense apparatus?

To some degree, USIA is hampered in its activities by the need to disseminate all important pronouncements concerning Government policy. Some of the slogans advocated by American leaders in the past have proven embarrassing abroad, where they are remembered long after they have been forgotten at home.

Furthermore, the Voice of America has been confused frequently in the minds of foreign listeners with programs of other, nonofficial, broadcasting stations, such as Radio Free Europe. These practice differing forms of exhortatory propaganda, political subversion, or mere reflection of émigré political views as distinct from those of our Government.

The Voice of America is designed to reflect accurately the attitudes and policies of the United States Government. Were this effort to be hampered by congressional economy, our long-range interests would ultimately and almost inevitably suffer. Even if the Voice sometimes lays an egg that is not golden, there is no point in killing the goose.

Use of Sports for Political Purposes by Communists

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, June 4, 1956

Mr. BUTLER. Mr. President, in continuation of a series of speeches which I have made during the past 2 years relative to the use of sports for political purposes by the Communists, I ask unanimous consent to have printed in the Appendix of the RECORD a press release of the United States Information Agency, dated May 21, 1956.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

The Communist drive to utilize international sports for political purposes is not merely well underway, but is being planned for many years in advance, the United States Information Agency said today.

Sports exchanges between Communist countries and the free world have increased greatly since 1950, the Information Agency reported. In 1953 and 1954 there was a marked increase in these exchanges, and in 1955 the rise was even more substantial. The object of this growing exchange, according to articles which have appeared in vari-

ous Communist publications, is to strengthen the "peace offensive" and "to demonstrate to the whole world the advantages and strength of the Soviet system."

The Information Agency said the prospect for 1956 and the future is for a still greater flow of sporting delegations between the Communist orbit and the free world and, because of the Communist emphasis on winning, for even more impressive Communist sports victories.

"With the 1956 Olympics not yet completely behind them, Communist teams and sports officials are pointed toward the 1960 and 1964 Olympics," the Information Agency said in its survey. "Hungary is constructing athletic facilities to accommodate the 1960 Olympics and the U. S. S. R. is reported spending the equivalent of $90 million to make a strong bid for the 1964 Olympic games."

In 1950, 21 foreign sports teams visited the Soviet Union and 29 Soviet teams went abroad to both Communist and free world countries, the Information Agency said. By 1953, the number of these teams had increased to 64 visiting teams and 68 teams "exported"; the visiting teams came from 19 countries and the Soviet teams went to 29 countries.

The motivation for the increased emphasis put on sports in the U. S. S. R., perhaps can be found in a Radio Leningrad announcement on January 12, 1952, that "physical culture and sport are not a matter of amusement but a matter of state importance."

As an index of the Communist determination to make political capital out of sports, the Information Agency compiled this table of 1955 Communist sports exchanges with the free world:

Area	To orbit	From orbit	Total
Western Europe	214	216	430
Near East, south Asia, Africa	25	17	42
Free Far East	5	1	6
Latin America	10	5	15
Total	254	239	493

These exchanges constituted 16 percent of total Communist delegation exchanges with the free world in 1955, according to the Information Agency. That the other Communist countries are extremely active in this program is indicated by the fact that the Soviet sports exchanges constitute less than one-third of the grand total.

Soviet sports exchanges with the free world, 1954–55

Area	1954			1955		
	To U.S.S.R.	From U.S.S.R.	Total	To U.S.S.R.	From U.S.S.R.	Total
Western Europe	23	31	54	54	60	114
Near East, south Asia, Africa, free Far East	2	2	4	9	7	16
Latin America	0	1	1	2	1	3
United States	0	0	0	4	0	4
Total	25	34	59	69	68	137

Conference on Occupational Safety

EXTENSION OF REMARKS
OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, there was recently concluded here in Washington a nationwide conference on industrial safety. This conference was called by President Eisenhower, who addressed the opening session in a speech which I should like to include at this point:

Mr. Secretary, ladies, and gentlemen, the concentration of 3,000 people here in the city of Washington to conduct a conference on this problem of occupational safety is the most heartwarming experience I have yet had in my months of examination into this problem.

I want personally to thank each of you for the interest you are taking in it. I want to congratulate you for the simple reason that I know that out of this conference will spring the greatest advance we have yet made in this field.

Now, on the highways we know we lose a tremendous number of our people each year—I believe 38,000 were killed last year. The number we lose through occupational accidents is not so large, but in a way it is more tragic.

In the one case we have many millions of fast-moving units on the road with no possibility of coordinated control among them, except as they may choose to obey the laws in the areas in which they are driving.

In this occupational field we have much of our trouble arising in organized bodies and groups, in our factories and other places. Through proper spread of information, proper adoption of methods and procedures, we know that much of this could be eliminated. In other words, the 14,000 that we lose through occupational accidents seems to be more easily controllable within limits, at least, than does the other.

I don't know how many of the individuals in this audience have ever had the task—almost the daily task—of writing letters of condolence to families that have lost a dear one. For my part, I assure you, it is one of the most heartbreaking things I have ever had to do. And when you stop to think of 14,000 bereaved families in this country every year, occasioned by preventable accidents, it is indeed, to such a person as myself, a tragic fact.

So I believe that such people as yourselves have the solution largely in your hands. The Federal Government can do little. The President can call a conference to bring you together so that you may exchange ideas; so that each of you may gain some inspiration from the fact that so many people do come to look into this thing and show their determination to do something about it.

But the Federal Government's part here is limited very definitely to that of a general leadership. Federal law and Federal Government should not extend into the factory, into the farm, into the other places where these accidents occur. The community and the State, therefore, must pick up the burden of teaching, of devising, of planning, so that this tragedy is certainly lessened in extent and comes as close to the point of elimination as human ingenuity can bring it.

This is a short description of the feelings I had when, with Secretary Mitchell, we determined to invite you to this particular conference.

I again say, I thank you from the bottom of my heart for coming.

I have every confidence that from today forward, from the moment you return home, we will begin to show improvement, and we will improve all the time, each year, until practical elimination has been achieved.

Each of you will share in the great satisfaction that will come from that development. I for my part, expect that I will look baik on this day for a long time as one of the finest things that has happened for America in this line.

It is a serious problem, but as they used to say in the war when people would complain about how tough this particular job was: "Well, if it wasn't tough, they wouldn't have brought such good men to do it."

I say that to you.

Goodbye and good luck.

Mr. Speaker, that same day the Secretary of Labor, James P. Mitchell, also addressed the Conference. In both these speeches the need was stressed for our people to give greater attention to the increasingly serious problem of occupational safety. Although the role of the Federal Government in this field may not be crucial, certain legislation is desirable. On April 25 of last year, I introduced H. R. 5740, which would provide certain assistance to States in their efforts to promote industrial safety. Although no action has yet been taken on this bill, it is my hope that Congress, through the appropriate committees, will consider this whole question in the near future.

Mr. Mitchell's address follows:

I am happy to welcome this vast audience to the fifth and largest President's Conference on Occupational Safety. I particularly want to greet the several new groups who are here for the first time this year. When we started this Conference, we concentrated by general agreement on certain segments of our economy—manufacturing, construction, utilities, trade and service, finance and government. This year we invited the Department of Agriculture and the farming community to join us. Increasing mechanization and greater use of chemicals have drawn farm safety problems close to those of industry. They have responded generously and we are very happly to welcome them. I hope this year's addition will stimulate future Conferences to invite the 1 or 2 remaining groups which are still not included.

This year for the first time we have invited leaders of the major religious organizations and women's groups to attend. We believe their knowledge of, and influence over, human motivation will help us discover what it is that makes a man take care of his own safety and that of others. In industry, labor, and government, we have developed many techniques and made much progress but workers continue to be killed and maimed. Something more is needed. The experts suspect we must find that something in the elusive wellsprings of human motivation. If anyone can help us with that quest, we believe it should be these groups whom we have asked to join us this year.

I ask all to consider with me for a few minutes what is the Nation's stake in occupational safety. Concern for human dignity is a tenet upon which our Republic was founded. The worth and well-being of the individual should determine all of our activities. Our first stake is to protect that well-being against needless suffering and pain. Our second concern is to maintain a high production and avoid economic waste.

Our third is directly related to our survival in competitive coexistence with our enemies in the world. Despite record employment levels today, we face dangerous shortages of skilled workers, not only scientists, but maintenance men, repairmen, mechanics, electronics experts, and many others.

When a jet aviator is killed, we know what we have lost in human and economic terms—not only a fine American boy who is lost to his family and his country, but whose intelligence and imagination, nurtured in freedom, gives us our qualitative superiority in the air. We are less aware of the loss sustained by death or injury to the man whose skill in maintaining the magic instrument box that keeps the pilot's B–47 jet effective in the air. In addition to his life and skill, and in addition to the untold suffering and anguish caused by injury, the loss of one repairman of these instrument boxes through occupational death or injury costs the Government an investment of 4 years and $22,500 in training, pay and allowances. We cannot afford this waste.

This is a dramatic instance of the importance of safety to world peace and survival. Every work injury is worse than one by enemy action because it is preventable.

Four decades of experience by industry, labor, and Government have taught us how to prevent over 90 percent of all work accidents. Despite that progress, last year 14,200 workers were killed and nearly 2 million injured on the job. These are not statistics—but the casualty list of our American economy in the peacetime year of 1955. We are shocked by newspaper headlines of a great disaster. Yet three times as many workers died on the job last year as in the Chicago fire, the Boston Coconut Grove night club fire, the Hartford circus fire, the sinking of the Titanic, the Johnstown flood, and the San Francisco earthquake combined.

Thet tremendous suffering of these workers and their families is immeasurable, and naturally transcends any economic losses involved. But the economic loss can be estimated, and is a factor with which businessmen must reckon. A rough estimate by one of our large insurance companies sets the employer's cost of a work injury at four times the cost of compensation. When a man is killed or permanently disabled, his production is lost not only at the time of the accident but for years to come. The 1955 work injuries cost our Nation a total of 193 million man-days of output—enough to produce 100 million refrigerators or cut and make 200 million men's suits, or make 1½ billion pairs of men's shoes, or fabricate more than 26,000 jet bombers, or build a million 6-room houses, or mine 2 billion tons of coal.

We can estimate, too, what a work injury will cost a worker in wages. For example, the average factory worker earned $76.52 a week in 1955. Suppose he were single and suffered a work injury in the State of Oregon. He would have lost $216.59 a month in wages. If he were married, he would have lost $191.99 a month. Suppose he were an average building craftsman earning $96.39 a week. If injured in Oregon and single, he would have lost $302.69 in wages each month; if married, $277.69. Maximum weekly benefits under the Oregon law—an unusually liberal one—would allow these injured men to live on only 30 to 40 percent of their previous monthly income. What would you and I do, if ill, in pain, and uncertain of our future earning capacity, we had to reduce our monthly living expenses by 60 to 70 percent?

This suffering and these costs need not happen. The Labor Department knows of 12 machinery plants which suffered less than one disabling injury per million man-hours worked in 1954. One such plant recorded 2.3 million hours without a disabling injury. On the other hand we know of 11 large plants with more than 1,000 employees each which suffered over 25 disabling injuries per million hours. If 12 plants can produce such a fine record, there is no reason why all the others can't also.

A frequency rate of 5 injuries per million man-hours is considered by most safety experts as very good. It is thoroughly practical. It has been achieved by many plants. Do you realize that if we could achieve that rate wherever people work in the United States, we would have had 1¼ million fewer injuries last year? With that completely achievable rate, we would have prevented two-thirds of our reported injuries. We would have had 238,000 fewer injuries in manufacturing, 225,000 fewer in trade, 228,000 fewer in agriculture.

How can we go about achieving such a rate? That's what this conference is for. Our problem is to convince those firms, who do not think safety is important or who think they cannot afford it, that safety is good business. A sound safety program pays the best dividends in the world.

How can we reach these firms? One way is through State labor departments who know the nonagricultural firms in their States. These departments are recognizing more and more that they cannot depend upon law alone to prevent accidents. Most work injuries today do not violate law but arise from a variety of other causes. The modern concept of a State labor department's service to industry is no longer that of a policeman but of a friendly and highly trained consultant.

If a State labor department is to realize this modern concept, if it is to build a competent, technical service, it needs the support of all of us. Governor Langlie will, I am sure, have a good deal to say about this today. What he has been able to achieve in Washington State can point the way for us all.

Another way to reach the unawakened firm is through community action. This, too, will be discussed tomorrow afternoon. That community safety programs can be effective is shown by one heavily industrialized county in Ohio whose 92 reporting firms—mostly engaged in fabricating iron and steel products—came up with a combined frequency rate of 5.5 last year. The Trumbull County Industrial Safety Committee has been at this game for a quarter century and had reduced their injury rate 75 percent in that time. They have the support of top management, the Ohio Industrial Commission, and their County Foremen's Club. Were they satisfied with their 5.5 frequency last year? No. Their goal had been "under 5 in 1955." So this year their goal is "4.6 in 1956." In 1955 they had an exposure of over 6¼ million man-hours and 29 of their 92 firms had perfect records—a frequency rate of 0.

How did they accomplish this? You can read their story in your complimentary conference issue of Safety Standards. Nor are they unique in Ohio. There are a number of similar community industrial safety programs throughout the State. I'm sure we can learn much from them that we can take back home and, I hope, put into practice.

Another way to reach the unawakened is by developing public understanding and support. At the 1954 conference you suggested we should utilize all the media of communication and that we have tried this year to do. President Eisenhower designated this week as Job Safety Week and called upon all citizens to join him in making it a success. This conference is the climax of the week. A number of Governors have issued similar proclamations and we are most grateful for the generous way in which they have helped bring before the people the importance of saving human life and limb in the workplaces of America. As the Federal Government's contribution to this observance the Federal Safety Council is sponsoring No Accident Week and using it as an occasion to stimulate safety meetings, training, and other safety activities.

In many other ways, we are trying to follow your suggestions of 2 years ago. They are all designed to reach men and women in every walk of life and arouse them to the horror of needless work injury and the necessity to preventing it. In a word, we go back to the community, to the neighborhood where people live and work. America's economic and social progress starts in the community, in the grassroots. The home is vitally important in motivating a safe community.

Fortunately the home was the one major area which last year reduced accidents, according to the National Safety Council. Safety in the home can influence safety at work, at school, on the highway, in the community. In other words, a safe home atmosphere reaches out into every activity of human life. Let us discover and utilize every motivation there is Let us incorporate safety into our daily life. Let us apply the skills that made this Nation an industrial giant to the problem of making it safe.

Small Business

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. MULTER. Mr. Speaker, I am sure that no one will accuse the Wall Street Journal of rabble rousing or of being a prophet of gloom and doom. That is why the following item from the May 1, 1956, edition of the Wall Street Journal is so very interesting:

SMALL BUSINESS: EARNINGS CLIMB BUT SHORTAGE OF CAPITAL STYMIES BIGGER GAINS—DETROITER LOOKS FOR A LOAN FOR 6 YEARS—CHICAGOAN REJECTS $800,000 ORDERS—TAXES TAX A TOY RETAILER

"If I had $25,000 I could really rake in the money. I could run circles around a lot of people in this industry."

Those are the wistful words of youthful J. P. Dunnett, owner of J. P. Dunnett & Associates, a 4-year-old electronic engineering and sales concern in Detroit.

Mr. Dunnett's problem is shared by many a small-business man. The Nation's biggest business boom is bringing plentiful sales opportunities in many fields. But smaller concerns often haven't the money to build up inventories or to finance new plant facilities.

"We recently turned down three contracts totaling $800,000," says the vice president of a Chicago manufacturing concern. "We have the technical ability to produce $1.2 million in business a year and the finances to do about $500,000."

SMALL COMPANY SELLS OUT

A small manufacturer in Boston, after a fruitless search for additional capital, finally sold out to a bigger company. Says the owner: "I can make more working 40 to 50 hours a week for the larger company than I could working 80 to 100 hours for myself."

Wall Street Journal reporters talked with businessmen and bankers in 13 major cities across the United States. With few exceptions, the businessmen report earnings are running at high levels. But most of them claim they'd be doing better if they could locate additional capital.

After-tax earnings of the smallest business concerns—those with assets of less than $1 million—totaled $252 million at last report by the Small Business Administration in the third quarter of 1955. That's an increase of 37 percent from a year earlier and it's the highest quarterly figure since the April-June period of 1953, when small business profits totaled $264 million.

Officials of the SBA, the Government agency charged with watching over the little concerns, are confident that earnings have held at a high level since last year's third quarter.

HIGH TAXES, TIGHT CREDIT

Why is it difficult for small business to boost capital? Businessmen and bankers both mention high taxes, which make it tough for small concerns to build up capital from retained earnings. They also agree that there's a sharply limited market for new stock offerings by the smaller companies. Most businessmen—and a surprisingly large number of bankers—say small concerns usually bump into problems in lining up bank loans.

Small companies find long-term financing their chief problem.

SBA comparisons of companies with assets between $250,000 and $1 million and those with assets over $100 million point up the small concerns' greater reliance on short-term loans. In 1947, loans, notes, and accounts payable within 1 year amounted to 15.2 percent of the smaller concerns' assets. By the third quarter of 1955—the latest period for which figures are available—the 1-year debt had risen to 19.9 percent of assets.

For the biggest concerns, the trend was reversed. Debt payable within 1 year declined from 8.6 percent of assets in 1947 to 7.3 percent in last year's third quarter.

"The banks prefer to make their long-term loans to larger corporations," says Jules Abels, top economist of the SBA.

PROBLEMS GROW

Small business has always struggled with capital problems, of course. But many businessmen and bankers contend these problems have been growing steadily more severe, especially when viewed in the light of abundant sales opportunities.

"The spread between the opportunity to grow and the ability to finance growth seems to be greater now than at any time I can remember," says a Detroit banker.

"The chances of a small business becoming highly successful are growing smaller all the time, something we all hate to admit, but nevertheless a fact of business life today," comments an executive of a major Boston bank.

Among small-business men, taxes arouse more bitterness than any other single capital problem. "I don't know whether I'm working for Uncle Sam or myself," complains an angry Clevelander.

"After the year's figures are in, we might see a good profit on paper," says Ben Aaron, 1 of 3 partners in Aaron Bros., a Dallas distributor of women's apparel. "But after taking out living expenses and taxes, there's never enough left to finance any expansion."

Abraham Sinoff, vice president of Jacksonville's Toytown, Inc., a retail toy store, claims high taxes helped put his brother, Toytown's President Barney Sinoff, in the hospital with a heart attack. Says he: "We were working 12 to 18 hours a day—running the business, unloading trucks, waiting on customers, and so on—so we'd have something left after taxes."

FULBRIGHT BILL

Small-business men talk hopefully of a proposal introduced in Congress by Senator FULBRIGHT, Democract, of Arkansas, but now stymied in the Senate Finance Committee. The Fulbright bill would reduce to 22 percent from the present 30 percent the tax on corporate net earnings below $25,000 a year. At the same time, the rate on profits above $25,000 would be raised to 53 percent from the current 52 percent.

Other businessmen offer other solutions to the tax problem. A Bostonian suggests graduated tax rates for corporations, similar to those for individuals. "My company pays a lower rate on the first $25,000 of its earnings—but so does General Motors, and that wouldn't even pay the people who open the doors for them," he says. But he concludes: "My idea is probably socialistic."

Arthur B. Davies, an executive of the Smaller Manufacturers Council, affiliated with the Pittsburgh Chamber of Commerce, has an even more radical suggestion: "Exempt up to $100,000 in profit, providing the company can show it put all the money back into the business. Any part that didn't go back into the business would be taxed."

An executive of Atlanta's Citizens & Southern National Bank says high taxes often push businessmen into questionable management practices—high salaries, bonuses, and expense accounts. In one case, C. & S. disposed of the assets of a concern forced into liquidation by creditors. Two of the assets: A Florida fishing camp and an over-sized yacht that had been at the personal disposal of the defunct company's president.

A LOT OF HURDLES

A small-business man who decides to build up his capital by selling common stock faces a lot of hurdles. "Investment banking houses generally steer clear of equity financing issues of small concerns," says the SBA's Mr. Abels.

"There is almost no risk capital available for small business," claims W. W. Faris, president of a St. Louis concern that makes minnow buckets, picnic jugs, and other sporting goods. "If something isn't done soon to correct the domination of the available supply of money by big companies, there won't be any small companies."

Frank B. Diamond, president of Philadelphia Securities Co., points to a Philadelphia food manufacturer, which he describes as "a good company with sound management." But, he adds, "they can't get capital. With this tax situation they can't build their net worth in relation to sales."

Small businesses generally are privately owned. Most of their owners would prefer to keep them that way. "If we go to public financing, we lose control of the business," explains Stanley L. Mead, who owns 31 percent of the stock of Package Containers, Inc., a Portland, Oreg., producer of paper and film bags that's now looking for capital. "We've just got the business going nicely and we don't like to lose control of it now."

George Lippincott, president of the 25-year-old Nic-L-Silver Battery Co. of Santa Ana, Calif., has needed some $250,000 for expansion for the past 5 years. He's finally had to sell stock to raise the money. "It doesn't look like taxes are ever going down enough to let us build up any capital, so I'm raising it the hard way," he says.

SEC MAY TIGHTEN UP

Stock sales may become even more difficult for small companies. The Securities & Exchange Commission, worried about recent heavy offerings of highly speculative securities is considering tightening of its regulations on stock issues under $300,000. The SBA is objecting, contending that the proposed rules would "handicap" legitimate financing by small companies.

High taxes also discourage individuals from putting up funds for small business—either through stock purchases or loans. "High rates make people hesitate to take risks," says Robert Williams, vice president of Philadelphia's Girard Trust Corn Exchange Bank. "They feel the risk is all theirs while they get only a part of the profit."

Another Philadelphia banker, Vice President A. L. Raffetto, of Philadelphia National Bank, claims the plight of the small business man has been recognized and that loans of up to 5 years have grown in popularity. But he admits: "We don't necessarily go out looking for this business."

Milton Burns, owner of a Detroit office supply store, claims he has been looking for a loan, without success, for the full 6 years that he has been in his present business. He says: "Banks have been of absolutely no help to me."

When a small-business man finds a bank that will lend him money, he usually pays a higher interest rate than a big company. "The smaller concern has to pay more because it's a poorer risk than a big company," says a Boston banker.

The size of the loan is a factor, too. It costs a bank more to process 10 $10,000 loans than it would to handle 1 $100,000 loan.

A Federal Reserve System survey of banks in major cities shows that the average rate on short-term business loans of less than $10,000 during 1955 was 5 percent, compared with 3.5 percent for loans of $200,000 and more.

Tighter money is making bank loans even more costly. New York City banks recently boosted the prime rate—the rate on loans to the biggest borrowers with the best credit ratings—to 3¾ percent from 3½ percent. In some cases, rates for smaller borrowers were boosted even more. "When I applied for a loan last week, my bank told me my rate had been raised from 5 percent to 5½ percent," reports one New York City wholesaler.

FEDERAL HELP WANTED

Several businessmen argue that more liberal Government loans to small business are needed. Complains Mr. Davies, of the Pittsburgh Smaller Manufacturers Council: "If you can get a loan from the Small Business Administration now, you can certainly get it from a bank. You can't get an SBA loan unless you sign away your property and your wife's property."

Some businessmen are hopeful about the spread of business development corporations. These privately financed organizations, providing loans to small business, have been largely limited to the Northeast. But they're spreading. In Georgia, for example, the State chamber of commerce, assisted by a committee of Georgia bankers, has agreed to launch a development corporation this year.

Small-business-capital problems in many cases stem from poor management, bankers are careful to assert. A businessman often fails to provide for sufficient capital when he starts out. According to a New York City banker, this lack of foresight is especially evident in wholesaling and retailing.

"A salesman breaks away from an existing concern—he thinks the boss is making too much money—and sets up for himself," this banker explains. "Then he sudenly discovers that he needs a lot more money than he had thought to carry inventories and accounts receivable."

Fred F. Stadelhofer, president of San Francisco's Berkeley Pump Co., sees one solution to small-business-capital problems: Merge with a bigger company. "At least from my own experience," he says, sadly, "I can't see any other way."

Still My Country

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1956

Mr. HOFFMAN of Michigan. Mr. Speaker, a recent article in the press

called attention to the fact that some years ago some Members of Congress, who believed that one's loyalty should be given first to his own country, were supporting Hitler. Nothing could have been further from the truth.

One referred to in that article was our former colleague, Hamilton Fish. He recently issued a statement which reads as follows:

THE TIDE HAS TURNED AGAINST INTERNATIONALISM

(Statement by former Representative Hamilton Fish, of New York, May 28, 1956)

This is an answer to the veiled implications that Nazi money was given in 1940 to the National Committee To Keep America Out of War. I was chairman of the committee, composed of 50 Members of the House of Representatives and a few former Members, and I welcome the opportunity to defend its actions and all of its members.

We had only one objective: To keep America out of the European conflict, representing the sentiment of 85 percent of the American people according to public opinion polls at that time. We raised approximately $4,000, sufficient for our purposes of using every legitimate means to keep us out of war, including one advertisement in the New York Times just prior to the Republican convention in 1940. We never received, and never were offered, any Nazi money. There is not an iota of evidence of any kind that a single cent was ever given to the committee.

I have been asked why the State Department released this dead cat 16 years afterward, and whether it was routine procedure or premeditated for political purposes. If I thought it was a political release made in desperation to head off the rising tide of Americanism, I would denounce Secretary Dulles without reservations, and the New Deal internationalist holdovers in the Department, for another attempt to smear the 1940 Republican noninterventionists who represented 85 percent of the people, and who in 1952 still constituted one-half of the Republican Party under the leadership of Senator Taft.

In the last year, the pendulum has swung back and I believe today that once again a large majority of the Republican Party is opposed to our huge foreign handouts, to making the NATO a world government, and are in favor of the Bricker amendment. If Secretary Dulles wants to debate our foreign handouts and one worldism, without dead cats, I accept the challenge. The overwhelming rejection of Senator WILEY by the Republican convention in Wisconsin, where the Republican Party was born; and the withdrawal of Senator GEORGE because of opposition to his intense internationalism and support of foreign handouts, are significant political-opinion straws indicating distaste of our extreme internationalistic policies. Public opinion is now once again in favor of placing our own American interests first.

I was proud to be associated with such Americans in 1940 as Senators Taft, Vandenberg, Wheeler, Reynolds, Walsh, Nye, Clark of Missouri, Clark of Idaho, Johnson of Colorado, and a host of Congressmen, including Representative Joseph Martin, who realized that the lend-lease bill was a phony war measure—the money and arms to be followed by soldiers and war. Today, many of the supporters of the lend-lease bill admit it was a war measure, including Editor Sulzberger of the New York Times. It was forced through the Congress by the most outrageous use of patronage and political influence. I denounced the presidential campaign of 1940 as the grossest fraud ever perpetrated on the American people. President Roosevelt proclaimed his love of peace by promising the American fathers and mothers again and again and again that their sons would never have to fight in foreign lands. And Willkie afterward called his own speeches mere campaign oratory. After F. D. R. won, he exerted his vast powers to incite us into war. I agree with Ambassador Claire Luce that President Roosevelt maneuvered and lied us into war against the wishes of the American people.

I know nothing about the dead cat release of the State Department except what I have read in the newspapers. Senator MUNDT, then a Representative, led 20 Members of Congress to the Republican National Convention in 1940, to urge an antiwar plank, and succeeded in having a very strong one written. No Member of Congress was paid his traveling expenses to Philadelphia. Our committee had ample funds if anyone had required $20 for such expenses. It is obvious to me that the Nazi telegraphic suggestion to provide $60,000 for numerous newspaper ads was rejected, as no such ads were ever published except in the New York Times, which out committee paid for. There would have been nothing legally wrong if our committee had taken money from any source, a year and a half before Pearl Harbor, but it did not. For every dollar Germany spent to keep us out of war, Britain spent millions to drag us in. I wonder why the State Department release contained no reference to the vast sums, amounting to many millions of dollars, spent for British propaganda in the United States in order to drag us into World War II? How much of these huge sums came from lend-lease money or actually from our own taxpayers to involve us in a war against the wishes of our taxpayers and of most of the American people?

I am proud of the fact that up to Pearl Harbor I did everything in my power to keep us out of war. I voted for war after Pearl Harbor, but what a tragedy it turned out to be. We had a million casualties, spent $300 billion to destroy Germany and Japan—the only powerful barriers to the spread of world communism. A mad Hitler was replaced by an even madder Stalin, and 70 million Germans by 700 million Communists. Now we are trying to placate West Germany, Japan, and Spain, and make military allies of them. We have spent over 50 billions since the war in foreign handouts, and the more we spend, the more we are hated because Britain, France, and Italy fear we are trying to drag them into world war III. The truth is that the result of the Second World War, which we entered to save the liberty of Poland and the smaller nations, was that we threw them to the dogs and communism, which has taken over half of the world. What a tragedy and travesty it has all been. The American people are just beginning to realize the ghastly blunders of our war-making internationalism. We are now confronted by world communism, a frightful, evil, dangerous, and powerful force which is determined, by fair or foul means, to communize the entire world.

In my opinion, the members of the National (Congressional) Committee To Keep America Out of War should be awarded medals for meritorious service, for their efforts to keep out of war instead of being subjected to snide smear attacks 16 years later. If it had not been for the activities of this entire antiwar committee, President Roosevelt would have involved us in war 6 months or a year before Pearl Harbor, and then Germany would never had attacked Russia on June 21, 1941. In all probability, we would have been fighting Germany and Soviet Russia, and might have lost the war, or it might have been a deadlock, with millions of American soldiers sacrificed in vain.

I am reminded of other unfair and untrue smear attacks made on me. I was accused of renting my house in New York to Otto Von Keip, the German consul general, and raising the rent twice. The fact is that it was my father's house, and the rent was reduced twice, and some years later Otto Von Keip led the conspiracy on Hitler's life and was tortured to death. He was never a Nazi.

Again in 1938, when I was chairman of the military affairs committee of the New York State Constitutional Convention, I introduced a bill to outlaw the Bundists and Communists from arming, parading, and marching in uniform. Fritz Kuhn, the Bundist leader, came up to Albany to oppose the bill. I never had met him before or seen him since, but someone took a picture of him asking me at the hearing for an opportunity to oppose my bill, and thereupon circulated 100,000 copies, stating that I was affiliated with him.

There are other smears that I remember, but time will not permit discussing them. But one thing is positive: There is not one word of truth in any of them. No one has ever questioned my integrity or Americanism, except possibly some fanatical Communists. However, I am not interested in making any defense of myself except to keep the record clear that I and my nonintervention colleagues fought a valiant fight to keep America out of war in 1940 and 1941, and only lost when we were maneuvered into war through the back door by President Roosevelt issuing a secret war ultimatum to Japan 10 days before Pearl Harbor to get out of China and Manchuria. Secretary of War Stimson called it a war ultimatum in his memoirs.

The repudiation of Senator WILEY and the withdrawal of Senator GEORGE will have a discouraging and terrifying effect on the internationalists and one-worlders. The time has come for a complete revision of our foreign policies, no matter how agonizing it may be to some misguided internationalists and one-worlders.

Magna est veritas et praevalebit—the truth is mighty and will prevail.

Furor Over Bill Baseless

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1956

Mr. HIESTAND. Mr. Speaker, there has been so much interest shown in H. R. 6376, the bill to provide for mental health of the citizens of Alaska, that I am inserting the following column of Fulton Lewis, Jr., in the Los Angeles Examiner of March 16, 1956, on the subject:

FUROR OVER BILL BASELESS

(By Fulton Lewis, Jr.)

WASHINGTON, March 15.—A bill known as the Alaska mental health bill, passed by the House and pending before the Senate Interior and Insular Affairs Committee, is creating one of the strangest political phenomena of recent years.

The phenomenon lies in the inordinate number of protests being received in Washington against the measure. I have received, literally, hundreds of letters protesting bitterly against the bill. I have had telephone calls to the same effect from California, Texas, and other parts of the country. Members of Congress report identical reactions.

The accepted mode of reference is to call it the American Siberia bill. Critics view it as part of a nefarious plot to set up a vast concentration camp to which enemies of whatever administration currently is in power, could be railroaded on any pretext.

Actually, the principal sponsors of the measure are the residents of Alaska; its pur-

pose is to authorize the Territorial government to set up its own mental institutions and operate them, and to provide rules and regulations for commitment and admittance of persons to those institutions.

PATIENTS FAR FROM KIN

Congress enacted legislation back in 1900 providing that the Governor of Alaska (who was and still is appointed by the President and is a Federal officer) should contract for the care and custody of persons legally adjudged insane. This contracting power was transferred to the Secretary of the Interior by Congress in 1905 by legislation which still is in force, and under which all Alaskans adjudged mentally incompetent have been sent to a private sanitarium in Portland, Oreg.

Understandably, the people of Alaska have become increasingly insistent that provision be made for treatment of mentally ill Alaskans within the Territory. Their biggest argument is that under the present setup, relatively few Alaskans with loved ones suffering mentally, have the financial means to go to Portland to visit them.

Opponents have chosen as their primary target a provision granting 1 million acres of federally owned land to the Territorial Government, contending that the only reason for such a vast land grant would be to create a huge reservation to house untold numbers of people.

INCOME FOR WELFARE WORK

But the purpose of the grant is to assist Alaska in financing the program. Traditionally, the Federal Government makes land grants to Territories and young States to assist them in financing educational and other welfare programs. Income from sale, lease or other use of the 1 million acres is to be used for the mental health program.

Another objection involves the bill's provisions for commitment of individuals to mental hospitals. On this one, there appears to be legitimate grounds for objection. An eminent Washington attorney who is familiar with commitment procedures and cases, says these provisions should be tightened in several respects to provide more adequate safeguards for individuals.

These objections have been brought to the attention of members of the Senate committee considering the bill, and they predict necessary revisions will be made.

One observer suggests the widespread protests are symptomatic of a growing distrust of government in general. It's the most plausible explanation I've heard.

Twenty Years of Growth

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I enclose a speech made by me on the agricultural situation over the past 20 years. The speech is as follows:

This is the 20th anniversary of a project that has been of tremendous value to the American people. It had its beginning in the Fourth Congressional District of Louisiana—the district I have the honor to represent.

Twenty years ago a demonstration project was established on the Brushey and Cooley Creeks watersheds near Minden, in Webster Parish, La. With alternating enthusiasm and doubt, a group of men set out to test the visions and dreams of a man who had for a long time been "crying in the wilderness" in a vain attempt to warn the people of America against the devastating effects of soil erosion.

The Soil Erosion Service was created by Executive order in the Department of the Interior in 1933 to demonstrate on a farm-wide, watershed basis that by application of all known practical conservation measures something could be done to stop this enemy of our national economy.

That demonstration was a tremendous success. It proved that erosion can be controlled through practices that are of immediate benefit to the landowners. It also proved that most erosion control practices can be applied by landowners using the equipment, power, and labor available on the farms being treated.

It is with great pride that I mention the fact that my native State passed the first Soil Conservation District Act which made it possible for farmers to organize soil conservation districts to conserve and improve land resources. Since that date most of the States have passed similar laws and today the soil conservation district movement is national in scope.

It is well to remember that early settlers in this country had no problems of erosion for the reason that under virgin conditions the surface soil was protected and held in place by grasses, trees, and other vegetation. This topsoil was filled with spongy organic matter, holding rainwater until it could soak into the ground to replenish subterranean acquifers, thereby maintaining high underground water level and rendering no damage to the land surface by rushing down the slopes to overflow the streams.

It has been charged that farmers invited soil erosion by their unsound land use. I have heard this denied by men and women who closely observed conditions during the latter part of the last century. They vehemently claim that soil erosion was unheard of until after commercial sawmills denuded the forests and destroyed the source of the spongy material that once covered the surface of the earth and held the rainfall.

Whoever may be guilty of the crime, unmistakably the corpus delicti lies before us. Unfortunately we cannot bury it; we are forced to live with it.

It is estimated that the annual cost of erosion in the United States, in wasted soil and reduction of crop yields, amounts to approximately $4 billion.

Surveys made in Louisiana by the Soil Conservation Service show that erosion has removed all of the topsoil from more than 170,000 acres; that 200,000 acres have lost 80 percent of the topsoil; and that 60 percent of the topsoil is gone from 1,400,000 acres.

It is scarcely necessary to remind you that we depend on topsoil for our production of food, clothing, and much of our shelter. Most of the soluble nutrients available to growing plants are found in the topsoil. The loss of any portion of it reduces the ability of fields to produce, for the reason that it contains a high percentage of organic matter.

Referring specifically to my native State, we suffer additional damage from unchecked soil erosion in States north of us. Floodwaters which rush down upon us come from watersheds that are mostly barren of forests or cover of any sort. Unchecked on eroded uplands, water builds up in Louisiana's stream channels, clogging them with sediment and debris to result in destruction of food and cover for wildlife. For many years commercial fishing played an important part in our State's economy. But soil erosion in Louisiana and in northward neighboring States has produced silt-laden waters which are detrimental to the propagation of fish.

However, I am happy to report that great progress is being made in Louisiana toward protection of soil and restoration of its fertility. Conservation surveys there have determined the proper land-use capabilities. They show that we have four kinds of land from the standpoint of proper use, namely, lands suitable for continuous cultivation, lands suitable for limited or occasional cultivation, lands suitable only for the growing of grass or trees, and lands suitable only for fish, wildlife, or recreation.

Four years ago the western gulf region of the Soil Conservation Service sounded this warning:

"Soil erosion is one of the biggest tasks Louisiana ever had. Planning the necessary conservation practices and fitting them to the land according to its capabilities and needs were an enormous undertaking. It required millions of many-days of skilled and unskilled labor, technical assistance, and work with heavy and light equipment to accomplish the task. If Louisiana had been afraid to tackle a big job and see it through to completion, the situation would have been hopeless."

It is pleasing to be assured that while the task has not, as yet, been completed, the situation is far from hopeless.

For several years I have been gravely concerned about our water-use, or more specifically stated, I have been apprehensive of our lack of serious planning for future water-use. If, in the future, we are as indifferent toward water-use as the two preceding generations were of forestry-use and land-use, the next immediate generation is going to find itself in a precarious situation. Our streams are polluted and our ground-water level is becoming distressingly low. A friend of mine relates that he sat at his desk and from memory listed 50 bubbling springs of pure and potent water that were bold and inviting to him as a young man 40 years ago, not 1 of which is visible today. I am told in my district that many shallow wells which were once generous in their production of pure water, are today either bone-dry or polluted beyond safe usage.

What has caused this distressing change?

It all goes back to improper use of our once bounteous timbered areas. When we denuded the forests we invited soil erosion which is the proximate cause of our present diminution of surface and underground water supply. We left nothing on the land to hold the rainwater or sponge it long enough for it to seep into the soil and into the fresh-water acquifers that were once so bountiful and dependable. In regard to our water supply, the future is rather dismal.

However, it is gratifying to learn that the Soil Conservation Service is including proper water use in its plans for the future, realizing that if we are to conserve our soil and protect our sources of water supply, we have got to grow trees or vegetation of some sort on every acre of land that we do not need for intensive cultivation.

I do not agree with the statement of the disgruntled old gentleman who acquired from his neighbors the nickname "Pessimistic Pete." When the overflow came and destroyed his cotton crop, Pessimistic Pete whined mournfully, "All nature is against man." And the following year when drought and heat burned his corn crop he gave tongue to the same plaint, "All nature is against man."

It seems to me the reverse of that statement is more nearly the truth. Hasn't man been against all nature? At any rate, the fact remains that whether the farmers or the commercial sawmillers invited soil erosion and coincidental water troubles, it behooves

man of this generation to rectify those mistakes.

In that portion of Louisiana which I have the privilege of representing in Congress, the two oldest subdivisions of service are known as the Saline Soil Conservation District and the Dorcheat Soil Conservation District. The recent annual reports from these two districts reflect considerable progress. The Dorcheat reports disclose that, "During the past year, 2,891 acres were given improved woodland management practices and 1,686 acres were selectively cut. Pine seedlings were planted on more than 1,100 unproductive acres." These reports enumerate the progress that is being made in soil conservation practices, under such headings as, "Planning and Application of Conservation Practices," but the general subject is too broad for discussion at this time.

We ordinarily think of soil conservation as a means of restoring fertility to land in order that we may grow more crops. But I am more definitely concerned with what conservation practices will do for future generations in order that those who follow this generation will not condemn us too bitterly for spoiling that which we only had a right to use with care and skill.

The recent report from the Saline district shows:

"Plans are made to apply woodland management to 11,096 acres of woodland on lands of our new cooperators. The district as a whole actually applied woodland management to 7,833 acres."

In order to give you a picture of what the Soil Conservation Service is doing, please consider for a moment the results of that agency's mismanagement of two tracts of land in my district that were acquired by the Federal Government during the depression. This land was classified as submarginal, that is to say, it was considered worthless for row crops. There are 12,624 acres in the project near Minden and 18,533 acres near Homer.

Last year those 2 projects, under management of the Louisiana Division of the Soil Conservation Service, brought in a revenue of $153,678 from forest products, grazing permits and concession fees. In lieu of taxes which would be paid to the parish if the land were privately owned, the project pays each year a percentage of its earnings. Last year Claiborne Parish received $1.36 per acre and Webster Parish got $1.03 per acre, whereas comparable nearby land, privately owned, paid a tax of 21 cents per acre in Webster and 16 cents per acre in Claiborne.

One other figure concerning these two projects and I will leave with you conclusive proof that we can afford to cover every slope and hillside in the entire South with growing pines and at the same time be helping nature recover her balance and again to function in a manner that will assure us of productive soil and a bountiful water supply.

Under 5 years of management by the Louisiana Soil Conservation Service, those 2 tracts of submarginal land have produced, chiefly from trees, a total revenue of $616,571. And that timber is increasing in production as the years pass on and the land on which it grows is regaining its fertility. The cost of this management has been nominal. Mother Nature has been the boss and the conservation boys have listened attentively to her.

To January 1, 1953, 6 soil conservation districts have been organized within the area that I represent, consisting of a total of 6,626,900 acres and representing 31,461 farms. There is much of which I could boast concerning the achievements of the soil conservation as applied in the fourth Louisiana congressional district. I would like to point out to you the democratic manner in which districts are formed and operated and how the farmers themselves take the initiative and assume the obligations. There is much to say about the practices as applied to contour farming, strip cropping, terraces, cover cropping, et cetera, but I am restricting my discussion to those practices of soil erosion which more directly concern the future water use and resources.

Our land and water resources are the very foundation of our fabulous industrial and agricultural strength. They are the principal source of our wealth. Our great cities, with all their complex activities, are dependent directly on these resources. Ours is the highest standard of living on earth and it has been built largely on the abundance and fruitfulness of our land and water.

You may think it strange that I am apprehensive of our general neglect of water resources, particularly since Louisiana has an annual rainfall of upwards of 50 inches. Millions of acre-inches of water pass daily down our bayous and rivers, and yet I rejoice to find in the last annual report of activities in the fourth congressional district such items as:

	Acres
Pasture improvement	393,035
Seeding of pastures	245,961
Woodland management	255,421
Tree planting	41,030

Such items reassure me that some day in the future we will have trees growing on every acre of land that is not needed for intensive cultivation of crops. Trees covering our slopes and hillsides mean better soil and more abundance of pure water.

Time does not permit me to pay deserved tribute to the Agricultural Extension Department and the Louisiana Forestry Commission in their efforts to augment the general plan of growing forests for the protection of soil and the prevention of a future water famine.

Such a project does not entail the expenditure of a large sum of money. Protection from fire is the most expensive item in the program, which means that someone must be assigned the task of protecting nature against the carelessness and indifference of man.

Let's give nature a chance to restore the balance which we have so ruthlessly disturbed.

However, in fairness to "Pessimistic Pete" let me admit that the schedule a farmer must follow is not fixed by himself. It is largely determined by the weather and other conditions that are beyond his control. When the farmer plows, seeds his acres, or harvests his crops, he is forced to operate in accordance with the whims and vagaries of nature.

Farmers are no longer independent of other phases of economy. There was a time when young men chose to be farmers because that life assured them of almost perfect aloofness from all other activities. They could act independently of the towns and cities. But this is no longer true. Farming has become a part of the fabric of our total economy. Tractors, motor trucks, combines, hay balers, and other mechanical equipment are necessary and make farmers dependent upon the factories who have built for them 4 million tractors, 4 million automobiles, and 2 million trucks, all of which use fuel and lubricating oil that help force farmers into the lifeline of trade and make them dependent upon many industrial enterprises.

Mechanizing the farm has not only brought the farmer into closer contact with industry, but it has changed his manner and standard of living. And it has also reduced his ranks, that is numerically.

Total agricultural production of the United States was harvested in 1952 with a half-million fewer workers than were used in 1950. Yet the harvest was approximately equal to the high records reached in 1948 and 1949. In other words, a half million fewer workers were needed in 1952 to harvest bigger production than was had 2 years previously.

The use of mechanical devices and the utilization of gasoline and electric power have combined to change the economic status of the farm family. The availability of electric power has done more to raise the living standard of rural people than any other innovation within my memory. Of the approximately 5 million farms in the United States, nearly half of them now depend upon electric power.

Who made this power available to rural people?

The Rural Electrification Administration was established by Executive order on May 11, 1935. The following year an act of Congress was passed which gave REA permanent status and authorized a 10-year lending program. In 1944 this authority was extended indefinitely, leaving to Congress the authority to determine each year the amount of funds REA may lend.

The basic policy of REA is to render "certain technical advice and assistance to its borrowers * * * and to assist rural people in doing things which they cannot do for themselves." The plan of the REA is democracy at its best. It provides credit for rural families who want to help themselves and furnishes technical guidance when needed. "Each borrower is an entirely independent corporate body, locally owned and controlled, and existing pursuant to applicable State laws, and each such borrower is itself responsible for the management of its own affairs, proper and successful construction and operation of its own system, and the repayment of the REA loan."

REA itself operates no rural-electric facilities, and its program involves no grants or subsidies. Its loans are paid out of the operating revenues of the locally owned and locally managed co-op organization.

The rural people of Louisiana have availed themselves of the opportunities offered by the REA. As of June 8, 1953, there are in that comparatively small land-area State 12,812 subscribers represented by 10 co-op organizations that have borrowed a total of $4,610,000 with which to construct many miles of powerlines.

These powerlines are a network of security. They relieve the mind and the body of many vexing and fatiguing problems and tasks. They pump water and keep it flowing through the home; they cook food, wash clothes and dishes; they milk cows and supply lights to the home and the barn; they provide communications with the doctor, with neighbors, and markets. Those lines are there because rural people put them there through their own initiative and labor, with assistance from an enlightened Government.

In October of 1949 the REA was authorized to make loans to local telephone co-ops for the purpose of constructing and operating telephone facilities. As an interest rate of 2 percent, loans totaling $106 million have been approved for borrowers from the different States of the Union.

It is important to note that commercial utilities companies supplied, last year, about 54 percent of the power used by rural consumers. However, in addition to the power purchased during the fiscal year 1952, REA borrowers used 649 million kilowatt-hours generated in their own plants.

Science has spread to the farms and the intelligent use of it has brought about many changes during the past century. Perhaps the rural family is again taking a prominent place in the social, political, and economic life of the Nation.

When this country was young, the farmer—particularly the planter of the South—enjoyed the highest standards of living American society had experienced. The Civil War, followed by discriminating legislation, such as differential freight rates and high tariff on manufactured imports, completely reversed the situation and the rural agricul-

tural South became, in the words of the late President Roosevelt, "the Nations No. 1 economic problem."

Through such subsidies a vast discrepancy developed between prices the farmer had to pay for what he bought and the prices obtained for what he produced, and out of this unbalanced economy there emerged legislation that sought to remedy the situation. Agriculture had at last become a basic industry, closely meshed into our complex system of economy. Industry, labor, and agriculture became dependent one upon the other. Farmers demanded and deserved full-parity prices for farm products and parity income for farm people. It is true that this objective cannot be obtained by Government programs alone, nevertheless, the farmer needs some protection against changing international relationships which quickly affect prices of farm products, over which he has no control.

Earlier in this talk I called attention to the fact that the schedule a farmer must follow is not fixed by himself. It is largely determined by the weather and other conditions that are beyond his control. When the farmer plows, seeds his acres, or harvests his crops, he is forced to operate in accordance with the whims and vagaries of nature.

Everyone who is interested in agriculture or who speaks or writes about farm families and rural people should make some effort to comprehend the word "parity." I particularly commend to certain city newspaper columnists the following definition of the very much misunderstood word:

"The parity of an agricultural commodity, generally speaking, is the price which will give the commodity the same purchasing power as it had during a given base period in terms of (1) prices of commodities farmers buy, (2) interest on mortgage indebtedness, (3) taxes on farm real estate, and (4) for most commodities, wage rates for hired farm labor.

"The parity price of an individual farm commodity, in other words, is a standard for measuring the purchasing power of that commodity in relation to prices of goods and services during a definite base period."

Through the influence and direction of the USDA the southern farmer has been getting away from the so-called one-crop system and turning much of his acreage into pastures. As a consequence, the dairying and beef cattle industries have expanded while cotton production has decreased. During this same period of time cotton production has increased in some of the far-Western States. Sufficient time has not elapsed to determine that the South should sacrifice her traditional superiority in cotton culture in favor of animal husbandry, nor have those Western States had ample time to assure them that they should plow up their pastures and plant them in cotton. For better or for worse, the South has been far more than a century and a half the throne of Old King Cotton. And the prevailing economy of 150 years cannot be shifted abruptly without deplorable consequences.

There are many phases of agriculture which I would like to discuss, such as reciprocal trade agreements, trade expansion with foreign countries, foreign agricultural service and technical assistance, all of which are important factors in our national economy and of particular interest to rural people. However, I must acknowledge that no one could completely cover, in less than a book-length treatise, all the "Problems and Progress in Agriculture."

Even so, I consider it a duty, as well as a privilege, to express my high regard for work done by the Animal Husbandry Division of the Bureau of Animal Industry. I am amazed at the network service provided farmers by these divisions of the USDA, reaching down through their affiliates to the State livestock sanitary boards. May I cite only one example of accomplishment?

Five years ago that dreaded animal plague known as foot-and-mouth disease had spread over an area of nearly 260,000 square miles. Farmers in my section were alarmed. In fact, there was danger to the cattle of the entire Nation. To wipe out this scourge, it was necessary to kill almost a million cattle, sheep, hogs, and goats. Vaccination was administered to more than 60 million animals. These agricultural agencies of the United States were forced to spend about $123 million to carry out our part of the program in conjunction with Mexico, but that money was spent wisely and effectively.

We hear some growling about the tremendous sums that the National and State Governments spend on agriculture. But we haven't seen that man, woman, or child who wants to stop eating, wearing clothes, living in houses, and covering their feet with shoes. We haven't talked to a single historian who refused to admit that we won two world wars largely because we outproduced the enemy, nor have we talked to one who refuses to admit that our ability to grow food and clothing and to produce materials of war is our greatest deterrent against attack by the Communists. We haven't seen that person who isn't grateful to farmers for what they did during the last World War. Remember, farmers were called upon to do the impossible. And they did. They actually produced four times the amount of commodities called upon to produce.

But with our rapidly increasing population, how far away is that fatal day when our soil can no longer produce enough food, clothing, shelter, and water to sustain the people? How long before we reach the saturation point? Will it be a century from now, or will it be 80 years, or only 50 years from now?

Shouldn't we of this generation open our eyes and watch the jaws of the stupendous pincers steadily closing? Those jaws are someday going to squeeze the very life out of us if we don't begin right now making plans to avoid that catastrophe.

Shouldn't we open our eyes and see the terrible threat to our economic safety that is so evident in the rapid increase of population and so obvious in our diminution of water and land resources?

What countries are always the source of unrest? The pages of history unmistakably answer that question. Wars are started by and in those nations where populations have grown beyond the ability of land and water resources adequately to sustain them.

Where is communism flourishing today? In what lands has that evil doctrine taken root? The answer is:

In those parts of Asia and Europe where 1 acre of land is required to support 80 people. That's the answer, fellow Americans.

With our natural increase in population, plus our far too liberal laws that haphazardly govern immigration, how many years before every acre of our soil will be called upon to furnish 80 people with food, water, clothing, and shelter?

And yet there is demand from some quarters that we increase the immigration quotas during the next 2 years by admitting an additional thousands of Europeans. This demand is supported largely by tear-jerking stories.

The people of my district are sick and tired of tax burdens for the purpose of supplying peoples of foreign countries who thank us by a kick in the teeth. The people of my district don't want those huge quotas of aliens here to hasten the fatal day when our soil may no longer be able to sustain the population. Why should we be continually called upon to give, give, give and keep on giving to sustain some of them at home and at the same time called upon to bring great numbers of them to the United States to hasten the day when our land can no longer sustain the people?

In my opinion, immigration agreements with each country should be on an exchange basis, reciprocal in number. Example: We accept a thousand people from Shang-ri-la if there are a thousand Americans who want to go to Shang-ri-la.

I shed no tears with those who misinterpret Cain's question, "Am I my brother's keeper?" Abel had disappeared under suspicious circumstances and when Cain was asked, "Where is Abel thy brother?" the killer replied, "I know not: Am I my brother's keeper?"

And the murderer's sentence was pronounced in these words, "When thou tillest the ground, it shall not henceforth yield unto thee her strength; a fugitive and vagabond shalt thou be in the earth."

I don't find in this Biblical story any suggestion that we Americans should be classed as murderers among nations. I see no suggestion that we should run the risk of destroying our economy in order that we sustain peoples of the world in their own kitchens until they decide they'd fare better by coming to ours. It is shameful to distort the meaning of Biblical phrases in order to play upon human emotions.

These grave problems, which I have stated very simply, are being seriously pondered by the cotton farmers along the fertile Red River Delta and by the dairymen and cattlemen of the same area, as well as by the hill farmers who are wisely turning most of their land into the growing of grass and trees.

The fathers and grandfathers of these hill farmers were accused of the crime of depleting the soil by unsound farming. They were charged with inviting erosion. I seriously doubt their guilt. I think their only offense against the general economy was the selling of their timber for a mere pittance of what it was worth. It may not be unjust to accuse them of being accessories to the fact, because they permitted their slopes and hillsides to become denuded and made barren of trees.

This being the 20th anniversary of the soil-saving demonstration that was begun in the 4th Congressional District of Louisiana, I ask for the privilege of congratulating those people and saying to them that if it is true that each generation merely has the right of trusteeship over our natural resources, then they, the farmers, have demonstrated beyond peradventure that the precious treasures of this country are in trustworthy hands.

Let's Help Our Friends

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1956

Mr. MULTER. Mr. Speaker, on the eve of bringing to the House the mutual security bill, I believe it important that every Member read the following item which appeared in the Washington Post and Times Herald of May 31, 1956:

PAKISTAN NEED FOR UNITED STATES AID STRESSED

(By Chalmers M. Roberts)

Continuation of approximately the current level of American economic aid to Pakistan over the next 4 years should make possible the success of that nation's current 5-year development plan.

Pakistan Ambassador Mohammed Ali gave that estimate this week during a discussion with newsmen of the plan for the period ending March 31, 1960.

The aim is to increase Pakistan's national income by some 20 percent gross or about 12½ percent when allowing for a 1.5 percent annual population increase. Present population is around 80 to 82 million.

Main goals of the plan, which tends to emphasize agriculture over industry, are to increase foreign exchange earnings, create 2 million new jobs, raise food grain output by 13 percent, extend the village development program, irrigate 3 million acres of new land and make other irrigation improvements, add 580,000 kilowatts of electric power, build 250,000 new housing units, boost hospital beds from 23,000 to 32,000, add 3,000 post offices as well as 35,000 new telephone connections.

The Ambassador declared that Pakistan "cannot keep up its heavy military expenditures" as a member of both the Baghdad and SEATO defense pacts "unless we can build up our economy with help from those foreign nations which believe in the same things we do."

Currently, American aid is running at about $145 million a year, he said, other than purely defense aid but including surplus agricultural exports and other nondevelopmental help. From the Colombo plan nations Pakistan is obtaining about $25 to $30 million a year while World Bank loans the past 2 years have averaged about $20 million annually.

Pakistan estimates that its 5-year plan will cost $2,436,000,000 in all with a gap of $882 million which can only be met by foreign help. Allowing $84 million anticipated from private foreign investment, the other $798 million is hoped for from the United States, the Colombo plan and the World Bank with perhaps some additional loans through the newly created International Finance Corporation.

Mohammed Ali said that it is Pakistan's hope "to stand on our own feet for the most part at the end of the plan."

Washington Lithographer Perfects Zinc Plate Process for Making Fine Prints

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, the Washington Sunday Star magazine of May 6, 1956, reported that a young Washington, D. C., lithographer has developed a zinc plate process for making fine prints. His results prove that stone is not the only satisfactory vehicle for lithographs. The ancient process of using a heavy stone for printing lithographs was felt to be cumbersome by Jack Perlmutter, a Federal employee who works at the Navy's Hydrographic Office in Washington as a lithographer, so he experimented with light zinc plates.

As is usually the case with those who break new paths, Mr. Perlmutter was warned that "you'll never get the same effects. You can't beat the old tried-and-true method." And, as is usual, also, this inventive young man worked nights, sometimes until the small hours, perfecting his process. The reward for his persistence is that today his lithographs are in the permanent collections of our finest museums, including New York's Metropolitan Museum of Art, the Philadelphia Museum, the Carnegie Institute in Pittsburgh, the Library of Congress, and the Corcoran Gallery of Art.

Her husband's consuming interest in lithography aroused her own interest to such an extent that Mrs. Perlmutter, who is also a painter in addition to her full-time job as mother to two lively daughters, studied intensively to become a professional lithographer herself.

In addition to his other activities, Mr. Perlmutter helped establish an adult education art center at District Teachers College where he teaches a class in painting. With his usual drive he also helped establish an art gallery at the college for firsthand study by the students.

The article describing Mr. Perlmutter's work was written by Mrs. Joyce Field, able president of the Society of Washington Artists. The Society of Washington Artists is one of the more important cultural organizations in the Nation's Capital, and its members through the years have worked hard to make the Federal City a cultural center. The article from the Washington Star follows:

PROLIFIC PERLMUTTERS
(By Joyce Field)

Step into the Perlmutter household and you are immediately lost in a bewildering maze of easels, canvases, lithographs, paints, zinc plates, brushes, and frames of every size and shape. And the wet paint warnings in the living room do not pertain to a freshly decorated wall or varnished trim, but to the new art creation lying on the couch or perched on an easy chair. The home of Jack and Norma Perlmutter, 3826 Halley Terrace SE., is not so much a dwelling to live in as a haven to work in.

During the day, Mr. Perlmutter is employed at the Navy's Hydrographic Office as a lithographer. Evenings, he is always at his easel or drawing board. Three years ago, he joined a new project at District Teachers College: An adult education art center where he teaches a class in painting. His vibrant enthusiasm is caught by his students and reflected in their work. With his usual drive, he has helped establish an art gallery at the college for professional art exhibits and firsthand study for the student.

Any art lover, student or ordinary layman who just knows what he likes has undoubtedly seen and probably admired a Perlmutter painting or lithograph. For Perlmutters have hung in every art gallery in Washington, in theater lobbies, and at art fairs. And the Perlmutter reputation has spread beyond the Nation's Capital, so that today Mr. Perlmutter is represented by the Kennedy Galleries and the Contemporaries in New York. Any artist who has struggled for recognition knows what it means to win New York approval.

The Corcoran Gallery of Art will hold a one-man show of Mr. Perlmutter's paintings and lithographs June 2 through September 30.

Norma Perlmutter is a painter in her own right, and has exhibited extensively in Washington. She signs her work with her maiden name, Mazo. Her husband's ardor for lithography aroused her interest to such a degree that she studied intensively to become a professional lithographer herself. Yet, despite this beehive of activity, she has managed to bring up a pair of daughters, Ellen and Judy, aged 8 and 11.

Even in their rare social evenings, the Perlmutters will expound on their favorite subject, color lithography.

"I'm opposed to 'mail-order lithography'," Jack will tell you, "where the artists do the drawings but send them out to be printed. I believe that printing can be just as creative as the drawing."

But the ancient process of using a heavy stone for printing the lithographs was too cumbersome for Jack, so he experimented with light zinc plates.

"You'll never get the same effects," he was warned. "You can't beat the old tried-and-true method."

But Jack worked nights, sometimes until the small hours, perfecting his process. And the reward for his persistence is that today Perlmutter lithographs are in the permanent collections of our finest museums, including New York's Metropolitan Museum of Art, the Philadelphia Museum, Carnegie Institute in Pittsburgh, the Library of Congress, and the Corcoran. His paintings locally are in the Phillips Collection, Howard University, and the Watkins Gallery of American University.

Most young families long for larger homes, equipped with all the ultramodern gadgets that make for luxurious living. Jack and Norma Perlmutter dream of a larger home, too, but only to gain more room for their prints and paraphernalia. Those prolific Perlmutters have a passion for art, not luxury.

The Case of Cain

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. MULTER. Mr. Speaker, the following item, which appeared in the New Republic magazine of May 14, 1956, is deserving of the attention of our colleagues:

THE CASE OF CAIN

A couple of weeks ago this reporter told of a rollicking GOP gathering at which the President uttered—amidst toy balloons and Fourth of July sparklers—lofty statements about the "supreme importance" of the individual; the need for "a heart as well as a head" in government and his distress at the thought of making citizens serial numbers in the files of a Government office. The president laid down, in fact, six principles.

Well, it appears that ex-Senator Harry Cain, Republican, of Washington, now a member of the Subversive Activities Control Board, wants the President to put those sentiments into execution right inside his own administration. Unknown to the President every one of the six is being violated, Cain told a New York audience last week, in the Government's present security-risk procedure. In 3 years of operation under the present procedure, Cain reported, not one single spy, traitor, saboteur, or Communist has been found in a position of trust. The procedure has got rid of some genuine "risks," he agreed, but at the same time it has operated so cruelly that hundreds of faithful servants have been hounded or ruined as "risks." Furthermore, Cain produced the sensational charge that Soviet agents are actually fishing among these innocent vistims who have been made pariahs by their Government and who cannot find employment. It is worth while to repeat here Cain's story of one case in particular.

Let us call him X. He joined the Census Bureau in 1940. In 1948 he was cited, but cleared, in a loyalty action. He was represented in his successful defense by Alfred Bernstein, counsel of the United Federal Workers of America (CIO) of which X was a member. He had not known Bernstein be-

fore the charges nor seen him after their dismissal.

In February 1955, X was charged again. By now he had risen to a post where he had access to secret information in a higher Government agency. Old charges were renewed plus a new one—associating with Bernstein, his lawyer. Cain said he has reviewed the case—sweated over the 525-page file. He is convinced of X's innocence, as are two of X's superiors. But X, a man with a family, has been suspended, payless, for 14 months, also rejected everywhere for private employment because of the cloud on his reputation.

But now comes the new angle. X desperately advertised for a statistical job at any pay, anywhere. A man—calling himself "Machoff"—made contact with him. He wanted research work done on the United States aircraft industry. Our man X was suspicious, got in touch with the FBI. "Machoff," according to Cain, turned out to be Methiov, connected with the Soviet Embassy. Melodramatic? Sure. But there is another twist.

On March 7, X sent an affidavit telling the Government agency that had suspended him all the facts. On April 3 he got the tentative notice of his dismissal as a security risk.

Maybe somebody is hoaxing Cain. Cain is an emotional man but a compassionate one; he says he has looked into the matter thoroughly and believes in X. It is an odd fact that the agency which has now fired X never asked him a question about the affidavit he submitted although this is now over a month ago. Maybe the department couldn't be bothered with current events; maybe it was too busy pondering earlier matters in X's life on which the suspension was based—events running back to 1941.

Almost imploringly Cain asks Eisenhower to give the situation his personal attention. Do those six Eisenhower "principles" uttered at the GOP rally about the importance of the individual mean anything? Says Cain sadly, "He (Eisenhower) does not speak because he does not know."

GATT and Labor

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1956

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to call the attention of my colleagues to the position of some of our labor leaders on H. R. 5550 which would provide for United States membership in the Organization for Trade Cooperation often referred to as OTC.

The endorsement of our trade policies by the top leaders of the AFL and CIO does not carry the approval of scores of the local unions that go to make up these major groups. A point in illustration is an editorial in a recent issue of the Standard Times published at New Bedford, Mass., that takes these union leaders to task for their failure to consider the unions in small industry while favoring a policy of support to union men working in mass production industries such as steel, automobile and heavy machinery.

I think the editorial, which follows, is timely:

GATT AND LABOR

Stanley H. Ruttenberg, research director for the AFL–CIO, appeared before the House Ways and Means Committee endorsing administration aims of expanding trade in the free world. Specifically, he said his organization felt Congress should approve United States membership in the proposed International Organization for Trade Cooperation.

This suggested agency, known as OTC, would administer the 35-nation GATT (General Agreement on Tariffs and Trade), which has been in operation for 8 years without any machinery to police it. A bill proposing American membership in OTC now is before the House committee; it is one of the most controversial measures in the administration's program aimed at liberalizing trade.

Mr. Ruttenberg emphasized the possibility that the OTC would provide a focal point for discussing the relationship of labor standards to tariff policy.

It would appear, however, that all of the unions within the organizations Mr. Ruttenberg represents, do not agree with the point of view which he expressed. One of the most outspoken sources of opposition to GATT and OTC is the Nationwide Committee of Industry, Agriculture and Labor on Import-Export Policy. This group maintains that GATT is assuming more and more power to regulate United States tariff and trade, a function assigned solely to Congress, in accordance with the Constitution.

Among the members and associates of this committee on import-export policy are the Seafarers International Union of North America, American Flint Glass Workers' Union of North America, Atlantic Fishermen's Union, International Photo-Engravers' Union of North America, United Wall Paper Craftsmen and Workers of North America, Cannery Workers Union of the Pacific, Cannery Workers and Fishermen's Union, International Handbag, Luggage, Belt and Novelty Workers Union, International Brotherhood of Operative Potters, and International Brotherhood of Bookbinders.

It would be interesting to know the reaction of these unions to Mr. Ruttenberg's declaration of approval of GATT and OTC in the name of the AFL–CIO and its members, since all of these are included in that category.

Water and Land Conservation and Use

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks, I wish to present a brilliant address delivered to the National Rivers and Harbors Congress at its 43d annual convention at the Mayflower Hotel, Washington, D. C., on May 11, 1956. Senator STUART SYMINGTON, former Secretary of the Air Force, presents in a most able and constructive manner the problems of water utilization throughout the United States and gives, as far as I know, for the first time his views on what may be the No. 1 internal problem within our country.

The speech is as follows:

I welcome this opportunity to discuss one of the Nation's most urgent problems—the conservation and use of our water and land resources.

History shows that every civilization which has risen to world prominence has done so only in areas where the soil was fertile; and where pure water was abundant.

It was not by coincidence that man's first cities were built along the fertile banks of the Tigris-Euphrates River in Mesopotamia; and along the Nile River in Egypt.

These areas were the "cradles" of early civilization.

It is a historical fact that no nation has long maintained a leading world position after either its soil or water supply became depleted.

As illustration, Rome was perhaps the proudest of all ancient empires.

But by the second century A. D. that empire had become so impotent agriculturally the historian, Simkovitch, was moved to write:

"Province after province was conquered by Rome to feed the growing proletariat * * * Latium, Compania, Sardinia, Sicily, Spain, Northern Africa, as Roman granaries were successively reduced to exhaustion. Abandoned land in Latium and Campania turned into swamps; Northern Africa into a desert. The forest-clad hills were denuded."

In other words, when the Roman Empire became an agricultural parasite, like all other parasites, it perished when its sources of food became exhausted.

History's greatest lesson may be the fact adequate water and land are prerequisites not only to improved living standards but also to national survival.

When the United States was first settled some 350 years ago timber, water, and rich soil existed in great abundance.

But the population grew steadily and the consumption of soil products and water steadily increased; and therefore shortly after the year 1900 we realized that shortages were possible even in America.

As a result President Theodore Roosevelt initiated the Nation's first conservation program.

Then came World War I with its tremendous drain on our productive capacity; and later the gigantic growth in our industrial complex during the 1920's.

By the early 1930's the complete exhaustion of our natural land and water resources could be foreseen; and so, under the leadership of another Roosevelt, our Government undertook to carry out the greatest reclamation, conservation, and resources development program ever conceived in all history.

Vast tracts of arid desert became areas of fertile productivity. Denuded hills were reforested. Deplenished agricultural plains were first fertilized and then sown in grass and grain. Multiple-purpose reservoirs were constructed.

This was a program to preserve our greatest heritage—the soil and water of America.

With the exception of the air we breathe, water is the material most vital to human life. It is the largest single controlling factor in the growth of population, in the growth of industry, and in the growth of agriculture.

Because we of America were particularly blessed with an initial abundance of fresh water, we can only blame ourselves for that lack of foresight which in turn now forces us to face up to this impending water shortage.

As our population increases we must devote ever more attention to the elimination of water waste through uncontrolled floods, lack of conservtaion practices, and stream pollution.

In all probability within 20 years water will be the most critical scarcity of all our national resources.

According to the Hoover Commission, in 1975 water consumption will be 1½ times greater than it was in 1950, but in 1950 we were already suffering serious water shortages in many areas, a trend that is increasing each year.

Last fall the chief of the fish and game division of the Missouri Conservation Commission warned about this problem, as follows:

"Approximately three-fourths of the earth's surface is water, one-fourth land. I contend that the Lord made the earth that way because that is the relative importance of the two. Regardless of what anyone may believe, however, the fact remains that life on this earth, in all its forms and facets, has developed and must live accordingly.

"Water is our most important resource. The available supply of fresh, pure water is an absolute deadline beyond which no community, state, or nation can ever go. When humanity runs out of clean water everything stops—that is the end of the road for man and all his activities."

The growing domestic, industrial, irrigation, and power needs for water make imperative the adoption of a national water policy which will insure the development of our new water supplies.

To that end the following six steps, some now being taken haltingly, some not at all, should be followed resolutely:

There should be a coordinated program of flood control, water storage, and power development through the construction of multiple-purpose reservoirs, wherever feasible, on the water arteries of the Nation.

There should be a cooperative national and State program for organization and development of local watershed districts to control water runoff at its source. This would conserve and preserve a supply of fresh water on the land where it falls.

There should be a strong program of stream pollution control. That control should embody, first, provisions for interstate cooperation in the control and prevention of stream pollution; and, second, Federal grants-in-aid to towns and cities for the construction of sewage treatment plants, along with other water purification facilities.

There should be a cooperative national and State program for the reclamation of used water by the removal of waste and the use of purification processes.

There should be a cooperative national and State program for the development of new ground water reservoirs. This would tap the presently unavailable underground lakes and streams.

There should be a national research program designed to investigate the possibility of inducing rainfall through artificial means, the development of a practical method of removing salt from sea water, and the development of methods to use fresh water substitutes in industrial and agricultural production.

Unless we follow through on a positive program of this type, in the not too distant future we will find ourselves as a Nation in the position of the throat-parched ancient mariner who cried, "Water, water, everywhere—but not a drop to drink."

Now is also the time to give serious consideration to the problem of how to conserve our native soil, and make it more productive.

Each year millions of tons of our best soil are eroded by rivers and streams.

Add to this the tons of topsoil eroded by the wind of our western plains, and we begin to calculate how many acres of agricultural productivity are sacrificed each year through natural causes alone.

For many decades, farmers in this country, schooled in the tradition of their fathers and grandfathers persisted in the raising of the same crops on the same soil. As a result, the once fertile topsoil has been depleted of its regenerative powers; and in many cases each year the crop yield becomes less and less.

Despite this continuing loss and depletion of soil, our present agriculture production is high—so high that many persons, including the Secretary of Agriculture, term it a "crushing abundance."

Therefore, some people believe this is not a popular time to talk about practices that will increase rather than decrease our present farm production.

I am not one of those people.

I believe our present so-called agricultural abundance is a temporary economic condition.

By 1975 the population of this country will have increased to approximately 193 million people.

For this reason alone we will then consume 41 percent more food than we did in 1950, a record agricultural year.

To be specific: By 1975 according to the report in 1952 of the President's Materials Policy Commission, we will consume 41 percent more corn, 42 percent more beef, 23 percent more wheat, and a total of 25 percent of such nonfood agricultural products as wool and cotton.

As can readily be seen, our present so-called crushing abundance will not meet those increased needs of the future.

We do have the potential of a substantial increase in agricultural production during the next 20 years. It is estimated that through irrigation, reclamation, and other conservation practices, we may be able to add some 80 million or 90 million acres to our present agricultural land.

But as stated in the materials policy report:

"In years gone by, an increase in farm production normally meant an increase in acres planted. But new lands for the extension of farm frontiers no longer exist. Relatively few new acres remain for the plow * * *. The bulk of future farm production—for the next 25 years or the next 100—must come from land already under cultivation."

Present indications are that by 1975, through straining our production potential to the utmost, this country will nevertheless want to consume 3 percent more wheat than we can produce, 23 percent more fresh vegetables, 11 percent more eggs, 7 percent more wool, 27 percent more beef, and 30 percent more pork.

This is why I say that unless we adopt now a program of nationwide soil conservation, improved farming practices, and agricultural research we will be faced with the necessity of having to go abroad for more and more of our food supply.

In this connection, the material policy report, a great piece of work, predicts that by 1975 our agricultural imports will increase 46 percent, while our agricultural exports will decline by about 36 percent.

In my judgment, therefore, it is imperative we now begin to explore all ways to reclaim land, control erosion, develop better seeds and fertilizers, improve and encourage crop rotation practices; and also launch a long-range program of research on how to conserve and preserve the soil on which every one of us depends for physical livelihood.

During the last war, after our rubber supply was almost completely cut off, the scientists went to work and came up with synthetic rubber.

But the big difference in this analogy and our impending food shortage is the fact there is no substitute for food. No one wants energy pills as a substitute for steak.

In the long run, civilization, as we know it could be as seriously threatened by the possible future shortage of these resources as by the possibility of a hydrogen war.

In the fields, mines, mountains, and waters of the United States and its possessions lies much of the opportunity to preserve our national security as well as our future prosperity.

Therefore, let us now take stock of our present conservation programs, and adapt them to meet the needs of the future.

It was Daniel Webster who said:

"Let us never forget that the cultivation of the earth is the most important labor of man. When tillage begins, other arts follow. The farmers, therefore, are the founders of civilization."

Address of Senator Wallace F. Bennett, of Utah, at Memorial Day Services, Jefferson Barracks National Cemetery, St. Louis, Mo.

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks, I want to insert in the CONGRESSIONAL RECORD the excellent and most appropriate remarks made by Senator Wallace F. Bennett, of Utah, at the Memorial Day services held at Jefferson Barracks National Cemetery, in St. Louis, Mo.:

We are met here today—in this place of peace and beauty—to spend a brief hour in contemplation of the meaning and purpose of our great country and the parts these men have played and we must play in its destiny.

As I sought to prepare myself to participate on this occasion, my mind went back to the Savior's profoundly beautiful parable of the talents; and there I found a focus for my thoughts.

To us Americans—as to the servants in the parable—has been given a great treasure: all that can be embraced in the word "America."

Our country is more than the geographic area which we inhabit or the material possessions we enjoy. From the beginning, it has been to its patriotic citizens the symbol of their greatest spiritual resources—the promise of their dreams for happiness—the reward for their devotion.

Our country has never been just another piece of land to those who came to its shores out of an older world. To some it was a refuge, to others a challenge. To all, it has ever been a promise of freedom. And this concept of freedom—spiritual before it became manifest in the form and function of government—is the greatest treasure that we have, and makes us the richest nation in the world. In the symbolism of the parable, we are the servants to whom the five talents were given.

Up to date, on the whole, we have used this treasure well. In the beginning it was little more than a dream, but in 300 years we have given it great substance. In the parable, the worthy servant doubled his talents. Ours have been multiplied almost to infinity. Inspired by it, each generation has made its own sacrifices for the future, so that our blessings have grown faster than our population, and there is more for each of us among the millions than there was to be divided among the first few. Certainly, because our fathers were faithful over a few things, we have been made rulers over many.

But the parable is never a completed story. It is a new challenge to every new American in every new generation; and before we can earn the plaudit of "well done, thou good and faithful servant," we must, in turn, make our own contribution to the growth of this great treasure.

To do so effectively, we must first learn for ourselves its true significance. If we lose sight of its spiritual foundation, if we fail to comprehend the irreplaceable part that freedom has played in its accumulation, we cannot use it wisely. Unless we realize that our material abundance is the product of our spiritual strength, we are in danger of losing it all—like the slothful servant. If we measure America only in terms of the number of gadgets per capita—and preen and boast of these—our current contest with the Soviets becomes no more than materialistic marauding.

For, because it is a great treasure, it attracts and inflames the evil motives of evil men. Being without understanding of its spiritual significance, they seek to seize its material values which, in their hands, would turn to dust and despair—as it will in ours, if we lose our understanding.

So, how do we best make use of this great treasure that has been entrusted to our care?

The first and obvious truth we draw from the lesson of the parable is that in a world that so desperately needs help to build a similar treasure, we cannot save it only for ourselves by burying it in isolation. We must protect it, of course, against all enemies of peace and freedom; but to keep it vital, we must share its blessings and expand its power, both in our own country and in all the world. As a nation, this need should ever guide our fundamental policies at home and abroad. At home, we work to keep the light of liberty alive—abroad, to share its blessings and thus justify our stewardship as good and faithful servants.

In the spirit of this concept, President Eisenhower is completely right when he reiterates as our continuing objective the ultimate freedom of the enslaved nations.

He is profoundly wise when he works patiently for peace, because only in an atmosphere of peace can the blessings of liberty expand to full flower.

But he must also be prudent and alert to the danger of attack and the need for adequate defense. Peace and war are always literally hanging in the balance; and the skillful blending of plans for peace—with postures for defense—without letting either overturn the other is a task requiring almost superhuman judgment and infinite patience and devotion.

He has demonstrated his broad grasp of the scope of the problem and his ability to adjust to meet the changing challenge of the evil enemy by his proposals to broaden the effectiveness of NATO beyond its present limited military emphasis and breathe into the alliance the spirit of community in the spiritual values of liberty. This is a classic example of one means by which we can put our American talent to use and thus expand its value to the world.

Another great demonstration of adaptability has been our more effective use of the U. N. Since Eisenhower became President, we have ceased our previous passive policy by which we expected U. N., by itself, to solve all international problems and have used it affirmatively as an instrument to expand our influence for peace—a forum to explain and sell our basic concepts to the world—a channel through which our contributions could be made.

And in his recent appointment of Senator GEORGE to serve America abroad, he provides a living reminder to the world that Americans of both political parties stand and serve together in its great mission to build this great treasure by sharing it with all men everywhere.

Perhaps by this time you are asking yourselves, "Why talk about this problem here, in this place that has been hallowed by the presences of these men who gave their lives in war and on this day on which we honor them?" I know of no place more fitting and of no day more appropriate. It was in the furtherance of this great responsibility that these men gave their lives.

The concept of freedom is always in peril. Since the beginning of recorded history, most men have lived in virtual slavery, under the shadow of tyranny, and few men have been free. Our own American experience has been the longest and strongest flowering of freedom. But its perpetuation will never be assumed. The lust for power will never disappear. And we must always be prepared to defend and preserve it, by war if necessary.

And yet in a way, this is a wise part of God's purpose, because without opposition there can be no growth—without challenge, no inspiration to overcome. If there were no new areas in need of liberty, we might be tempted to "bury" liberty like slothful servants, and thus lose it.

As long as the evil challenges the good, it will seek to resort to its obvious weapon, force; and men will be called to use force in liberty's defense. Of these, some will die as these have done, making their life's contribution in one sacrifice. Their task has been to preserve for the rest of us the opportunity to build. They died to keep the door open and the hope alive. Theirs is a necessary and honored part in the process of peace.

Their sacrifice deepens our obligation to use the opportunity they preserved with greater effectiveness and more devoted zeal—to keep the light of liberty bright and make its blessings more abundant here in America so that all men can draw inspiration from this source and, working together, we can spread both light and blessings ever farther in a grouping, starving world.

Extension of Defense Production Act

SPEECH
OF
HON. OLIVER P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 9852) to extend the Defense Production Act of 1950, as amended, and for other purposes.

Mr. OLIVER P. BOLTON. Mr. Chairman, I have asked for this time merely to ask a question of the gentleman who just spoke, Mr. MULTER. I believe I heard the gentleman quote Secretary Weeks; where was that testimony?

Mr. MULTER. I quoted from page 180 of the hearings before our committee on this extension.

Mr. OLIVER P. BOLTON. Actually, standby controls would come under the jurisdiction of Mr. Flemming, would they not?

Mr. MULTER. No; I do not think so. I would say that Mr. Flemming also has jurisdiction over the matter, that Mr. Flemming as the Director of Defense Mobilization should certainly give attention to this. I can give similar quotations from Dr. Flemming's testimony, at another page of the record.

Mr. OLIVER P. BOLTON. I would be interested in that quotation because it is my memory during the testimony of Dr. Flemming before our committee, that we questioned him at some length concerning this matter and the impression which I gathered was that the matter had received very serious consideration and was still under study.

Mr. MULTER. I will agree that the gentleman did tell us that the matter is still under study.

Mr. OLIVER P. BOLTON. I thank the gentleman.

The Fault in the Armed Services

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1956

Mr. HOFFMAN of Michigan. Mr. Speaker, the fault in the armed services is not that the top brass in the Army, Air Force, and Navy—at the moment primarily the Army and the Air Force—disagree and are arguing publicly as to which is the more important in preserving our national security; as to which should receive a major portion of available funds for the development of the weapons or equipment which it considers to be advisable or necessary; as to which service should be entrusted with the performance of a particular function.

The reason for and the purpose of the armed services is to maintain a front which will deter any potential enemy from attacking us and, in the event it fails in that, then to defeat that enemy as quickly and with the least possible loss of life.

From the very beginning, individuals in the Army and the Navy disagreed as to the roles and missions which each was best qualified to perform in defense of our country. Naturally, when the Air Force came of age, the controversy was intensified.

Beyond doubt, the Navy needed carrier-based fighting air equipment to protect and make successful its operations. This was demonstrated in the last war. Experience also demonstrated that the ground forces needed air coverage if they were to fight successfully.

One has but to read the history put out by the armed services to realize that in World War II and in the Korean war each service was dependent upon the other for successful operation. Unified action by all three is necessary if we are to survive.

It is only natural that patriotic, ambitious, aggressive individuals in each service should, as do experts or specialists in any other human activity, become obsessed with the idea that their branch of the service is the most important, the best qualified to give us effective national defense. That is a healthy and desirable situation, for it keeps everyone on his toes. It leads to progress and the acquisition of the best.

Nor does any harm result unless one branch becomes unfairly, unduly, critical of the other. Even then the remedy is at hand. We have not only Joint Chiefs of Staff, but we have a Commander in Chief who can, figuratively speaking, knock the heads of even the generals

together and tell them just how far to go.

In addition, back of it all, sits the Congress which, while its individual Members may know very little about what each service should do, is supposed to possess commonsense and, sitting as a jury, decide upon the testimony of the experts, not what each branch should do in peacetime or in war, but how far the country can go in spending money for national defense without destroying our security through bankruptcy.

As I see it, the fault in the armed services is that because of the technical training of its officers—they get into the academies when they are 20 or 21—they have never learned, they do not realize the efforts which the taxpayers must put forth to earn and contribute the dollars which the services spend. Hence, millions are wasted because of duplication in purchasing common items, because of the lack of unified effort to keep down the cost of overall national defense.

With 52 percent of the national income being spent for national defense—and this year we are giving the armed services something like $34½ billion, in addition to a holdover of some $20 billion—the top brass should have impressed upon it the realization that we can spend ourselves into insecurity as well as becoming insecure through lack of preparation.

Better Late Than Never—Eisenhower Belatedly Adopts Proposals on Research and Development Which Democratic Leader John McCormack Urged 3 Years Ago

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. PRICE. Mr. Speaker, many times during this administration we Democrats have urged certain actions for the security of our country on the responsible leaders of the executive department. Most of the time we are told that we must not disturb the tranquility of the people or question the supreme wisdom of the general in the White House.

Yet again and again the things we have urged have been done—belatedly, perhaps halfheartedly—but nevertheless done. One supposes that action is better late than never.

A prime example of these thoughts is the decision of the President to ask us for new leadership in the field of military research and development. Exactly the same thing was urged 3 years ago by the majority floor leader, the gentleman from Massachusetts [Mr. McCORMACK], but then he was laughed at and ridiculed by responsible subordinates of the President.

So now, 3 years late, it is an administration proposal—perhaps better late than never.

Under permission to revise and extend my remarks, I offer a story by John Kelso from the Boston Sunday Post:

(By John Kelso)

WASHINGTON, May 26.—The facts of life in the nuclear age are now reaching the higher echelons of the District of Columbia and nearby Virginia, it became obvious today.

President Eisenhower is urging Congress to write legislation aimed at improving research and development in the Armed Forces.

It was explained that his proposal follows recommendations of the Hoover Commission, calling for establishing an office of Assistant Secretary for Research and Development in the Army, Navy, and Air Force.

When House Majority Leader JOHN W. McCORMACK, of Boston, made much the same recommendation in 1953, he could get no place with it because of the opposition of the Eisenhower administration.

Congressman McCORMACK even appeared before the House Armed Services Committee in connection with a bill he introduced on March 30 of that year which would have done substantially the same then as Eisenhower wants to do now.

OF PRIMARY IMPORTANCE

"Without minimizing in the slightest manner any activity of our military organizations," commented McCORMACK in his testimony, "I think it can be said that, in the world of today and of a foreseeable future, military research and the results thereof is of primary importance. Its value cannot be underestimated or undervalued with safety for our country.

"Research is of such importance that the very safety and future of our country may depend upon the brains and the ability of our scientists in the field of basic research and in the other vitally important fields of research."

A reading of that 1953 testimony shows that Defense Secretary Charles E. Wilson and other GOP chieftains made extremely light of the McCormack suggestion.

It also shows that Congressman McCORMACK, who has been around Capitol Hill 28 years, was fully aware of the tradition-encrusted concepts of warfare prevailing at the Pentagon, across the Potomac in this Old Dominion. That is why he began his statement with the words, "Without minimizing in the slightest manner any activity of our military organizations."

He knew that cavalrymen hated to give up steeds for Patton tanks, that admirals of wooden ships and iron men paled at the thought of abandoning tree-born craft, and that all of the left-face, right-face martinets have stubbornly refused to believe in anything more advanced in the sphere of electronics than the TV set in the bar—at the officers' club.

At any rate, it is clear that McCORMACK did his level best, with no thought of political concern, to force the Defense Department to get on the right track.

The currently sizzling row at the Pentagon, it was emphasized, has at its roots a failure to cope with the problems being brought about by great technological advances.

The world's biggest office building, it was emphasized further, is still seething this weekend with discontent. The brass hats are at sixes and sevens and fighting with each other as some of them continue to grumble ominously about brush fires.

McCORMACK and others hope that they will soon get squared away to face the realities of a military future of A- and H-bombs, the intercontinental balistics missile, and the satellite.

One way to do it, it was stated, would be to push through the Eisenhower proposal which was advocated by McCORMACK 3 years ago.

In a somewhat similar connection Congress is expected to pass this session a bill which would remove one of the roadblocks between the private utility industry and a new source of electric power—that generated by atomic reactors.

The roadblock is insurance. "We feel that solution of the insurance problem will eliminate the only absolute roadblock to our program," testified William Webster, president of the Yankee Atomic Electric Co.

Webster's company proposes to construct a demonstration nuclear powerplant in Rowe in western Massachusetts. The power output will be sold to 12 New England utilities which are Yankee's sole stockholders and are responsible for the supply of approximately 90 percent of the electrical needs of the New England area.

"The insurance problem has been a matter of major concern to us from the outset," Webster told the Joint Congressional Committee on Atomic Energy. "Thus far we have gone ahead with our plans without waiting for a complete solution of this problem, in the confidence that it could and would be solved by the time we were ready to commence major construction."

GIGANTIC RISKS

Insurance men do not feel able at the present time to commit themselves to the gigantic risks the new industry thinks it has to have covered.

The Atomic Energy Commission has estimated that an industrial atomic catastrophe could cause $200 million in damages to human beings and property. But the damage potential may be $500 million or even $1 billion.

The present thinking within the joint committee is that the Government will be forced to underwrite part of the coverage on atomic plants—possibly anything more than $65 million per accident.

The private insurance industry has indicated it will be able to provide a pool that can underwrite risks up to $65 million for for each accident. Nobody knows now what the premium rates might be.

Also testifying before the committee was H. W. Yount, vice president of the Liberty Mutual Insurance Co. He recently returned from London where he sought additional funds to put into the proposed atomic insurance pool.

Yount stressed that the risks involved in such an insurance program are larger than anything ever before advanced. The biggest single policies presently outstanding, and which are few in number, he noted, are $10 million to $15 million.

The highly articulate Boston insurance executive observed that most insurance men and laymen know little about atomic reactors. They still think of an atomic reactor as a potential bomb, which it is not, he stated.

"We hope," Webster declared at one point, "that more specific information as to the cost of private insurance will be available in the future—the atomic future."

The Late William T. Granahan

SPEECH
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. QUIGLEY. Mr. Speaker, in the death of Representative WILLIAM T.

GRANAHAN I, as a new Member of Congress, lost a good friend and wise counselor.

It was not my privilege to know BILL GRANAHAN well until I came to this body on January 3, 1955. His warm friendship and wise advice was very helpful to me in my efforts to understand the workings of the House of Representatives.

I had known him well by reputation as a political fighter of the highest ideals, a man constantly devoted to the welfare of the people he represented.

I deeply regret the loss of a fine colleague. His voice will be missed in his State and in this body.

To his wife and family I extend my deepest sympathy.

A Tribute to James T. Hixson, Educator

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1956

Mr. CURTIS of Missouri. Mr. Speaker, on Saturday, June 2, 1956, the former students of James T. Hixson, for over 50 years a teacher, principal, and leader in the field of secondary education, presented to the Webster Groves, Mo., School District a portrait of Mr. Hixson which is to be hung in the new James T. Hixson Junior High School. On the occasion of the unveiling of this portrait I had the following remarks to make:

Many people talk about the need of more people with talent and the spirit of self-dedication in the field of primary and secondary education. I am satisfied that one way of assisting in bringing about that end is to honor those people who have spent their lives furthering good primary and secondary education.

From time to time the busy society of today pauses to evaluate the lives of its component parts, the men and women who go to make it up. We pay tribute with our lips and our passing thoughts to those who have entered the service professions; but this has not been sufficient to bring enough persons into the pursuit of such dedicated living.

Fortunately, our society has adjusted itself so that many of the service professions bring with them monetary returns as well as, occasionally, fame. We do not need to pause to discuss these more fortunate of the service professions, they have their obvious rewards.

We do need to start paying more deliberate attention to those service professions which remain largely unheralded, if we are to continue to attract to them the number of men and women our society needs. Not the least of these unheralded professions is that of education; and in the field of education an area that most lacks proper public acclaim is primary and secondary education.

Today the higher institutions of learning, through their spokesmen, are proclaiming an easily perceived truth that by and large our secondary school systems throughout the Nation are not turning out the caliber graduate that the higher institutions of learning must count upon. This indicates the need for more persons to dedicate their talents and lives to the problems of secondary education.

We in Webster Groves are blessed by having the highest caliber primary and secondary school products. This has not come about by chance. It comes from the dedicated work of men and women like the man we are honoring today.

All assembled know personally the great, fine, and silent work performed by James T. Hixson in behalf of education in our community, because he was our teacher and our principal. Not all of us may be aware of the influence that this work has had upon education throughout our land and yet this, too, is so.

In a sense we honor ourselves here today by following our natural inclinations to honor this distinguished educator. This fine building dedicated to public education appropriately bears the name of a great educator, James T. Hinson. We his former students now give to the Webster Groves Board of Education a portrait of this man to be placed in this building so that all may know and come to recognize the face of the man who personally gave to us so much. The qualities of a great educator are not limited to the fields of scholastic abilities; they also must encompass those that go toward making daily living among people a pleasant experience. James T. Hixson's scholarship is matched by his humanity, his friendliness, his good Christian character. His is a life to be emulated. It will be an inspiration to the thousands of students who will go through the corridors of this beautiful new junior high school to see the portrait of a man who gave so much to the education of the children of this country. It is fitting that honor should come to him while he is still with us.

Extension of Defense Production Act

EXTENSION OF REMARKS
OF
HON. OLIVER P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 9852) to extend the Defense Production Act of 1950, as amended, and for other purposes.

Mr. OLIVER P. BOLTON. Mr. Chairman, in explanation of this amendment, may I say the committee amendment to the bill merely makes the disclosure provisions, which are applicable under present law to those serving without compensation, also applicable to those who come into the Executive Reserve. The amendment which I have offered, and which I believe has been agreed to, would withdraw the provision which would require members of the Executive Reserve to report every 6 months. The feeling, at least on my part, and the reason I went along with the committee amendment, is that it is our job to preserve the integrity of the reputation of those who are in Government, and if there is a challenge of their integrity which can be met easily, I see no reason against it. Therefore, since the disclosure of one's holdings is such an easy step, I thought this could be gone along with and would not keep men out of the Executive Reserve. However, after the amendment was adopted, we noticed that under the language, members of the Reserve would be required to file changes in their holdings every 6 months regardless of whether they were in Washington and regardless of whether they had any connection with Government business at that time except for a membership in the Executive Reserve. This amendment would withdraw that requirement and not make it necessary for members of the Reserve to report unless they were serving as men without compensation in Government.

Mr. SPENCE. Mr. Chairman, will the gentleman yield?

Mr. OLIVER P. BOLTON. I gladly yield, sir.

Mr. SPENCE. The Executive Reserve have no employment. They are those who it is anticipated might be employed.

Mr. OLIVER P. BOLTON. They merely agree that in time of emergency they will serve in a certain job.

Mr. SPENCE. I do not think they ought to have to disclose what they have every time they visit the agency, and I am for the gentleman's amendment.

Mr. OLIVER P. BOLTON. I thank the gentleman. Therefore, I gather the gentleman would support this amendment.

Mr. SPENCE. I said I was in favor of it and I will support the gentleman's amendment.

Mr. GROSS. Mr. Chairman, will the gentleman yield ?

Mr. OLIVER P. BOLTON. I yield.

Mr. GROSS. Well, is this is a training program or a visiting program, or what is it?

Mr. OLIVER P. BOLTON. The Executive Reserve is a training program similar to that of Reserve officers, for those who are willing ahead of time to accept responsibility within Government should an emergency develop which would require their services. They come to Washington, or some other point designated, for approximately 2 weeks, although the time is not specifically designated, for orientation and reorientation in the department in the service that they would give to the Government.

Mr. GROSS. The chairman of the committee refers to it as a sort of a casual thing, a meeting at which they do little more than visit.

Mr. OLIVER P. BOLTON. That is certainly not my understanding. I think I can compare it to the mobilization tables of a National Guard Division. If one takes it down to the company level, in times of peace you have certain officer allotments, but the men are chosen to fill other officer jobs in case of mobilization, and the troop strength is increased.

Mr. GROSS. Can the gentleman tell me how many there are in this reserve training program?

Mr. OLIVER P. BOLTON. I regret I do not have those figures, but the Executive Reserve is at present under formation.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield?

Mr. OLIVER P. BOLTON. I yield.

Mr. McCORMACK. Am I to infer that in this particular status they have nothing to do with policy?

Mr. OLIVER P. BOLTON. It is my understanding that they do not have anything to do with policy.

Mr. MULTER. Mr. Chairman, will the gentleman yield?

Mr. OLIVER P. BOLTON. I yield.

Mr. MULTER. There is a table in the hearings on this bill indicating the number of WOC's who have actually served up to the present time in various capacities.

Mr. OLIVER P. BOLTON. If I might interrupt, this is no indication of their status in the Reserves.

Mr. MULTER. No, but I was about to say, if you look at that table you can get a fair idea of the number of men who must be trained for the full mobilization, because we will certainly need more men than they have already serving in these various capacities. It is fair to assume we are training as many as we are now using. I might suggest that Dr. Fleming testified that the Department recognized we should not put these trainees under the same or similar restrictions as those of the WOC, and the President had issue an Executive order under which he issued regulations which had to apply——

The CHAIRMAN. The time of the gentleman from Ohio has expired.

(By unanimous consent (at the request of Mr. MULTER) Mr. OLIVER P. BOLTON was recognized for 5 additional minutes.)

Mr. MULTER. Dr. Fleming indicated he had already issued a regulation or directive covering the trainees, and when asked a question, at page 61 of the hearings, he said he would have no objection to the Executive order being written into law. That is what we tried to do by the committee amendment, but, as the gentleman indicated, the committee amendment goes a little too far. The gentleman's amendment to the committee amendment will take care of that situation, and with the committee amendment as amended by the gentleman's amendment, I think then we will have the protection we need as against WOC and trainees so that nobody can complain.

Mr. OLIVER P. BOLTON. I thank the gentleman.

Mr. TALLE. Mr. Chairman, will the gentleman yield?

Mr. OLIVER P. BOLTON. I yield.

Mr. TALLE. I want to say in support of what the gentleman from Ohio said in reply to the question of the majority leader that it was stated repeatedly at the hearings that the trainees, that is, the Executive Reserve, have nothing to do with policy.

Mr. OLIVER P. BOLTON. I thank the gentleman.

Mr. BEAMER. Mr. Chairman, will the gentleman yield?

Mr. OLIVER P. BOLTON. Gladly.

Mr. BEAMER. I take it the gentleman's amendment and the committee's amendment were offered in an effort to protect the so-called WOC. Is that correct?

Mr. OLIVER P. BOLTON. Actually it has no reference to the WOC, sir; it refers purely to men who will agree to serve within the Executive Reserve.

The committee amendment extends to the men who agree to serve in the Executive Reserve the same requirements of reporting the companies in which they own holdings as do WOC's.

This amendment which I am discussing, however, would remove from the members of the Executive Reserve the requirement that they bring the status of their holdings up to date every 6 months. In other words, if you agree to serve in the Executive Reserve and you are living in Indiana and do not go on active duty, you do not go for training within that 6-month period, there would be no need for you to make a new report.

Mr. BEAMER. The reason I asked the question was that these are men who serve without compensation. I know some of them who served the Government at great sacrifice to their respective companies. Unfortunately the press and even Members of Congress on the floor of the House have taken occasion to criticize these people.

If this continues we are going to find it increasingly difficult to find people of merit who will give of their time to the Government; and I wonder if we should not attempt to think a little bit in terms of praise of these people. I hope the gentleman's amendment will indirectly, if not directly, encourage these men to come to the Government and give of their efforts and abilities.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield?

Mr. OLIVER P. BOLTON. I yield to the gentleman from Massachusetts.

Mr. McCORMACK. As far as the WOC's are concerned there can be no thought of impugning the honesty of their motives. There are some of us, however, who feel that dollar-a-year men should be confined to service in actual wartime. However, I have no criticism to offer of that.

The criticism I offer is where any man puts himself in the position of undertaking to serve two masters. I am not saying anyone did, but there is some evidence that some have. That is a thing that we have got to watch. I know I cannot serve two masters. Whenever I find myself in that position, which is very rarely, I absolve myself. I think there is an ethical consideration that I should absolve myself from making any decision where I am in any position of serving two masters.

So that is the situation that has got to be watched in the case of men coming here passing upon policy or taking any action where the Government is involved and where a company with which they are connected is directly or indirectly involved. That is the important question and that is the key question.

I do not recognize the right, the power, or the ability of any other human being to serve two masters. I know I cannot, and I do not recognize the ability of any other human being to do so. That to me is the kernel of the question.

But there is another consideration, whether outside of actual wartime, such people should be used. I recognize that I have never made any statement about the present situation, about the employment of WOC's because I realize it is a debatable question and that is where a man puts himself in the position of serving or giving others the color of right to think they are serving two masters. That is where criticism justifiably arises, as I see it.

An Unbiased Look at the Farm Situation

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of the Agricultural Bulletin of May 17, 1956, of the Roy Wenzlick & Co. entitled "An Unbiased Look at the Farm Situation." Unlike many articles this one lives up to its title. If we are ever to solve the farm problems we must start analyzing them objectively. I suggest that there will remain ample room for political debate even after this has been done. The present situation of demagogs shouting around in the darkness of ignorance is bound to damage not help the farm economy. I am hopeful that the farmers will show those in politics in both parties, that they are a great deal smarter than they have been given credit for being, this coming November elections.

AN UNBIASED LOOK AT THE FARM SITUATION

In this election year a great deal of misinformation is being poured into the public ear about the stringent financial state of the American farmer. Much of it comes from politicians and from the more radical farm organizations, but a good deal of it comes from radio and television commentators, the big metropolitan dailies, and others who should know enough to keep their news coverage objective.

The argument most often followed is that the farmer is being squeezed by falling income and rising prices; further that, as a result, thousands of farmers are giving up and migrating to the cities. More partisan observers point to these trends as evidence of the failure of the administration's farm policies, and particularly the failure of Ezra Taft Benson.

Now there is just enough truth in all of these statements to lend them an aura of authenticity and to give conclusions based on them a certain amount of apparent steadiness. However, to those who are interested enough to dig a little deeper and think a little longer, there is a great deal in this popular presentation that cannot stand the light of day.

First of all, take the matter of falling farm prices. They are falling and have been for several years. On the other hand, if you will look at the chart below [chart omitted], you will see that their first big postwar drop began in late 1948 immediately after Mr. Truman was elected to his second term. You will also notice that this decline continued steeply until the start of the Korean war. They then rose rapidly to a new peak and started falling again in early 1951. By the time the Republicans had assumed control of the executive branch of the Government, farm prices had been falling for almost 2 years.

This is not to say that the present administration is blameless. Perhaps there are some practical measures that could have been taken to halt the drop in farm prices. Nevertheless, it is recorded clearly that the two serious drops began before the present administration went into office. Furthermore, most informed agricultural opinion holds that the enormous surpluses built up by Fair Deal farm policy are the chief reason for the drops. Moreover, neither the President nor his Secretary of Agriculture has received con-

gressional cooperation in farm matters. Indeed, the recent farm bill was such a miserable piece of legislation that Mr. Eisenhower vetoed it, and was widely applauded editorially for so doing.

Secondly, consider the fact that thousands of farmers are leaving the farm for more remunerative employment in the cities. Everyone knows that this has been going on for 200 years. During the 1910–40 period, however, this migration was slowed to a crawl, as over this period farm population lost less than 1.25 million. However, during the 1940–50 period, which was by far the most bountiful in farm history, the farm population dropped almost 5.5 million. During World War II thousands of young men and women left the farms for the Armed Forces or defense work. Relatively few of them returned, despite the record high incomes earned by farmers during the late 1940's and early 1950's. This migration was simply part of a trend, accelerated by the war, that had been going on for a long time.

This is not to say that some farmers are not being forced out of business by economic factors. Undoubtedly some of them are, but to blame the continuing farm-to-city migration on falling prices and to say that it results from administration failures is to ignore the entire past history of the country.

Strictly from a standpoint of going out of business, indications are that farmers do this a great deal less frequently than do nonfarm entrepreneurs. Figures from the Department of Commerce show that from 1950 to 1954 business ownerships were terminated at a rate of about 165 per 1,000 per year. During this same period, farm sales, both voluntary and involuntary, took place at the rate of 50 per 1,000 farms per year. Thus during the period of declining farm prices and booming business, 3 times as many businessmen (per 1,000) as farmers found it advisable to terminate their activities.

Most of the farmers that have been forced off the farms have been marginal operators or tenants. During the periods of high prices it was possible to make a profit even on poor land or on land unsuited to cultivation. As prices declined, it was no longer profitable to cultivate a good deal of this marginal land, and the operator gave it up. Recent advances in mechanization and changes in crops have also forced many tenants off the farms.

In some parts of the Mississippi Delta, for example, cotton plantations employing 40 to 100 families have been converted to cattle raising, thereby displacing all but two or three families formerly required. Thousands of others have been displaced by more efficient methods and better machinery, particularly the mechanical cottonpicker.

Therefore, instead of the current shift in farm population to the cities being prompted by a falling price level, we see that the major portion of it springs from much healthier reasons. That farm production is becoming more efficient, requiring less manpower, and thereby releasing farm labor for employment in the cities, is a change that should continue. Industry and business will be faced with a continuing labor shortage for many years, and if fewer people are required to raise the necessary food and fiber, that many more will be available to produce other goods and services. That such a low proportion of our population is needed to produce agricultural products is one reason we have had the labor force necessary to man our productive facilities and to continue to increase our standard of living.

As for falling prices forcing the marginal or inefficient farmer off the land, this is strictly a nonpartisan characteristic of the high break-even point. In every price drop in any community it is always the marginal and inefficient operator who will be hurt first. In a good many cases he is a fly-by-night who can prosper only in times of inordinately high prices. His temporary eclipse is certainly not a matter of national concern, though few Congressmen will say so, especially in an election year.

There is an important point usually overlooked in any discussion of farm prices. When the entire economy began moving up in 1940, farm net income rose much more rapidly than did wages and salaries, and more rapidly than did the gross national product. Steadily mounting farm prices pushed farm net income to a peak in 1948; at that time farm net income was 3.87 times its 1940 level. Gross national product was only 2.57 times its 1940 level and did not achieve the proportional gain made by agriculture until 1955. Even in 1955, the wage and salary index was only 2.72 times its 1940 level, while farm net income was still 3.3 times its 1940 level.

This doesn't make the drop in farm prices and in farm income any less painful to the farmer. Nevertheless, we should all recognize that the boom came much more quickly to the farmers than it did to the nonfarm sections of the economy.

Another point seldom mentioned is the overall relationship between total farm debt and the liquid assets of farmers. At the start of 1956, total farm debt amounted to $18.8 billion. This included all real estate and non-real-estate debt owed by farmers. In comparison, the liquid assets held by farmers (currency, bank deporits and United States savings bonds) amounted to an estimated $18.9 billion. In other words, the farmer's cash position was still strong enough to pay off all of the debt against his business, his home, and his consumer durable items. There are few businessmen or other nonfarm groups that are as solvent as the farmers.

While farm income was down again in 1955, in nearly all of the corn and wheat States average income per farm ranged from $4,900 in drought-stricken Missouri to more than $10,500 in Iowa. It also might be pointed out that those States with the highest per farm incomes are those with little history of Government assistance.

Finally, there is the continuing rise of farm land values that points to the farmer's confidence in the future. Despite the fact that farm net income is down, the price of farm land continues to rise. It is now higher than ever before, and since 1953 all States except Vermont has recorder gains. In the predominantly farm States of the Midwest, the increase has ranges from 4 percent to 15 percent in the average per acre value.

That the current farm problem is a difficult one, no one will deny. It will not be eased by recrimination and political misrepresentation. Neither will it be solved quickly. However, the agricultural base is sound, and the long-range demand gives promise of a not too distant day when surpluses will be less of a burden than they are at present.

Bad for the Country

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, there is mounting evidence that all is not well with the Department of Defense as it is being administered by Secretary Charles Wilson. A genius for the management of big business, which Mr. Wilson undoubtedly demonstrated in his career before entering Government, does not seem to be adequate for the duties and responsibilities Mr. Wilson has assumed as a member of President Eisenhower's Cabinet. The Trenton Evening Times said editorially the other day that—

> Secretary Wilson's weakness for inept utterances, while embarrassing, is on the lighter side. Much more serious is the apparent failure of the United States to keep pace with Soviet Russia in certain vital fields of military development, particularly the air, attended by the bitter dissension among the services.
>
> Attributing the harmful discord to "eager beaver" service partisans, Mr. Wilson declares that the existing conflicts "are not good for the country." This is an extremely restrained estimate of their consequences. They are dangerous, and it is the responsibility of Secretary Wilson and President Eisenhower to see that they are ended.
>
> If Secretary Wilson has not succeeded after nearly 4 years in building an organization that can work in harmony for the creation of a formidable military establishment, he has written a record of failure. The existing situation is far from creditable to him or to the Eisenhower administration.

On Memorial Day I was one of the speakers at the annual observance held at the Beverly National Cemetery by the William A. Cortright, Jr., Post of the American Legion. The size and success of the affair is a tribute to the post members who work for months on the plans. It is a great expression of gratitude to the 10,000 veterans who rest in the cemetery.

The principal speaker at the Beverly ceremonies was Lt. Gen. Thomas W. Herren, commanding general of the First Army. The general's excellent speech emphasized the need for a great Ready Army Reserve to back up the Regular Army which has been cut back considerably in recent years.

General Herren did not say so, but the Reserve Act passed in 1955 has been a resounding flop. This is tragic at a time when the Russians and their satellites have 8 million men under arms. When the Reserve Act was adopted, I reported that, in my opinion, it was poorly drafted and replete with inequities and loopholes. To a large extent it was designed to cover up earlier failures. There have been only 800 Reserve enlistments in New Jersey in the past year. Our present Reserve strength is not much more than one-third of that which is authorized. The boys cannot be blamed for not enlisting in a program which is based upon a law so confusing that hardly anyone can understand how it is supposed to work. The Department of Defense would do well to take off its rose-colored glasses. The services should stop alternately bragging and fighting with each other and straighten out the mess they have created for themselves. Do we have a good Reserve? Do we have the best Air Force? Do we have the best missile program? Are our concepts of the missions of the services correct? These and many other questions of the American people should be answered because the people are, in fact, the owners of the Nation's Defense Establishment.

I include here for the information of my colleagues two editorials from the Trenton Evening Times:

[From the Trenton (N. J.) Evening Times of May 22, 1956]

RESERVE LAW FAILS

Endorsement by President Eisenhower and Defense Secretary Wilson of Military Reserve Week was not expected to give essential vitality to a movement which has failed from the beginning to enlist public interest, much less the practical support necessary to its success.

President Eisenhower signed the Reserve Forces bill last August with the comment that while it fell short of what it should have been "it does contain provisions that will definitely strengthen the Reserve structure." In practical application, however, the measure has failed to accomplish even this modest purpose.

It was hoped that by July 1 at least 95,000 boys between the ages of 17 and 18½ would volunteer to serve 6 months in the Reserve and that by 1959 the Ready Reserve would be increased to 2,900,000. Most recent figures show, however, that only 22,175 boys have volunteered for the 6-month enlistment and that the Ready Reserve numbers only 890,000.

It is apparent that when Congress, fearful of an unfavorable political reaction to any compulsory features in a military service bill, made the Reserve law wholly voluntary, it enacted an impotent and ineffective measure.

The youth of the Nation is not interested in military service. Its attitude toward this obligation of citizenship is influenced by the fact that the draft is operating in extremely slow motion and that there is little to suggest that service is inevitable. The young men prefer to take their chances on not being called.

It is obvious, accordingly, that if the Reserves are to become "a bulwark of our Armed Forces," the role in which they have been envisioned, more formidable legislation will have to be devised and enacted. It is not too soon to appraise the current law as a failure.

[From the Trenton (N. J.) Evening Times of May 23, 1956]

BAD FOR THE COUNTRY

There is mounting evidence that all is not well with the Department of Defense as it is being administered by Secretary Charles Wilson. A genius for the management of big business, which Mr. Wilson undoubtedly demonstrated in his career before entering government, does not seem to be adequate for the duties and responsibilities Mr. Wilson has assumed as a member of President Eisenhower's Cabinet.

Secretary Wilson's weakness for inept utterances, while embarrassing, is on the lighter side. Much more serious is the apparent failure of the United States to keep pace with Soviet Russia in certain vital fields of military development, particularly the air, attended by the bitter dissension among the services.

Attributing the harmful discord to "eager beaver" service partisans, Mr. Wilson declares that the existing conflicts "are not good for the country." This is an extremely restrained estimate of their consequences. They are dangerous, and it is the responsibility of Secretary Wilson and President Eisenhower to see that they are ended.

If Secretary Wilson has not succeeded after nearly 4 years in building an organization that can work in harmony for the creation of a formidable Military Establishment, he has written a record of failure. The existing situation is far from creditable to him or to the Eisenhower administration.

Another and a different phase of the Defense Department record is revealed in the complaint by Joseph Campbell, Federal Comptroller General, that the Department is illegally holding $400 million in foreign-aid funds that should have been handed back to the Treasury. It may be, as Defense Department officials maintain, that this is only a technical violation of the law but it is indisputably bad business practice.

The So-Called Right-To-Work Law

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1956

Mr. METCALF. Mr. Speaker, in Montana a drive has been launched to pass a law modeled after a statute of Iowa that would provide it to be the policy of the State "that no one shall be deprived of the right to work at his chosen occupation for any employer because of membership in, affiliation with, withdrawal or expulsion from, or refusal to join, any labor union, organization, or association, and any contract which contravenes this policy is illegal and void."

Two examples of the advertisements appearing in Montana newspapers follow:

SHOULD MONTANA HAVE A RIGHT-TO-WORK LAW?

Eighteen States have already enacted right-to-work laws. Would you favor a State referendum in 1956 to pass such a law for Montana?

Following is the substance of the right-to-work law in the State of Iowa:

"Right to join union: It is declared to be the policy of the State of Iowa that no person within its boundaries shall be deprived of the right to work at his chosen occupation for any employer because of membership in, affiliation with, withdrawal or expulsion from, or refusal to join, any labor union, organization, or association, and any contract which contravenes this policy is illegal and void (sec. 736A.1)."

What do you think of this law?

We want your comments. Address letters to Box 37, Scobey, Mont. (No letters will be published.)

Circulated and paid for by Montana Right To Work Association, Larry C. Bowler, secretary, Scobey, Mont.

WHO FAVORS, WHO OPPOSES A RIGHT-TO-WORK LAW FOR MONTANA?

Answer: All who want the right to join a union, not to be separated from the right not to join, are in favor. Opposed are those who favor compulsory union membership.

Is there any candidate for office this year, or anyone else, who would deny the people of Montana a right to vote on this question at the general election this fall?

Answer: It would be hard to believe so. This question is nonpartisan and involves a decision concerning basic liberties of the individual regardless of party lines.

What does the vast body of union members and other workers, as individuals, think about right-to-work laws?

Answer: From the flood of letters received here by now, they feel the best chance they have to actually express their point of view without fear of meeting harm, hardship or accident, is this fall at the general election, where they may freely vote as they personally choose.

How can the Montana Right To Work Association carry on its campaign to bring its question directly before Montana voters?

1. Through financial assistance, large or small, by all those who sincerely believe this law should be voted on.

2. Through telling friends and acquaintances that their support is urgently needed at this time.

3. Advertising costs money. The advertisement on May 3 in the press over Montana cost a total of about $902. This advertisement you are now reading would be larger and contain more information if more money were at hand.

4. MRWA calls on every public-spirited Montana citizen for assistance in bringing this question before the voters of this State.

5. Do not make checks out to the secretary of MRWA. Send contributions instead to the MRWA depository, a properly bonded institution, which has been engaged to receive and disburse all moneys on a business-like basis. That address is: MRWA Depository, Citizens State Bank, Scobey, Mont.

Advertisement circulated and paid for by Montana Right To Work Association, Larry C. Bowler, secretary, Box 37, Scobey, Mont.

Mr. Speaker, straight-thinking Montana citizens have been prompt to denounce this movement. In a recent issue of the Montana Farmers Union News some of these statements have been collected. The fact that a farm journal in a farm area carries this condemnation of such statutes is significant of the growing awarness that these laws are not just antilabor but are detrimental to all economic groups and against the public interest. The article follows:

"RIGHT TO WORK" FRAUD EXPOSED

Friends of labor in Montana are watching with alarm the growth of an advertising campaign promoting adoption of a so-called "right-to-work" law—the kind of union-busting legislation which has already been applied in 18 States. As is usual in such matters, the campaign is fronted by an obscure newspaperman—in this case one Larry Bowler of Scobey.

* * * * *

Montana newspapers were generous with space for a United Press release by Bowler announcing "a flood of replies" from "farmers, small-business men, self-employed craftsmen and other workers" showing a "trend" in favor of the law. But news media suppressed a release from James S. Umber, Montana AFL–CIO president, denouncing the movement. To provide a peephole in the lead curtain of the reactionary press, MFU News publishes Mr. Umber's statement, and the views of other leading Montanans. Emphases are ours throughout.—Ed.

James S. Umber, Helena, president, Montana AFL–CIO:

"The so-called 'right-to-work' law is a fake and does not give the workers the right to work, but rather gives unscrupulous employers the right to exploit the worker and destroy his economy. Wages in States having this vicious law have been going down, and the economy of these States will suffer as a result.

"Those who promote this immoral legislation would sacrifice the working people of Montana to low wages, nonunion working conditions and generally poor living conditios, and make all workers secod-class citizens.

"Religious leaders of all faiths have repeatedly condemned this unholy attack on the workers. * * * Republican Governor Fred Hall, of Kansas, veetoed such a bill a year ago on the grounds that such a law was class legislation designed to set one group of Americans against another and was a disservice to our country."

D. W. Chapman, Great Falls, president, Montana Farmers' Union:

"The law in question has one purpose only—to destroy unions, and thus deny workingmen the right to bargain collectively for decent wages and conditions. To sell such a bill of goods under the pretense of protecting a man's right to work is like selling arsenic labeled as candy. It is just one more foul on labor by a bunch of second-string plutocrats who specialize in fouls.

"The labor economy and the farm economy are inseparable. Laws that depress wages hurt the farmer just as much as the Eisenhower farm depression is hurting labor. The so-called right-to-work law is specifically condemned in the 1956 program of the Montana Farmers' Union, adopted by the membership at our convention last October, and will be fought with all our strength."

The Reverend Joseph Mackin, professor of economics at Carroll College, Helena, and director of the Institute of Industrial Relations, Butte:

"The campaign for the so-called right-to-work law in Montana, currently seeking support through the press and radio, is clearly opposed to Christian principles concerning the interests of labor and management.

"It is in the interest of social justice that this right-to-work subterfuge is understood for what it is. In effect, such legislation destroys unionism and, therefore, denies the workers their natural right to form associations. Such legislation, far from contributing to social order, promotes strife and discontent by outlawing gains which labor has rightfully won. The right-to-work law in reality is the right to stand alone against overwhelming odds. In our present economy a worker cannot normally realize his rights acting as an individual. He lacks the ability and experience to represent himself effectively. Organization is necessary for handling grievances, rights, and claims even when there is utmost good will on both sides. For these reasons unions are an indispensable ingredient in our society."

The Reverend E. Paul Conine, First Presbyterian Church, Billings:

"It is my earnest hope that the miscalled right-to-work legislation will not be adopted in Montana.

"Where such laws are in effect, wage standards and working conditions are lowered, and the whole economy suffers. Right-to-work laws prohibit agreements between employers and laborers which would limit employment to organized labor. The reasonable-sounding argument for this legislation is that a man ought not to be required to join a union if he doesn't want to. There are flaws in this argument.

"A man's ability to work is, in a sense, his own property. His rights in connection with his ability to work are limited, however, out of consideration for his neighbors. If I own property in a fine residential area, I am not permitted to build an unsightly shack on it because it lowers the standards of neatness and beauty my neighbors have established. In the communities in which most of us live, every resident is required to maintain certain standards of cleanliness, sanitation, and appearance to protect the standards in the community. Let someone introduce legislation for 'right to live' (in filth and ugliness), and the standards will be lowered.

"Organized labor and wise employers have worked hard to establish high standards for wages and working conditions in our Nation. Let legislation be introduced for 'right to work' (at lower wages and under poor working conditions), and the standards will be lowered, and the economy will suffer.

"There are always those who area ready to take advantage of the costly benefits that have been secured by their neighbors. It is only fair that all who enjoy the benefits share in their cost. When the cost of winning favorable working conditions is being borne by a union, it is reasonable to expect the workers who enjoy the benefits of the union to support it."

Ernest Salvas, Butte, executive board member, International Union of Mine, Mill, and Smelter Workers:

"Passage of a right-to-work law would disrupt long-established relationships between labor and management, to the detriment of Montana's economy.

"Most workers recognize the need to help pay the freight for the tremendous gains which have been won by labor organizations. For every right there is a responsibility; when the responsibility is denied, the right is lost."

The Reverend Howard Y. Williams, United Congregational Church, Butte:

"Trade unions have been a vital force in bettering the working conditions of men and women, and increasing the purchasing power of the masses of our people.

"The right-to-work movement is a deliberate effort to weaken trade unions and undermine working conditions, and should certainly be opposed."

Dr. R. R. Renne, economist, president of Montana State College, Bozeman:

"Right-to-work laws are bad not only for labor, but for business and the entire economy.

"Right-to-work laws provide that no worker shall be deprived of the right to work at his chosen occupation for any employer because of membership or nonmembership in, or refusal to join a labor union organization or association.

"In reality such laws can be used to make collective bargaining ineffective. An employer under such laws is not required to employ union labor or to bargain with workers over wages through their own collective bargaining agency, the union.

"Collective bargaining is well established as a vital part of our modern economy and is essential in establishing satisfactory wage levels basic to a high level of business activity and general progress.

"Without strong, well-managed, effective labor unions to bargain for labor's proper return with leaders of our large corporate industrial units, our economy could not operate successfully because there would be no suitable means of assuring satisfactory wage levels and adequate purchasing power of workers to consume the great output of our modern technology and industry."

A few of the national figures who oppose right-to-work laws are:

James P. Mitchell, Secretary of Labor: "These laws * * * result in undesirable and unnecessary limitations upon the freedom of workingmen and women and their employers to bargain collectively * * * they restrict union security and thereby undermine the basic strength of labor organizations. I oppose such laws categorically."

Dr. Israel Goldstein, president, American Jewish Congress: "Such laws seek the destruction of the trade-union movement, the abrogation of democratic rights which it has taken decades to secure, and the undermining of one of the strongest pillars of American democracy."

Dr. Walter G. Muelder, Methodist, dean of Boston University School of Theology: "The right-to-work laws are a virtual conspiracy of the crafty, the ignorant, or the misguided to subvert industrial peace, exploit men's need to work, and deluge the community with industrial irresponsibility * * * they only victimize the worker and make his organization ineffective."

The Reverend William J. Kelly, lecturer at Catholic University, Washington, D. C., and for 6 years chairman of the New York State Labor Relations Board: "No man or woman of good will should contribute money to proponents of this legislation * * * to contribute financial aid would be morally wrong. All good men and women, Protestants, Jews, and Catholics, should seek by every just means to get such right-to-work laws repealed and should oppose them whenever they are proposed."

Mr. Speaker, one final comment should be made. In the second ad above the Montana Right to Work Association asks if any candidate for office this year would deny the people of Montana a right to vote on this issue. The issue is contained in the question stated in the title, "Who favors, who opposes a right-to-work law for Montana?"

The reason why such a proposition should not be submitted to the people is that the very statement of the question is fraudulent and dishonest. Before the electorate is called upon to pass upon any question it should be fairly and honestly presented to them. The very title of "right to work" is fraudulent and the experience in other States has been that the campaigns to have such laws adopted have been as dishonest as that title.

Before the 84th Congress adjourns the Taft-Hartley law should be amended and section 14b rewritten to permit unions to contract for a closed shop or a union shop in all States. Such action would put an end to these attempts to foist upon the people a piece of detrimental legislation under a thoroughly misleading label.

Steel and Waterways

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I present a very fine speech made by Mr. E. B. Germany, president, Lone Star Steel Co., of Dallas, Tex. He is an able, enterprising, civic-minded man who presents in a unique way the problems which he has encountered in building a veritable empire in the southwestern part of the country. The address is as follows:

It is a privilege to discuss before this 43d national convention of the Rivers and Harbors Congress the steel industry's interests in the waterways of our Nation. I am sure that there are many others in steel eminently better qualified to voice opinions on this subject, but I rather suspect that my presence here is occasioned by the fact that my company—Lone Star Steel Co.—is one of the "have nots" with respect to water traffic.

There is an old quip you hear frequently down in Texas, and it goes something like this: "The wheel that squeaks the loudest is the first to get the grease." I have an idea that those responsible for selecting the speakers for this program had this thought in mind when they asked a representative of a "have not" steel company to talk about the value of waterways. I think their reasoning was good, and, ordinarily, I would not let this opportunity pass to get in a few licks favoring the development of the Red River and its tributaries, one of which flows along the south border of our plant property.

There are many other similar projects, which, when fully developed, will prove to

be major factors in the economic stability of industrial firms of specific areas, but I shall forego the selfish temptation to dwell upon individual cases and, in lieu, confine my remarks to a much broader and more important field—the security of our Nation. Even at the expense of shelving some of the goals of individual companies, the steel industry's greatest responsibility to itself and to the United States is the preservation of our national security and the maintenance of free enterprise. Without either of those, industry, as we know it, will cease to exist.

I am impressed with the rapid strides made in recent years in the development of our waterways. A great deal has been done. The St. Lawrence seaway has been a major accomplishment and a very necessary adjunct to our system of water transportation. There are others, but after naming a scant handful of waterways projects, the list falls off rapidly, and in the place of achievement, we find surveys, reports, recommendations, but very little in the way of real progress.

The past few weeks have been extremely important in the security program of our Nation. Before Congress, and it appears a certainty to become law, is a bill which proposes to build the greatest system of highways the world has ever known. Billions upon billions of dollars are to be earmarked for the orderly construction of a network of roads that will make our country a lacework of highways to serve many purposes. In peacetime, they will encourage the use of motor transport for the hauling of goods. They will provide our people with vacation opportunities that only Aladdin and his lamp could have envisioned. In wartime, they will guarantee the movement of men and equipment at a rate of speed never before possible. They will give our Armed Forces the mobility of the horse cavalry but at a speed that would have left old dobbin at the gate. Yes, our new highway program will produce fantastic possibilities.

In the air, the day hardly passes but what we read of tremendous advances being made in the development of aircraft of all types. Giant skyfreighters, supersonic fighters, global bombers, jet-propelled passenger liners are rolling off assembly lines all over the country, and on the ground, the expansion and construction of airports keeps pace with increasing demands of our airplanes.

In this great capitalistic system of ours, the race for business is the prima facie evidence of our selfish desires to grow and prosper. The presence of competition demands that we go forward if we are to stay in business. Competition, as we have known it for so many years, has been a sort of money game in which the loser had a chance to come back the next day and recoup his losses. There was no finality attached to losing.

From this competitive system emerged the most advanced nation the world has ever known. Today, however, we face another kind of competition—competition from without, and from an enemy who has the weapons capable of subduing if not exterminating. It is a grisly kind of competition we now face. In it, there is no prize for the loser unless you count slavery or death as some sort of sadistic reward. This is a race which we may never win, but it is a race, nonetheless, which we cannot afford to lose.

Now, what has this to do with waterways?

It has everything, and I think that the one most appropriate word with which to link waterways and our security is the word "dispersal."

To understand the drastic need for dispersal of our industry, one has only to look at a variety of maps. One such map shows the air facilities of the Nation. Streaking down from Minnesota to enclose our northern and eastern industrial centers is a prominent, heavily inked area defining the Eastern Air Identification Zone. Every airplane flying into this zone must be identified and cleared. Another type of map shows the concentration of industry, and still another, the concentration of population. Viewing these maps, and others, it is perfectly obvious to even the untrained eye that we have most of our eggs in one basket, the highly vulnerable eastern and northern industrial areas.

In the event you have not recently considered the danger of concentrated industry, I point out to you that only 10 well-placed H-bombs would jeopardize 80 percent of the Nation's steel production. Over half of the Nation's steel comes from four regions: Chicago, Pittsburgh, Philadelphia, and Youngstown. Ten areas contain the production of more than 50 percent of primary metals, 45 percent of fabricated metal products, 55 percent of electrical machinery, and about the same percentage of transportation equipment.

Three or four years ago, we undertook to check up on the security forces at our plant in east Texas. We installed what we think is a tight protective system, but even so, we realize that the danger of our plant ever being a bomb target is extremely remote. We doubt if anyone would ever consider wasting a bomb on us when the same bomb might be dropped on an area in the north from which comes practically all of our electrical equipment. If this source of supply is eliminated, our plant very likely would have to be closed down within 90 days.

Dispersal: the one great necessity in our industrial life.

Under consideration at this time are numerous plans to bring about more rapid dispersal of industry. There is a proposed plan for fast tax relief for the company moving a plant out of highly industrialized areas. There is some talk about favoring dispersed plants with defense contracts, and there is a proposal for tax reductions based on distance away from likely bomb targets.

These concessions are looked upon as incentives designed to disperse industry. Not much has been done about the problem and the planners of our national defense are worried.

I submit that if we develop our inland waterways to the extent we are now planning our highway system, no stopgap measures will be needed to lure industry away from the danger zones. Industry, recognizing the danger of concentration, will go of its own accord to sites which offer sufficient water for industrial uses and transportation. No less of an authority than Adm. Ben Moreell, of Jones & Laughlin, who certainly is qualified to speak, says that we can replace 25 percent of our steel capacity with new construction in dispersed areas in only 8 years if we proceed at the rate of only 3 percent per year. Inherently, steel and its related industries are high tonnage shippers. The advantage of water rates is almost a necessity. About 200 of our steel mills, blast furnaces and coke plants are now located on waterways.

This problem of dispersal is no fly-by-night proposition. If you think it is, consider the fact that United States Steel Corp. is presently storing its valuable records in a vast cave in western Pennsylvania. American Machine and Foundry, along with numerous other companies, his plans for quickly moving its general headquarters to an alternate site. The American Iron and Steel Institute has prepared a complete defense planning manual. Preparations such as these sound like the long look to me.

Again, I want to emphasize that none of my remarks is intended to be critical of anything that has been done in connection with the promotion of our waterways. As in airways, highways, and railways—Santa Fe just recently announced it would spend a hundred million dollars in 1956 to improve its system—move aggressively forward, one of the biggest challenges facing our Nation is the immediate development of our waterways, particularly the inland routes.

For a quarter of a century or more we have been struggling to make a waterway out of the Trinity River. This would connect Dallas and Fort Worth with the Gulf of Mexico. River boats once navigated this stream, long since eroded and filled with silt. For a quarter of a century we've been battling to make the Red River navigable to north Texas and Oklahoma. When boat traffic comes to Oklahoma we will have opened up another outlet for that State's considerable coal supplies. Some progress has been made on the Red River project, very little on the Trinity, and I'm sure there are similar projects throughout the entire Nation. In permitting these works to lag, we are deliberately delaying the day when we will have attained adequate dispersal. When we delay dispersal of industry and the people needed in industry, we increase the odds against our security.

The full development of our inland waterways strikes me as being a gilt-edged invitation to industry to expand out of the H-bomb districts.

American Legion Junior Baseball Program

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 2, 1956

Mr. KEATING. Mr. Speaker, one of the most worthwhile of the American Legion's many civic projects is its junior baseball program. From humble beginnings, this program has grown to be the largest athletic activity for young people in this country. For 30 years, with ever-increasing success, this program has served as a bulwark against juvenile delinquency by guiding American youth along the paths of good sportsmanship and good citizenship.

Those who instituted the American Legion junior baseball program and the many responsible adult leaders in the many communities across the Nation who carry it on today, deserve the thanks and congratulations of all of us. Through their efforts this commendable and wholesome project is helping to build a stronger, sounder, and healthier America of the future.

Under leave to extend my remarks, I include a brief article by Irving Herschbein from the June issue of the American Legion magazine, in which the junior baseball program is described:

In the 30 years of its existence the American Legion junior baseball program has grown to be the largest youth sports program in the United States. Even the Legion, which is accustomed to measuring its many activities in terms of thousands of participants, finds the 1 million junior baseballers who play each year a formidable number.

The more than 18,000 teams which compete annually under Legion auspices constitutes the biggest baseball league in the world. Their influence on organized baseball is best shown in at least one respect by the fact that more than half of all major league baseball players are graduates of Legion junior baseball.

Impressive as the figures and statistics are, the thousands of Legionnaires who give their time to the teams find the value of junior baseball to be the opportunity it

affords to teach youngsters the meaning of America.

The 15 million youths who have played baseball under Legion auspices have learned not only how to pitch, hit, run, and field; they have learned citizenship, loyalty, sportsmanship, team spirit and self-reliance.

The adult leadership given by Legionnaires throughout the country and Hawaii and Alaska has been the backbone of the program. Winning teams and healthy boys with an understanding of what America has to offer them can be built only by inspired, persevering leadership.

Federal Highway and Highway Revenue Acts of 1956

SPEECH
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 26, 1956

Mr. HOFFMAN of Michigan. Mr. Speaker, the gentleman from Virginia [Mr. SMITH] was talking about wage rates in Winchester. Within the last 2 or 3 days a representative of some of the workers who expect to be employed under this bill came to see me at my office. I asked him what the prevailing rate of wage was in his line. He said $3.60 an hour. Assuming that the wage in Winchester was $2 an hour, as I understand the gentleman, the Secretary here can, and probably would, because that Department is created to look after the workers, fix the wage at $3.60.

Now, one more question. Do the taxpayers in the vicinity of Winchester contribute toward the construction of these highways?

Mr. SMITH of Virginia. If the gentleman will yield to answer, of course, that is exactly what is going to happen, just as the gentleman has described it, because that is what has been happening ever since the Davis-Bacon Act was passed. Because of the interruption a while ago, I did not get the opportunity to say that it not only has the effect which I have mentioned but these roads are going to be built in the rural areas. They are a source of work for your country folks. Some of you represent city folks, but a whole lot of you represent country folks, and those country folks expect to get the right to work in that neighborhood. They are not going to get it if you fix the prevailing rates in the metropolitan area and the metropolitan contractor gets the work to the exclusion of the rural contractors and rural labor.

Mr. HOFFMAN of Michigan. Do those people who live in Winchester help pay for the construction of these highways?

Mr. SMITH of Virginia. Yes; they pay 10 percent of it.

Mr. HOFFMAN of Michigan. All right. What is their wage, who fixes it, how much is it? Do they get the $3.60 fixed by the Secretary of Labor?

Mr. SMITH of Virginia. The prevailing wage in California is going to be fixed by somebody sitting down here in the District of Columbia.

Mr. HOFFMAN of Michigan. My point is this: The taxpayers in Winchester contribute toward the construction of the highway and help pay the wage fixed by the Secretary of Labor. Now, do they get the same wage that the fellows from the outside who are working on the highway get?

Mr. SMITH of Virginia. They may or may not, I do not know.

Mr. HOFFMAN of Michigan. Of course, they will not, unless they are members of the union. They will be discriminated against because they may not be members of the union, or because their dues or special assessments have not been paid to date. The result is that though they will be taxed to build the highway, they would be denied the right to work on the job, that is, unless the provisions of the Virginia statute, that is, the right-to-work law, are correctly interpreted and adequately enforced.

Visit to United States by Russian Church Leaders

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, June 4, 1956

Mr. NEUBERGER. Mr. President, one of the leading Baptist clergymen in the Nation is Dr. Ralph C. Walker, now the minister of the Madison Avenue Baptist Çhurch in New York City. Before accepting this post, Dr. Walker was minister of the White Temple, in Portland, Oreg., and I have known him and his family for many years. They are outstanding people.

In a sermon recently, Dr. Walker expressed concern about attacks which have been made on the visit to this country of five Baptist leaders from the Soviet Union. From press reports, I understand that a second group of Russian churchmen is now about to make a similar visit here, as guests of the National Council of the Churches of Christ in the United States of America. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the sermon by Rev. Ralph C. Walker at the Madison Avenue Baptist Chuch, on May 20, 1956, on the subject of these visits by Rusian religious leaders and the attacks made upon them, entitled "That They May All Be One."

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

Five eminent Baptist leaders from Soviet Russia arrived in this country Friday, May 18. That evening they were in this chuch as guests of our own Baptist people at a dinner of fellowship and Christian welcome. For the next 30 days these 5 Russian Baptist leaders will be guests of 16 million Baptists in the United States, returning a visit paid to them by 4 Baptists from America last August.

The delegation from Russian includes four officers of the All-Union Council of Evangelical Christian Baptists: Jakov Zhidkov, president; Nikolai Levindanto, vice president; Alexander Karev, general secretary; and Illya Ivanov, treasurer. Miss Klaudia Tyrtova, worker in the Baptist Church in Moscow is the fifth member of the group. Their All-Union Council is made up to 520,000 Baptists in 5,400 Russian churches.

The visitors will attend meetings of the executive committee of the Baptist World Alliance, in Washington, D. C., May 22 and 23, attend the Southern Baptist Convention, in Kansas City, Mo., May 30–June 2, and the American Baptist Convention in Seattle, Wash., June 15–17. They will also visit many other American cities where they will preach in many Baptist Churches. These visits are intended to develop mutual understanding and to create a spirit of unity and fellowship among Christians living under different political systems.

This is the first of the recent exchange visits of Russians to the United States, religious or otherwise, to include a woman. It is also the first church delegation to America since 1928, when 11 Russian Baptists attending the Baptist World Alliance in Toronto, Canada, spent several weeks here.

The 4 American Baptist ministers who went to Russia in August 1955, for a 2-week visit included the first Negro American clergyman to visit the Soviet Union, the Reverend Dr. Joseph H. Jackson, Chicago, Ill., president of the National Baptist Convention, United States of America; the Reverend Dr. Theodore Adams, Richmond, Va., pastor of the First Baptist Church and president of the Baptist World Alliance; the Reverend Dr. Carney Hargroves, Philadelphia, Pa., pastor of the Second Baptist Church and former president of the American Baptist Convention; and the Reverend Arnold T. Ohrn, Washington, D. C., general secretary of the Baptist World Alliance.

This is, of course, an event of extraordinary Christian and international signficance. These Russian Baptists are our blood-brothers in the faith. They have suffered for the faith for many years far beyond any experiences of our own. We believe it is the Baptist spirit and the Baptist interpretation of the Gospel which have produced in them a heroism like that of the early Christian martyrs in Rome. After the Russian revolution in 1917, especially after Stalin's ascent to complete power in 1929, there was violent persecution of all religious groups in Soviet Russia. That repression continues in varying degree until this day. These visitors, to use the Bible phrase, "bear in their bodies the marks of the Lord Jesus." They are upholding the banner of Christ in a difficult, dangerous time.

On June 1 another, second delegation of Christian leaders is coming from Soviet Russia to visit the United States. They come by invitation of the National Council of Churches of Christ in the United States of America. They will represent the Russian Orthodox, Armenian Orthodox, Lutheran, and Baptist-Evangelicals.

What should the attitude of God-fearing and patriotic Americans be toward these visits of Russian Christian leaders? How shall we receive them? What impression of our country's spiritual life should we convey for them to carry back to Russia?

First, there are two things I want to make unmistakably clear. One is, that because our Lord Himself prayed for and believed in Christian unity, we also pray for it and believe in it. The second is, that we as Christians can have no fellowship with atheistic communism. If we felt that this visit would weaken or compromise in any manner our absolute opposition to the teachings and practices of atheistic communism, we should be worried indeed.

What a strange and terrifying thing communism is. As has often been pointed out, it is a heresy from Judaism and Christian-

ity; a contradiction, a perversion, an upside-down and backwards-going misinterpretation of some of the very fundamentals of judaism and Christianity. It is amazing and frightening how communism takes the very aims and promises of our holy faith and seems to be able to lead the way toward them by hardboiled practical means which appeal to the ignorant and pathetically needy masses of men. Communism substitutes other standards for the standards of truth and then calls them truth, and somehow they succeed in getting men to believe in these new standards.

Communism, like Christianity, claims to be working for the brotherhood of man and a better day for all humanity, a day of justice and hope. But communism is earthbound. As the famed Dean of the Cathedral of St. John the Divine, James A. Pike, has declared: "Marxists believe that a man dies like a dog: hence they treat him like one now. If he gets in the way he can be put out of the way."

We who call ourselves Christians turn in dread from atheistic communism, but we give our whole hearts to the prayer of Jesus Christ when He prayed "that they all may be one." In deepest humility we confess that even in our beloved United States, with all its Christian leadership and its multitude of professing Christian people there are division, unbrotherly strife, separation and segregation. Some Americans are doubtless almost as much worshippers of material things as are the Communists. We may take pride and comfort in the fact that while the Communists are Godless, we believe in God; but the question remains, Do we truly worship and serve God in the spirit of Christ?

May God make this tongue to cleave to the roof of this mouth if any unnecessarily critical or accusatory word is uttered here today. But I must speak out, I dare not desist. I must describe to you in terms as temperate and fair and true as is possible some of the attacks which are being made in public today against this visit, against these our Baptist brethren from Soviet Russia, against those of us American churchmen who are their hosts.

Here is a full-page advertisement in the Philadelphia Inquirer, April 26, 1956. I read it to you:

"Eight saints, or eight spies? Eight top Red church leaders are coming over here in June from Russia, sponsored by the National Council of Churches. The Reds are using your church. Protest. Get the facts at the mammoth rally. Philadelphia's Convention Hall, May 4, 1956. Rally sponsored by International Council of Christian Churches representing 57 Protestant denominations."

The International Council publishes a periodical called the Christian Beacon. In its May 10 issue the statement is made: "These men are coming as tools and agents of the (Russian) secret police. * * * Are they Christians * * *, or are they now posing as Christians and in the name of Christianity promoting communism and using the Christian churches as a cloak for sinister purposes? We believe it is the latter. * * * The Christians in Russia are in the underground (or) in the concentration camps."

I bring these matters to your attention because today that same International Council is advertising a rally here in New York City at Carnegie Hall this week at which it will seek to disseminate the same accusations against both the visitors and the hosts in this Russian-American Christian interchange.

Who is this group who makes such serious and terrifying accusations? If they are right, even partly right, a multitude of American Christians are in deep trouble indeed.

This so-called International Council of Christian Churches, in the first place, is a numerically small, very small and insignificant organization. Its substantial membership, contrary to the title "International" is mainly in the United States. Its affiliates abroad though totaling an imposing figure of 43 denominations has a trivial actual membership count. The almost entire popular membership of the International Council is in the United States. For a long time the spokesmen of this dominant American section had claimed a popular membership of over a million persons. But when, under pressure, the true statistics were at last released that number had shrunk to 220,000 and somewhere near 75 percent of that total was in one denomination, the General Association of Regular Baptists, which as a denomination is not even formally linked with the International Council. The other denominations making up the council are very small ones, often called fringe sects.

In the second place, the constituent membership in this international council is only extremist fundamentalist. Those of you who often hear the preaching from this pulpit, and those of you who are acquainted with the record of my ministry through the years will hardly doubt my own theological conservatism. But the fundamentalism of the international council and its churches is harshly extreme. Their proclaimed beliefs seem always to lead them to continually accuse and criticize others organizationally apart from them, even to the point of calling them unbelievers. If you do not express your belief exactly as they do they call you a "modernist," "pacifist," or "near-Communist"; accuse you of denying the deity of Jesus Christ, Hir virgin birth, the inspiration of the Scriptures, or of working against your country and being a Communist agent or dupe. In other words, their policy seems to have been to attack, to criticize, to cast doubt upon the faith, sincerity, and patriotism of others who would not join them.

A third and most discouraging fact about this international council, especially to us Baptists who pride ourselves on our democratic form of church government, is that it is not really responsible to its membership. By the information of former constituent bodies, who have withdrawn from the international council, it is under "boss" rule and undemocratic leadership using objectionable administrative practices. The international council is dominated by a small clique of willful men who are forever trying to force their way to undeserved national religious leadership by blatant campaigns of intolerance and bigotry, using slander and misrepresentation, and encouraging sectarian divisiveness and rancor; men who are ready to endorse many harmful public policies.

Suffice it to say that certain of the Council's leaders have attacked the following: (I refer usually to one or more of their leading men.) They have been bitterly anti-Catholic, and while carefully phrasing their words, have been strongly anti-Semitic. They have made almost endless attacks on the World Council of Churches and the National Council of Churches. Not only that, but they have attacked the regular organizational of the smaller doctrinaire fundamentalists, the National Association of Evangelicals, and also Billy Graham, the evangelist, who returned their fire by saying of the International Council that their "dissensions in the ranks of evangelical Christians are a stench in the nostrils of God." Who could be more conservative than the Sunday School Times in theology, yet they attacked the Times. And who doubts the theological fundamentalism of the great body of Southern Baptists; but in past years a prominent international council pastor said such things as this: that the Southern Baptist Convention was "an unclean church and a denomination permitting worldliness," and "a denomination with a creeping tendency toward apostasy," apostasy meaning "unbelief."

As for our own American (Northern) Baptist Convention, the council's paper, the Beacon, has asserted that our leadership is "Bolshevik," and that our convention "is no fit body for a true Christian to be affiliated with."

One of the most saddening things to me about the leadership in the Council has been their bitter record on the issues of war and peace. During World War II, for example, the council's president, perhaps moved by the hysteria of the times, envisioned the substantial annihilation of the Axis nations, and in the recent cold war years, the council's American directorate found it in its heart to pass a resolution indirectly justifying the policy of preventive war.

If, now, our guests from abroad may perhaps be embarrassed by any accusations against them as our guests and against ourselves as their hosts, let them be encouraged by the fact that their accusers have been accusing a lot of other people for a long period of time. Let them realize that they have a very great number of friends who will not let uncontrolled suspicion draw them away from extending a Christian welcome and a listening ear.

For instance, President Eisenhower wrote a letter last January to Premier Bulganin of the Soviet Union, in which he said: "Consider, also, the mountains of distrust and misunderstanding that would disappear if our peoples freely exchanged news, information, visits, and ideas."

Those eminent American churchmen (including our own Dr. Herbert Gezork, president of our Andover-Newton Theological Institution in Massachusetts), who visited Russia this last March, said on their return:

"We were courteously received in Russia and we hope to reciprocate here. A beginning has been made. Under the guidance and power of God we believe the Church of Jesus Christ may be used for the reconciling and salvation of the nations."

Let our Russian visitors remember that they as Baptists were invited here by their American Baptist brethren in the spirit of trust and confidence and the sincere desire for true fellowship in the common struggle against all Satan's evil, treachery and oppression.

Let them know how strong are the forces of Christ's people gathered into the National Council of Churches, 30 denominations such as Presbyterians, Congregationalists, Lutherans, Methodists, and our own American Baptists—representing 35 million Christians as opposed to the International Council's scant claimed 220,000—who wholeheartedly welcome them here.

We Baptists do not think that any one church or demoniation, or any one council of churches on earth today can claim to be the one true church. Yet, because Christ prayed as He did, we do believe that there is one church, one body of Christ, one faith, one baptism, one God and Father of us all.

In knowledge of present facts and the terrible history of past persecution, and in Christian charity and hope for the future, we believe the visiting Russian clergymen are at one with us in that faith, in that church. We believe—unsubstantiated accusations and suspicions to the contrary—in the Christian integrity and faithfulness of our visiting Russian brethren.

Hear the witness of the delegation of our own American Church leaders who after recently visiting Russia confirmed the judgment of famed Pastor Niemoeller as to the living church in Russia. Here is what they said:

"We had formal conferences as well as countless conversations (with) * * * Russian Christians. We visited many churches and shared in the worship of Orthodox as well as Baptists. Lutheran and Armenian

Orthodox joined in our discussions. We were taken to theological seminaries and academies and to monasteries. * * * It is apparent that church and state (in Russia) have reached at least a temporary accommodation. During the last several years the policy of the Soviet Government has discouraged persecution of Christians and regarded the clergy and other believers as loyal citizens."

And here is further witness by our own Dr. Gezork of Andover-Newton, a Baptist member of the National Council of Churches delegation to Russia last August:

"The picture which we found as far as the life of the church is concerned was one of light, but also of deep shadows. Freedom of religion is guaranteed, and we found no instance of interference with worship in the church. In every church we visited we saw large and reverent congregations. I preached twice in the Moscow Baptist Church, on a Thursday night to 1,500 and on Sunday morning to at least 2,000 people, a thousand of whom stood shoulder to shoulder in the aisles and on the steps to the balconies through a service lasting 2 hours and 15 minutes. * * * The government has issued a strongly worded decree that Christians are to be considered loyal citizens of the Soviet state, and insulting attacks on clergy and believers are not permitted. All this is encouraging.

"But there was also the other side: No religious education is permitted, there are no Sunday schools, no Christian youth organizations. The goal of Communist leadership is evident. It is to make out of the church an agency of pure other-worldliness, remote and separated from the reality of daily life, its prophetic voice stilled." And here Dr. Gezork was referring to its voice on the great moral issues of our day such as war and peace and corruption in high places, "its influence upon the coming generation reduced to a minimum."

Surely our Soviet visitors can, as they may be publicly demeaned by the clique in the International Council, take comfort in the fact that this small group of trucculent extremists may be honestly characterized as irresponsible men who have made it their cardinal policy to damn other Christians, whether they be Protestant, Catholic, or Orthodox; that the record of these men shows that they are given to divisiveness and separation; men whose own congregations and denominations have repeatedly split off and subdivided into splinter groups; men who have themselves been fairly indicted of grossly undemocratic administration and gross exaggeration and distortion of facts, and of stating half-truths, and of using partial statements as if they were the whole of the statement in order to discredit others; in short, men who are constantly hatemongers and fear peddlers, apparently tending toward a philosophy which may be characterized as an obsessive spiritual and social nihilism; men perpetually filled with rage and frustration; men who are blinded leaders of the blind. These men for years past have on their record been proven to be sowers of discord and dissension, engendering ill-will and suspicion, seriously injuring the peace of God's church. They have compulsively played upon fears rather than facts.

The word of God condemns those given to strife and dissension. See II Timothy 2: 24.

Now I note, also, in the New York Harold Tribune this morning that Herbert Philbrick, who is a Baptist himself, and who was an FBI undercover agent against the Communist Party in America, for which we all thank him, has an article entitled: "Soviet Clergymen and the Church in Russia." In it he comes right out and suggests that the visiting Russian church leaders, including the five in our Baptist delegation now here, are not the representatives of the Russion Christian believers, but, he says, "represent only the Soviet state apparatus," and, furthermore, than "an agent of the secret police (M. V. D.) will be among them" (the members of the delegation). When Mr. Philbrick uses the words "churchmen, clergymen, or Baptists," he puts them in quotation marks to create the impression that the visitors are not legitimate Christians.

His article is full of suspicion and hostility against our Russian guests. Now, there are two things I want to note about his article: One, Mr. Philbrick says his own "facts about religion in the Soviet Union are sparse." I think he means by this that, for the purposes of his article, he was unable to adduce any verifiable derogatory data against the visting Russian Baptist delegation. Second, he states he cannot divulge the names of the informants upon whom he relies for his derogatory conclusions. I am, for one, inclined to agree with the President of our country that we should be reluctant to publicly credit faceless accusers whose witness or credibility may be in doubt.

But I must go one step further. In good caution we might reasonably hypothesize that evil might somehow flow from these visits or visitors. Although, history teaches us that evil is more likely to come to the visitors themselves than to us here in America. For, back in 1928, 11 Russian Baptists came out of the Soviet Union to attend the meetings in Toronto, Canada, of the Baptist World Alliance. On their return home, 10 of these 11 were exiled to concentration camps, and of these, only 1 survives to this day.

But, even keeping our caution, let us see how our Lord would have acted under similar conditions. Look at what he did in mingling with the publicans, lepers, social outcasts, Samaritans, and even thieves. Look at how he acted in the case of Judas, his own disciple who became a traitor.

Jesus knew all along Judas would betray him. Yet, in the upper room, he washed the feet of Judas with the rest. He treated him, like all the others with equal love and trust. If we follow the example of our Lord we must extend that same trust, that same tenderness, and that same love that the Lord extended even to Pilate, even to Judas.

God pity those who conceivably might, in this case, betray the trust of their hosts. But, without knowledge that this is so, or even in unfounded dread that it may be, we who are followers of Christ cannot let down an iron curtain of hate, fear, and suspicion against these our long-suffering Russian brethren who say they come here in the name of our Lord.

The Economic Troubles of the Farmers

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, June 4, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a radio broadcast prepared by the Public Relations Department of the Farmers Union Grain Terminal Association of St. Paul, Minnesota, dated May 29, 1956, dealing with the economic troubles of the farmers.

There being no objection, the text was ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP, TUESDAY, MAY 29, 1956

What kind of ideas do you think the city person gets about farmers after he reads a headline like this in his newspaper: "With Food Setting Pace, Living Cost Is Going Up"? That headline was in the city papers last week. Now, with living costs going up as they are, you can't blame city people, or anyone else, for getting hot under the collar when they read about prices going still higher. And, when headlines tell them that cost of living is going higher because food prices are rising, who are city people going to blame? The farmer, of course.

That gets us hot under the collar here at GTA, because we know it is not true. We know for a fact that farmers aren't to blame for the rise in the cost of living. We wish newspaper headlines did not shave the truth so thin.

What are the facts? Farmers took a 26-percent cut in their prices during the last 3 years. That is how farmers have been holding down the cost of living. They've been subsidizing the inflation by getting less, when business was getting more. Any way you want to look at it, there's inflation in prices of manufactured goods and services. We all feel it. The reason the cost of living hasn't gone up a lot faster is the farmers. They've absorbed the inflation. City folks ought to be aware of that.

It may look good on the grocery bill to let farmers pay for the inflation. But the trouble is that it won't work for long. The farmers' economic troubles are now moving into town. They're coming in the back door. Because farm buying power is at its lowest point since back in the depression days of the 1930's, factories are shutting down. Hundreds of thousands of city workers who haven't got jobs. Sure, the food from the farms is cheaper, but that doesn't mean much when there's no paycheck.

It's the old story all over again—the economic troubles of one segment of the population are visited upon the others. City people ought to understand that a farm depression finally moves to town. Cheap food—which means a few dollars saved on food bills—first causes trouble for farmers, then it starts pinching paychecks in the cities. It's happening now in Detroit, in Racine, Kenosha, Moline, in our own Twin Cities, which depend, in many ways, on the prosperity of farms and surrounding towns for their own prosperity.

Put more buying power in the farmers' hands and farmers will start buying machines and tools they can't buy now. It's as simple as that. Farmers understand it. That's why they voted 95 percent in the wheat referendum last year to keep their farm program intact and their wheat prices stable. They know that farm prices are made in Washington. Now they are getting ready to cast another big "Yes" vote in the wheat referendum July 20.

Thanks for listening, and join wtih your farm neighbors all over the Midwest in GTA, the co-op way.

New England Hospital Plan for Alien Women Physicians

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, June 4, 1956

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed

in the Appendix of the RECORD a recent editorial entitled "New England Hospital Plan for Alien Women Physicians," written by Carl Bearse, M. D., and published in the Journal of the American Medical Association for February 18, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEW ENGLAND HOSPITAL PLAN FOR ALIEN WOMEN PHYSICIANS

(By Carl Bearse, M. D.)

A special program has been inaugurated by the New England Hospital, Boston, in the belief that international relations as well as the care of patients would be improved if extra consideration were shown to alien physicians serving as interns and residents in United States hospitals. Since this hospital is staffed entirely by women, men being included only on its consulting and courtesy staffs, the program was conceived primarily to aid foreign women physicians. There are more than 5,000 alien physicians from 83 different countries now in training in the United States. Of these, 12.3 percent are women. When these physicians return to their homelands, they will come in contact with thousands of their countrymen as patients. It is evident, therefore, that they possess tremendous potentialities for promoting friendship with the United States.

That such a program should originate at this 93-year-old hospital is not surprising. Here was established the first school of nursing in the United States. The New England Hospital was also the first to admit a Negro woman for training as a nurse and the first to use visiting nurses. The current plan for alien women physicians is another pioneer effort, characteristic of this hospital.

It has been recognized by both governmental and civilian agencies that the extension of good medical care to persons all over the world would be helpful to international relations. As a result, thousands of alien physicians have been encouraged and assisted to visit the United States, today's medical mecca. At the present time, about 60 percent of the hospitals approved for residencies and internships by the American Medical Association council on medical education and hospitals have alien physicians on their house staffs. These physicians constitute up to one-fourth of the total of resident staffs on duty in the hospitals of this country. Without the services of these physicians, hospitals would have many more unfilled positions than they now have (20 percent residencies and 30 percent internships). In fact, many small hospitals are advertising in foreign medical journals in an effort to attract interns and residents. Properly indoctrinated, these physicians can be of tremendous assistance in caring for patients, first, in our hospitals and, later, in their own countries.

Wrote Dr. J. E. McCormack: "We should resist every effort to exploit foreign physicians who are in this country for training. Many foreign interns and residents are used in hospitals where they are responsible for menial tasks in the care of an inordinately large number of patients, in return for which they receive little or no training. Even in larger centers there have been isolated instances where foreign physicians who sought research opportunities in this country were actually used as technicians. All this is very bad—for international relations."

The New England Hospital plan, on the other hand, takes into consideration both the social and psychological needs of foreign physicians, as well as the need for medical training. Prior to the training itself, a month's course of indoctrination and orientation is given. Since the English of these alien physicians is seldom fluent, and they are usually unfamiliar with idioms, they are given an intensive course in English. The course stresses medical vocabulary and the technical terms for drugs and other treatments with which the visitor may be unfamiliar. In addition, they witness demonstrations of medical techniques in use in this country. Thirty-six formal lectures in the basic sciences and in the clinical application of new therapeutic techniques are given by experts in their fields. This additional instruction supplements usual housestaff activities such as grand rounds, clinical and pathological conferees, and journal club meetings. Special functions such as teas are arranged so that these alien physicians can meet American business and professional people as well as people from their own country. They are also encouraged to participate in social activities with students from various parts of the world. Tours have been arranged so that they may visit art museums, pharmaceutical plants, and other places of interest. The staff is also raising $5,000 for travel subsidies. All these and many other activities show the visitors what America in action is really like. It certainly seems that the New England Hospital is offering a construction program that other hospitals with alien residents and interns would do well to emulate.

Activities of Midwest International Trade Development Center, Inc.

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, June 4, 1956

Mr. BENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the activities report of the Midwest International Trade Development Center, Inc., which reached its first milestone on April 22, 1956. This report summarizes the scope of this enterprise, and is an indication of Ohio's new "Forward Look" beyond the horizons of its own boundaries. I feel that the report warrants the attention of the Senate, as well as that of the general public.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

MIDWEST INTERNATIONAL TRADE DEVELOPMENT CENTER, INC., ENQUIRER BUILDING, CINCINNATI, OHIO, ACTIVITIES REPORT, APRIL 22, 1956

On April 22, 1956, MITDC completed 1 year of operation. During that time, we feel much has been accomplished toward our goals of developing more trade, understanding, and peace between this Midwest area and the free world.

We have had inquiries from abroad requesting names of firms in this area, and we have established these contacts. We have found export managers for Midwest Radio & Television Corp., Central Tool Co., and Senco Products of Cincinnati, of Ohio, and Record Files of Wooster, Ohio. We have had one trade luncheon here, and others are in the planning stage for other towns in the MITDC area. A trade mission to Latin America is planned for the fall of 1956.

We have endeavored, through questionnaires sent to almost four hundred firms in this immediate area to find those desiring foreign markets and sources of supply. We have begun making market surveys for these firms in cooperation with Xavier University.

We have established contacts with the United States Export-Import Bank, the United States Department of Commerce, both locally and in Washington, with all the Ambassadors and Consuls in Washington, with all the American consuls abroad, and the consuls of other countries residing in the MITDC trading area. We have their complete cooperation, as stated in letters to our office, in passing along information concerning this center and its activities to businessmen in other localities to stimulate more trade.

We have secured a consul for Mexico for Cincinnati, Miss Aria Parke Schawe, who has had broad experience in Mexico and other Latin American countries, and the matter is now in the hands of the Mexican Government for approval. We have every reason to believe this appointment will be approved, and continuing efforts are being made by this office to secure consuls for other countries in Cincinnati.

We have provided translation services when necessary for firms or individuals and speakers for various organizations. We completed all research to provide names of all the leading manufacturers and industrialists in this Midwest area. We are now mailing our house organ, The Trade Mart, to approximately one thousand businessmen and other interested organizations in the MITDC trading area each month as well as to American consuls abroad who keep it on display for business opportunities in their localities.

We are affiliated with International House of New Orleans, receiving all of their experience and services. We have a competent corps of representatives in Latin America, in three European countries, one Asiatic country. We shall continue to secure representatives in other sections of the world.

Through efforts of MITDC, Xavier University is now offering a course in International Trade. The University of Indiana is now exploring the possibility of offering more scholarships to Latin American students at American universities and obtaining scholarships at Latin American universities for American students. We have arranged for one exchange doctor in the Department of Radiology at General Hospital.

United States Congressmen GORDON SCHERER and WILLIAM HESS have been contacted, and they are arranging for a meeting of the various representatives in Washington from the Midwest area so that a statement can be issued jointly in favor of MITDC, and arrangements can be made for more support of this project in Washington.

The State of Ohio, in cooperation with MITDC, is preparing a new booklet on Ohio in color. Farson, Huff & Northlich, of Cincinnati, Ohio, are now preparing the dummy for this booklet which will be published in various languages, seeking to draw tourists to Ohio. Mr. E. E. Schnellbacher, Director of the Office of Intelligence and Services, Bureau of Foreign Commerce, Washington, D. C., said in his talk before the American Association of University Women in Cincinnati, March 15, 1956:

"If instead of shipping goods to foreign countries, we sent ourselves and brought them back, or if we brought enough customers here to equal production, we would have a balance of trade. * * * Tourism is very sound business because you provide the service industries with dollars which they in turn spend. There is no estimate of how American tourist dollars spent abroad return to this country in purchase of materials from American industry * * * France, for example, made more money from the United States through tourism than from all the things she exported to the United States in goods."

Mr. C. A. Harrell, city manager of Cincinnati, has been contacted regarding the city of Cincinanti assuming some of the expense of publishing this book concerning Cincinnati and Ohio. While the city prob-

ably will not be able to aid in financing, Mr. Harrell stated in a letter to this office:

"I will be glad to discuss this matter further with you, if you feel the city can be helpful, for I am very much interested in the type of thing you are doing."

Negotiations were made with WRUL, World Wide Broadcasting, of New York City, to transcribe their recording of the MITDC banquet speeches in October of 1955, and news of this banquet has gone all around the world together with the news of the establishment of this trade center. NBC–TV has also been in consultation with us, and MITDC is to be included in their special telecast from Cincinnati on April 17 for Dave Garroway's Today.

On the civic service side, MITDC has cooperated with the Children's International Summer Village to provide a luncheon for the delegates to the village. We have provided contacts, home entertainment including dinners, and industrial tours for the following visitors to Cincinnati; Latin American businessmen brought by Amertool Services; Japanese businessmen brought by Amertool Services; Latin American agricultural team brought by United States Department of Agriculture; Mexican group of teachers, secretaries, accountants, etc., brought by Experiment in International Living; teachers from India, Japan, and Argentina brought by Cincinnati Board of Education; doctors from Latin America brought by Wm. S. Merrell Co.

We are now preparing, in cooperation with the William S. Merrell Co., a dinner and reception for the 122 resident international doctors, internes, and nurses at the greater Cincinnati hospitals.

We have cooperated with the Cincinnati Council on World Affairs for their Latin American Institute in January, and we have provided letters of introduction to various Cincinnati area people who were leaving for foreign travel. We have helped Ohio State University publicize its April 7, 1956, regional foreign trade conference covering a 5-State area.

The past several weeks we have been exploring the possibility of JayCee support of MITDC, having had a conference with Mr. George Kral, president, and Mr. Lawrence W. Bratburd, international relations chairman for the local group. We have also had correspondence with Mr. William Hellerman of Columbus, Ohio, JayCee director of international relations who is very much interested in MITDC and is urging support of it by the local group.

We have also had contact with Mr. Roth of the Retail Merchants Association, and they feel they will be interested in participating as founder members of MITDC. In fact, a membership campaign is now in the planning stage, and will be presented for board approval within the next 2 weeks.

We have been exploring the possibility of publishing for distribution abroad, an industrial directory of the Midwest area in four languages, and we have discussed this matter with Diamond Directory and Conover-Mast Co. It is now under consideration by these two firms.

All of these efforts were made while we were also soliciting and obtaining memberships with a staff of never more than 4, most of the time with only 2, with a total budget for equipment, office expenses, salaries, et cetera, of only $21,799.94 with pledges and income of $21,850, leaving a bank balance at this time of $50.06. Naturally, as with all new enterprises, mistakes were made during the first year of operation. However, we feel these have been corrected, and we are now in a much stronger position to obtain more memberships and provide more services to our members and to the community because the necessary groundwork has just now been laid.

Many other cities are now considering establishment of just such a center as ours, and we have been getting many inquiries as to how to start a center. If we do not go full steam ahead, these other cities will overcome our head start and much of the export and import business which could come to this area through MITDC will be diverted elsewhere.

The American Merchant Marine—Key to Trade and Defense

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Monday, June 4, 1956

Mr. POTTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most excellent essay entitled "The American Merchant Marine—Key to Trade and Defense," written by Miss Nancy McDonald, a high-school student of Detroit, Mich. I am pleased and proud that Miss McDonald has been awarded a national prize for her paper in the 1956 Harding Memorial Essay Contest conducted by the Propeller Club of the United States.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

MERCHANT MARINE: KEY TO TRADE AND DEFENSE

Every lock has a key. Every nation which is to know economic prosperity and national security in today's world must have in its possession the key to both trade and defense; namely, a strong merchant marine.

Since the end of World War II, the United States merchant marine has not kept pace with the merchant marines of other nations. The United States, the top shipbuilder during the war, has dropped to sixth place. The active United States merchant fleet of approximately 1,500 vessels carries just over one-fourth of all the cargo tonnage transported in the water-borne foreign trade of the United States.

This condition exists largely because the basic pay of an American shipyard worker is 4 to 10 times that of a foreign yard worker. Consequently, United States shippers can no longer compete successfully with foreign competitors, for the building of a vessel in an American shipyard may cost from 50 to 100 percent more than in a foreign yard. For example the superliner the *United States* cost $50 million to build in an American yard in 1952 while in a British yard it would have cost $30 million.

Another reason United States lines receive less business, and consequently order fewer ships from United States yards is that the merchant marines of foreign nations, which have been restored to prewar status, have lower operating costs. For example, an American ablebodied seaman receives an average pay of $315 per month compared to the Britisher's $60 a month or the Chilean's $20. Thus, the total annual bill for the crew's wages of the liner *United States* is almost $7 million which is double what a British crew's wages would be. It is not difficult then to understand why in 1954 out of 850 dry cargo ships built in the world, not one was built for private account in the United States. Moreover, since the end of World War II, while other maritime nations have added more than 2,700 vessels to their fleets, the United States has added less than 100.

Of course, Americans can always play at being ostriches with their heads stuck in the sand, pretending that the United States does not need ships. How many times, however, have ostriches received rather sudden and forceful blows from behind while in this rather defenseless position? It is relatively easy if one's head is not stuck in the sand to understand why America needs a strong merchant marine for trade and, thus, for defense.

The industries of the United States are becoming increasingly more dependent upon ships to keep them supplied with the raw materials which they need in ever-increasing amounts. For example, the United States imports 98 percent of all manganese without which steel cannot be produced. It is estimated that by 1960 the United States will need to import 40 million tons of iron ore. While the United States needs it imports, it, also, has built a very valuable export trade. To illustrate, 1 out of each 20 passenger cars and trucks which comes off American assembly lines is shipped to a foreign country.

Today the people of the United States have a great opportunity to develop new trade for the St. Lawrence Seaway Development Corporation expects seaway navigation works to be ready for the first larger ships in the spring season of 1959. The Corporation estimates that 50 million tons of traffic will be able to move through the seaway by 1965. If more ships are not constructed by United States shipping lines, however, the United States may not share in the St. Lawrence trade. By then the United States may not be engaging in much other trade either. Fully 80 percent of the United States merchant marine is composed of ships built during World War II. Since 20 years is regarded as the efficient life of a merchant ship today, this 80 percent of the American merchant fleet will be obsolete by 1965.

While trade is the lifeline of industry, industry is the lifeline of defense. Americans are dependent for defense upon weapons which can be produced only by using certain minerals from foreign countries. Most weapons are made of steel. In order to make steel certain of these foreign minerals, such as manganese, are essential. Modern airpower depends upon jet propulsion. Since jet planes generate intense heats, the metal used in these planes must be able to withstand this heat. Cobalt, three-fourths of which comes from the Belgian Congo, is alloyed with steel to enable it to withstand the heat. Most of these heavy minerals can move only in ships.

Nations friendly toward the United States depend a great deal on this country. The United States is giving material assistance to 49 countries and has troops stationed in 42 nations upon which these countries rely for defense. These nations depend on the United States and its merchant marine to keep provisions coming in.

Arguments against building a strong merchant marine are weak indeed. The first of these is, the United States can depend upon foreign vessels to carry its commerce. This has been disproved many times. For example, at the beginning of World War I, the ships of foreign nations, carrying 90 percent of the United States foreign trade, were withdrawn from normal operations leaving the United States entirely cutoff from foreign raw materials and our export trade became almost nonexistent. The second argument is, strengthening the merchant marine now would be too expensive. If the United States were involved in another war, however, the cost of building an adequate merchant fleet would be tremendous. To illustrate, in World War II, the United States spent $12 billion to create emergency shipyards and hastily constructed ships. This money would have subsidized in normal times the orderly construction and operation of most of this fleet for 340 years.

As for building up the United States merchant marine, while it will require the coop-

eration of the Government, industry, and the voters, it is not an insurmountable task. The Government must increase ship construction and operating subsidies, for while the United States wants and needs shipping, it does not want to lower its standard of living to compete with foreign shipping. Industry must give concentrated attention to technological improvements and higher productivity of labor. Perhaps most important, however, the voters must understand merchant marine problems, for the people's representatives vote for the legislation which they know the people they represent want.

Since a strong merchant marine is the key to trade and defense, use it to unlock the door to greater prosperity and security for the United States.

Fringe Benefits for Business Executives

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 24, 1956

Mr. DONOHUE. Mr. Speaker, I should like to include at this time a most informative article concerning the fringe benefits that are more and more being accorded the executives of our corporations and the bonuses proffered to them in return for their special skills and energies. The article appeared in the April 20, 1956, issue of the Worcester (Mass.) Telegram.

It would appear that "fringe benefits" will very soon be an accepted and respected phrase in our economic language.

The editorial follows:

YOUR MONEY'S WORTH: BENEFITS FOR BIG BOYS

(By Sylvia Porter)

R. A. is one of the policymaking vice presidents of a nationally known corporation which has made a lot of money in the last few years. If you saw his monthly paycheck, though, you would be surprised; you would expect the check to be much bigger, considering the name of the company, the industry, and his key job.

But R. A.'s paycheck would give you a badly distorted view of his actual financial setup. For, in addition to a cash salary, R. A.'s company has just in the last 5 years given him:

A handsome expense account which covers virtually all his expensive entertaining, travel costs, etc. It also provides him with a new car every year and a beautiful vacation haven.

A retirement program under which he's already guaranteed $21,000 a year for life and his retirement benefits are steadily increasing.

A special contract retaining him as a consultant at $14,000 a year for 10 years, beginning when he's 65.

CAN BUY STOCK

A privilege to buy a big chunk of the company's stock at a specified price at any time between now and 1965. The stock is now quoted at $40 above the price at which R. A. can buy (or has bought) the stock and his paper profits on the stock top a quarter-million dollars.

So, if you added to R. A.'s cash salary all his fringe benefits, you would find that he is doing very nicely indeed in this era of stiff taxes on high incomes. R. A. is not only building a major estate for his family; he also is in a position to move easily and comfortably in the so-called million-dollar circles of our land.

Am I making this report on R. A. because he is so exceptional? Oh no. The point of this story is that R. A. is becoming less and less the exception, more and more typical of executives in industry.

In corporation after corporation, key officers are getting contracts and pay deals that rival or surpass the one R. A. has. As an illustration, the magazine Sales Management made a survey of 50 leading corporations a short while ago, found only one in which the chief sales executive is compensated by salary alone.

In corporation after corporation, top management men are being tied to their jobs for life by a "golden cord" of fringe benefits. The deals make the executives all but immune to offers from the companies' competitors because the men would have to give up their impressively attractive benefits if they quit.

What are some of the ways corporations are compensating keymen—outside of cash? These:

A stock option deal. Under this plan, a key employee gets the option to buy a specified total of the company's stock at a specified price during a specified period of years. If the stock soars during the period, he still can exercise his option at the fixed price; when and as he sells his shares, his gain will be taxed only at the capital gains rate, meaning at a top of 25 percent. The profits of some men who have stock option deals run into millions of dollars.

A deferred bonus arrangement. Under this, the company votes the officer a bonus payable in installments over a number of years, thereby cutting his year-to-year tax liability. In some cases, the executive prefers (and will get) payment of his bonus after he retires.

EYE-POPPING INCOMES

Handsome retirement programs. Some contracts I've seen give executives really eye-popping incomes for life. In addition, many have contracts to remain as consultants at impressive salaries after 65.

Rich insurance policies which also may pledge a lifetime income to the wife.

And fat expense accounts, special health programs, profit-sharing arrangements, many other variations of benefits.

The publicized statistics on the rate of rise in executives' salaries are meaningless unless the fringe benefits also are included. It's becoming commonplace for top men to turn down flatly hikes in cash pay in favor of pay in forms which are subject to only moderate taxes.

The cash pay check of an American executive is less and less the yardstick of his financial well-being, and it'll continue to be less and less so as his fringe benefits multiply.

Coordination of Public Works

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I present a very able speech by Maj. Gen. J. S. Bragdon, special assistant to the President, delivered to the National Rivers and Harbors Congress at the 43d annual convention held at the Mayflower Hotel, Washington, D. C., on May 11, 1956:

Congressman BROOKS, distinguished guests, ladies, and gentlemen, it is a privilege for me to participate in the 43d national convention of the National Rivers and Harbors Congress. From my experience in the Corps of Engineers I am well acquainted with the fine contribution your organization has rendered in the development of our Nation's water resources and in its sponsorship of great projects which have added to the Nation's wealth. The programs with which you are concerned are among the most important functions of public works.

My subject this morning, Coordination of Public Works, affords me an opportunity to tell you something about a comparatively new staff element in the White House whose purpose is to provide coordination of public works planning at all levels.

The Public Works Planning Unit is responsible, among other things, for keeping the President advised as to (a) the various types and amount of public facilities required by an expanding economy to meet human needs at the national, State, and local levels; (b) the current, long-range plans and programs for the accomplishment of such works by agencies of the Federal Government and by similar agencies of States and local governments and the interrelationships of these programs; (c) the possibilities for the acceleration of public works construction in the event that economic conditions make such acceleration desirable.

Perhaps you may not be fully aware of the magniture of public works. Last year the value of new public works brought into being amounted to over $12 billion. This equals about 3 percent of the GNP. Of this three-fourths or $9 billion was for State and local public works and the balance for Federal works.

There are forty-odd Federal agencies engaged in public works. There are over 109,000 State and local governmental or quasi-governmental entities involved in public works. It is a big and widespread operation.

Much has been said of accumulated backlogs. It is true that 2 wars and a depression have served to accumulate great volumes of public works needed but deferred. It is also true that the amazing spurt in our population growth is rapidly adding to our over-all needs. Our population growth in the 20-year period from 1955 to 1975 will add about 56 millions, a number equal to one-third of the entire population growth attained in 300 years prior to 1955. There are now about 3 births to every death in our country.

These and other major factors have combined to bring the estimated requirements for State and local public works to over $200 billion. If we were to catch up and obtain these needed assets within the next 10 years, the present rate of construction of public works would have to be more than doubled.

The backlog of public works, exclusive of military, in which the Federal Government is directly concerned is something over $80 billion. Sixty billion dollars, or three-fourths of this is in the major water resources fields; namely, navigation, flood control, watershed management, and irrigation.

At our present rate of public works construction it will require over 24 years to catch up with presently estimated requirements.

Public works—schools, streets, water supply, sewage disposal—are tangible assets which are intimately concerned with our everyday living. Because of the great volume of this demand, as well as other construction demands in the future years, it is necessary that we carefully husband our construction dollar and spend it prudently on those things which we most need rather

than on those things which we would merely like to have.

The need for long-range planning to obtain integrated, comprehensive, and sound development becomes more generally recognized and more pressing as our requirements grow. Surveys and studies of possible improvements in organization and policy have almost uniformly come to the single conclusion—that adequate planning, participated in equally by all parties at interest is fundamental to the wise development of our resources in the long run interest of the Nation.

In dealing with this problem we have evolved an approach to the overall planning problem which envisages four major steps:

First, a determination of measured needs, based on flexible general criteria for each area of government following basic guides of population and economic growth, and specific criteria for each type of work. These criteria will be self-determined and by reason of a common basic method, relative urgencies of needs can be ascertained.

Second, long-range plans arranged by functional priorities which reflect relative urgencies. These also will be self-determined by each community but follow a common although flexible method of development.

Third, multiyear programs of capital improvements developed from the long-range plans and constituting the initial phases thereof.

Fourth, annual or biennial budgets developed from these multiyear capital programs.

To assist in developing the details of this aprpoach and to provide firmly rooted bases for procedures, we are launching four general research problems to be carried out by experts in each field. Briefly, these are:

I. The role of public works in the economy, both in times of normal growth and to assist in stabilization, if needed.

II. The interrelationships of Federal, State, city, and local governments in the field of public works with especial reference to financing.

III. The optimum planning organizations for public works at the various levels of government. This would include a study of comprehensive or multifunction planning and single-function planning.

IV. A methodology for the determination of public works needs with their relative urgencies at all levels. This would include the development of these needs into long-range plans.

Since the complete working out of the details involved in research is a long-term effort, we are pushing ahead along parallel lines by having the responsible Federal agencies develop criteria for calculating public works needs. These criteria drafted in cooperation with State and local interests will be reviewed by the advisory committees on Federal public works and the advisory committee on State and local public works and updated as additional data become available, either from the research problems noted above or from experience gained as the program progresses.

Basic to this process are the judgments of leading citizens and governmental officers at all levels in determining needs and urgencies; and second, the willingness of local governments and communities to consciously and enthusiastically organize for and embark upon comprehesive planning programs.

Just last week I attended the National Conference on Metropolitan Problems where was studied the increasing urgency of the problem of the growth of metropolitan areas. Between 1950 and 1955 over 97 percent of the total increase in population was in the 168 standard metropolitan areas. Within these areas there are 16,000 smaller political jurisdictions or an average of 95 in each. A major element of the metropolitan problem is how to efficiently plan, build, and operate public works and services for congested areas where fractionalized government in the form of numerous political entities now exercise varying jurisdictions. Water supply, navigation, and flood-control problems are often involved in this jurisdictional entanglement. In the case of harbors serving one or more jurisdictions there have been many excellent solutions found in port authorities or other interstate or intergovernmental groups.

Until the President initiated this work, there was no organization responsible for taking a broad look at the needs for all types of public works and the progress being made in meeting such needs. Programs have operated pretty much within their own channels and without much long-range planning. There may have been times when inadequate attention has been given to navigation improvements in the overall water resources development program. Our work is pointed toward bringing to light the existence of any serious deficiencies in any category of public works. This will include the needs and plans for rivers and harbors programs as an integral part of our national requirements.

While the foregoing applies to all fields of public works, nowhere is the need for comprehensive long-range planning more evident than in the field of water resources. We are today face to face with water scarcities and flood devastation which can seriously limit our growth and impair our economy. We cannot ever overlook the central fact that water is our most precious asset. Contrary to popular belief, there is not an inexhaustible supply of water. We are consuming this vital resource at an ever-increasing rate. If this increasing rate is not widely recognized and dealt with intelligently, we can only look forward to more serious scarcities. In 1954 the President of the United States stated to this Congress that we must study where every drop of water falls and what we are going to do with it, from the Continental Divide to the sea. It has been calculated that in an average year the total rainfall on our country amounts to about 4,300 billion gallons per day. There is lost in evaporation and transpiration about 3,000 billion, leaving only about 1,300 billion gallons of runoff. Of this, about two-thirds runs off as excess waters in floods in a short period. Only about one-third is available during most of the year. Our present use for all purposes is 262 billion gallons per day. In 1975 it is predicted that 453 billion gallons will be required. If this predicted demand comes to pass, it does not necessarily mean that it will overtake total supply because, as you know, water is and can be stored and reused. It does mean that it is imperative that we plan carefully and wisely for reuse methods. It has been estimated that it would, within economic feasibility, be possible to build reservoirs so that we could utilize 630 billion gallons per day. However, to build up supplies through reservoir and reuse methods requires extensive antipollution measures, both as to domestic wastes and industrial processing of waters. I hasten to point out the foregoing figures deal only with the overall national picture. We are all aware that there are regions of this country facing acute shortages right now.

In an address before the National Rivers and Harbors Congress in 1954 your president, Congressman OVERTON BROOKS, emphasized some of the problems which were also of great concern to the President's Advisory Committee on Water Resources in their recent report. He pointed out that the establishment of a clear national policy in the light of all the varied aspects of water resources development is most difficult; that existing policies have been developed on a piecemeal basis over a long period of time as demands for work in certain specified functional areas arose; that areas of potential conflict in our water resources and land programs could be largely eliminated by the formulation and adoption of a well-defined water policy. He further said that uniform and just treatment would be facilitated if Congress would establish the extent of Federal interest and its corollary appropriate requirements for local cooperation; stressed the need for evaluation of costs and benefits on a uniform and sound basis; emphasized the importance of balanced functional programs; and urged that appropriations follow authorizations in logical sequence.

The committee's report constitutes a great step forward in the establishment of a reasonable approach in the development of our water resources. It was not expected that its findings would become a panacea for all ills. And while the report may not satisfy the zealots of extreme positions, the policies outlined therein are basic and constitute a framework within which the Federal Government, together with State and local governments and other non-Federal interests, may collaborate to best develop the water resources. Broadly, it does two things. First, it reduces or eliminates many of the present conflicting procedures and practices of agencies. Second, it recommends a planning organization that will provide a continuing mechanism for settling those unresolved problems in the water resources fields that are not specifically dealt with in the report and which may arise in the future, to include needed policy formulation.

The report implements the principle of close collaboration in planning with local interests by providing basin committees to coordinate resources planning and develop basin plans. These committees would be formed of representatives of all States concerned on an equal basis with the Federal agencies.

The report also carries out the principle of cooperative planning in its treatment of interstate compacts. It points out that most of our major rivers have an interstate character and that the States should be encouraged to undertake to adjust among themselves through compacts the fair and equitable distribution of water.

Among the important water-resources projects authorized this year, two are unique under present conditions. The Great Lakes connecting channels and the Mississippi River-Gulf channel projects constitute large developments that can be viewed almost solely from a single purpose standpoint. In both projects economic savings in transportation costs is the primary requirement. With the tremendous increase in demands for water and its multiple uses and control, such uncomplicated conditions are seldom found in the development of interior navigation channels.

In the 1944 Flood Control Act the use of water for navigation projects authorized therein was subordinated to beneficial consumptive uses for all water originating west of the 97th meridian. This legislation stemmed from the compelling pressures which developed in the West as water shortages occurred.

The Advisory Committee on Water Resources Policy realized the seriousness of controversies arising from conflicting views as to the rights of various groups to use of water. Its report holds that "The principles which recognize water rights as property rights should be accepted. Determinations as to disposition of water should recognize such rights." It also recommends "that a study be made under the leadership of the Federal Government in collaboration with State and local entities to determine (a) the relationship between the establishment of property rights to water and the economic and social development of the Nation and its regions and of the States and their communities, and (b) the principles and criteria to be incorporated into Federal, State, and local laws upon which rights to the appropriation and use of water could be estab-

lished that would assure the best and most effective use and control of water to meet the current and the long-range needs of the people of a region, State, or locality, and of the Nation as a whole, and that would encourage maximum participation by all parties of interest."

In the water-resources field particularly, opportunities are afforded to make public-works projects self-liquidating. Through integrated planning it is often possible to incorporate features serving several purposes into such projects and thereby reduce the cost which would have been otherwise incurred in providing separate facilities to meet each need. This practice also accomplishes a more comprehensive and higher use of the resources available. Furthermore, since such products as hydroelectric power, and water supply constitute salable commodities, the beneficiaries are directly traceable and responsibility for repayment of costs readily assigned.

Under a comprehensive plan the total volume and head of water in a basin is utilized to the feasible maximum; under a multipurpose plan the total head and volume of any given site is utilized to the feasible maximum and thus under complete basin and complete site planning the feasible maximum development with a minimum capital outlay is attained.

When such basin water-resource planning becomes a part of nationwide public-works planning, all elements in this field are seen in proper perspective. Comprehensive planning requires participation by all interests—Federal, State, county, city, and private interests—this from the beginning of planning to the final constructional stage.

The National Rivers and Harbors Congress is in a peculiar and strategic position to exercise leadership in proposing programs for comprehensive planning in its field.

It is through such organization that we may attain enlightened, comprehensive, and coordinated planning of public works, in which all citizens participate and from which they all will benefit.

The Soviet Challenge to American Technological Leadership Must Be Met

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 24, 1956

Mr. DONOHUE. Mr. Speaker, I should like to include a very timely and thought-provoking article concerning the Russian challenge to our technological leadership, which appeared in the April 23, 1956, issue of the Worcester (Mass.) Evening Gazette.

It is evident that, if we expect to retain our scientific leadership in an atomic age, ways must be found to increase the number of youths pursuing scientific education or else we will be left far back in the race before we know it.

Let us hope that the competent authorities at all Government levels, and particularly in the educational field itself, will bend their efforts and energies toward a quick and adequate solution of this seriously threatening scientist shortage.

The article follows:

THE SOVIET CHALLENGE TO AMERICAN SCHOOLS

For several years educational leaders have been disturbed by reports that the Soviet Union is surpassing us in technical education. A figure often quoted is the 23,000 engineers which we graduated in 1954 as compared to the 53,000 that the Soviets graduated in the same year.

Americans have been apt to distrust such figures. It has seemed incredible that a backward nation like the Soviet Union could ever challenge the technological preeminence of the United States, where youngsters become mechanically minded at the age of five.

Nevertheless, there seems good reason to feel concern. Writing in the New York Times magazine, former Senator WILLIAM BENTON gives a graphic picture of the herculean efforts that the Soviets are making in the field of technical and engineering education.

In the Soviet Union, Benton points out, practically everybody goes to school. Soon the basic 10-year school will be compulsory everywhere. Russian youngsters already go to school 6 days a week and for more hours per day and more weeks per year than ours do. And the stress is on mathematics and the physical sciences. Unlike the United States where, according to Benton, only 125 new teachers of physics were produced for the 28,000 high schools of the Nation last year, the Soviet Union is rapidly producing thousands of trained secondary school teachers and technicians. The University of Moscow, which has a heavy technological emphasis, alone enrolls 23,000 students.

On the higher levels of engineering also the Soviet preformance is, unfortunately, impressive. The 800 institutions of higher education—training everything from surgeons to aeronautical experts—enroll nearly 2 million students. Contrary to our usual ideas about Marxist suffocation of the intellectual pursuits, the Soviets apparently give free rein to the scholars who deal in theory. The University of Moscow alone has 500 of these. They are committed to pure research, and have no teaching duties.

The result, according to Benton, is that the Soviets are rapidly overtaking us in training their students in the specialized skills. His solution—a massive Federal Government subsidy for 4-year university scholarships—is drastic. With American colleges already crammed to the eaves, such a program would increase the overcrowded conditions.

But there seems good reason to believe that our educational system is facing its greatest challenge. Unless it supplies us with sufficient numbers of technical experts—whose training begins on the secondary school level—we may find ourselves in a critical situation within another 10 years.

Employment of the Physically Handicapped

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1956

Mr. FOGARTY. Mr. Speaker, the President's Committee on Employment of the Physically Handicapped recently held its annual meeting here in Washington. At its luncheon meeting on Friday, May 18, the committee heard addresses by William P. Schnitzler, secretary-treasurer of the AFL–CIO and by John S. Coleman, president of the Chamber of Commerce of the United States.

Mr. Schnitzler spoke on the topic of The Handicapped and Labor and Mr. Coleman addressed himself to The Handicapped and Employers. Both speeches typify the excellent work being done by the committee in promoting the rehabilitation of the handicapped and returning them to the productive labor force of the country. They spell out what is being done and what neds to be done in this field which is so important to our Nation's welfare and economy.

Mr. Speaker, under leave to extend my remarks, I include the speeches of both Mr. Schnitzler and Mr. Coleman:

SPEECH BY AFL-CIO SECRETARY-TREASURER WILLIAM F. SCHNITZLER TO THE PRESIDENT'S COMMITTEE ON EMPLOYMENT OF THE PHYSICALLY HANDICAPPED

It is a distinct pleasure to extend the very best wishes of the officers and members of the American Federation of Labor and Congress of Industrial Organizations to the hardest working conservationists in our country.

We Americans are great believers in conservation. We've done a tremendous lot to preserve the great natural resources of the United States. We annually spend great sums of money to protect our wildlife; to establish game preserves; to police our game-protection laws.

I only wish we'd do half as much to protect and preserve and rehabilitate America's greatest natural resource—her people.

The American labor movement has no objection whatsoever to game-protection laws; to game wardens; to the expenditure of public funds for conservation. In fact, we are staunch supporters of such legislation.

We do object, however, to a type of political thinking that supports the employment of far more game wardens than industrial safety inspectors.

Most emphatically, we object to the meager sums which are spent by the Federal and State governments for the rehabilitation of those injured in industrial or nonindustrial accidents and those who are handicapped from birth.

Somehow or other, too many of our legislators—both State and Federal—think of rehabilitation and employment of the handicapped, in terms of charity.

We in the AFL-CIO reject that type of thinking.

Rehabilitation, retraining, and employment of the handicapped—that is not charity. Oh, certainly, they are objectives close to the hearts of all humanitarians. But they are more than just humanitarian ideals.

In our practical world, it seems to me important to consider these matters in terms of concrete investment. And it is a good investment. It is good business.

Every survey that I have studied clearly proves that the funds expended in the rehabilitation of the handicapped have been returned to society—and with good interest, too.

Instead of remaining a drain on our economy as wards of society receiving welfare aid, rehabilitated workers become useful citizens—contributors—and good contributors—to the earning power of our economy. Why in income tax alone, the returns are far greater than the original investment.

Even more important than the financial value is the fact that we return to these handicapped folks their sense of self-respect; we return their personal dignity. We are, in each case, once again proving the basic

belief upon which our great Nation was built and has flourished—the all-embracing belief in the importance of each individual human being.

I suppose a political cynic might say that the interest of the AFL–CIO in this entire subject is a selfish one. That is, of course, partly true. While we have a sincere interest in this matter from a humanitarian point of view, we have a deep personal involvement.

Among the 15 million members of the AFL–CIO there are a large number who suffer from all types of handicaps. Some were injured on the battlefield; some are the victims of the industrial machine; some were injured in traffic accidents. Some were born handicapped.

We in the AFL–CIO are committed to the proposition that equality of opportunity must be shared by all men.

No artificial boundary of race or creed or color or national origin or physical handicap can be permitted to block a man's opportunity to a better way of living for himself and his family.

The basic interest of the American labor movement is in the welfare of American workers. That is why we shall wage relentless war against industrial accidents and against all who stand in the way of the handicapped worker in his desire for rehabilitation.

I suppose you could rightly say that every single one of our 15 million members is a potential victim of the industrial machine. There isn't a single job filled by an American wage earner that doesn't involve some potential risk. Of course, there are jobs that are far safer than others. Certainly, the sandhog working under the Hudson River today considers the man working in a bakery as having a far safer job.

Well, I am a baker. And I have seen horrible accidents in a bakeshop—accidents which maim a worker for life.

You know, even the most callous worker never gets used to such accidents. We are shocked whenever they happen.

That sense of shock and the knowledge that today's victim of an industrial accident could, but for the grace of God, have been any one of us, has kept the American labor movement alive to the need for continual battle in this field.

I know of no other single issue more certain to arouse the interest and the fighting spirit of American workers, than a fight for better workmen's compensation laws, for better industrial safety laws and for better rehabilitation services.

Despite our continuing fights and despite the desperate need, the condition of America's workmen's compensation laws is still shocking. Workers still bear not only the pain and the suffering of industrial accidents; they bear as well a disproportionate share of the resulting economic burden.

Workmen's compensation laws are a legalistic hodge-podge. In State after State, the amount a worker receives for the loss of an arm or a leg or an eye—or even the loss of life itself—varies like the score on a pinball machine.

In some States the loss of an arm will bring a worker half as much as he would receive in a neighboring State. By what standard of morality can our legislators determine that an arm is worth more in Wisconsin than in Ohio?

Why, in some States, the loss of an arm at the shoulder has less compensable value than the loss of a thumb in another State.

There is no moral or ethical or economic justification for these varying standards. Nor is there justification for the tragic lag, in every State, in achieving badly needed improvements and economic modernization of workmen's compensation laws.

The same indictment can be returned against the industrial safety laws of many of the States. In the main, these statutes do not reflect the tremendous strides that have been made in our modern industrial life. Today, when the operations of many industries bear up resemblance to the operation in the workshops of two decades ago, we find industrial safety laws which were adopted in the twenties and haven't been modernized since.

But the greatest shortcomings of all are found in the field of rehabilitation. With only a few exceptions, the field of rehabilitation is virtually ignored in the workmen's compensation laws of the various States.

The time has certainly come when the Federal Government must give wise and progressive leadership in this, the most neglected form of social insurance in America today.

We in the AFL–CIO will, I solemnly promise you, continue to fight without a moment's relaxation for rehabilitation measures which will benefit America's handicapped—and benefit equally the American economy.

While we wage this battle on the legislative front, we shall be mindful, as well, that we can also insure substantial gains for the handicapped through the collective bargaining process.

The President's Committee on Employment of the Physically Handicapped has done an exceptionally fine job in alerting our Nation to the serious gap which separates the large number of unemployed handicapped workers from self-reliant, productive, useful jobs.

The American labor movement is doing much to aid in this campaign. But there is much more that we can and should and will do. Union-management cooperation in this field is a prime necessity and the AFL–CIO will do its best to spur this kind of cooperation.

Out of it and out of a new awareness of the problem, we hope will come the kind of understanding and assistance which will result in the adoption of sound second-injury laws; enlightened rehabilitation legislation; the appropriation of needed funds to erect and staff rehabilitation centers where the proper emphasis is placed on the medical, psychological, and vocational aids that handicapped workers need.

The doctors, the scientists, the technicians have made remarkable progress in this field. We have the tools and the know-how that is necessary. It is up to us—labor and industry alike—to bring the know-why to the attention of our legislators so that we can translate this knowledge into practice for the benefit of the handicapped as individuals and for the ultimate benefit of the entire Nation.

In this campaign, the American labor movement will not be found wanting. We know the need. We know the value. We know the tremendous return which can be achieved.

We are in this fight until we achieve the victory that must certainly be won if right and justice for the handicapped worker are to prevail.

ADDRESS BY JOHN S. COLEMAN, PRESIDENT, CHAMBER OF COMMERCE OF THE UNITED STATES, BEFORE ANNUAL MEETING, THE PRESIDENT'S COMMITTEE ON EMPLOYMENT OF THE PHYSICALLY HANDICAPPED, WASHINGTON, D. C., MAY 18, 1956.

It seems to me that I am wearing two hats at this meeting because the Chamber of Commerce of the United States and the Burroughs Corp. are both members of the President's Committee on Employment of the Physically Handicapped.

I had not been president of the national chamber many days before I discovered that it always has a number of the so-called physically handicapped on its payroll. Some of them have been there for years—loyal, valued, and respected members of the staff. Another such person joined the staff last week.

At Burroughs we also hire the so-called physically handicapped—so I am happy to report that both the business organization I represent and the corporation I represent practice what they preach.

We have a written policy at Burroughs, one article of which states that "* * * we will give full consideration to the placement of disabled persons on work they are qualified to do."

The keystone of this policy is that it accentuates the positive. By that, I mean that we emphasize abilities rather than disabilities. We seek to find a job that the disabled person can perform just as satisfactorily as if he were not disabled. That is why I think I was justified in using the phrase "the so-called physically handicapped" twice in the first minute of this brief talk.

I would like to give you the gist of our experiences at Burroughs because I am more familiar with those experiences than any other facts which bear on the subject for discussion today—and because our experiences might be usefully adapted by other business concerns.

Our general policy states that all employees are to be selected on the basis of their skill, their intelligence, training, experience, character, merit, and physical fitness. This same policy applies to the physically handicapped. However—and this is important—we realize that physical fitness is a relative thing and must be judged in relation to a specific job. We do not tailor jobs to disabilities. Rather, we seek to put a person on a job where his disability will not harm his performance.

Our procedure is this:

1. An applicant is considered employable unless defects disclosed by a medical examination prevent him from meeting the specific requirements of a job.

2. A handicapped person is considered employable when he can meet the requirements of any position in which his handicap would not be a hindrance to job performance, a hazard to himself, his fellow employees, or company property.

3. A handicapped applicant is required to submit to a regular company physical examination when it is prerequisite to employment. He must pass the physical exam in terms of the physical requirements of the work for which he is being considered.

4. A physically handicapped person is considered promotable just as any other employee—provided he can meet the qualifications of the assignment for which he is being considered.

In actual interviews, again stressing ability rather than disability, we try to evaluate the applicant's attitude. Understanding his motivation, we feel, is essential to making a good placement. In dealing with the handicapped applicant it has been our experience that motivation can be readily determined from his attitude in certain specific areas.

First of all, we try to determine his attitude toward his disability. We have to find out what his mental outlook is toward this disability. Has he decided in his own mind that he can perform a job just as well as any other worker? Does he feel that he is not just one of society's unfortunates? Does he also feel that if given the chance he can prove successful? We try to find out what are his interests for a career.

This latter is important for placement in training programs and for future upgrading and promotional programs. Last, we try to determine his attitude toward the job and the company. He is not led to believe that he is obtaining the job because of the company's charity or sentiment. He is made to understand that he is being placed in a job which he can perform and that his performance must compare favorably with that of other employees.

Actually, when it comes right down to hiring people to work for us, we do not really distinguish between who is physically handicapped and who is not.

After all, who is to say what is or is not a handicap? Simply because a man is neither in the physical prime of life, nor has a superior physical profile, should he be at once disqualified for employment? The point is—some of us just do not see as well as others. And some of us just do not hear. None of us are really equal in respect to the amount or degree of physical strain we can bear up under.

It would profit no one and harm many if a man with very poor eyesight were placed at a job which put a great strain on his visual faculty. In all instances, be it whether a man has one arm or no eyes, his physical profile is evaluated against a backdrop of the requirements of the job. We would not hire an epileptic to operate a heavy press, but that same man would stand just as good a chance of rising through the ranks as a man with no history of epileptic seizures. We ask ourselves, too, is it necessary to place a man with 2 arms at a job that a 1-armed man could do as well? We try not so much to know what a man can't do, but what he can do.

In our employ there are several hundred persons who are working under medical restriction. They make up what is called the no stoop, no squat, no squint group. Back injuries, visual difficulties, and sundry other disabling conditions have made it impossible for them to perform certain kinds of tasks. Employees with progressive as well as static handicaps—many of whom would have a few years ago been considered unemployable—are working at jobs they can do. Special jobs have not been created for them. Job standards are neither less nor more exacting than those of their able-bodied fellow employees.

We boil it down to this. Handicapped persons can be employed successfully if jobs which they can fill exist. The problem then becomes finding these jobs. Representatives of the company's medical, safety, personnel, and operating departments working together study the jobs in our organization, looking for those which can be filled by persons with various handicaps. We have, in fact, tried to establish an inventory of jobs which the handicapped can do.

Nevertheless, we believe that jobs for handicapped persons should be made available from this approach rather than by creating special work for them. It is our opinion that the handicapped applicant should be treated with the same respect as any other individual and not as disabled if he can do what the job asks of him. We have found that if the handicapped person is properly placed, the fact of his disability immediately disappears.

At Burroughs we also try to work in close conjunction with State, Federal, public, and private agencies whose function is to assist in placing the handicapped. We have found them to be of inestimable value. They filter through such prospective applicants so that our placement problems are made much simpler. They own the established testing and training facilities and the insights of professional guidance we do not have. Several of our executives participate in community activities which are directly concerned with the rehabilitation, employment, the placement of the physically handicapped. The information, the insights they have brought back to us have done much toward enlightening us with respect to our dealings with the handicapped.

It is my personal opinion, and I am certain that it is shared by many, that the greatest step taken by commerce and industry has been the realizing that the handicapped should be treated with the same respect as other human beings. We know now they do not want charity, dole, sympathy, special consideration, favoritism. They want merely a chance to compete on a just and equal basis with the ablebodied. They want simply a chance to show that they can work as well if not better than their unhandicapped counterparts. They want a chance to become self-supporting, self-reliant members of society.

I have often heard it said that quite often a disabled person becomes a more valuable employee purely because of his disability This seems to be a reasonable assumption, because we are all familiar with the driving force of disability on what is sometimes the "genius class."

Beethoven, as you all know, was plagued by deafness all his life, and the fury that he threw into his work was the result of his determination to pour out the music that was in his soul before the world was wrapped in silence. The best-remembered lines of Milton were written after he was blind.

While we are not looking for Beethovens or Miltons—and they are not looking for us—it is certainly true that a normally vigorous young man, for example, lives several lives, all at one and the same time. He has his job, and he has his social life. He may take an active part in some sport. The quitting whistle is actually the signal for another day. He works hard, and he plays hard.

But what about the handicapped person whose social life is strictly circumscribed by his disabilities? He can't fish—he can't bowl—he can't play golf. It is rather easy to understand that such a person would throw everything he's got into his job because his job becomes his only outlet. It becomes more than a means of earning a living. It becomes an all-absorbing interest, a balance wheel, the one thing that provides a man with a sense of participation in the affairs of the world—and the one thing that permits him to hold his head high and meet all men on equal terms.

One more thought, and I rest my case.

Many economists who are looking at the long-range prospects for the American economy envision not a labor surplus—but a labor shortage—more acute than any we have ever known.

By 1965, or perhaps before that, our population is expected to reach 190 million—an increase of 25 million.

But the proportion of persons from 20 to 64—the productive, working years—will increase by only 8 million, which is less than one-third of the total increase.

There are several reasons for this imbalance, as I am sure that you here know, but I think they should be spelled out for the record. The low birth rate in the 1930's is one reason; the large baby crop in recent years is the second reason, and still a third is the fact that people are living longer.

The result is that we can anticipate a larger group of older and younger people in proportion to our working population.

It may become a matter of national necessity—far more than a matter of national concern—to hire more handicapped workers and train more handicapped young persons for employment.

The further mechanization of industry and the trend toward automation will, of course, help meet the production needs of our expanding economy. But mechanization and automation, instead of replacing manpower, call for more skilled workers. Such has been the history of our progressive steps in mechanization.

As electronic controls take over the backbreaking jobs, there will be need for more brains and less brawn. The handicapped workers should be able to compete with the physically robust better than ever when the job is one of tending an automatic machine.

In light of our position in the world today and in light of our changing population picture and our swiftly changing economy, it seems to me that we cannot afford to deny any worker, because of physical impairment, the opportunity to become productive and self-supporting, whenever his remaining talents can be used.

In essence, our discussions today might well come under the heading of not what we owe the other fellow—but what we owe the country.

Editor Feels 3-Cent Stamp Out of Date

EXTENSION OF REMARKS

OF

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1956

Mr. CEDERBERG. Mr. Speaker, I find more and more sentiment in the 10th Congressional District of Michigan for a reasonable increase in postal rates and a feeling that a penny increase in the handling of first-class mail is long overdue.

The editor of the Gladwin County Record, published in Gladwin, Mich., says editorially on May 23 that the 3-cent stamp is out of date.

I feel his comments are worthy of the consideration of Members of the House. The editorial follows:

THREE-CENT STAMP OUT OF DATE

Few prices in this inflated world are as ridiculous as the 3-cent postal rate for letters.

Postmaster General Summerfield and the Eisenhower administration have campaigned for 3½ years to get postal rates up where they should be so that the Postal Department would break even. The Department's deficit, which must be made up from general taxation, totals $4.6 billion since the end of World War II.

Summerfield has done a superb job of Postal Department reorganization. He has been able to get some rate increases through Congress. He has greatly reduced the annual deficit. He has repeatedly been rebuffed on his request for a higher first-class rate.

His chief adversaries have been the Democrats, who cry, as usual, that the Republicans are trying to push the costs of operating over on the consumer. The voting public is often taken in on this line and politicians are scared stiff to talk against it.

So let's take a look.

Since 1932 the per capita disposable income of the Nation is up 319 percent. Wholesale prices are up 163 percent. Postal cost index is up 107 percent. The consumer price index is up 96 percent. Rates on telegraph, another method of communication, are up 81 percent. But the rate on letters, the 3-cent stamp, is exactly the same as it was in 1932, the depth of the depression.

Now, who makes up the deficit? Democratic leaders would have you believe that business pays the shot. Nothing could be farther from the truth.

Business pays 75 percent of the cost of running the Postal Department's first-class mail service through postal rates, with individuals paying the balance, 25 percent. But the postal deficit, made up through general taxation, demands only 40 percent from business and 60 percent from individuals. As long as the Department operates at a deficit, business transfers a large share

of its first-class postage bills to the individual.

The Eisenhower administration, which Democrats like to refer to as the "businessman's administration," has tried for 3½ years to increase business' postal bill and relieve the individual or consumer. But their efforts have been blocked by Democrats on the pretext of protecting this consumer who is being socked with a postal bill twice as big as he should be paying.

Paying 3 cents to mail a letter makes about as much sense as having a price of 10 cents for a quart of milk.

When we buy a service, we should pay for it. A higher postal rate could reduce a postal deficit so large since World War II that it could have built 460,000 homes or equipped 20 new bomber wings to protect the Nation.

A Threat to the West—Seaton Appointment Raises Questions

EXTENSION OF REMARKS
OF
HON. FRANK A. BARRETT
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Monday, June 4, 1956

Mr. BARRETT. Mr. President, that there is widespread interest in the enactment of my bill, S. 863, known as the Western Water Rights Settlement Act of 1956, having for its purpose the reaffirmation of the long-standing congressional policy protecting the integrity of State water law in the 17 Western States, is evidenced by the numerous editorials supporting the bill published in recent issues of prominent newspapers throughout the West. I ask unanimous consent, Mr. President, that there be printed in the Appendix of the RECORD at this point the splendid editorial of Frank Waddell entitled "A Threat to the West," published in the May 27, 1956, issue of the Casper Tribune-Herald, of Casper, Wyo.

I also ask unanimous consent that the editorial in the Denver post of May 30 last, written by Robert Lucas, editor of the editorial page, entitled "Seaton Appointment Raises Questions," be also printed immediately following the Casper Tribune-Herald editorial.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Casper Tribune-Herald of May 27, 1956]

A THREAT TO THE WEST

Sharp criticism of the Supreme Court for a series of decisions increasing Federal authority, and eroding that of the States, could on occasion be turned with equal force against Congress, which shows little eagerness to override judicial decisions where this can be done by restatement of a historic position.

A Presidential veto intervened in the tidelands case, but it still took a long time to get around to returning to tidelands States what always had been recognized as their own but was seized from them by an overbearing Federal authority.

In the natural-gas case the Supreme Court ignored the declared intent of Congress and put gas producers under Federal regulation in a decision that could have far-reaching effect on a great industry. Consumer areas seized upon the situation as offering opportunity to serve self-interest and narrowly missed. It might not be so again when the question emerges from the shadow of a Presidential veto.

These things are of first-hand concern to the Western States, because right now their claims to their own life-sustaining waters are being set aside by judicial decision.

Water rights were assumed to be unassailable. In many instances they are confirmed in State constitutions which were accepted by Congress. But in a time of expanding central authority, a Washington bureaucrat argued not only that title to unappropriated waters is vested in the Federal Government, but that by control of public lands Federal authority can claim waters vested in others.

The Supreme Court has been leaning toward this position and in a decision last year in a case carried up from Oregon seemingly sustained it.

Senator BARRETT has been asking Congress to reaffirm the traditional water law of the West. His bill would prohibit Federal interference in any water right and would require Federal acquisition of such rights as might be desired to be accomplished by exactly the same procedure set forth for any other water user.

Water law is based on the doctrine of appropriation under the exclusive regulation of the State. If is anything else then the very foundation on which the West was built has been destroyed. Surely Congress can't ignore that.

[From the Denver Post of May 30, 1956]

SEATON APPOINTMENT RAISES QUESTIONS

The appointment of Fred Seaton, Nebraska publisher, as Secretary of the Interior is said to have many implications. First, Mr. Seaton is supposed to be an ace troubleshooter with a talent for quieting the controversy that has arisen over Interior policy and administration in recent years. Second, the Nebraskan is described in the editorialized "news" reports of the Chicago Tribune as the Brownell-Dewey faction's man who was triumphant over Under Secretary Clarence A. Davis in the controversy over administration water policy.

The first implication is accurate, in our opinion. Mr. Seaton represents a needed fresh viewpoint on complex questions of resource development and use. We do not know where he stands on specific issues. As of now, however, he is not knowingly allied with the "Keystone cops" who work overtime guarding the Nation against the twin evils of creeping socialism and public power. We will be eager to see how the new Secretary equates the public and private interest in projects for which power is integral to feasibility.

As for the alleged conflict within the administration on water policy, that is something relatively new. If the administration's view on water rights is that of J. Lee Rankin, Assistant Attorney General, as analyzed during recent hearings on the Barrett bill in the Senate, we will be both astonished and annoyed. For that concept holds that Federal authority, acquired at the time States were admitted to the Union, imposes Federal preeminence in the control of water resources. It challenges the control of water by the States, and undermines both past and future assignment of water rights by legal appropriation through beneficial consumptive use.

It is incredible to us that such a view could be official in the Eisenhower administration. It is in direct and flagrant conflict with the policy of the administration in the case of tideland oil. And it represents outright legal aggression against States' rights without a word of justification either in custom and law, or in present and foreseeable management of Federal lands.

Mr. Davis is said to be opposed to such a Federal policy. We believe he is right in that opposition. And indeed if such a policy is not attributable to the Eisenhower administration, and is not embraced by it, then that should be made clear to the people. For as of this moment, an Assistant Attorney General of the Eisenhower Department of Justice is seeking to superimpose Federal upon State water rights, as was also attempted in Denver's Blue River water case before the move was deliberately called off by higher authority.

The Departments of Agriculture and the Interior have testified in behalf of legislation that would clarify the dominant rights of State law in matters of unappropriated water. That the two Departments would be in complete and open conflict with the Department of Justice in a matter of such great importance is, itself, astounding. And we cannot conceive that the new Secretary of the Interior would be allied with a cause that is so alien to the repeated objectives of the Eisenhower administration.

Carrying Water in a Cracked Pitcher

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1956

Mr. GUBSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith an editorial which appeared recently in the Palo Alto Times, Palo Alto, Calif. I believe that this editorial represents an excellent appraisal of the critical water situation confronting the great State of California:

CARRYING WATER IN A CRACKED PITCHER

Cracked pitchers are poor water carriers, and California is a cracked pitcher. Unless the crack is mended, it will be impossible for the State to get adequate amounts of water from areas of surplus to areas of shortage.

The crack is the dispute between northern California and southern California on the best way to finance the San Luis Dam project.

Northern California is all for Federal construction of the dam so that water can be used to irrigate San Joaquin Valley land and a conduit can bring it through Pacheco Pass to the central coast counties. The proposed dam is on the western edge of the great valley.

Southern California appears to be afraid this plan will block the most feasible route for getting Feather River water to the south by means of the proposed California water system.

Having fought the upper Colorado River project out of fear they would be unable to get all the water they want from that source, the southern Californians now want to make sure nothing is done to endanger their supply from the north.

This is an understandable reaction, but it is being allowed to jeopardize the development of California's water resources and thus cheat all parts of the State.

The spectacle of a delegation from one part of the State rushing into a congressional committee hearing to fight a proposal urged by the Governor and other State representatives is enough to cause the Federal Government to hesitate to give any aid whatsoever until the civil war is over.

As Senator THOMAS KUCHEL has pointed out, sectional bitterness of this kind could make it impossible for the State to solve its

water problems in any way. It would seem that, before any further steps can be taken, engineers and leaders from the north and the south must reach agreement on the program for California.

We have been assured that there is water enough for all. If this is the case, then surely an agreement can be reached and the water now being wasted can be put to use for the benefit of all parts of the State.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1956

Mr. MILLER of Nebraska. Mr. Speaker, the Congress this week will again be called upon to vote on the subject of foreign aid. Foreign aid has come to Congress under several different names: First, it was lend-lease, then UNRRA, then the Marshall plan, FOA, and now International Cooperation Administration. I have never voted for foreign aid. I think it is wrong to tax Americans for giveaway programs that have given away something over $65 billion in the last 10 years.

Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an editorial from the Omaha World-Herald dated June 2, 1956. This editorial is extremely thought provoking and should be read carefully by my colleagues:

DEAR CONGRESS

Last month the State Department let it be known that a letterwriting campaign might help sell foreign economic aid to the reluctant Congress.

Mr. Dulles' boys passed the word, according to the Wall Street Journal, but left it to the passionate defenders of the giveaways to think up their own arguments.

This was a rather dirty trick, because the supply of arguments is shorter than it used to be.

Could the letterwriters say that aid is vital because Uncle Sam needs all the allies he can buy?

No, that's out of date. It suggests a military alliance. Anything with the word "military" in it these days simply scares the life out of people such as India's Nehru.

Could the letterwriter plead that the alleged need for foreign economic aid is an emergency which will end in a year or 2?

No, the new look in aid is that it should be permanent, with some of the individual spending projects to continue 10 years.

Could the petitioners say that the handouts foster free enterprise abroad and cause foreigners to copy American ways?

No, that would be frightfully bad manners, according to the giveaway people. Besides, it isn't so.

Could the friends of economic aid say that the handouts promote goodwill and cause the recipients to shy away from the blandishments of Moscow?

Well, no, that isn't true either, because America's foreign aid clients are cozying up to the Reds from the Nile to Siam.

Could the letterwriters conclude that the United States should give the money without strings or hope of recompense of any kind, just to let the world know that its old Uncle Samuel is a generous fellow?

No, even that excessively modest reward is outdated. It hurts the tender feelings of America's relief clients to be perpetually reminded that the money comes from the American taxpayer. The latest idea is to remove all mention of the United States of America and let the United Nations or some new international agency pass out the do-good money.

What, then, could the letterwriters say? That foreign aid should continue because the clients have come to expect it? Because thousands of United States bureaucrats would be jobless—or would be put to the inconvience of changing jobs—if economic aid folded? That the giveaways will keep United States factories humming?

None of these seems to be a persuasive argument when presented to a Senator or Representative who is about to face the voters back home.

Which brings us around to the unsurprising fact that the letterwriting campaign has been a flop. No Member of Congress is snowed under with mail whooping it up for the giveaways. Which suggests that when those called upon took pen in hand they couldn't think of anything to say that was worth a 3-cent stamp.

Bustup in Korea

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. BOSCH. Mr. Speaker, we hear the soft talk from the Soviet leaders, but I have failed to see any action on their part to signify any change in Soviet policy. Actions speak louder than words, and I would like to see actions that scream to the world that there has really been a change of policy.

Under leave to extend my remarks, I include an editorial from the Daily News, New York, of June 1, 1956:

BUSTUP IN KOREA

"Better late than never" is our main reaction to yesterday's decision of the United Nations command in Korea.

It has long been common knowledge that the North Korean Reds have consistently violated the truce terms, particularly by building up airpower, and that they have enjoyed the help of the Czech and Polish members of the so-called Neutral Nations Supervisory Commission.

The U. N. command yesterday ordered a stop to all of the Commission's activities in South Korea, pulled Commission team members back into the neutral zone, and fiercely denounced the North Korean Reds.

At the same time, it was revealed in London that the 16 U. N. countries which took part in the Korean war on our side have rejected the latest of Red China's hyprocritical proposals for a conference looking toward reuniting Korea.

This twin explosion over Korea should at least serve to clear the air, and remind Westerners anew of the nature of the Red enemy. For all his current peace prattle, he's the same old conscienceless, conniving scoundrel.

The Korea bustup, too, should put in its proper perspective the scheduled visit of United States Air Force Chief of Staff Nathan F. Twining to the June 24 military aviation show in Moscow.

We can see no objection to General Twining's going wherever he can hope to get a peek at the latest in Red aircraft.

But how about Washington making it 100 percent clear to the world that this visit carries with it no United States endorsement of anything connected with communism—especially of the Kremlin's continuing enslavement and ruthless milking of the satellite countries?

The Kremlin obviously hopes to make Red propaganda out of this air show and its distinguished foreign spectators. It's up to our Government to nip that plan and make some propaganda of its own—which, given a little wit and boldness, our Government can do.

No Further Aid for Tito

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including at this point a letter received from a friend who lived a considerable part of his life in Yugoslavia and who has some pertinent observations regarding our aid to the man who has just said the Socialist nations must stand together:

NEW YORK, N. Y., *May 21, 1956.*

WOULDN'T IT BE MORE HONEST TO TEAR DOWN THE STATUE OF LIBERTY?

To Members of the United States Senate and House of Representatives, 84th Congress:

A few days ago, looking across New York Harbor toward the Statue of Liberty, the thought struck me:

"What's that Statute of Liberty doing there now? Now, when through its financial, material, and military aid, our Government enables a Communist bandit and mass murderer, Tito, and his America-hating gangsters, to hold our 17 million Yugoslav allies and friends in slavery, wouldn't it be more honest to tear it down?"

That thought struck me again reading the newspaper reports of the House Foreign Affairs Committee's deliberations over the President's request for $4,900,000,000 for foreign aid, which included $30 million as defense aid for Communist Yugoslavia. Why call that defense aid or military aid? Why not truthfully call it what it would be: aid for maintenance of the institution of slavery in Communist Yugoslavia?

Some may say that an unknown businessman has no place mixing into this. But having known the Yugoslavs for 36 years, including 20 years operation of my own company in the former prosperous, food-exporting, pre-World War II Yugoslavia, and constantly meeting refugees, freshly arrived from Tito's present, food-begging, practically bankrupt, Communist slave state, I feel it my duty to submit this for your consideration.

Wouldn't the President's request for $30 million for defense aid for Tito in 1957, and his requested right to spend $40 million in any one country from his special discretionary fund of $100 million permit him to give Tito $70 million in 1957, and this on top of the sum to accrue in Yugoslavia from our January 1956 sale to Tito of $49 million of wheat, lard, and cotton for Yugoslav dinars? Why permit this? What have we received from the $2 billion already given to Tito and his gangsters?

Ladies and gentlemen, whatever our foreign-policy makers may say, the fact is, we cannot hold the trust of the 800 million peo-

ple now in Communist slavery if we aid the atheist Communist dictator, Tito, to hold the Yugoslavs in slavery. Those enslaved peoples and others, knowing the Yugoslav Communists to be real Communists, easily, from our support of Tito and his Communist gangsters, can doubt the sincerity of our Government's expensive worldwide anti-Communist propaganda.

Therefore, shouldn't we stop all aid to Communist Yugoslavia, and show the world that our Statue of Liberty still stands for liberty for all men? But if, for reasons of policy too devious for open explanation, you will feel forced to vote funds for the continued support of slavery in Communist Yugoslavia, ought you not vote also the funds needed for the tearing down of that great statue, and for replacing it with a memorial to the ideals for which we once were respected?

Sincerely yours,

WILLIAM H. SMYTH.

Spiritual Strength in the Cold War Struggle

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1956

Mr. O'HARA of Illinois. Mr. Speaker, on Sunday, May 27, our distinguished colleague from Ohio, the Honorable MICHAEL A. FEIGHAN, addressed the second annual communion and breakfast of the United States Information Agency here in Washington at the Washington Hotel.

In his address Mr. FEIGHAN made a scholarly and practical analysis of the cold war and the relation of our great spiritual ideals to a winning program of the United States Information Agency.

Under leave granted, I include Mr. FEIGHAN'S address on this occasion:

It is a pleasure for me to join with you in this, the second annual communion and breakfast of the United States Information Agency.

As many of you know, I have maintained over the years a keen interest in the program carried out by the information agency.

It has been my good fortune to have an early understanding of the real meaning of the cold war because of my equal good fortune of having knowledge of the real nature of communism at a very early age in my life.

I am one with Father Edmund Walsh, S. J., in the belief that the hotter we make the logistics of the cold war, the colder becomes the possibilities of a hot war.

The work in which you are engaged has a vital bearing upon the question of war or peace.

In your daily work, you do your best to contribute to the United States Worldwide Campaign of Truth.

Such a campaign of truth can do much to dispel the ignorance on which evil seeds of hatred and vengeance thrive.

Hatred and vengeance in turn are the architects of war. Truth is the architect of a just and lasting peace.

It is most fitting, therefore, that you, the Catholic employees of the USIA should have an annual corporate communion and breakfast.

Such an occasion as this provides a singular opportunity for a rededication to those great spiritual truths upon which civilization is based.

It also provides a splendid opportunity to gain added spiritual strength for the difficult tasks that are certain to confront your work in the immediate months ahead.

There can be no doubt that the world of our day is besieged by a force far more evil than any other in all of recorded history.

The struggle for the world is one in which the forces of human freedom and the forces of atheistic communism are locked in a death struggle.

This is fundamentally a conflict of ideas and ideals.

We believe that man is a creature of God, and as such possesses a special dignity, an immortal soul, and that in the hereafter every man must account for his stewardship on earth.

On the other hand, communism teaches that man is an animal, very little different from a horse or a pig.

Communism also teaches that all life ends with mortal death, that there is no hereafter, and consequently no accounting for a stewardship on earth.

It follows that material values are all that count with those who subscribe to the doctrine of communism.

This accounts in very large measure for the unequaled record of inhumanity to man established in the name of communism.

It is this irreconcilable difference in ideals and ideas which lies at the basis of the international conflict between communism and free people. Those who take part in the conflict in defense of our cause of human diginity and freedom must themselves be worthy representatives of our highest ideals.

There is no room for the materialists in the camp of human dignity and freedom.

They can only weaken our cause and dissipate the prospects for a just and lasting peace.

But there is unlimited room in the camp of human dignity and freedom for all those who believe that man lives not by bread alone and that things of the spirit are, in the end, what makes life worth living.

And while we keep open the way for all men of good will to participate in the fight for universal justice and decency, it would do us well to ever bear in mind what the persecutors of the early Christians said about them—"See how they love one another."

The work in which you are engaged is in many respects novel—at least it is new to the American scene.

Consequently you must expect a great deal of criticism and very little appreciation for your efforts. It may be many years from now before due accord its given to much of the good work you are now doing. This, it seems, has been the lot of many great and necessary causes down through history.

I underscore great and necessary because those are the only causes that draw strong fire and criticism. Bearing this in mind, you must not become discouraged no matter how difficult the task ahead may seem or how strong the criticism leveled against your efforts to pursue and expand a worldwide campaign of truth.

In somewhat recent years your work has become more difficult because of the burdens and obstacles created by indifference, expediency, and the growing attitude of laissez faire.

The do-nothing attitude which we see on many sides today springs from the false notion that if we do nothing, we will make no mistakes, and if we make no mistakes, we will avoid public criticism.

This is an attitude which must be completely rejected from the important work in which you are engaged.

Leadership demands a try at the unusual or unique and consequently expects honest mistakes will be made. Real leadership sees its mistakes and corrects them.

That is the kind of leadership which must always be given to the cause of human freedom or else individual liberty as we know it, will perish from the world.

I am reminded of an experience I had last November during the course of an inspection trip in Korea. I attended mass at an Army chapel and as I entered the church, I was handed a small leaflet which announced the masses for the week, the feast days of the week, and other items of interest to the military post. But down at the bottom of this little leaflet, prepared by a chaplain assigned to work close to the front lines of freedom, was this timely admonition to all those who attended mass that morning: "The greatest sin of all is doing nothing."

More and more we are hearing the idea advanced that the only workable formula for easing international tension is to approach the Communists in the spirit of live and let live.

The spirit of live and let live is so fundamental to all established religions that it naturally has great appeal to everyone.

This formula if followed would create a situation in which those who believe in moral principles make great concessions to those who are in fact amoral, and whose basic doctrine holds that if needs be three-fourths of the people of the world must perish in order that communism will triumph.

This presents a very serious dilemma for us as we seek to preserve our great moral principles and at the same time prevent the destruction of civilization by the forces of atheistic communism.

We are also being urged to adopt a policy of forgive and forget in our dealings with the Russian Communists.

Here again all established religions teach the necessity of forgiving our transgressors and forgetting misdeeds of the past in the hope that good works will result in the future. But unfortunately the Communists seek to use these moral principles to cause us to forget the many nations and people enslaved by them and who today suffer the trials of the martyr.

In conscience we can never forget the victims of communism any more than we can forget the moral principles which, if adhered to, will prevent the continuance of the many crimes against humanity committed in the name of communism.

In my judgment, we should be quick to forgive and prepared to forget only when the Communists have corrected their evil practices upon humanity and have removed their apparatus of fear and terror from those vast areas of the world which they now hold by force alone.

Another notion being advanced as a solution to the crisis which now grips the world is that we who are free can safely cohabitate with those who seek to enslave us and that if we will be patient and agree to a mixture of what we believe in with that of what the Communists teach, there will evolve over a period of years a new civilization.

This is called the new political evolution. It presupposes that by some accident of nature, evil can be mixed with decency and that the future civilization it heralds can be at the same time both good and evil.

The misguided advocates of this unworkable concept of political evolution have not learned that it is impossible to mix fire and water.

These are only some of the signs of our times.

In your work you must run across many others that stand as obstacles to the performance of the high task that is yours.

But these obstacles, as many and as diversified as they might be, should only serve as added encouragement to push you forward with renewed energy.

I have long thought that those engaged in work such as yours could well adopt the classic saying of St. Augustine which con-

cludes his writings on the subject of Christian combat.

He said, "The crown of victory shall go only to those who engage in the struggle."

In every sense of the word, you are engaged in the struggle to preserve the dignity of man and the decencies which make life worth living.

It is my hope and prayer that you will win that blessed crown, if not in this world, in the hereafter when all of us must give an accounting for our stewardship here on earth.

Agriculture and Food Supply in Various Parts of the World

EXTENSION OF REMARKS
OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1956

Mr. COOLEY. Mr. Speaker, I submit for the RECORD a splendid speech delivered by Dr. W. E. Colwell, assistant director, North Carolina Agricultural Experiment Station, at a recent meeting of the Raleigh Rotary Club in the city of Raleigh, N. C. The speech contains much real food for thought, and I hope that it will be read by every Member of the House and other readers of the CONGRESSIONAL RECORD. I especially hope that the speech will be read by those who live in the great metropolitan areas of our country who do not seem to appreciate the great importance of agriculture and the problems now facing our farmers.

I commend and congratulate Dr. Colwell, both upon the preparation and presentation of this fine speech:

AGRICULTURE AND FOOD SUPPLY IN VARIOUS PARTS OF THE WORLD[1]

(By W. E. Colwell, assistant director, North Carolina Agricultural Experiment Station, in charge of tobacco research)

I am appreciative of the opportunity to speak today on some agricultural observations made recently in various parts of the world. While the primary purpose of the trip I took was to visit some of the principal tobacco research centers of the world and some of the main production areas, it would appear to be of more general interest today to discuss with you matters of broader agricultural significance than recent advances in tobacco research. Suffice it to say that it is most beneficial to us to be in communication with other tobacco research programs. There is much we can learn from these centers where the level of technology is increasing rapidly. We've had students and other visitors from all over the world studying tobacco in our State but until this year we hadn't made it a two-way operation.

The topic I have chosen today is agriculture and food supply in various parts of the world including the United States. In developing this topic I have tried to keep in mind one of the principal objectives of the rural urban committee, viz, that of bringing about on the parts of both rural and urban people, a better understanding of the problems of the other. Though I am no authority on the subject of world agriculture and food supply it's quite impossible for one interested in agriculture to visit some 13 countries and not pick up certain information on this subject. I trust that some of my impressions will be of interest to you.

As background for my comments I would develop the fact that many people of the world know what hunger really is. Then there are two points I would make: (1) What is it worth to have reasonable assurance against hunger. (2) The food supply of the United States could depend in part upon Russia's activities in the Middle East.

On January 23, I was in Hamburg, Germany, about 25 miles from the barbed wire, floodlights and buried mines, hound dogs and police that guard the border between East and West Germany. I would like to read from a letter taken from a newspaper I bought that morning in Hamburg. It is from a woman referring to East Germany conditions.

"Have a look at the prices. A worker earns from 250 to 300 East marks a month and sausage or meat costs 6.50 per pound. A pair of shoes cost 100 to 200 marks and they are made out of pig skin which becomes like stone after the first rain."

About a month ago at a Presbyterian luncheon on the campus at State College, an East German refugee across the table told us: "You know, I have stolen a potato for my wife and me. I'm not proud of the fact but I did it. I was so hungry."

In Vienna, one of my traveling companions, an Austrian who was in a United States detention camp in World War II told me that the food supplied by the United States after the war to him, to his family, and thousands of his countrymen will forever make him a loyal friend of America. As best I can recall he said these words, "You know, there were times just before food came in from your country that I thought my family was going to die of starvation."

In Italy, I met a secretary now employed by the United States Embassy in Rome, an Italian woman perhaps 50 years old and a charming person, who told me that she lost 22 pounds during the war. She said there were entire days when she didn't eat. Food in Rome just wasn't to be had.

In the Union of South Africa, the natives this very day live on a handful of cornmeal, one-quarter pound of meat, including bone, and small portions of beans or rice. In Southern Rhodesia, where 95–97 percent of the population is native, the same is true. However, production potential is tremendous.

In Egypt, the standard of living has actually declined during the 20th century. Sixty percent of their 23 million people live on farms and all but 3 percent of the country is desert. This means that these 23 million people have about as much cultivated land (6 million acres) as North Carolina. Imports of corn and wheat must be paid for in some way.

India, with more than twice as many people as the United States (370 million), has two-thirds the land area and with poor rainfall distribution and low technology, food supply is of critical importance. Famines this decade are clearly recalled by many Indians—especially in the larger cities. This moment it's near midnight in Calcutta and hungry women with babies are sleeping on the streets. I saw this 2 months ago. The population is so dense that on the average in Calcutta a lot the size of mine in West Raleigh, 75 by 200 feet, accommodates approximately 165 people instead of 3 as it does in the case of my family.

The level of technology in India is low. Production is low. Population increases at the rate of about 1 million a year and food supply is recognized by the government as a principal need and a major goal of the two 5-year plans.

In Japan, pressure on the land is terrific, though production is high per unit area. Since the war some 89 million people (over half the United States) are crowded on the islands and they have only 13 million acres of available land—roughly twice the farm land in our State. When I was at Hatano some 75 miles from Tokyo, visiting one of the experiment stations, the director had lunch served in his office. In addition to the cold fried eggs and several other items, we had a huge bowl of rice. They told me that during the critical season they and all their city neighbors watched closely every daily report on the rice crop. If it were short, they said, reduced rations would follow, and if a failure it would mean near starvation to many people. "There's nothing more important to us than the condition of the rice crop," they said. I wonder how many of you this afternoon could tell me how the winter wheat crop is in Kansas?

With this background, let me develop the first point. What is it worth to have an assured food supply?

On the corresponding Monday a year from now we expect to be served Rotary luncheon in this room and I venture to say not one of us has ever even thought about the possibility of not having adequate food for the occasion. We are indeed fortunate. To whom are we city people indebted for this happy situation? Farmers, it is true, produce the food—about 13 percent of our people do that—but many of us in the 87 percent group sometimes get pretty tired of paying storage costs on surplus wheat and corn, and stabilizing prices and farm income. It's pretty ridiculous, some of us say, to give these special favors to the farmer; especially when granaries all across Iowa and Indiana, for example, are already filled to the brim.

I take you back to Hatano, Japan—with the conversation centered on the rice bowl. But the rice bowl in your kitchen and mine has been filled equally well now for the last many years. Your share and mine of the total net cost of programs for stabilization of prices and farm income since 1932 is $2.80 per year. The storage of wheat plus the storage of corn is costing each of us in the United States $2 this year. Personally, I think it is worth it though I, too, would like to see it reduced. Just keeping food cool in my refrigerator costs me more than that. I'd be quite alarmed if we had much less than the 9 or 10 months' supply of corn which we now have. I know that people can be hungry. We might find this cost of assuring our food supply surprisingly small when compared with that of national defense or even our share of the Government subsidy on national magazines or many other items.

But let us assume that the $2 storage cost is too high—and let us assume the $2.80 annual per capita cost is too high a price to pay for the stabilization of prices and farm income—both of which are involved in assuring you and me a good meal a year from today. This brings me to the clock set at 11:45 and on exhibit in front of me. We live in an era of the most rapid scientific and technological change of all time. If you were to put the full recorded history of man on the face of a clock, starting with the story of creation in the Book of Genesis and continuing until 1854—100 years ago—the hands of the clock would have moved from noon around to 11:45 p. m. The last 15 minutes on the face of the clock represent the last century. This is the slice of time colored in red. The output per worker in the United States has increased more in that last 15 minutes than in the entire previous 11 hours and 45 minutes. And most of the increase within that last 15 minutes has occurred since the turn of the present century.

Let us imagine for a moment that a good Egyptian farmer in the day of Moses could have been brought back to life in the day of the Caesars, some 12 centuries later, and placed on a good farm in Italy, then the most

[1] Talk before the Raleigh Rotary Club, May 21, 1956, as a program of the Rural-Urban Committee.

advanced nation of the world, but now with eroded soils and a poor agriculture and a poorly fed people. He could have farmed with practically no additional instruction, for the art of agriculture had changed little, if any, in the intervening 12 centuries.

Let us imagine that same farmer brought back to life on a good English farm in the day of Shakespeare, some four centuries ago. He still would have been a pretty good farmer with no additional instruction.

Now, let's bring that same ancient Egyptian farmer to the eastern shores of America 150 years ago and put him on Thomas Jefferson's farm, one of the advanced farms of that day. He still would not have found the art of farming very different from that which he practiced in Egypt 3,000 years earlier. He still would have used the same methods of power, the same crude implements, and large amounts of hand labor. He would have known very little about fertilization, improved varieties, high producing breeds of livestock, and the hundred mechanical and electrical gadgets which occur on our modern farms.

Now, imagine for a moment that same farmer on a modern American farm. He would be completely bewildered. He would not even recognize the working end of the tractor parked in the farmyard. It would require hard years of instruction and apprenticeship for him before he could even begin to operate the modern American farm.[2]

In spite of all the changes crowded into this 15 minutes on the clock, or more specifically, the last 7½ minutes, representing the 20th century, an adjustment, perfectly satisfactory to all is not far from attainment. And if it has to be off one way or the other, I'm sure we'd all have it in the direction of surplus instead of on the short side. Remember, it could have been the other way, and in many, many countries it is the other way. I met so many people concerned with food supply that I feel quite convinced our system is one we should appreciate more than we sometimes do, especially since a lower percent of our income today is required to supply us with a given food list than was the case 20 years ago. (18 percent versus 23 percent in 1935–39, assuming diet same. Actually we now spend 26 percent because diet is improved.[3])

It causes me to re-read the statement in the May 7 issue of Time to the effect that at the close of 1955 the index of what a farmer sells has dropped to 80 as compared to 100 for what he buys. (The highest it has been in recent years was 13 points over the 100 in February 1951.)

On the second point of my discussion, I wish to consider how Russia's activities in the world today could affect our menu here next year or some other year thereafter. Observations of grave concern regarding Communist activity came to me in every country I visited with 1 or 2 exceptions. This is a subject in itself and I'll not go into it today, other than to mention the specific item that deals directly with our agriculture and food supply. It relates to a source of power, viz, oil. Without oil we would not farm very much. Tractors and trucks would be idle, many trains also. Horse and mule population is so low to be of little relief as a source of power to plow, sow, and harvest. Where does our oil come from and how does Russia figure in this? Around two-thirds of the proven oil reserves of the world exist in the middle east, next door to the Soviet Union, particularly in Iran, Iraq, and Saudi Arabia.[3] Iran, saved from communism by a hair's breadth not long ago, still is under heavy Communist pressure. Unrest among a poverty stricken people provides fertile ground for Communist leaders who work undercover. Iraq is under heavy Communist pressure from both Communists and Arabs to desert its military alliance with the West. Saudi Arabia, now oriented toward the United States is lined up strongly with other Arab states against Israel.

Communist countries are buying surplus agricultural products from the area—and offering Communist products at cutrate prices in return. Russia is buying Syria's cotton, for example, and offering to put up a complete oil refinery cheap.

At present, 90 percent of the Arabian oil is controlled by the United States and Britain.[4] With it many of our tractors here in North Carolina operate. We probably burned some of it driving to work this morning or in coming to this meeting. Without it, the 13 percent of our population might have some difficulty feeding themselves plus those of us comprising the 87 percent. We are placing an unusually high degree of dependence on the one commodity—oil, especially when two-thirds of the world reserves (of 158 billion barrels) are next door to a country dedicated to the goal of world domination.

I for one am glad those granaries in Iowa are filled with a 9 to 10 months' supply of corn. This doesn't seem excessive to me.

In conclusion, let me say that it's an unforgettable experience to see really hungry people and to hear the stories of those who have had the misfortune to be in that condition. This very day millions of people in the world will not have enough to eat. Tomorrow morning there will be 80,000[5] more mouths to feed than there were this morning. Hungry people make good hunting ground for the operation of global communistic agitation techniques.

The American farmer has fed us well. We appreciate his efforts—yes, three times each day we appreciate his efforts. However, we may not have told him of the good job he's doing. I believe this is one thing each member of this club can do as his own opportunities present themselves. Let the farmers know how well we like to eat.

President Appoints New Commission on Small Business—Again a Commission

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1956

Mr. CELLER. Mr. Speaker, on Thursday last, President Eisenhower appointed a Commission in Aid of Small Business. Why the solicitude for small business now? Can it be that election is only a few months hence?

This Big-Business Government has given small business the absent treatment for 3½ years of its existence. Small business failures are up 15 percent over last year's. Up to May of this year, almost 5,500 small firms went out of existence. The Commission is too late for them.

This new commission will go the way of all commissions. There are scores of them floating around in space in Washington. We have them on floods, taxes, natural resources, parks, science, labor, schools, health, and what have you.

They are usually set up with fanfare but like fireworks in the night they peter out in the darkness.

Who is the administration fooling?

Someone wisely stated:

A commission is a group of uninformed, appointed by the unwilling, to do the unnecessary.

Spiritual Values in a World of Crises

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1956

Mr. HOEVEN. Mr. Speaker, on Monday, May 28, 1956, it was my privilege to deliver the commencement address at the 56th annual commencement excercises of Westmar College, Le Mars, Iowa, at which time I was awarded the honorary degree of doctor of laws. My address follows:

We live in a time of desperate challenge. Great problems confront us.

Your generation will be called upon to assume responsibilities of vast magnitude. You will be called upon to assume the burden of a world torn by two conflicting ideologies.

One preaches the Word of God, sustained and strengthened by faith in the divine teachings of the Holy Bible.

The other plots in darkness to enslave mankind under a cruel tyranny that denies God and would tear down all that we hold sacred.

One believes in freedom under God as the source of all human progress. That philosophy, to which we adhere, upholds the dignity and sanctity of the individual. The other would destroy all freedom and all religion except worship of the state. In the Communist philosophy the individual exists only to serve the purposes of the government.

Within the lifetime of all of us here today revolutionary changes have taken place.

The swift pace of modern scientific development has touched upon every aspect of human activity. The old concepts of time and space have been swept away. Research into the secrets of nature has made possible the destruction of civilization should the world become involved in total war.

I bring these grim facts to your attention only to emphasize my firm belief that the future of mankind depends upon a clear understanding of the eternal and unchanging truths that govern the destinies of men and nations.

I wonder if you will agree with me then that the human race is living today close to the edge of eternity and that this unprecedented fact in history calls for a reappraisal, so to speak, of the future of the world.

I wonder if you will agree with me that had we been living in a more normal period of history—before the nuclear age—we would, as the result of the natural forces of international attrition, be deeply involved at this hour in World War III.

Now what I want to be concerned with here today in my meditations with you is a determination—just among ourselves—on just what it is in civilization that endures. Our problem is to decide where to put the major accent on life and how to shape our world in the immediate hours ahead so that we shall not blow ourselves and all of life

on this planet into a mass of nuclear gases.

This we know: There is no comparable period in human history during which so much has happened to so many people in so fractional a space of historic time.

We want to know first how we can go on living as the human race. And then we want to know how we can go on living without being enslaved.

I begin with a premise.

My premise is this:

My premise is that the United States of America is up to this hour the greatest triumph of Christianity.

President Dwight D. Eisenhower in an address in 1955 made this statement: "As we build a richer material world, we must always remember that there are spiritual truths which endure forever. They are the universal inspiration of all mankind." George Washington in his farewell address more than 150 years ago uttered these words: "Religion and morality lead to political prosperity." These great men, though living many decades apart, shared the belief that a sound prosperity cannot be accomplished without a foundation of high standards of spiritual and moral principles and values.

My premise is that the moral values are the enduring values.

My premise is that victory in the struggle we are now in is so deeply involved in moral values that we cannot hope to survive without them. We shall need and maintain our strength-in-being, our Gideon's sword, but, I insist, we shall get nowhere without the Ark of the Covenant.

Now when I say that the United States is the greatest moral and practical triumph of Christianity I am not to be misconstrued into believing that I think we Americans are (a) the chosen people, or (b) the master race.

I am not putting out that kind of boast.

On the contrary, I hold it the most vital long-term duty—a duty of the greatest magnitude—that the whole world, under whatever religion, feel at the heart of its peoples and the seat of its governments, the power of the moral principles that make for survival of mankind and amity among the nations of the earth. It is up to the United States to be among the nations what Paul of Tarsus was among men.

Now when I say we here represent the greatest triumph of Christianity, I mean by triumph of moral principal over that which is bad. Our Constitution says that "all men are created equal." It is a cornerstone in our sense of moral values. The question is: So you believe all men are created equal? So what? Here is the difference: The Americans spelled that phrase out into statutory law. They spelled it out in their Constitution. They amended their Constitution to spell it out even more. And they are rendering decisions in their highest courts not only to keep the Constitution, under which they established Christianity in Government alike, but to expand and enrich it.

When you do these things you then give yourself the right, by virtue of your conduct, to preach; you give yourself the obligation to teach, perhaps to boast.

The Bible came out of the steaming ferments of the Middle East in antiquity. But in 2,000 years I do not know where its credo has been applied more practically than in the Congress of the United States, the White House, and the Supreme Court. For that matter we did not invent the internal combustion engine. But when we got hold of it we made the automobile the greatest industry of all time. It is this business of plucking a great ideal out of the dreams of the visionaries, and the schemes out of the half-realized hopes of the great inventors—foreign and native—and putting them to work for the good of all men that explains so much of America's success.

The moral ethics we live by came from Christ, they came from Moses, they came from Aristotle, and others. But before we got through we had: trial by jury, habeas corpus, due process, no unusual punishments, equal justice under law, and a sublimely organized system of courts for the protection—precisely for the protection—of the dignity of man.

By triumph of Christianity, I mean we took the blueprints of Christianity and law and created working tools.

That has built us up to the present hour but it does not protect us for the future.

We began this Nation with 3 million agrarian citizens and a sort of gross national income in 1799 of $667 million—substantially less than $1 billion. Our gross national product is now approaching—as President Eisenhower pointed out in his state of the Union message recently—$400 billion.

From less than one billion, in rough economic language, to upward of $400 billion in something over 150 years. What made possible this fabulous progress?

There have been other great land masses with enormous resources.

Why did they not blossom with a parallel prosperity?

I venture a few broad-gaged guesses:

They gave priority and privilege to some one church instead of giving the fullest opportunity to all, as on this soil—and priority to none.

They failed to separate church from state and they totalitarianized the one and persecuted the other.

They preferred aristocracy and privilege to democracy and equal opportunity.

They perpetuated corruption and accelerated decay because they lacked the purgative powers and the self-criticism of a free press.

Their system of popular education was so debased by despotism or semi-despotism that teaching a nation to read and write made the people only more vulnerable to a form of totalitarian propaganda and yellow journalism, and the victims of deliberately designed falsifications.

They failed because they ignored the moral and spiritual values that alone give strength to a nation's roots, its foundations, its reason for being.

The system that grew up here was imbedded in the public school, the town meeting, and the free press. We implemented democracy and justice in government by providing a government by consent of the governed. When we talked about "all men * * * created equal" we worried, as Lincoln did at Gettysburg, about giving it meaning in everyday life. When we Americans say, "love thy neighbor as thyself," we are not just reading Leviticus in the Old Testament and Mark in the New and letting it go at that. If someone invents a steam engine, we Americans expect it to run a locomotive. We expect it to replace sails on the sea, to carry freight, to move passengers, to build an economy. When we thunder at the greatest power of the time that all men "are endowed by their Creator with certain unalienable rights," we Americans are not kidding because we expect to get those rights, fight for them and, if necessary, die in the process. All of which is precisely and exactly and extravagantly just what we do.

And we do it again and again and again.

"Love thy neighbor as thyself" did not mean for us sharing cookies with the family across the street on some one day during the Christmas season. It meant that Cuba was to be free. It meant that the Philippines were to have their independence, just as we had our independence. It meant that any little people anywhere on this earth could lift its melancholy face towards Washington, D. C., and hear ringing out to the oppressed peoples the electric language of the "self-determination of nations" in the ennobling words of Woodrow Wilson and his successors.

It meant relations with our neighbors, Mexico and Canada, founded on persuasion and consent. It meant a climax of thinking across the frontiers that rendered senseless and unthinkable any policy of violence, of infiltration, or conquest. It meant a relationship founded on mutual respect, not mutual fear, and it produced hemisphere understanding and vast regional solidarity and strength on the side of the free world.

That's what it meant.

And it meant that for the free world—after the United States had spoken and practiced its words—the existence of satellite nations would stand out as a symbol of shame, of national peonage, and that it would be an affront to the whole world's sense of freedom and right in the era that is our era.

Yet we are but seven perecent of the population of the world.

After 157 years, this tiny confederation of 13 States emerges as the greatest power of all time. It is the unexampled phenomenon of 166 million people governed by 166 million people. It is so much the very heartbeat of world liberty that monarchs and statesmen, kings and queens, those in power and those in exile—but all seeking liberty of strength for liberty—come to the podium in the House of Representatives in the Capitol of the United States of America to plead their cause. The satellites that come to Moscow look glumly for their orders. The nations that appeal to us for whatever influence we have to give to enable them to continue free and independent.

As clearly as black is black and white is white, Washington means freedom and Moscow means enslavement.

We have then to ask ourselves: Now what?

If you agree with me that we have the moral might—in the interests not alone of our own preservation but in the interests of the preservation of the free world and life itself on this planet to right a wrong, then our problem is: What processes shall we employ? What methods shall we use, what tools, what means? And, can we do this at all without going to the brink and without precipitating the very World War III we are so bent upon preventing?

The answer is that, in one form or another, it all happened before—and in our time. The answer is that of course no people grimly determined to maintain its integrity against enslavement or destruction can hope to survive against a resolute and a dangerous enemy without some element of risk. But I insist that the risk can be buttressed by character, courage, and strength. And with these I feel—as history I am about to relate proves—that Communism has been and can be stopped dead in its tracks. I believe we are doing this under our administration today and I believe, moreover, that in this contest between freedom and communism there are no party lines.

Of course, given the brute strength of a limitless army, given conditions of desperate poverty, given widespread chaos, and the Soviet Union, or its fatal export, communism, can and does expand. But unless everything we know about conquest by force as against conquest by moral principle is wrong, it will be impossible to convince me that communism has even begun to take root among the third of the earth's population and the fourth of the world's surface where it now rules.

It is only just now giving itself its own blow to its own solar plexus.

We now have the proof in the Kremlin's own words that communism in general and the Soviet Union's oligarchy do not respect each other or themselves.

It is because they are vulnerable on moral grounds that they are vulnerable on every other ground—economic, political, diplomatic, ideological.

We all remember Austria, France, and Italy in 1947. They were becoming Communist-ridden. Their governments were tottering under the vast despair of postwar chaos. Exercising our high moral standards we stopped, on the home soil of the other man's country—the tragic overwhelming of free government by Communist infiltration. We stopped subversion and the misuse of a people's poverty to destroy their liberty.

In our overall program, Western Germany was brought into the anti-Communist fold. It happened that total success was not to be our lot. For while we succeeded brilliantly for the most part in Europe, we underwent dismal failure for the most part in the Far East. We have to accept the conditions of combat—for wars are like that.

I could go on and relate the story of Iran, which but for us might have been swallowed by the Soviet Union.

I could go on and tell the story of Greece and Turkey with the Kremlin breathing on their necks.

I could go on and report the heroic tale of the Berlin airlift.

What I say in sum is that the Communist ideology is not an irresistable force. The Soviet Union, with its Kremlin, is anything but an immovable body.

But moral force is both.

No one with an open mind and a clear view will belittle the compelling impact of President Eisenhower's challenge to the Soviet Union on disarmament and aerial inspection at the Geneva "meeting at the summit." Who can miss the sheer power of the confidence President Eisenhower enjoys from the people of his own country and the world in relation to this contest with communism?

What I urge today is that we seek with all the diligence we have, with all the wisdom we can get to lead us, with all the sincerity of our own people, some formula tailored—in each case—to the prevailing situation, for the defeat of the Communist enemy.

One part of this formula must be our own strength in the area of education in our own country.

We may even turn the Soviet tragedy to some benefit if under pressure of its crisis we exert ourselves on the educational plane to meet it head-on. We must defeat the peril of drastic shortages in skilled occupations. We must determine why students drop out of school and how gifted students may develop their abilities. I go all the way with the proposal that opportunities for higher education should be available to all Americans to the extent of their capabilities.

What I have sought to emphasize in this address is the suddenly, extended, suddenly accentuated meaning of our moral and spiritual values in the light of atheism's physical and ideological threat from Moscow. We cannot miss the importance in a technological age of the need for higher education and the development of our national talents to their noblest flowering. It is this that will contribute mightily to a strong and progressive America. Above all, this growth, morally and spiritually, this strengthening of our native talents by training and education, is without meaning if it is not based on the bulwarking, equally, of our faith in our constitutional rights. Given these moral and spiritual forces, given this all encompassing education for all our people, given this faith in the American heritage, victory for the free world will be the inevitable reward for mankind.

Nothing you graduates can possibly do will enrich yourselves more or hasten the triumph of faith or make a better contribution to your country than to proclaim and demonstrate the faith and learning you have gathered here at Westmar. May each of you bring something to a world in need of light and understanding.

The Fight for Industrial Safety

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, among a number of interesting speeches made at the President's conference on industrial safety was one by William F. Schnitzler, secretary-treasurer of the AFL–CIO. I should like to include Mr. Schnitzler's remarks at this point:

I am not happy to be speaking here today because the subject which brings us together is cruel and heartbreaking—the subject of industrial accidents.

Certainly this meeting is necessary; certainly this conference has helped tremendously in calling public attention to this grave problem. But none of us can honestly say we are "happy" to be here.

You know, as well as I, the statistics of industrial accidents—the annual toll of 14,000 dead, and nearly 2 million injured.

It is very easy to recite those statistics. It is very easy to talk about the necessity for preventing this terrible waste of our Nation's most precious resource—her people.

It is quite another thing to appreciate the suffering, the tragedy that industrial accidents bring in a worker's family.

It is quite another matter to substitute action for speeches.

I have been assigned the topic "Labor's Responsibility for the Prevention of Accidents." I submit that it is impossible to talk about labor's responsibility and not talk about management's responsibility. It is impossible to talk about either the responsibility of labor or management and not talk about the responsibility of Government as a representative of all the people. It is impossible to talk as a labor representative about the subject of industrial accidents without getting mad and without stepping on some toes.

I shall strive to restrain my indignation. I shall not try to avoid "stepping on toes." For this is a matter so serious as to make the normal social amenities pointless.

I am a baker. I have seen a man lose an arm in a dough mixer—and later die of gangrene. I have seen a lovely girl lose four fingers in a slicing machine. And mind you, I do not come from an industry that is considered "hazardous."

I represent here today the people who have the greatest stake in the abolition of industrial accidents—the workers whose eyes and hands, whose legs and lives are at stake.

I represent as well the people who are denied, in all too many instances, an effective voice in dealing with industrial accidents. Oh, we have a voice in conferences like this, but we are often denied a voice at the plant level—where it really counts.

Let me point out that the concern of the trade union movement in this field is not new. One of the earliest fights we waged was for the achievement of workmen's compensation laws and factory inspection and safety laws.

It is often forgotten that we achieved workmen's compensation laws and State safety laws over the fierce opposition of the representatives of management.

We did not achieve a workmen's compensation law or a factory inspection law in a single State just because of our logic or our powers of persuasion. We won our fight because men and women died—died horribly—died needlessly.

Just the other day, President Meany reminded a group of union leaders, who were here in Washington, of the fact that in the State of New York it took the death of young girls in a garment factory—the Triangle Shirt Waist disaster—to bring decent laws and decent enforcement of laws in that State.

New York wasn't the exception—it was the rule.

Men lost their jobs because they fought for these goals. Men were blacklisted as "agitators". Employers spent large sums of money to defeat workers in their campaign for this kind of legislation. They fought us vigorously but we won.

Or did we?

Today's statistics would indicate that there is a tremendous job still to be done. The workmen's compensation laws have not kept pace with economic advances. The proportion of pay that an injured worker receives is far too low. The disqualification pitfalls are far too many; the red tape too snarled.

The factory inspection and safety laws have not kept pace with the tremendous advances of the industrial world. We have States where there are more game inspectors than factory inspectors, as though our wildlife is considered more important than human life.

I think we in labor have a right to point the finger at those responsible.

In every battle in every State legislature, over the issue of workmen's compensation improvements, we have been opposed by the organizations representing business and industry.

Every time we have fought to improve factory safety laws or to see to it that there were enough State enforcement officers to police these laws, we have been opposed by lobbyists of the State chamber of commerce, or the State manufacturers association.

I have been sometimes puzzled by this opposition. Some members of these employer groups are companies that have demonstrated, at the collective bargaining table, maturity and a progressive and understanding attitude.

Some members of these employer groups are companies with active safety programs—companies that have established safety programs which save skilled manpower, save production and protect profits.

Why then the opposition from the lobbyists of these employer groups? I don't know. I have never been a member of these organizations. Some of it may come from individuals who believe they are protecting the best interests of their members. Some of the opposition may result from the fact that progressive employers fail to exert an influence in the organizations to which they belong.

Much of it comes, I believe, from a kind of cash register mind that is unable to see that a short-range profit in cash could be a long-range deficit in human values—from the kind of mentality that places profit before people and dollars before decency.

I am told that no progressive company today opposes industrial safety. On the face of it, that's probably true. But the fact is that there is a good deal of opposition—almost concerted opposition—to what we consider the only sound and sensi-

ble approach to the achievement of industrial safety.

That approach can be summed up in one word—"cooperation".

In those instances where the cooperative approach has been tried—in those companies where there is now agreement that safety is not the job of management alone or the job of safety technicians alone or the job of labor alone—the record of industrial safety has been astonishing and heartwarming.

But in all too many companies, top management is afraid that the cooperative approach which we advocate would be an infringement on management's prerogatives. In all too many companies the safety technician is considered just an employee. He has no say in top management policy. He can recommend, but he cannot act.

In all too many companies the labor unions are ignored or scorned or fought when they attempt to get into the safety picture.

Labor organizations recognize that, in a large part, plant safety is a technical problem. We recognize that management has the prime responsibility for making the workshops safe.

We recognize, too, that the labor union, which is the workers' representative, and which the worker respects, can play an important role in building plant safety.

But it can't play an effective role if it is considered only a messenger boy for top management. It can't play an effective role if its recommendations are not heeded. It can't play an effective role unless safety is a cooperative matter in which the technicians and the union and management work together with an understanding of each other's problems, with an appreciation of each other's sincerity and with the common purpose of making the job safe.

All too often, employers with whom we have excellent relations will say to us privately and confidentially that they would make their plants safer and provide for the purchase of expensive safety equipment if all of the companies in their industry would do likewise.

But they can't be caught in a competitive squeeze—they can't afford higher operational costs if a competitor is going to continue hazardous practices just because they are cheaper practices.

That's the reason why labor unions consider that this is a job in which Government, as the representative of all the people, must play a prominent role.

We need factory inspection laws that are modern, strict, inclusive. We need fair and continuous enforcement of these laws without fear or favor.

I pledge to you that the trade unions of the United States are going to continue their fight to get this kind of industrial safety legislation and to get this kind of enforcement of these laws.

That will end the competitive squeeze which worries some employers.

I spoke before of the cooperative approach. Let me remind you that during World War II, there were some 7,000 labor-management production committees going in American industry. Statistics show that over 80 percent of these worked on safety. Safety was by far the most frequent subject of joint cooperation. It was by far the most effective.

Today a great many of these committees have disappeared. Some still exist—far fewer than I would desire and those that do exist are doing an excellent job.

I want to commend to your attention the labor-management safety program in the west coast pulp and paper industry. The management's side of the table is represented by my predecessor on this program, Mr. Zellerbach.

I want to congratulate Mr. Zellerbach and the employers he represents, and I want to congratulate the unions involved in this program. They have demonstrated far better than any words of mine the fact that labor-management cooperation for safety does work.

Some of the international unions of the AFL–CIO today have full-time safety directors. Some have part-time district safety directors. Many of the local unions have safety committees. Some of the unions provide training in the basics of safety in their industry, and they have sought and found expert guidance in this field.

In honesty, I must say to you that the unions have not made as much progress in this field as they should and as they will in the future.

But the concern of the trade-union movement for industrial safety is growing in the AFL–CIO. At our founding convention, we established a constitutional committee on safety and occupational health which includes top leaders of organized labor who come from the most hazardous industries.

Let me assure you this is not going to be a sweetness and honey committee. It is not going to be a committee that will content itself with writing a resolution for the biennial convention to consider. It will be a committee that will take an active, hard-boiled, practical interest in this field.

The members of the AFL–CIO, I assure you, will be fighting at every level for the enactment of enforceable, up-to-date occupational safety and health codes. We will be fighting for adequate appropriations to insure the policing of these codes at every level of Government.

We will be fighting for decent, modern, and humane standards of workmen's compensation.

Yes, the AFL–CIO will be fighting. But we will also be ready to cooperate—to cooperate at the plant level, in the State legislatures or in the Federal Congress—with men of good will from management who believe, as we do, in the preservation of human life and the prevention of human suffering.

This Conference serves an excellent purpose in bringing the need for occupational safety before the public.

But it serves no purpose at all if the noble words which are uttered here are not matched by concrete deeds back home.

We applaud the words—but we'll wait for the needs before rendering judgment.

The Late Miss Lucinda Rayburn

SPEECH
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. DOLLINGER. Mr. Speaker, I wish to take this opportunity to extend my condolences to our Speaker on the loss of his beloved sister, Miss Lucinda Rayburn.

Miss Rayburn was a fine woman, highly respected, loved, and revered by all who knew her. To our Speaker she was sister, companion, confidant, and hostess; a person dedicated to his welfare and happiness. Her loss will be keenly felt by her family, friends, and the many thousands who had the opportunity to benefit by her kindliness, graciousness, and sincerity.

Our Speaker and other members of his family have my deepest sympathy in this time of bereavement.

Memorandum on Kearns Bill, H. R. 10424

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1956

Mr. KEARNS. Mr. Speaker, under permission to extend my remarks in the Appendix of the RECORD, I submit the following memorandum on my bill, H. R. 10424, which would amend the Internal Revenue Code of 1954 to reduce the excise tax on television receivers capable of receiving 50 or more ultra-high frequency television channels:

COMMITTEE FOR COMPETITIVE TELEVISION,
Washington, D. C.

MEMORANDUM ON KEARNS BILL, H. R. 10424

In order to achieve an all-channel television system it is essential that receiving sets at manufacturer's level be built as all-channel sets. Because of the inept manner in which allocations were made at the outset by the Government, it is now essential that the Government help to correct the error by creating an excise tax differential between all-channel sets and VHF-only sets at the manufacturer's level.

This is the purpose of H. R. 10424, and the following facts relate to the tax effect of that bill which provides a 5 percent reduction in the excise tax on television sets capable of receiving 50 or more UHF television channels:

The average cost at manufacturer's level before taxes of all-channel sets is currently $134 per unit.

The average cost at manufacturer's level of VHF-only sets is currently $120 per unit.

It is estimated that all sets costing at manufacturer's level $129 or more would be manufactured as all-channel sets if there were a tax differential of 5 percent.

It is estimated that this would cause the manufacture of 50 percent of present VHF-only sets as all-channel sets. It would affect 3,300,000 sets.

In addition, in 1955 there were manufactured 1,181,000 all-channel sets.

The reduction of revenues from the 5 percent differential would be as following, presuming 1956 and later production would be approximately on the 1955 basis:

Value of 1,181,000 UHF sets	$160,000,000
Present excise tax, 10 percent	16,000,000
Kearns bill, loss, 5 percent	8,000,000
Value of 3,300,000 UHF sets	425,000,000
Present excise tax, 10 percent	42,500,000
Kearns bill, loss, 5 percent	21,250,000
Total loss	29,250,000

However, this loss would be offset by at least a 10 percent increase in set market as a result of increased stations. This will amount to approximately $6 million. In addition, the present UHF stations will have increased revenues. If this were to be an average taxable revenue of only $100,000 per

station, there would be a gain to the Government of $5 million. The advent of new stations to the extent of only 400 stations with taxable income per station of only $50,000 would increase tax revenues by $20,000 per station or $10 million. All of these taxes would create a recoupment of $21 million per annum.

Additional employment of taxable employees, additional revenue to networks, and additional orders to manufacturers for transmitting equipment and receivers will all generate more taxable income than could be lost by the Government.

Therefore, the Government would under the Kearns bill gain revenue rather than lose it.

The foregoing is based on facts and figures supplied by the Statistical Division of Radio-Electronics-Television Manufacturers Association.

Bulganin and Khrushchev Are Not Welcome in the United States

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 2, 1956

Mr. BYRD. Mr. Speaker, I wish to direct the attention of our colleagues to the following article by Mr. Robert E. Allen, which appeared in the Charleston Daily Mail of West Virginia on May 29, 1956. Mr. Allen tells us how anxious the Russian bosses are to visit Canada and South America and points out that their real objective is the United States. Let us hope our good neighbors make known to these murderers that their presence is not welcomed on this side of the Atlantic.

The article follows:

BULGANIN AND KHRUSHCHEV SET SIGHTS ON CANADA

(By Robert E. Allen)

These two globe-trotting Kremlin czars are eyeing this side of the Atlantic.

They are putting out feelers about coming to Canada.

It's being proposed to Premier Bulganin and Communist Party boss Khrushchev be invited to make an official visit to the Commonwealth, as they recently did to Britain.

Prime Minister Louis St. Laurent has done nothing about the matter. Moscow has been informed he is "considering it."

The Reds' strategy, in proposing to tour Canada, is obvious.

Their real objective is not the Commonwealth. It is merely the means to far greater ends.

The Russians' actual propaganda targets are the United States and Latin America.

A Bulganin-Khrushchev trip to Canada is deemed certain to be extensively covered by the United States press, radio, and TV, which in turn would transmit reports to Latin America. Thus the two Soviet rulers would, in effect, be making a tour of the entire American continent.

Further, they would be doing that without taking any undue personal risks, added fatigue, and with the opportunity to wheedle for invitations to the United States and elsewhere.

The Reds are making no secret about courting Latin America. At the latest Kremlin diplomatic reception, Khrushchev went out of his way to be cordial to South Americans. To the Ambassador of Argentine, with whom the Soviet is negotiating a big trade deal, Khrushchev expressed the enthusiastic hope of visiting that country "soon."

A significant straw of what is in the wind along this line occurred in Uruguay last week.

The Uruguyan Chamber of Deputies accepted a Russian invitation to send a delegation there for an extended visit. Similar invitations have been made to a number of other Latin American countries.

Management's Responsibility for the Prevention of Accidents

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include a speech made recently at the President's Conference on Industrial Safety by J. D. Zellerbach, president of the Crown Zellerbach Corp. Mr. Zellerbach points out the responsibility of management, together with labor and the individual worker, to attack the problems of accident prevention. His speech follows:

MANAGEMENT'S RESPONSIBILITY FOR THE PREVENTION OF ACCIDENTS

(By J. D. Zellerbach)

Throughout the first 2 days of the President's Conference on Occupational Safety you have explored accident prevention from several different approaches. You have heard safety discussed as a community problem. You have participated in safety clinics. You have looked at safety from the standpoint of our farms and our public employees. This morning you will hear from management and labor.

All of you have presumably received copies of the Conference Fact Sheet. At the risk of repeating statistics from this document which may already be familiar, let me mention briefly the following figures: in all industry divisions within the scope of the President's conference there were more than 1,700,000 disabling injuries in 1955. The number of fatalities exceeded 12,000.

My point is this: the majority of these injuries and deaths occurred in industries operated by American management. The figures, in short, provide us with a graphic indication of the tremendous scope of the safety problem faced by management. It is management's responsibility to use every device available to lower as far as humanly possible the number of deaths and injuries in American industry.

At the same time it must be recognized that management has made great steps forward in making American factories, mills, and mines safe places to work. We know that American management as a whole has become acutely safety conscious and that no responsible industrial concern can afford to function without a sound accident-prevention program.

But we also know that to the homes and families hit by fatalities, to the permanently disabled, it makes little difference whether the figures are relatively better or not. Death and pain are not relative. They are bitter reality—to the man who is hurt or to the survivors left behind.

A single accident, a single fatality is bad, wherever and whenever it happens.

Taking accident prevention from the management viewpoint, we can start with the fundamental assumption that management is most emphatically responsible for industrial safety in the United States. That responsibility will be reflected in literally thousands of individual safety programs of varying complexity across the country, programs which are designed to protect American workers from the physical hazards of industrial employment.

But whereas certain obvious jurisdictional lines can be drawn between management and labor in many areas of industrial activity, no line can be drawn where safety is concerned. Safety represents a unique form of responsibility in that accident prevention cuts straight across every industrial organization and involves everybody—without exception.

This means that management must share its responsibility for safety with labor and with the individual worker, completely and wholeheartedly. We might call accident prevention the eternal triangle of industrial relations, to take certain liberties with that familiar phrase. On the one side, there is management, on the second side organized labor, and on the third side the worker himself. Unless there is a sense of mutual responsibility for safety, a sense of personal participation by every member of the organization, the triangle flies apart, accidents happen, and people get hurt.

Today I want to discuss with you some of the implications of the triangular approach to accident prevention, and then to show you how we have used this approach in the field where I am most at home: the Pacific coast pulp and paper industry.

Management's responsibility to provide a safe place to work requires far more than the provision of guards around machinery or dangerous chemicals, adherence to State and local safety regulations, or the establishment of elaborate safety campaigns. It requires the generation and the steady maintenance of a safety climate.

This climate must induce every member of the organization, from top management down to the man on the line, to think, feel, and breathe safety all the time.

If the safety climate is sufficiently well developed, it should even permeate the home and the community and thus act to prevent accidents away from work—where, in fact, most accidents occur. An employee who seriously injures himself falling from a defective stepladder while pruning an apple tree is just as much a loss to the company as though he had been hurt on the job.

This need for a good safety climate cannot be overemphasized. Indeed, it has been growing steadily in American industry through the years. Where it does not exist it is apparent that top management or the employees are either indifferent to safety or merely paying lip service to accident prevention. In such cases a plant cannot be completely safe. In a complex industrial facility—and what facility is not complex these days—the lack of a good safety climate can be dangerous to management and labor alike.

To build a proper safety climate, management must have the full cooperation of the union and the individual worker. Each must hold up his end of the triangle. There can be no blockage of communications, no attitude of "let the other fellow do it," no abrogation of the mutual responsibility for safety. Management cannot afford it because of its legal and moral obligations to its employees and because of its heavy investment in trained manpower and in equipment. The union cannot afford it because it is obliged to promote the welfare of union members. The individual worker cannot afford it because his good right arm, and possibly his life are at stake.

The plain fact is that nobody cannot afford it. The pursuit of safety is about the most "mutual" interest I know of.

In order to generate a proper safety climate, management must be prepared to do everything within its power to prevent accidents. Safety must be built into the entire industrial process, from the building of new plants and equipment to the lowliest work order. The plant manager, backed up by top management, must be ready and willing to curtail production in order to solve a safety problem. And the safety message must be effectively communicated up and down the line.

Building safety into the industrial process obviously calls for system and method. A program is the sine qua non of accident prevention and it is up to management to provide direction and support for safety campaigns. I do not wish to fill in for you all the details of a management safety program, since many of them will be known to you as established techniques. Nevertheless, the common denominator of all safety programs must be a combination of five basic elements:

First, good housekeeping. Safety and clutter, like the mongoose and the cobra, are natural enemies.

Second, protective equipment and emergency procedures.

Third, safety supervision and inspection. This would include the preparation of safety rules and their enforcement, accident investigation and analysis. And it would include action to prevent the recurrence of accidents.

Fourth, sanitation and medical facilities.

Fifth, safety education. This means the indoctrination of new employees, building safety into job training and holding safety meetings. It means keeping the safety message before all members of the organization all the time.

It is possible, of course, for management to blueprint an accident prevention effort on the basis of these five elements and delude itself into believing that complete safety has been achieved.

Let me give you a useful illustration of what I mean. In the Pacific coast pulp and paper industry we thought we were all for safety during the years before the war.

Most of our member mills probably considered that their safety standards were adequate for the times. But there was a missing link. The proper safety climate had not been established. And our accident rate proved it. From 1923 to 1945 the sum total of our safety effort was a drop of around four points in lost-time injuries—from 43.50 to 39. No such rate could be tolerated today.

Then something happened.

Fortunately the pulp and paper industry on the Pacific coast had always enjoyed excellent relations with the two labor unions representing our employees: The International Brotherhood of Papermakers and the International Brotherhood of Pulp, Sulphite and Paper Mill Workers. Through the years we had bargained collectively with considerable vigor, without losing respect for the other side of the bargaining table. Bargaining was, and is, on an area-wide basis and the wage contract agreed upon applies to the workers of all mills in the Pacific Coast Association of Pulp and Paper Manufacturers.

During the course of our wage negotiations in 1945, the two labor unions, representing nearly 50 local unions, by the way—proposed a joint labor-management attack on accidents in the pulp and paper industry. They fully recognized that safety cannot be covered in any adequate way through a labor contract and saw considerable merit and wisdom in the joint approach.

So did management. We agreed with the idea at once. Thus began one of the most unique developments in labor-management relations throughout all of American industrial history. We had discovered, at least in our industry and in our area, the triangular method of accident prevention.

To put the proposal into practical effect, the unions suggested that we establish an annual series of joint labor-management safety conferences to be held in the three States of Oregon, Washington, and California. The purpose of the conferences was to be "the consideration of safety education, accident prevention and first aid." From that day to this we have never wavered from this purpose and the results of the whole experiment speak for themselves.

Our first conference took place in Olympia, Wash., in 1946, with 35 member mills taking part. It was recognized that the conference would be conducted in a vacuum unless we also developed a fool-proof system for reporting back to the mills, so that every employee was familiar with the topics discussed and the solution or safety procedures recommended. Thus the conference machinery of discussions, clinics, talks and feed-backs was shifted into gear and off we went.

From that first conference the accident rate began to drop. Our rating in 1945, as I have just mentioned, was 39. In 1946, the year of the first conference, we were able to lower it several points. By 1952, we had cut it back successively each year to 10.06, a drop of nearly 30 points.

Last March we held our 10th annual Joint Labor-Management Safety Conference of the Pacific Coast pulp and paper industry. It was a time for stock-taking, of course. And we allowed ourselves at least a measure of satisfaction from the fact that our 1955 accident rate, with 39 mills participating, was down to 6.40 accidents per million man-hours worked, as against 11.9 for the pulp and paper industry as a whole. The frequency of injuries had been reduced by 84 percent while the number of workers in Pacific coast pulp and paper mills had increased by more than 50 percent, from 15,000 to 22,500. The actual number of injuries in 1955 was 291. With fewer workers in 1946, the number of injuries in that year exceeded 1,000.

The successful reduction of an accident rate, however, permits only a momentary burst of pride. For a 6.40 accident rate is still too high and we have found it increasingly difficult to reap the spectacular gains we made during the initial phases of the experiment.

Moreover, the very moment when you take pride in a good accident-prevention record is the time to look for trouble. At our 10th conference a Los Angeles paper-converting plant was awarded a trophy for a lost-time accident rate of zero during 1955. Within a matter of a few days the record of this mill was broken when a man fell from a ladder, breaking two bones in his foot. Shortly afterward a second man injured his hand in a winding belt. Luckily, nothing more serious occurred.

I am quite familiar with the details. The mill happens to belong to my own company.

At the same time a drop of more than 32 points in lost-time injuries speaks volumes in favor of our labor-management safety conferences. We found, for example, that had we maintained the accident rate of 1945 during the 10-year conference period there would have been 10,000 additional lost-time accidents. We can argue soundly, it seems to me, that those accidents were prevented by our conference program. It is now safer to work in a mill of the Pacific coast pulp and paper industry than it is to stay at home.

From the first year of the program, active union-management committees were established at each mill. Through the years these committees have continued to meet regularly, often once a week, to review plant accidents, to investigate the causes of accidents and to discuss various safety measures. Again at the mill level, considerable attention has been given to encouraging safety consciousness on the part of individual workers through buletins, posters, and meetings—in fact, up to and including safety book matches.

In order to keep up sustained interest throughout the industry, the manufacturers' association publishes every month the accident-frequency rate of member mills. And at every annual conference friendly competition among the mills is encouraged by the presentation of awards based on the 5-year frequency rate, the lowest frequency rate for the year and for the lowest injury rate in each of the 3 States.

Each conference meets and deliberates under two cochairmen, one representing labor and the other management. It has always been agreed that the meetings should not be sounding boards for the settlement of local plant disputes or grievances, which can be more effectively solved in the mill itself. The deck is thus cleared for the consideration of suggestions and ideas which can be used by individual delegates to improve their own safety programs. We can also count on many visitors from other parts of the country to contribute their own recommendations for accident prevention, based on their regional experience.

Now it is true that the joint labor-management safety conferences of the Pacific coast pulp and paper industry grew out of a history of successful collective bargaining. We cannot deny that the soil for this type of experiment had been well prepared by a pattern of cooperation which had been long established. There have been attempts to adopt the technique elsewhere and not all of them have been successful. We are familiar with many accident-prevention campaigns which collapsed after the initial enthusiasm had waned.

Nevertheless, I commend our experiment to your attention as one approach to the problem of accident prevention.

Safety, like many other aspects of our modern technological world, is here to stay. Management must think first of the humanitarian considerations of accident prevention. Every effort must be made to see that the man on the line is sent home to his family as sound of mind and limb as when he reported for work on his shift.

Management has discovered, however, that safety pays and that accident prevention is another effective way of protecting the total corporate investment. Safety helps to reduce high insurance costs, eliminates waste, and prevents the loss of valuable property and equipment. While serving its humanitarian purpose, safety also protects management's investment in its most valuable asset: Skilled and experienced manpower. And that investment will loom larger as the technological revolution advances and jobs in industry become more highly skilled and better paid.

In connection with this subject of cost saving through safety, it is often wrongly assumed that only the large corporation can afford effective safety programs. Studies have been made which demonstrate that the small company also can cut costs and get a higher return on investment through systematic accident prevention. And yet, as a group, small companies are generally found in the rearguard of the national safety movement.

For the small concern safety is an effective form of accident insurance. Actually a large corporation might be able to survive an accident which could ruin a small company.

In short, safety is "a game in which everyone can win." That apt description was given at one of our Pacific Coast Joint Labor-Management Safety Conferences by William Riggs, international representative of the International Brotherhood of Pulp, Sulphite, and Paper Mill Workers.

It is the mutual responsibility of management, labor, and the individual worker to see that commonsense rules of the game of safety are drawn up and applied. Management also shares with labor and the individual worker the responsibility for seeing that the game never ends.

The Administration and Red China

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. BYRD. Mr. Speaker, Mr. George E. Sokolsky in a recent column foretells the seating of Red China if the proposed appointments of Paul Hoffman and Dean Rusk to the American delegation to the United Nations are confirmed. While I thoughts Mr. Sokolsky expresses, noneam in agreement with many of the theless, it is most disconcerting to find a spirit of submission on the part of the press. Mr. Sokolsky states:

It will not be long before the Government of the United States * * * will recognize Red China.

I, for one, have more confidence in the judgment of the American people. The column, which appeared in the May 28 issue of the Charleston (W. Va.) Daily Mail is as follows:

HAVE REPUBLICANS TURNED SOFT ON COMMUNISM?

(By George E. Sokolsky)

When the State Department sent the names of Paul Hoffman and Dean Rusk to the Republican leadership in the Senate, it did something profane in the sense that it violated Republican promises to the electorate in the 1952 campaign that Red China would not be recognized by the United States. The Republicans had bitterly and even cruelly attacked President Harry Truman and Secretary of State Dean Acheson for their pro-Red China machinations, giving the country to believe that the Democrats were a party of treason.

But the cold fact is that Truman and Acheson did not recognize Red China nor did Red China get into the United Nations. It is no secret in international circles nor among U. N. delegates who make their headquarters in New York that the 1956 meeting of the United Nations General Assembly was postponed from September until after the presidential election for the convenience of the Eisenhower administration, so that the United Nations General Assembly would not be an embarrassment during the presidential campaign. And the most embarrassing subject is, of course, the seating of Red China which could change the votes of many Americans if it occurred before the November presidential election. Apparently for the same reason reports from Moscow indicate that Bulganin and Khrushchev will come to the United States after the election.

The proposed appointment of Paul Hoffman and Dean Rusk to the American delegation to the United Nations is bound to give the impression that the China problem was a factor in these appointments, Paul Hoffman is chairman of the Fund for the Republic. According to the Daily Worker of May 16, Paul Hoffman compared Americans who are fighting Communists to "a new form of Ku Klux Klanism—by which a group of Americans having no judicial status whatsoever can set itself up to pass judgment on the loyalties of their fellow citizens." Since when do Americans require judicial status to express their views on a public question or about public personalities or fellow citizens?

The objection to Dean Rusk is that he was Deputy Under Secretary of State and at one time Assistant Secretary for Far Eastern Affairs under Dean Acheson and was, in a measure, responsible for the policies which the Republicans criticized so constantly and so heatedly from 1947 to 1952. The Republican leadership in the Senate feels that the appointment of Rusk is a direct slap at them and at the Republican Party.

But behind all this is the belief that some time ago, the State Department secretly agreed that Red China would be admitted to the United Nations by 1957 and that the stage is being set for this event.

It will not be long before the Government of the United States, on the theory that the game is up and the Soviet world has won all the victories and that there is no use bucking the tide, will recognize Red China.

Unfortunately, this concept of the solution of the China problem makes a liar out of every Republican who said it was all a Democratic plot to appease either Great Britain or Soviet Russia, that it was the concoction of the perverse mind of Dean Acheson. Now that it turns out to be a Republican plot, the product of the realpolitik of John Foster Dulles, it is embarrassing to the Republicans who for so long have denounced it.

Study of Aluminum Industry Announced

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1956

Mr. CELLER. Mr. Speaker, as chairman of the House Committee on the Judiciary and also as chairman of its Antitrust Subcommittee, I announced today that the Antitrust Subcommittee staff will undertake an extensive study of various conditions in the aluminum industry. Upon completion of the staff study the subcommittee will hold hearings on this industry.

The House Judiciary Antitrust Subcommittee has long concerned itself with the aluminum industry. As part of the subcommittee's examination into this industry, a predecessor subcommittee—the Subcommittee on the Study of Monopoly Power—held hearings in January and February 1951 in the course of which 32 witnesses testified. Based upon this comprehensive body of facts the subcommittee reached unanimous conclusions in its report, submitted to the House on March 13, 1951.

Following this report, the Government and the industry adopted policies which resulted in more than doubling the productive capacity of the aluminum industry.

In addition to the increase of productive capacity, the independent fabricating segment of the industry has also experienced a very substantial growth in this period.

Against this background the Antitrust Subcommittee deems it desirable to bring up to date the factual information concerning this industry, which is most important not only to the civilian economy but to the national defense.

It is particularly important for the subcommittee to determine whether the substantial expansion program of the past 5 years has resulted in greater or lesser concentration and competition at various levels from production through fabrication.

In the course of the study and the hearings, representatives from all segments of the industry will be given ample opportunity to submit relevant information to the subcommittee and to testify.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Address by Hon. Marion B. Folsom, Secretary of Health, Education, and Welfare

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Tuesday, June 5, 1956

Mr. POTTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. Marion B. Folsom, Secretary of Health, Education, and Welfare, before the annual meeting of the President's Committee on Employment of the Physically Handicapped on May 17, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY MARION B. FOLSOM, SECRETARY OF HEALTH, EDUCATION, AND WELFARE, BEFORE THE ANNUAL MEETING OF THE PRESIDENT'S COMMITTEE ON EMPLOYMENT OF THE PHYSICALLY HANDICAPPED, DEPARTMENTAL AUDITORIUM, UNITED STATES DEPARTMENT OF LABOR, WASHINGTON, D. C., MAY 17, 1956

It is a privilege and personal pleasure to meet today with the President's Committee. I want you to know the important work you are doing is deeply appreciated by all of us in the Department of Health, Education, and Welfare.

The President's Committee and our Department are both working toward a common goal for the handicapped person—a useful, productive place in life. One of the essentials in this common cause is an active and forceful program of public education about the people who are handicapped and their rightful place in the world of work, because lack of public understanding and acceptance still presents great obstacles to vocational rehabilitation. Your Committee is carrying on an effective program to tell the American people the facts about our handicapped citizens, and for these efforts we are grateful.

Our mutual concern for handicapped people raises many questions about the broader problems of disability among our people—problems which should be the common concern of businessmen, organized labor, and your local, State, and Federal Governments.

This century has seen a tremendous breakthrough in medicine, just as in air flight, nuclear energy, and many other fields. Medical research and preventive medicine have opened great new frontiers. Dramatic advances in curative medicine and surgery, too, have made it possible for thousands of individuals to survive illnesses and injuries which would have been fatal a few decades ago.

For example, around the time of World War I, the death rate for young diabetics at age 20 was 400 per 1,000. In other words, about 3 out of 5 survived. Then came insulin. Experience in the last few years shows that 99 out of 100 live.

Nevertheless, the diabetic persons' problems of living today are still serious. When he applies for a job, he must say, "Yes, I am a diabetic." And the employer must ask himself, "Will I hire a diabetic?"

For these and many hundreds of thousands of other disabled persons, the progress of medicine has brought new problems of living. This very success in medical science contributes to the mounting number of handicapped people who have survived serious illness and injury only to find that there may be no place for them in our social, industrial, or business life.

Disability raises many problems far beyond the direct question of medical care—problems which are felt more keenly each day in our homes, offices, and factories. These problems are reflected in the work of your local, State, and national governments, and in the taxes you pay to support them. The so-called catastrophic illnesses and injuries mean more than a catastrophe of the body. They mean the financial collapse of thousands of hard-working, thrifty families every year. When income is halted while medical costs mount and living expenses continue, then another family faces destitution.

As a nation, we provide some measure of financial protection against this hazard through a variety of means—the voluntary and private charity groups, various forms of insurance, workmen's compensation, and others. Through the public assistance agencies, we try to see that no person in serious want is ignored and that basic financial needs are met. To the extent that money payments can help, we have taken many steps in the right direction.

However, we are now reaching a stage of greater maturity, I believe, in our approach to many social problems. In the administration of public-assistance programs, for example, we have enough experience to realize that cash payments, by themselves, are not a satisfactory solution for either the people who receive them or the taxpayers who provide them. Our efforts so far have been to alleviate the effects of personal misfortune—but we have only recently begun to move against the causes.

With this in mind, the President this year recommended that Congress enact legislation which would lend the support of the Federal Government to this concept of getting at the causes of public dependency. The administration has proposed an approach which will encourage research to produce more facts, along with a broadening of public welfare services to help people overcome their problems and advance to a place of self-support and dignity.

There is no better example of the constructive results of this approach than the experience of the vocational-rehabilitation program. In recent years, this program has given an increasing amount of its attention and resources to restoring and reestablishing disabled people who are dependent upon public assistance.

The State rehabilitation agencies are contending with an enormous problem, in relation to their resources, for disability ranks high among the causes of dependency. About 1 million people, including some 325,000 dependent children, must look to the public assistance agencies for support because the family breadwinners are disabled—some of them with permanent impairments, others with short-term conditions. Payments by the public welfare agencies to maintain these individuals have reached nearly a half billion dollars annually.

No one knows, of course, just how many of these disabled men and women could be rehabilitated. But as experience accumulates, it becomes increasingly evident that an all-out effort in rehabilitation could make a substantial reduction in the number of disabled people who must depend upon public support.

The financial gains for both the disabled men and women and the public would be substantial. In 1955, over 11,000 disabled people who had been on the public assistance rolls were rehabilitated and placed in employment. To leave them on the welfare rolls would have cost almost $10 million a year. To rehabilitate them cost less than $8 million. Estimates indicate that these persons will pay in Federal income taxes alone much more than the funds spent on their rehabilitation. Far more important than the economic advantages, however, are the human rewards for a life of independence and self-reliance.

The value of this program has been widely recognized, but this recognition has not always been followed by adequate support. One of the first legislative proposals made by the President was to expand and improve this program. Congress enacted a new Vocational Rehabilitation Act without dissent in either the House or Senate—a rare occurrence on such important legislation.

Under this broadened act, the program already has made progress toward its goal of bringing the Nation's rehabilitation resources abreast of the needs of the handicapped. The Office of Vocational Rehabilitation reported an increase in the number of disabled people restored last year and another increase is expected during the current year. Meanwhile, we have been building a foundation for much greater advances in the future.

To take full advantage of the new act, the Federal and State Governments and many voluntary groups have joined in a cooperative effort to bring more and better services to those who are disabled. Nearly 150 nongovernmental organizations have launched projects—some to expand the range and volume of their services, others to undertake research and other developmental work—to widen the horizons for the whole field of rehabilitation.

These voluntary groups include such fine organizations as the crippled children's societies, Goodwill Industries, and their nationwide system of affiliates, local units of the American Heart Association, and many others. In these projects now going forward with the support of the Federal and State rehabilitation agencies, the voluntary organizations are investing their own funds as well.

Several research projects are seeking answers to employment problems. In New York, a project is now under way to analyze hiring practices among a representative group of employers. Another investigation is aimed at learning the extent to which a rehabilitation team can improve the employment outlook for persons who are confined to their homes.

In Massachusetts, another study will try to find improved techniques for preemployment evaluation and work preparation of those who have chronic rheumatic disease. In California, the vocational rehabilitation agency has sponsored a project to develop ways of speeding the rehabilitation of in-

jured employees under workmen's compensation.

In making grants for these special projects, our Office of Vocational Rehabilitation has the benefit of the advice and recommendations of a National Advisory Council on Vocational Rehabilitation—an outstanding group of national leaders in medicine, education, rehabilitation, industry, and labor. In helping to shape the direction of this new research and demonstration program, the Advisory Council has performed a valuable public service for which we in the department are grateful.

Many other benefits of the new Vocational Rehabilitation Act are becoming apparent each day. Under the new training grant provisions of the act, 90 colleges, universities, and special institutions have joined forces with the Office of Vocational Rehabilitation to augment their teaching programs in rehabilitation and to develop new ones. From these schools, located in 30 States, will come the bulk of the professional workers we must have to provide more and better rehabilitation services in the coming years.

Services for the blind, particularly in the vending-stand program, have been greatly strengthened by the 1954 act. The cooperative work between the Department of Labor, our own Department, and the President's committee—which long has been important in developing new job opportunities for the handicapped—has been recognized formally by the act. Out of this new relationship came a series of cooperative projects during the past year—all aimed at improving job opportunities for those who are disabled.

Another portion of the new law provided for staffing each Employment Service office with at least one person specially qualified to direct placement efforts for the handicapped.' Under this provision, the United States Employment Service and the State employment services have substantially increased the number of handicapped individuals placed in jobs.

The progress made under the new law during the past year and a half has been possible because many persons and organizations have devoted themselves wholeheartedly to the interests of the handicapped men and women of this country. Many of the people in this auditorium this afternoon have played important parts in this progress.

We have a responsibility now to look at the situation in its entirety and to understand the size of the task still before us. If the vocational rehabilitation program is to achieve its full potential, if it is to accept all the people needing services each year, then we must increase by 300 percent the number of persons restored to employment annually.

This constitutes tremendous growth, and it cannot be accomplished overnight. We are, however, dealing with a problem whose magnitude we have only recently begun to appreciate. Growth will be measured each year—and our task now is to provide for full, healthy growth each year.

Under the new act, Congress has voted increased funds for rehabilitation each year and has indicated its support of expanded services to restore more disabled persons. In this State-Federal program, the degree to which the States give their support—financial and in other ways—provides the key to successful expansion. Many States already have responded vigorously to the opportunities provided in the new law. In less than 2 years, the amount of State financial support has increased by more than 50 percent for the country as a whole. But some States still have not seized the opportunities that are open.

There are great variations among the States in the funds invested in this constructive work. To illustrate: the per capita expenditure for vocational rehabilitation in one State is 23 cents. At the other end of the scale, one State is devoting only 3 cents to rehabilitation of its handicapped people. It is noteworthy that there seldom is a relationship between the amount devoted to rehabilitation and the per capita income of the States concerned. In fact, some of the low-income States are far surpassing the higher-income States in the funds they are investing to rehabilitate their disabled people.

The rate of growth of the rehabilitation program reflects to a large degree the extent to which we have been successful in our educational efforts. Even today, rehabilitation is not always recognized widely and used effectively. Thus, there is a challenge in public education for all of us and, particularly, for the President's Committee, which has done so much to foster a better understanding of handicapped people.

It is important that we help the public to understand the many ways in which the restoration of disabled people is contributing to the progress of our country. The rehabilitation and reemployment of handicapped men and women is not simply a question of doing something for them. They, in turn, are doing much for us.

Last year, in the midst of a growing shortage of engineers, 212 disabled people completed their rehabilitation programs and went to work as engineers—proving that a man can have a disability and still be a good engineer. In the same year, another 60 were restored to the practice of medicine and surgery.

As a result of last year's rehabilitation effort, our country acquired 74 chemists, 163 trained nurses, 370 laboratory technicians, 390 draftsmen, and nearly 1,300 teachers. Thousands of other disabled people now are performing just about every type of work found in this country. Our national life has been enriched and our productive might has been strengthened because these trained individuals had a chance to reestablish themselves in useful work.

In the years ahead, hundreds of thousands of men and women will win their battles with illness and injury. They will travel the difficult road to recovery and rehabilitation. Most of them will be looking toward that all-important day when they are ready for a job.

At that critical point, their futures will rest with the employers of the Nation. At that time, an employer must decide whether a welfare payment or a useful job is the answer. This should be a challenge to American business and industry, large and small.

I join the President's Committee in its appeal to the Nation's employers to recognize the ability that so often seems obscured by a disability.

For the wonderful work which the Committee is doing, and for this opportunity to participate in your meeting today, I thank you.

Address by Hon. Clifford P. Case, of New Jersey, at Dinner of Paterson Branch, NAACP

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, June 5, 1956

Mr. SMITH of New Jersey. Mr. President, my distinguished colleague, the junior Senator from New Jersey [Mr. CASE], on Monday, May 21, 1956, at the Alexander Hamilton Hotel, in Paterson, N. J., made an address to the Paterson branch of the NAACP.

I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EXCERPTS FROM REMARKS BY SENATOR CLIFFORD P. CASE, REPUBLICAN, OF NEW JERSEY, PREPARED FOR DELIVERY AT DINNER OF PATERSON BRANCH, NAACP, MONDAY, MAY 21, 1956, AT ALEXANDER HAMILTON HOTEL, PATERSON—SENATOR CASE RECEIVING A CIVIL RIGHTS CITATION FROM THE BRANCH

Meetings such as this play a significant part in helping men and women of America find ways of bringing equality and justice to all Americans. But, in addition, they also make a contribution to the foreign policy of this country; for it is by evidence of such concern and such progress that other nations recognize the worth of our democratic form of government.

Let us not forget that all through the world, nations are stirring. They are restless, watching closely the movements of the two major powers—United States and Russia—and evaluating whose example offers them the best chance for self-realization—for the fullest flowering of their potentiality. Each day they read in their newspapers of events in the field of racial relations in this country. A Government official who visited our office recently after a tour through Africa told us that such news was reported at length and with great prominence and that unfortunately, most of it emphasized the conflict and violence of racial relations.

This is not a criticism of the press; if we want a better press with the nations of the world, we must do the things which earn it. We cannot convince the colored people of the world that we are their friends as long as we deny the colored people of this Nation the rights accorded to all others. We can only win friends by deeds, not declarations.

We had a chance to see this in practice in Washington this week. President Sukarno, of Indonesia, one of the new and uncommitted nations of the world, came to Washington at the invitation of President Eisenhower. He addressed Congress warning that the mainspring of the nations of Asia and Africa is the drive toward freedom and that unless these aspirations are recognized "no amount of thinking, no torrent of words, and no Niagara of dollars will produce anything but bitterness and disillusionment."

After a tremendous welcome by the people of Washington, the Indonesian President responded with this comment—and I think it bears repeating—"Today I am in Washington for the first time in my life and I feel that here, and I am sure in all America, democracy is a reality. I saw the faces of the people along the street and the hospitality given me.

"Look here, I am a brown man, an Indonesian, an Asiatic. I am the son of a nation only recently emerged into the world of national existence. Yet you accept me as a friend; you accept me as a human being and perhaps you accept me as a brother."

That word "perhaps" bothered President Eisenhower and he indicated this at a meeting Thursday night. He emphasized that the secret for success of the foregn policy of the United States is to convince other nations that "we are all brothers under the skin." He said that if we, as a nation, "can convince every other nation that when they refer to us as a brother, they won't have to say 'perhaps,' they will see a real democracy."

About this there can be no doubt. We are making progress toward this ideal—it is slow; it is hard, but we are moving in the right direction. And with this progress comes great responsibility, for Negroes now are

pioneers—the first to enter a white school or college; the first to become a policeman or city councilman; the first to stay at a particular hotel or attend a certain theater.

The record made by these trailblazers is bound to have great effect on the acceleration of progress toward our ideal. The path cut by them will be traveled by thousands of others who have waited long to obtain the full benefits of our country. They must be strong; they must be dignified; they must radiate integrity. A great stake rests on their shoulders.

We have before us many fine examples already, and in thinking about our Nation's foreign policy, there are, for example, Ralph J. Bunche, the Under Secretary of the United Nations, and J. Ernest Wilkins, Assistant Secretary of Labor for international affairs. Mr. Wilkins, in addition, was recently honored by election as chairman of the judicial council of the Methodist Church, the highest lay body of the church. We all recall the late Walter White, for so many years head of the NAACP as well as a representative of the United States abroad, officially and unofficially. Their achievements are the greater because of the handicaps they have surmounted.

Their presence on the international scene as citizens of the United States should go far toward convincing the two-thirds of the world populated by people of other colors that we are trying in this country to prove that we are all sons of God and that recognition will be accorded by accomplishment, and not color.

Indeed, the united voice of American Negroes raised against the distortions of international Communist propaganda is a great demonstration of courage and foresight by your people.

All Americans concerned about the attitude of other countries toward us are in the deepest debt to those Negro leaders who have spoken out firmly against Communist racial propaganda used against our Nation overseas.

Our Negro leaders have denounced the ceaseless efforts of the Communists to paint all Americans with the brush of bigotry, and to make us lose face with the nations of Africa and the Middle and Far East. We have our faults, but we are struggling toward their elimination. It is palpable nonsense for the Soviets, with their slave camps, their programs and their grinding down of all minorities to the will of Moscow, to set themselves up as the champion of civil rights. The American Negro has recognized this false propaganda for what it is, and his forthright rejection has benefited his country, even more than himself.

In my heart, there is the constant hope that you and I will yet enjoy the day when no Negro mother in America need to tell her son that he is "different"; that he cannot enter the school or profession of his choice, or the polling place of his district. When Negro mothers can be spared this painful hour, I will be glad to join you all here for a dinner of thanksgiving. Until then, we must continue to strive toward this end.

Address by Hon. Wilber M. Brucker, Secretary of the Army

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Tuesday, June 5, 1956

Mr. POTTER. Mr. President, the Honorable Wilber M. Brucker, Secretary of the Army, delivered an address of tribute to America's honored heroes on the occasion of the Memorial Day ceremonies at Arlington National Cemetery.

Beyond the benefitting and poignant tribute, Secretary Brucker delineated what we, the living, must do to keep faith with those honored patriots who gave their lives to preserve the freedom we possess.

His address is truly a blueprint for the perpetuation of the American way of life, and I commend it to all patriotic Americans. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WE MUST KEEP FAITH

(Speech by the Honorable Wilber M. Brucker, Secretary of the Army, Arlington National Cemetery, May 30, 1956)

It is with a deep sense of humility that I rise in this sacred place to pay tribute to America's honored heroes. Can we, who enjoy the manifold benefits of freedom, ever forget what an enormous debt we owe them?

The soldier known but to God who lies here in glory, and all his comrades—those whose graves dot the rolling green of Arlington, and those who rest elsewhere, beneath the sod of every continent and the waters of every ocean—paid a tremendous price to preserve and defend our American heritage. We cannot discharge our solemn obligation to these men of deeds with mere words of homage. We, too, must be doers of great deeds. We must fight as valiantly as they did for the principles and ideals which have made America the mighty Nation it is.

Our freedom and our American way of life are always under attack from within as well as from without. Only through eternal vigilance and unremitting effort on the part of each one of us can freedom be kept secure. Freedom is not like a prize that can be won for all time and locked away as a perpetual treasure. It is a living thing that must be constantly nurtured by the toil and sacrifice of dedicated men. Freedom will continue to bless us with its presence only so long as it is vigorously cherished and zealously guarded.

Democracy is always an unfinished work. Its permanence is never guaranteed by past achievement. We cannot take it for granted simply because we have had it for 180 years. America cannot rest on the laurels of Washington or of Lincoln or of any of the other illustrious patriots who helped to fashion our Government. Democracy is strictly a matter of day-by-day accomplishment. We may take off our hats to the past, but we must take off our coats to the future. We derive great inspiration from the magnificent achievements of yesterday, but unless we translate that inspiration into equally splendid accomplishments today, our democracy cannot long survive. Democracy is not like a granite statue that is finished for all time when the sculptor has smoothed away the last rough spot. On the contrary, it is like a ship that needs constant attention by every officer and member of the crew to keep it in repair and moving steadily forward, weathering the rough buffeting of every storm, wind, and wave.

This country was built by patriots, and it will be kept secure only by patriots. As I stand here today my thoughts go back many years to the time when, as a small boy, I was first privileged to participate in a Memorial Day observance conducted by the GAR. How clearly I remember my pleasure when one of the veterans in his big blue coat with brass buttons handed me an American flag and permitted me to march in the parade. Carrying that little flag over my right shoulder, with other schoolmates I followed proudly behind the column of old soldiers, and there stirred within me a feeling of patriotism which has never since been stilled. The patriotism that was kindled in those days kept growing in power and meaning as boy grew into youth, and youth into man. Nobody in those days was ashamed to admit that he was patriotic.

Today we have some self-satisfied sophisticates who think they know all the answers. Cynics are fond of saying that patriotism has become outmoded, that it doesn't mean anything any more. Can we believe that when we contemplate these thousands of little white markers here at Arlington? Were the brave men who lie beneath them impelled to serve their country to the death by greed, by love of money, by comfort, or convenience? Or was it a love for America that was stronger than any other influence in their lives—patriotism? Sometimes patriotism lies dormant until it is stirred to life by some great event, some moving experience. However, it is always there in the breast of every true American. We should teach our youth to revere the flag, and to sing with all their hearts the words of "the Star-Spangled Banner." Patriotism is one of man's most noble attributes.

Today America has a greater need than ever before in her history for men and women who are proud to be Americans, men and women who think in terms of what they owe their country, not what their country owes them.

Our Nation, our freedom, our lives, and everything we hold dear are threatened by the hydra-headed Communist conspiracy, which is backed by the mightiest mobilized military forces on earth. However, it is more than a military threat we face. It is the menace of a diabolical and insidious ideology of hate and deceit and intellectual perversion which saps men's moral stamina, impoverishes their minds, and destroys their souls.

We are keeping ourselves militarily strong in order to cope with the formidable military aspects of this Communist threat. We have a magnificent Navy, with fighting ships, atomic-powered submarines, and carrier aircraft. We have a splendid, versatile Marine Corps. We have a great Air Force with intrepid pilots manning modern jet bombers and fighters. We have our reliable and ready, mobile Army with its streamlined infantry and artillery, its tanks, and guided missiles. All together, working as a team, they constitute the greatest material power for peace in the world today. Nevertheless, they are no more than the outward manifestation of our real power to defend ourselves. In a larger sense, it is the spiritual strength and determination of the American people which now as always in the past are the chief guaranties of our national survival.

The propagation of the myth that we can ever manufacture security in the laboratory or in the machine shop can lead to nothing but disaster. The American people should not be lulled into a false sense of security that there is any easy way short of blood and sacrifice. The safety of America and American ideals today and through all the years to come depends upon the indomitable spirit of millions of other Americans—in and out of uniform, in every walk of life—willing to stand up and be counted for America, and take the hard road for the sake of their country.

We will not have the splendid bulwark of spiritual strength we sorely need to see us through this troubled era unless we rekindle in full flame the kind of uncompromising Americanism that inspired the pioneers when they created this great Nation out of a wilderness—the kind of uncompromising Americanism which brought our free institutions to full flower—and has defended them in the past against every demoralizing influence.

We must believe in America first, last, and all the time, with the unalterable faith that

will move any mountain of difficulty. We must believe in America and in American principles, not half-heartedly, or with an academic spirit, but with full-fledged, unquenchable enthusiasm. This is the most wonderful, the most prosperous, and the fairest country on earth, and American principles—the principles laid down by our forefathers—have made it so. We must strengthen our determination to keep it true to those principles.

We value freedom, of course, but do we value it high enough? Do we truly understand the insidious danger of holding anything more precious? If we value our comfort, our money, our convenience, our leisure more than we value our freedom, we will not only lose our freedom, but along with it we will lose everything else. That is the most important lesson that history can teach us.

America has always been in the forefront of the battle for human freedom and for the dignity of man. We must keep her there. We seek peace not from ignoble motives, not from distrust of our own powers, but from a sense of moral obligation which is deeply rooted in the ideals upon which our Nation was built. We know that true peace is not just the absence of war, but the presence of justice throughout the world. If we are to lead the world to a peace founded upon justice and honor, which is our paramount objective, we must revitalize in all our hearts the true spirit of patriotism and of devotion to the highest tenets of our American faith, which have been the strength and glory of our Nation from the very beginning.

We must do more than honor our hero dead on Memorial Day. We must keep full faith with them every day of the year, and in every aspect of our lives. Let no indifference, no indecision, no sluggish citizenship, no moral weakness, no shirking of our responsibilities undermine and destroy what they gave their last full measure of devotion to keep secure. Are you willing to do your duty to your country and pay your debt to the brave men who lie here? The future of this Nation will be even more glorious than its past if we develop to the utmost the sturdy American character which faces any challenge with the watchword: "It can be done"—and then proceeds to do it.

Last December in the course of an inspection trip to the Far East, I visited Pearl Harbor. It was 15 years from the time of the infamous attack, and I told the admiral who welcomed me that I wanted to visit the spot where the battleship *Arizona* sank under the unexpected rain of aerial bombs that terrible day in 1941. He took me out in a small boat, and as we approached the area in the harbor where the *Arizona* lay, I noticed that the form of the great ship was outlined by small floats. The deck was 15 feet or more under the water. I asked if I might stand on the bridge, which projected several feet above the water.

While standing on the bridge of that historic ship, I looked down and let my eyes trace her outline under that dark water, and I thought of the 996 Americans who lie there within her shattered hull in eternal honor—where they fell, and where they remain because their dear ones want it that way. As I stood there, I noticed the irridescence of an oil slick on the waves. As I pointed to it, the admiral said: "Yes, we've noticed it many times. It's oil, still oozing up from the *Arizona*." It was a solemn moment.

I turned toward the stern, and there an American flag was flying. I mentioned Old Glory to the admiral, who told me proudly: "Sir, we like to think of the *Arizona* as still on the active list of the Navy. Every morning we come out here and raise her flag, and every evening we take it down." We both saluted the *Arizona's* flag and her immortal ship's company—while I gulped and wiped my eyes.

After an experience like that, you have a tingle running along your spine—greater faith in your heart—a spring in your step—and renewed determination to be fully worthy of that glorious flag and all it stands for—fully worthy of the courage and sacrifice and devotion of the patriots who have given their lives to defend it. You don't have to shout about patriotism. You don't even talk about it much. You just feel it deep inside you—and you live it.

There is a little couplet which expresses my faith in this Nation, and in the inherent patriotism of our people:

"America's strong, America's young,
And her greatest songs are still unsung."

The Leftist Fringe Could Elect a President

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 5, 1956

Mr. MUNDT. Mr. President, for the information of the Congress and the country, I hereby call attention to a most interesting and impressive editorial printed in that great all-American journal, the Saturday Evening Post. It deals directly with the necessities of electoral college reform, a subject in which I have long been interested and in connection with which I have recently introduced a proposed amendment to the Constitution.

Mr. President, we must find a suitable method for breaking up the bloc-voting system presently employed in our electoral college if our way of life is to be preserved in this country. We must find a method whereby our Presidents will be elected by the people of the United States rather than by the political pressure groups which marshal their determining strength in a few large cities in less than a dozen States of this Republic.

This Republic is dedicated to the principle of government by the people, by the people, and for the people. It was never intended that it should be dominated or controlled by political bosses of selfish and soulless city machines or by the leaders of self-serving pressure groups. By breaking up the electoral votes in the electoral college in accordance with the manner in which the voting citizens desired them to be cast instead of on the winner-take-all basis prevailing by use of the unit-rule and bloc-voting in the electoral college, we shall be striking a great and lasting blow for freedom in this country.

I ask unanimous consent that the editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE LEFTIST FRINGE COULD ELECT A PRESIDENT

The idea that those who vote for the loser in a presidential election should have greater representation in the electoral college, where the votes assigned to the States are cast, is rapidly taking hold, despite the failure of Congress to agree on a constitutional amendment to carry it out. The present system, of course, is to give each State's entire electoral vote to the candidate who has the largest popular vote, regardless of how close the runner-up may have come.

The most potent opposition to change comes, of course, from politicians who fear they may lose some advantage ,and from left-wing liberals. Why the liberals? A clue can be had by a look back at the presidential election of 1944. In that year in New York, Governor Dewey, the Republican candidate, received 2,987,647 votes, and President Roosevelt received a total of 3,304,238, a plurality of 316,591 votes. However, Roosevelt's vote as a Democrat was 2,478,598. Thus, he would have lost the State to Dewey had it not been for 825,640 votes cast for him by members of the Liberal and American Labor parties. Thus, two small splinter parties, composed largely of left-wing radicals and liberals representing a fraction of the total votes cast, held the balance of power in New York State, and were able to hand over all of the State's 47 electors to Mr. Roosevelt. As far as the result was concerned, the Dewey voters might as well have stayed at home.

Naturally, the politicians and parties which are strongest with left-wing and racial blocs in our large cities hate to surrender this advantage. It is not an advantage which appears only on election day. It enables these blocs and pressure groups to exert influence upon the executive branch of the Government all out of proportion to their actual popular strength. Fear of losing the electoral votes of our largest industrial States is ever present in any national administration. Thus, we find Presidents, regardless of party, urging all sorts of measures, such as weakening of the immigration laws designed to appeal to these blocs. Congress, the majority of whose Members owe nothing to big-city pressure groups, seldom goes along.

If in 1944 New York's electoral vote had been distributed in proportion to the popular vote for each candidate, Mr. Roosevelt would have got slightly more than half the New York electoral vote and Governor Dewey would have got the rest. Had the 1944 electoral vote in New York been divided according to congressional districts, as Senator MUNDT, of South Dakota, proposes, President Roosevelt would have received 23 electors and Governor Dewey 22. The splinter parties, not having carried any congressional district, would have got none. These doubtless boring statistics should be sufficient to indicate why change is being resisted.

It is unfortunate that the Senate could not agree on the congressional district method, which really makes the most sense. Besides reflecting more truly the real result of elections, such a change would go far to eliminate from presidential elections the temptation to kowtow to small factions which represent only a fringe of American opinion, but are in some States placed strategically to decide elections.

Address by Hon. Clifford P. Case, of New Jersey, Before 78th Annual Convention, New Jersey State Federation of Labor

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, June 5, 1956

Mr. SMITH of New Jersey. Mr. President, my distinguished colleague, the junior Senator from New Jersey [Mr. CASE], delivered an outstanding address before the 78th annual convention of the New Jersey State Federation of Labor at

the Traymore Hotel in Atlantic City on May 30, 1956.

I ask unanimous consent that the address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR CLIFFORD P. CASE, REPUBLICAN, OF NEW JERSEY, BEFORE THE 78TH ANNUAL CONVENTION, NEW JERSEY STATE FEDERATION OF LABOR, AT THE TRAYMORE HOTEL IN ATLANTIC CITY

It is always pleasant to address a labor meeting, and particularly so when our economic barometers are registering fair weather and relatively clear skies ahead. Things generally are going well. Certainly, there are soft spots in the economy where things are not working properly, but last month this Nation had 64 million people working at jobs—a new record. And each month, these working men and women are bringing home pay checks of near-record size. In addition, the cost of living has been stabilized during the Eisenhower administration so that the pay raises are real—not illusory.

Basically, the situation is good. This is a testimonial to our dynamic economy—to the leadership of our great President, to the unflagging efforts of the various segments of our economy, management, labor and capital and to the general advantages of our form of government.

This economic good health offers a fine opportunity for making further improvements in our way of life—for bringing more benefits of our economy to more people. There are some who are doing well and who have given up one of the Nation's greatest assets—vitality and enterprise. Their position is quickly stated in this way: "Things are going fine. Why look for changes now?" Such complacency is often harder to defeat than an organized campaign by vociferous interests aimed at holding back the clock of social progress.

The obstacles delaying the enactment of adequate school construction, health, housing, flood insurance, civil rights and minimum wage legislation are formdable, but not impossible. We should make progress on these basic matters and there is no better time to do so than when the Nation's economy is at an alltime high and the Nation's energies can be devoted to improving the peace. There is no credit for either Republicans or Democrats in a record of "no progress" on social welfare legislation.

It seems to me that this period is just the one in which we should constantly press forward for improvements, solid steps in the right direction. Social welfare legislation has worthy goals and, in addition, it provides resources to keep our economy rolling.

The achievement of real progress in the social welfare field, it seems to me, depends on two areas of activity: the first is the enactment by Congress of the legislation which I have just mentioned. The second is the organization of the unorganized workers in the South and elsewhere. With less than a third of our 64 million workers in organized unions there is plenty of potential.

On the legislative front, there are several bills before Congress now which could use a good shot in the arm. President Eisenhower has given us a list. The legislative department of the AFL–CIO has given us another one, not too dissimilar. There are good bills on both lists and I know many of my colleagues in the House and Senate are eager to vote on them.

What then is the problem? The major one is apathy—people are talking politics and candidates, but are not giving equal attention to the legislative issues. Another side of the problem is the deep-freezing of legislation by unsympathetic committee chairmen. I need not remind a labor meeting of the cooling-off treatment extended by the southern Democratic chairmen of such committees as House Labor, House Rules, and Senate Judiciary.

Secretary of Labor Jim Mitchell has been hitting his head against a stone wall in trying to get hearings on the tiniest pieces of labor legislation in the House. Labor groups have recognized the fine work of this New Jersey man. The Amalgamated Clothing Workers of America even nominated him for another term as Secretary of Labor, regardless of who is President. I join with President Potofsky in his evaluation of Jim as an outstanding public servant. A few days before that, President Dubinsky, of the International Ladies Garment Workers Union, praised Jim, too, and added similar words for Newell Brown, director of the Labor Department's Wage and Hour Administration. Mr. Dubinsky said that although his union had opposed Brown's appointment, Brown had turned out to be the right man in the right place and a man of integrity, intelligence, and understanding.

Such kind words from two union officials who have had some other things to say about the Eisenhower administration in the past are most appreciated. I am glad to see that as these union people get to know some Republicans better that they find they are rather nice folks. Sometimes, I feel that the Republican Party is in the same boat as some minority groups in this country and that if only we could be measured by the yardstick of individual worth, we could receive a lot more support.

In addition to speeding action in the legislative arena, there is a big job to be done by the labor unions for themselves and the Nation—that is the organizing of workers in the South. The disparity between wages and working conditions of the South and the North is a constant threat to the security of workers in this part of the country. As long as this gap continues there will be employers closing up shop here and moving South to the land of no-unions and low wages. The continuation of the South's lower economy has social and political implications for the whole country.

Unions traditionally have brought higher living standards to their members—both Negroes and whites. Accompanying this there is usually a greater interest and awareness about the right to vote. Such a change could interfere with the present security of officeholders in these districts. More Democrats with enlightened views would stand a chance for election for the first time and perhaps even a Republican could squeeze in now and then. But the big gains would be for the country at large—gains in terms of a more widespread prosperity and an alert electorate. For remember this: Laws in Congress are voted on by all, not just those from our section of the country.

There is much to be done by all of us toward bringing the benefits of our great democracy to each American. Working together in a spirit of modernization and good will, we shall make progress. This is our opportunity—and our duty.

International Food and Raw Materials Reserve

EXTENSION OF REMARKS

OF

HON. THOS. E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 5, 1956

Mr. MARTIN of Iowa. Mr. President, the Senate Committee on Foreign Relations conducted hearings on May 28 and 29 on Senate Resolution 86 to establish an international food and raw materials reserve.

Raymond Moley was a member of the United States delegation to the London Economic Conference in 1933. That conference dealt with many of the problems covered in Senate Resolution 86. Mr. Moley discussed this resolution in his syndicated column which appeared in the Cleveland Plain Dealer on May 28.

Mr. President, I believe Mr. Moley's views on this subject are of interest to the entire Senate, and I ask unanimous consent to have his article printed in the Appendix of the RECORD for the benefit of my colleagues.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRICE FIXING

(By Raymond Moley)

A legislative mongrel was introduced about a year ago with Senator MURRAY as the original sponsor. It carried, under MURRAY'S, names of 19 Democrats and 3 Republicans.

It is Senate Resolution 86, and with a great outpouring of platitudes and flourishes it states that it should be "the policy of the Congress that the United States participate with other nations, under the auspices of the United Nations, the Food and Agriculture Organization, and other international agencies, in establishing an International Food and Raw Materials Reserve."

UPLIFT ACTIVITIES

Various countries would contribute to this store of all kinds of raw materials, including food and presumably minerals, which would probably be managed by an international authority.

The money or I O U's given to this reserve for the purchase of materials therefrom would be used for all sorts of uplift activities among needy nations. It should be noted that credits are involved which would mean a new kind of commodity currency. The effect would be a sort of international price control—just another of the many proposals made in recent years for some sort of international control of our trade and economy.

The idea was submitted to the State Department, which took a very dim view of the idea. Assistant Secretary Morton, replying for Secretary Dulles, replied that the idea was not new but had been presented in many other forms in the past. It would, he said, create more problems than it would solve. Moreover, Morton wrote that it would involve "rigidities and distortions" which might well constitute "a danger to a free competitive economy."

HEARINGS NEXT MONTH

Nevertheless, there will be hearings, beginning this month, on this proposal.

It would seem that the Senate in its rush to get essential business done before an early adjournment might find more profitable ways of spending its time. That, however, is not the way of Senators in an election year.

Development of St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. CHARLES E. POTTER

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, June 5, 1956

Mr. POTTER. Mr. President, I am sure that my colleagues in this august

body, as well as the people of my own State of Michigan, are well aware of my continuous and enthusiastic support of the development of the Great Lakes as this Nation's fourth coastline. Knowing that this interest is shared to a high degree by many others, I should like to take this opportunity to insert in the Appendix of the RECORD an article which the Marine News graciously published for me in its issue of April 1956. This is the thrilling story of what enterprising and forward-looking communities of Michigan can expect from the economic impact of the development of the St. Lawrence seaway and the opening of the Great Lakes to world trade.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ON TRADE ROUTE 32—PORT OF MUSKEGON

(By Senator CHARLES E. POTTER)

Almost from the time of the discovery of this Continent the St. Lawrence River and the Great Lakes have been of great importance to the history of this country. This system of waterways has provided transportation. It has played a strategic part in the wars between the early settlers. It was one of the main highways leading to the opening and exploration of the great heartland of this Continent. All my life I have been interested in the activities on these lakes and thrilled by the thoughts of their potentialities as great seaways for world commerce and as a fourth coastline for the United States.

Today we are nearing the realization of that idea. The St. Lawrence Seaway will be completed soon. I fully expect that the channels connecting all the Great Lakes will be adequately deepened to provide for free passage of ocean-going vessels to the many ports situated in the Great Lakes. World trade routes have been authorized for the Great Lakes putting such ports in direct contact with ports all over the globe. I expect action will be taken which will insure the building and maintenance of an adequate fleet of United States ships to be operated on such trade routes from the Great Lakes and their ports.

As a sidelight, we will realize within a few years the completion of Michigan's Marine Highway. That would be the completion of a series of harbors of refuge being built all around the coastline of Michigan to accomodate small craft. This is of particular interest to the thousands of water tourists who then can travel the entire coastline of the Lower Peninsula with the greatest of safety and convenience.

All this means the spurring of new industry both commercial and tourist. New businesses will be born and will start to grow along our shores. With particular reference to the commercial aspect of this growing business, I have picked one Michigan city, as an example, to show the potentialities of such growth for the entire State of Michigan. Naturally my interest is broad and encompasses all of the State of Michigan. I forsee great things for many ports in our State. I have urged repeatedly that our various port cities or potential port cities along our shorelines take action now to do the necessary puanning and projecting for the future so that they will be ready when this opportunity for prosperity knocks at their door. As an example, then, let us take the City of Muskegon to see what can happen in some measure to many cities in our great State of Michigan.

Muskegon, located on the eastern shore of Lake Michigan just south of the parallel bisecting Lake Michigan between the Straits of Mackinac and Gary, Ind., has one of the most ideal natural harbors throughout the lake waterway chain.

The town grew in early lumber days on the south shore of Lake Muskegon, an inland lake connected to Lake Michigan by dredged channel approximately 1 mile long. The Muskegon River, flowing into the eastern head of Muskegon Lake, was utilized in these early days to float down logs, and by 1880 Muskegon had over 16 lumber mills along this eastern and southern shore of Lake Muskegon.

With 33 sawmills, a thriving lumber port developed which built Chicago and a hundred prairie towns. But by 1890 the lumber had completely disappeared and Muskegon was faced with the problem that has pressed many similar cities of either developing new industry or reverting to a small tourist and agricultural community.

The people of Muskegon favored industry, and with their strategic location and natural harbor advantages pushed forward to become a leading industrial center. During the last 50 years a diversified industrial economy rapidly developed.

Water transportation continued to play an important and vital part in Muskegon's program. Pig iron to supply the foundries was brought in from Gary, South Chicago, and Cleveland. Aggregates and limestone, so important to construction, were brought down from the northern peninsula. High quality sand used in the production of steel developed as an important export. Petroleum products were brought in, and about the same time oil was discovered near the head of Lake Muskegon, thus petroleum became an import and export product. Later, as the automobile industry grew in Michigan, a thriving traffic in new cars and tourist trade across Lake Michigan to Milwaukee and the Northwest became an important asset to Muskegon's development.

Using cost-per-ton figures for the various commodities averaged for the year, Muskegon's water commerce total is estimated at $250 million. A preliminary survey by the harbors department of the chamber of commerce indicated the 1955 value total would show at least $275 million. The value totals do not include car ferry shipments, since there is no reliable estimate or value due to the wide variety of products carried, and difficulty of getting value statistics.

Muskegon's 21 commodities in lakewise, foreign, and overseas shipments consisted of fish and fresh products, canned fruit juice, woodpulp, bituminous coal and lignite, motor fuel and gas, gas and oil distillates and fuel oil, crude petroleum, kerosene, residual fuel oil, building cement, limestone, crushed rock, sand and gravel, pig iron, scrap iron and steel, standard newsprint paper, manufactured metal parts, construction mining machine parts, motor vehicles, other commodities, and valued shipments.

Along with tonnage increase, 1956 will record a rise in the number of foreign flag vessels calling here. Purchase of the steamer *E. C. Collins* from the Kineman Transit Co., of Cleveland, Ohio, has been announced by Paul H. Townsend, president of Huron Portland Cement Co. The *Collins*, a 440-foot bulk ore carrier formerly owned by the Pittsburgh Steamship Division of United States Steel Corporation, was built by American Shipbuilding Co. in 1904. Huron Portland reported it had no definite plans for reconstruction of the *Collins* into a self-unloading cement carrier. The steamer *Presque Isle*, which was purchased last year by the company, is being converted from an ore carrier at Sturgeon Bay, Wis., and will be ready to sail next spring. Purchase of the *Collins* brings total number of ships owned by Huron to six. The Huron fleet calls regularly at the company's Muskegon Lake terminal.

Harbors Department of the Chamber of Commerce will launch a major drive this month to secure for the Port of Muskegon a larger part of the growing volume of foreign and Canadian wood pulp shipped in for the vast Kalamazoo Valley paper mill complex.

Woodpulp shipped to the Kalamazoo mills has risen steadily in volume since World War II and is increasing at a rate which will easily surpass the 50 to 60,000-ton level of the prewar period within a few years. Estimates see Valley wood pulp volume increasing to over 100,000 tons a year.

Surveys show the import of wood pulp to the Kalamazoo mills is the largest single commodity—including newsprint shipments—currently carried to Lake ports from overseas.

Estimates indicate the Seaway will be carrying as much as 800,000 tons of wood pulp to Lake ports by time of completion of the deep-draft waterway, and that the Kalamazoo Valley, one of the top three areas in the Upper Lakes in total pulp use, would eventually take off 100,000 to 200,000 tons of this total, and possibly more.

The port of Muskegon will have a new dock available for open cargo operations by start of the 1956 shipping season.

Emery Toth, president of the Great Lakes Dock & Material Corporation, has announced filling of swamp and water-covered land in its 1,750 feet of lake frontage on Muskegon Lake and reported that by spring it will have a completed slip 1,000 feet long and 100 feet wide, dredged to 24-foot depth.

The slip and dock facility will be ready by this month (April) to handle all types of cargo suitable to open dock movement. About 225 feet of sheet steel piling will bulwark the dock facing, and the slip width will be extended to 240 feet in operations during the year. The existing 100-foot width is sufficient to accommodate most lakes vessels.

In addition to this development, the corporation has completed about 80 percent of fill work in the corporation building and operations area west from the new slip to a second planned slip of 180 feet in width and 800-foot length. This slip will be dredged to 24-foot depth to accommodate one ship, with the major slip area beyond that dredged to 8 feet to provide a small marina which could accommodate scores of small craft. It is expected fill work on this section can be completed this year.

A Chesapeake & Ohio Railway spur has been laid from the rail right-of-way to the main dock section adjoining the slip now nearing completion. Long-range plans call for four docks to accommodate all types of Lakes shipping. Existing facilities, with the new slip, will accommodate four vessels.

The private industry development has taken place gradually and without fanfare since 1953. The firm started filling and dredging work in September of that year, developing four acres and a dredged slip 800 feet long and 100 feet wide by 24 feet deep. By March of 1954 company offices, equipment storehouses, and other facilities were constructed on the reclaimed land. First ship to use the dock arrived April 21, 1954.

Future operations call for considerable expansion of terminal facilities. Warehousing facilities have not yet been installed and initial operations will be limited to open dock movements which do not require storage.

Plans outlined by the corporation for the Michigan Corporation Securities Commission envisage a major terminal operation, including facilities for repair, construction and renovation of vessels, the stevedoring and warehousing operations, as well as general construction work. The completed dock and slip system under present plans will accommodate five vessels.

Final figures for economic 1955 indicate Greater Muskegon has enjoyed the best year in its history in a majority of fields which make up the business picture.

The outlook for the first quarter of 1956, with total employment expected to rise over the 50,000 mark and unemployment to drop

to the lowest level since May 1947, presages another boom year.

New all-time records were posted in the categories of bank debits—within nudging distance of the $1-billion mark—postal receipts, residential building, air traffic volume, utilities service expansions, department store sales, and other factors.

Total factory and utility workers' income for the year aggregated $139,938,953, second highest in history and exceeded only by the $1,600,000 margin of the record $141,538,953 of 1953.

The above figures are based upon statistics from a special year-end survey by Greater Muskegon Chamber of Commerce, and are based on an average industrial work force averaging 29,800 for the year. The special survey included some 30 industries which do not report regularly to Muskegon Manufacturers' Association and hence reflects somewhat higher figures than those recorded in the regular chamber indices. According to the special compilation, worker's average income for the year was $4,695.

Muskegon's shipbuilding program got its start 2 years ago with the local industry task of converting the former Government C-4 vessel steamship *Marine Star* into a multimillion dollar lakes passenger liner, the *Aquarama*.

Muskegon's harbor has played a vital role in the industrial development of west Michigan. With the advent of the St. Lawrence seaway project, Muskegon's port operations offer Michigan's industry new and greater opportunities for expansion and development of world markets.

In considering the potential expansion of trade that will result upon completion of the seaway, it is interesting to note Michigan's early history. The State's economic development is traced directly to the completion of the Erie Canal which gave access to the Hudson River and the completion of the Soo locks which provided the means for Michigan's vast mineral deposits to economically traverse the lake waterways.

The seaway is the final link in this lake chain which opens new horizons to Midwest industry.

CONCLUSION

This, then, is the story of one of Michigan's port cities. This story is not the exception but rather it is an example of what many cities of Michigan may expect. Again I say, the Great Lakes are the fourth coastline for the United States. The development and realization of the potentialities of this coastline will write a thrilling chapter in our Nation's history and those cities which are prepared for it and plan for it may well play a major part in writing that chapter.

Uncle Sam's Campgrounds

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, June 5, 1956

Mr. NEUBERGER. Mr. President, every citizen in America is proud of our national parks and national forests. They are, indeed, the Nation's playgrounds. We, as custodians of these playgrounds, have a solemn obligation to pass them on unblemished and untrammeled to the next generations of Americans. An eloquent and informative article about our national parks and national forests, under the title "Uncle Sam's Campgrounds," appears in the June 1956 issue of the Ford Times, which is published by the Ford Motor Co. The article was written by one of America's most brilliant writers in our own time, the late Bernard DeVoto, and is published posthumously after his untimely death last November. I ask unanimous consent that the article by Bernard DeVoto from the June 1956 issue of Ford Times may be printed in the Appendix of the RECORD, along with a brief salute from the same issue to the covered bridges on the scenic McKenzie River in my own State of Oregon, entitled "Two Ways to Cross the McKenzie," by Harry De Lasaux.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNCLE SAM'S CAMPGROUNDS

(By Bernard DeVoto)

A good many areas suitable for camping are owned by individual States. By far the largest and most numerous ones, however, are in the permanent reservations called the public lands, owned by the people of the United States at large and managed by the Federal Government. Of these all the important ones are included in the national parks or the national forests. It is a curious fact that many enthusiastic outdoorsmen do not clearly understand the differences between these two kinds of reservations.

Camping is permitted in most of the 28 national parks and in the largest of the national monuments, which are managed by the same Federal bureau but have a slightly different legal status. They are all areas set aside in order to preserve intact scenery acknowledged to be the most beautiful, most majestic, or most interesting in the country. A visitor goes to them primarily to see the scenery, and the basic fact for campers is that they are maintained in their natural conditions. No logging is allowed nor is any other commercial use of the natural resources permitted. Flowers may not be picked and only qualified scientists working under permit may make collections of any kind.

Fishing is permitted and, in a few parks, without a license, but a limit is set to the catch. There is no hunting; all firearms must be sealed by a ranger at the entrance stations. Except by special permit, readily obtainable, campers are restricted to regularly maintained and supervised campgrounds. The remote mountain and plateau country of the big parks is open to pack trips.

An American who does not know his national parks has missed a priceless part of his heritage. Camping provides the best as well as the least expensive way to see them. The National Park Service maintains campgrounds which are provided with water, toilets, fireplaces, and sometimes with additional facilities.

In the most popular parks many of these facilities are strained to capacity throughout the season, because they are situated near famous scenic features and the number of visitors has increased enormously since the war. National park visitors, too, are gregarious and love to crowd together. The campgrounds on the valley floor of Yosemite National Park, for instance, are small cities of tents (all kinds of tents) pitched so close to one another that blankets have to be hung between them to secure a little privacy. Yet those in the Tuolumne Meadows, up toward the Sierra timberline and spectacular beautiful, may be almost deserted, though they are easily accessible.

The National Park Service is a bureau of the Department of the Interior. Its Washington office or any of the regional offices—Philadelphia, Richmond, Omaha, Santa Fe, San Francisco—will gladly furnish maps showing all National Park System areas. On these, too, are brief descriptions of these areas, lists of facilities, including campgrounds, names and addresses of concessionaires who provide overnight accommodations, and the addresses of the superintendents. On arrival at any area of the system, the visitor can obtain a free publication with more detailed information. Any of these publications may also be purchased from the Superintendent of Documents, Washington 25, D. C., who issues a price list of all of them.

There are national forests in all but 9 of the States, 150 all told in the United States. A few are comparatively small but many in the West cover from 1 to 3 million acres. All are open to camping, at any time and mostly without restriction. Hunting and fishing are permitted in all of them, under the laws of the States in which they are situated. (Out-of-State visitors are charged higher fees than residents for licenses.) Portions of some forests have been set aside as game refuges; in others some streams and small tracts are reserved for wildlife research and experiment. These, of course, are posted.

The national forests provide by far the best opportunities in the United States for the person who is interested primarily in camping, rather than in being surrounded by world-famous scenery. But it must be said at once that many areas in many forests are spectacularly beautiful, especially in the North country and the Southern, Western, and Southwestern mountains. Many people prefer the Uncompahgre, San Juan, or Sangre de Cristo Mountains, which are not included in national parks, to the Colorado ranges that are. If Wyoming's Wind River Mountains lack the drama of the nearby Grand Teton National Park, they are in some ways more beautiful. Many of the loveliest parts of the Sierra and the Cascades are in national forests.

There are regular campgrounds in most forests (usually not so well equipped as those in the parks) but also in practically all of them a camper may pitch his tent almost anywhere he cares to. Exceptions may be sites easily reached from big cities, areas reserved for experiment and research in forestry, damaged or eroded areas, and areas of critical importance to town or city water supplies. These are likely to be clearly marked but it is best to inquire at the office of the forest supervisor, which is always in town, or that of a district ranger, which usually is. You will have to go there anyway to get a campfire permit, a map, and a descriptive pamphlet, the last of which is full of valuable information. Wherever you camp, a ranger will probably visit you to explain the fire regulations all over again, and he is a man to tie to. He knows the best fishing places, the best lures, where and when you are likely to find game, the areas of special photographic or scientific or historical interest. He is also the man you make for in emergencies.

In periods of extreme fire danger, which means prolonged dry weather, Western forests and occasionally a Southern or an Eastern one may be temporarily closed to campers. Legally, everyone in or near a national forest is liable for fire-fighting duty, but it is hard to imagine circumstances in which anyone would be drafted for it. Forest fires do many millions of dollars' damage every year; it is a matter of conscience to observe to the full the precautions which every outdoorsman knows by heart. In certain western forests the commonest cause of fire is lightning. But it is a dreadful comment on the thoughtlessness of tourists and campers that everywhere else the overwhelming majority are started by campfires that are not properly extinguished or by carelessly discarded cigarettes.

The main roads in a national forest are good and the fire and access roads that lead off them wholly adequate, but many areas can be reached only by trail, afoot or on horseback. In addition, there are 78 reservations all told which are called wilderness areas or wild areas. (Not counting similar reserved tracts in eastern forests too small to be called wilderness.) Practically all of them are remote and difficult; in mountain country most of them are near timberline and above it. The three in Minnesota forests include lakes and streams which many sportsmen consider the finest canoe country we have. There are no roads in such an area; there are no hotels, lodges, resorts, private camps or cabins, stores, or landing fields. Wheeled vehicles are prohibited, including jeeps, and so are motorboats. The camper's outfit must be taken in by pack train or, if practicable, by canoe.

Apart from the back country of the national parks and some deserts, these areas are the last remaining primitive wilderness in the United States. Dude ranches in or near the forests provide outfits and guide service and some wilderness areas should not be attempted without such professional help. Most of them, however, are accessible to anyone who has a suitable outfit and is sufficiently skilled at outdoor crafts. Skill is a prerequisite, for the wilderness is as dangerous today as it ever was, despite airplanes and radio.

The United States Forest Service, Department of Agriculture, Washington, or any of its 10 regional offices, will send free of charge a map showing all the forests, a pamphlet called "National Forest Areas" which lists them by region, and maps and pamphlets describing any individual forests you may be interested in. Ask too for "Wilderness and Wild Areas," Yearbook Separate No. 2159. Somewhere in this great national heritage, owned by and preserved for all of us, you are certain to find precisely the kind of country you want to camp in—though it is likely to be much finer than you thought it would be. And it may be surprisingly near your own home.

Farm Parity

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Tuesday, June 5, 1956

Mr. JOHNSTON of South Carolina. Mr. President, I have a newspaper editorial which appeared in the Anderson Independent, Anderson, S. C., on Saturday, June 2, 1956. This editorial is entitled "Parity: A Much Misunderstood Word That Simply Means a Fair Break." It is shown in this editorial that the farmers have lost another fight and that they will continue to suffer under the present administration's farm policies.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PARITY: A MUCH MISUNDERSTOOD WORD THAT SIMPLY MEANS A FAIR BREAK

A farm bill has been passed by Congress and signed by President Eisenhower. It does not provide 90 percent parity for the basic crops.

The soil-bank plan—a product of Democratic thinking sternly rejected last year by Secretary Benson's office—was advocated on a rush basis this year by President Eisenhower.

This plan, however sound, does not provide the immediate relief from price squeezes that farmers need. It is a long-range program, adopted this year as political sop by Eisenhower.

Clarence Poe, editor of Progressive Farmer, says the farmers have lost one fight and must now make another. He deplores misconceptions that have harmed the farmers' fight to get fair prices.

He lists some misconceptions in this order:

1. "It's just a bill to help the farmers," a feeling prevalent among nonfarm citizens. Actually, Poe points out, all classes of people benefit when the farmer is prosperous—manufacturers, merchants, laborers, all others

2. "I just don't understand parity." (Parity means a price which will enable a given quantity of a commodity, say cotton, to buy 100 percent as much goods as the same quantity would have bought during a fair-base period—originally 1909–14.)

3. "Many voters thought 90 percent parity would virtually mean riches for the farmer—'all this and heaven, too.'" Actually, 100 percent parity would give farmers only a fair decent income—whereas at any level less than that they are penalized.

Editor Poe touches on still another strange development in this Republican regime.

"The Department of Agriculture and some farm organizations seemed at times to be willing to see how little could be given the farmer and still keep him satisfied.

"To them, the doctrine 'What is good for the country is good for the farmer,' seemed sound, but didn't seem to work both ways.

"We never expect to see the Department of Labor trying to see how small a wage labor can be made to accept.

"Nor do we ever expect to see the National Association of Manufacturers trying to see how much tariff reduction manufacturers can possibly stand.

"Certainly now, at a time when labor's wages are the highest ever and the manufacturer's profits the biggest ever, the Secretary of Agriculture and our farm organization leaders should be the farmers' retained attorneys to fight for his full share of the country's prosperity."

The basic trouble, of course, is that the farmer—especially smaller farmers—has no friends in the Eisenhower administration which has successfully whittled farm income by billions while boasting about Wall Street prosperity and corporation profits.

Address by the Ambassador of Bolivia During World Affairs Week

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Monday, June 4, 1956

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very plain-spoken address delivered by the Ambassador from Bolivia, Victor Andrade, before the Rotary Club of Dallas, Tex., on May 16, 1956. I am advised by the Public Printer that the cost of printing this address will be $180.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY VICTOR ANDRADE, AMBASSADOR OF BOLIVIA, DURING WORLD AFFAIRS WEEK BEFORE THE DALLAS, TEX., ROTARY CLUB LUNCHEON HELD AT THE BAKER HOTEL IN DALLAS MAY 16, 1956

I feel at home in Texas. Partly it is your generous hospitality and partly the feeling that, because of geography and your Spanish heritage, you understand the importance of Latin America to the United States. Here, one does not have to sell Latin America or spell out the things we have in common. You know them. Your financiers and industrialists and your ambitious young men are looking more and more to the south.

Latin America today is one of the few economic frontiers left in the world. The Latin-American countries are in various stages of development, but almost all are years behind the United States. They have great wealth—timber, minerals, oil, and tropical agricultural products which do not compete with the United States. To a great degree, our common future depends upon the use which is made of this wealth.

The reasons for the economic lag in Latin America are interesting. As you know, North and South America were discovered in approximately the same time period and exploration and settlement paralleled each other. Why then did the United States advance so rapidly by comparison with most of the Latin-American countries?

Some of the factors were geographical: the high Andes Mountains and the tropical jungles, for example. However, a primary factor was the difference in viewpoint between the English colonists and the Spanish and Portuguese colonists. The English settlers came here prepared to make the New World their home. They did not expect to make their fortune here and return to the Old World and enjoy it. This country was their physical and spiritual home.

Most of the Spaniards thought of the mother country as home and always hoped to return there. Even after the revolutions which cut the political ties with Spain, they still looked to the Old World. The wealthy and influential educated their children abroad and they retired there to spend their last days.

All the settlers in the New World, or almost all of them, searched for gold and silver. The Spaniards found the precious metals and, in doing so, intensified their interdependence upon Spain and Europe. They did not develop the land as did the English settlers.

The Indian tribes in North America were relatively few in number; they were mostly hunters and fishermen. The Spaniards found well developed civilizations in Mexico, Peru, and in other areas of South and Central America. The Indians were conquered, but they still comprised the bulk of the population.

The North American Indians were swept away by the advance of the settlers. Most of them died in battle, or from disease and alcohol.

In several Latin-American countries the relatively few conquerors spent a lot of their time and energy in keeping the Indian subordinated. They succeeded so well that the problem today is how to rescue him from second-class citizenship.

One could detail at length other reasons for the failure of Latin America to make the material progress which has characterized the growth of the United States. It is more important to take a look at the situation and relationships of the republics in this hemisphere today in terms of what these may mean to all of us tomorrow.

The United States has preoccupied itself with events in Europe and Asia since the end of World War II. You have given away and loaned more than $50 billion to help economic recovery in Europe and Asia. Obviously, you had a political purpose in so doing;

you wanted to stop the spread of communism and hold the free world together.

I do not intend today to try to pass judgment on the success or failure of the United States policies since the end of World War II. Many persons think the danger of another world war receded. I hope so; we have been very close to another holocaust on several occasions in the past 11 years. But obviously the conflict between capitalism and communism, a conflict symbolized on the one hand by the United States and on the other by Russia, still continues. It will continue in all probability for years to come. If the danger of an all-out war has receded, then the necessity for prosperity and stability in the free world becomes all important. The two systems are on trial and will be judged by the masses on the basis of performance.

In making this statement I hope I am not misunderstood. My own personal opposition to communism is well known. I opposed it at a time when some leaders of the Western World thought the two systems could live harmoniously side by side. My Government is on record in opposition to communism and has proved it by its actions. Yet as beneficent as capitalism has been to the masses in the United States, it has been something else in other countries. The opposition to colonialism which is keeping the world upset today is in part opposition to capitalism. The United States has abandoned imperialism. Some other countries have clung to it and have used colonialism as the means of exploiting and victimizing backward countries and peoples.

One may say with a good deal of truth that communism also is imperialistic and that it also exploits countries. Yet it is possible that the techniques which have resulted in a great increase in heavy industry in some of the Communist countries could result in similar increases in consumer goods. Or to put it another way the standard of living in the Communist countries may rise sharply; with that rise may come a better feeling on the part of the people under communism. Moreover, communism could become more attractive to people in backward and poor countries, who might see little hope of improvement under the existing system.

Some western leaders already have pointed out the dangers inherent in the new attitude by Communist spokesmen. It could result in making international communism seem rational and logical once more; it could revive its appeal to the intelligentsia and to the youth of many countries.

Therefore, the situation of every country in Latin America becomes of particular concern to the United States. For the prosperity of the United States is becoming increasingly dependent upon Latin America. Likewise, the material prosperity and stability of Latin America is becoming increasingly dependent upon the United States.

The trade between the hemispheres averages around $7 billion annually, being pretty evenly divided. The United States has more than $6 billion invested today in Latin America, and the return is over $750 million a year. Since World War II the United States has loaned and given Latin America less than $1 billion, and the profits from investments alone in Latin America exceed that in 2 short years. More and more American money is going into Latin America each day, since developments are making it one of the few places where capital can be put with any assurance that it will be safe.

And as important as Latin America is today, it will be much more important tomorrow. The population of Latin America is growing at an amazing rate; someone has termed it a population explosion. The United States today has a population of about 166 million; Canada has approximately 15 million; the combined population of the Latin-American countries exceeds that of the United States by nearly 10 million. If the present rate of increase continues, there will be a half billion people in Latin America before the year 2000.

Along with this rise in population will come, in all probability, a great increase in the living standard in Latin America and a lessening death rate. Together with a corresponding rise in the United States standard, this could mean an era of material prosperity such as the world has never seen. It also could mean the triumph of the free enterprise system. And finally, the right kind of relationship between the countries in this hemisphere could mean an inter-American system which would assure the peace of the world. Its capacity to retaliate in case of attack could be so great that no aggressor would dare start a war; its geographic sweep would be so great that its defeat even in case of attack would be almost impossible.

There are encouraging factors in the relationship today between the Americas. The United States is not imperialistic; it has taken the lead in trying to outlaw the use of force in the hemisphere. There was a time when the marines landed and punished defiance of the national will of your country. We still hear echoes of the resentment which this policy caused, and it was a long step toward hemisphere solidarity when it was abandoned. I believe that most of Latin America today gives the United States credit for good intentions, and undoubtedly the loans and grants given Latin American nations in recent years have been very helpful.

Since Latin America, generally speaking, produces raw materials and is a purchaser of manufactured products, the two economies complement each other. The clash of interests which attends your trade with Europe and some parts of Asia does not evidence itself to any great extent in the dealing between our continents.

Nor is there any significant ideological conflict. Communism does not attract Latin Americans to any great extent. There are some exceptions, but on the whole Communism is only a threat—whatever may come in the future.

I do not mean to say that the Latin American countries have solved their political problems. The reverse is true. Over the years there has been a familiar pattern in Latin America. A strong man rises and, with the help of the Army, he rules for a time. He dies, or there is a revolution, and an attempt is made to solve familiar and pressing problems through a democratic and revolutionary program. All too often this effort fails. Once again there is the military dictatorship.

So familiar is this routine that some persons feel it is the solution to the political problems in Latin American. There is a question in the minds of some North Americans about the capacity of the Latin Americans to govern themselves, as you know government in the United States. But let me point out that the unrest and turmoil which forced the military dictatorship continue. The mass of the people in all too many Latin-American countries remains poor and discontented. The contrasts between wealth and poverty are too great.

The military dictatorship is an expedient which may have worked for a long time. It will not work indefinitely unless it is accompanied by programs which help the people as a whole and give them something to look forward to and to hope for. This is extremely unlikely. It should not be forgotten that the imperialistic nations held down their colonies for generations. Yet the time came when force availed no longer. The steam within the kettle had too much power.

The danger in Latin America today is that the forces of repression will be followed by radical revolutions. In many countries the United States might find itself unable to work with the leaders of the governments. They could be men who had lost faith in private enterprise and the democratic processes.

The result would be chaos and an end which no one could foresee. All concerned would be injured. Then the United States would be forced to concentrate its attention upon Latin America. The republics to the south could no longer be taken for granted. But surely there is enough wisdom among us that we do not allow affairs to drift and degenerate. Surely we can work together to strengthen the forces of constructive reform in Latin America. Surely we can see that the development of Latin America must proceed in a way that will help the masses. The capitalism of the United States has been dynamic. The average workingman in your country laughs at the idea of becoming a Communist. Why? He feels that he has more opportunity and is doing better under your system than he would do under any other system in the world. He likes the feeling of freedom which he has; the absence of fear because of the religious and political views which he holds. That is the kind of system then which all of us should work for in Latin America.

Let us proceed from the general to the specific. My own country of Bolivia, which is half again as large as your great State of Texas, is backward and poor. It is a country whose masses have been repressed even if the dictators ruled in the name of democracy. The masses of our people are Indians.

The one fully developed industry of Bolivia is tin. The development of this industry made three families rich and kept most of the rest of the country desperately poor. The rich men concentrated upon their own interests. Bolivia has oil, iron, lumber, almost every valuable mineral known, and rich agricultural resources, but these remained almost untouched. The ownership of the tin mines gave the Patinos, Aramayos, and Hochschilds, the tin barons, great political and economic power. They used it to rule the country behind the scenes. They scuttled every attempt at reform. They bribed the politicians who could be bribed, they intimidated those who could be intimidated; they turned the machine guns on the miners when the latter rebelled; they took their money abroad and lived there in a style which attracted the attention of the world. They gave an example of the very worst side of capitalism.

In 1952 a revolution overthrew the power of the tin barons, and that same year the Government nationalized the mines. A great hue and cry went up. The United States did not like nationalization. Neither did we. We took the drastic step only because we felt that the only way to make Bolivia a modern and prosperous state was to eliminate the power and influence of the tin-mine owners. Otherwise, they would bribe and bully their way to power again and the country would be back in the gutter.

Since 1952 Bolivia has systematically tried to develop its great resources. We have great faith in private enterprise, and we want the partnership of United States capital. We have given guaranties against expropriation of private property and assurances that profits made and the capital invested can be taken out of the country. The Government recently issued a new oil code, the most liberal, I believe, in this hemisphere. Experts tell me that the Bolivian oilfields which extend diagonally across the country from north to south, probably will be some of the greatest in the world. Private operators are moving in. Glenn McCarthy, of Houston, Tex., has held a concession since 1953; one of the world's great companies, the Gulf Oil Co., recently obtained a sizable concession.

I have mentioned our links with Texas. We have another link, an economic link, the

tin smelter at Texas City, which processes ores from Bolivia.

This smelter was built because of the crisis which the United States faced in World War II. Bolivia is the only source of ore in the hemisphere and was the only source available to the Allies after 1942. The mines in Malaya, Indonesia, and Africa were cut off.

The Texas City smelter was hurriedly built to process Bolivian ore, since you had to have tin for many, many uses. The United States wanted to be certain that for the remainder of the war, and the future, it had available the tin in this hemisphere and the means to process it.

Now the proposal has been made to sell the Texas City smelter to private operators, and if that cannot be done to close the plant. If the plant is shut down, it will deteriorate to the point where it will become valueless in a short time.

I only want to point out that the situation which caused the Texas City smelter to be built in the first place still is with us. The Communists hold all China, and their influence is strong in the area where most of the world's tin is produced. Unquestionably, Bolivia would make its tin available to the United States if another war came, but before the tin could be used it would have to be smelted. The statement is made that a new tin smelter could quickly be built in this country if the need arises. I only want to point out that no one knows what the situation will be if another war comes or what demands will be made upon the time, manpower, and materials of the United States. It would seem to me that the Texas City tin smelter is a vital asset for national defense, not only for your country but for the hemisphere. All of us have an interest in preserving our vital assets.

The course which Bolivia has followed since 1953 should please the businessmen of Texas and the United States. Our program could have been written by a member of your own Rotary Club. I am glad to say that we have had the help of the United States and that invaluable aid is continuing. We had to have help. The price of tin fell after the Government took over the mines. The cost of mining Bolivian tin is between $1.10 and $1.25, and the world market price has averaged around 90 cents since 1952. Nevertheless, tin had to be mined. It was the only source of exchange which we simply had to have. Meanwhile, we were forced to spend money trying to develop our agriculture, in building roads, importing blooded livestock—doing all the things which should have been done generations ago. Lots going out; very little coming in. No wonder Bolivia has a bad case of inflation.

We made mistakes. Not long ago the President, Victor Paz Estenssoro criticized some of the workers in the nationalized mines. He said they did not work as they should and showed a lack of discipline. He spoke plainly and frankly, something which political leaders do not often do. The result was an outcry that nationalization had failed. Our enemies implied that everything would be all right if only the tin barons had kept their properties and had continued to machinegun the miners when the latter protested low wages and intolerable working conditions.

One of the reasons for nationalization was to end maltreatment of the workers by the tin barons. From that standpoint nationalization has succeeded very well indeed. Not a worker in the mines has met his death because of labor strife since 1952.

From the standpoint of the United States, the very worst thing which could happen in Bolivia now would be the fall of the existing regime. The Government has the support of the people and could fall only through revolution, and then only if economic conditions grow so bad that the workers give up in despair.

The tin barons—who never learn—seem to feel they could take over again. They could not. If they did, it would be for a short time, and then there would be a violent rebellion again. The people are through with them. The miners and the farmers—the repressed Indian masses—know there is no hope from the tin barons and their ilk. They will not submit to them again.

What would happen if the regime falls? Inevitably, the swing would be to the left. The leaders who have put their faith in private enterpise would be thoroughly discredited. The leaders who said that friendship with the United States was the way out also would be thoroughly discredited. The blow to the prestige of the United States would be tremendous; for it is well known that your great country has helped us. The assumption has been that if we do our part, aid would continue until we are solvent.

All Latin America is watching the Bolivian experiment and the relationship between our two countries. As I have said, and I repeat, that this relationship may refute the Marxist charge that a strong, capitalistic country always exploits a weaker one with which it deals. The help given us by the United States has been generous with no strings attached. It has enabled us to start projects and programs which hold great promise for the future. In 1953 Bolivia was an importer of oil; in 1956 Bolivia is an exporter of oil and within a few short years oil may take the place which tin once held in our economy.

If the Bolivian experiment fails, it will be a blow to the future of private investment in Latin America. For Bolivia has tried to stimulate foreign investment. We have gone out of our way to allay fears caused by nationalization of the tin mines and the expropriation of the Standard Oil properties in 1937. This latter expropriation grew out of a quarrel between Bolivia and Standard Oil during the disastrous Chaco War between Bolivia and Paraguay. In my opinion, the nationalization of the oil properties was unfortunate. In any event, the existing regime had nothing to do with it, since the MNR, the party now in power in Bolivia, was not formed until 1940. If Bolivia goes ahead to prosperity and stability, it will be with the help of foreign capital and will demonstrate what constructive capitalism can do to help develop a potentially rich country like Bolivia. It will encourage other countries to follow our example. It will show that true democracy and private enterprise will work in Latin America—provided they are given the right kind of chance.

The success of our experiment will increase the friendship of the masses in Latin America for the United States. The liberal forces in the continent know what is going on. They know my Government is really trying to help its people. They know that Bolivia is one of the few countries to attempt genuine land reform. It seems incredible that Indian farmers in some Latin American countries have had the status of serfs down to the present day, but that is what they have had. We are giving land to the landless farmers and paying the owners for it. The plan has been described as collectivism. It is the opposite of collectivism. It is a program to base our agricultural economy upon the ownership of family-sized farms. It is action to perpetuate private enterprise and capitalism.

Incidentally, Bolivia acknowledges and is grateful for the help given by the United States. Our leaders speak of it openly. What is more important, they have told the people about it. The result is that the average Bolivian looks upon the United States as a friend and, when he has the opportunity, makes his views known. One of the things we cannot be accused of is ingratitude.

Since 1953 the United States has given Bolivia approximately $30 million in loans and grants. As I have said, we are grateful. We are hopeful, however, that your great country will take a close look at our stiuation and will provide enough aid to really put us on our feet. We do not want to remain, nor does the United States want us to remain, forever on a subsistence basis, always having to come back year after year to ask for more. It would take comparatively little to enable Bolivia to complete some of its programs and to be, as one of your sayings goes, out of the woods. It would be too bad if reactionary pressures caused this aid to be withheld at the very time when it spelled success or failure. The time will come fairly soon, if we work together, when we could be almost as rich as Texas. In that event we will have paid back the United States many times—in one way or another—the aid which you have given us.

I do not want what I have said here today to be interpreted as a threat in any sense. I have found that your people understand plain language and like it. As you say, they want to know the score. Bolivia has come a long way since 1952, and it will not take too much more to put us over the hill. Once we become self supporting, I can say that every penny we have borrowed will be returned with interest and that Bolivia will be a good place for American business and businessmen.

My only concern is that our situation is not thoroughly understood and that the propaganda of the tin barons will have its effect. They have been busy of late, for they sense that the crisis is approaching. A few more difficulties and we may roll downhill; a little more help and we are in. It would be a tragedy if the help given by the United States should be, to use a familiar expression, too little and too late. It would be a calamity for Bolivia and a hard blow to the United States and the private enterprise system which is fundamental to the preservation of our economic and political freedoms.

I do not think we will fail. I have never thought so; I do not think so now; and I will do all in my power to prevent its happening. I hope that the good people of Texas will help us succeed. It will be good business for all of us.

Tax Exempt Foundations

SPEECH
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. REECE of Tennessee. Mr. Speaker, I hold in my hand a document which raises questions of such a fundamental importance to the preservation of our Republic that I feel it should be read and studied by every loyal citizen.

The Committee To Investigate Tax Exempt Foundations revealed much that should disturb Americans. Still, to my knowledge, it did not uncover an instance of a foundation being sued for libel. I question whether those who established the privilege of tax exemption ever dreamed of such a contingency. After all, was not this privilege to be extended to only those who, without profit to themselves, sought to advance the general welfare? And how could the general welfare conceivably be advanced by libeling a citizen?

The citizen who alleges libel is Dr. Bella V. Dodd, former Communist, who, unlike so many unrepentant conspira-

tors, has given unstintingly of her time to all branches of our Government at great cost to herself. While in the party, Bella Dodd lacked not for finances nor prestige, nor accolades from the groups and individuals who today vilify and attack her. But once she came to the aid of our Republic in its hour of crisis, foresaking the Red dictatorship which plots our end, we find a different story.

From that day forward Dr. Dodd has existed on the paltry return she could achieve from a greatly reduced law practice and teaching career, supplemented by occasional fees for lectures.

But the friends of the Red Fascists begrudged her even this and sought to turn all against her. In May 1955 the Fund for the Republic circulated 25,000 copies of a reprint from Harper's magazine entitled "The Kept Witnesses" to labor officials and business executives. This article is the subject of the complaint I hold in my hand, naming the Fund for the Republic, its officers and trustees, and Harper's magazine as defendants in a suit for damages.

However, the article "The Kept Witnesses" is also an all-out attack on our national-security program and on the agencies of our Government which Dr. Dodd has so often helped. Dr. Dodd fights not only to rectify a wrong to herself, but to defend the very agencies which loyally strive to preserve us as a sovereign Nation.

And here let us pause to note the most amazing fact of all. Whereas Dr. Bella Dodd courageously rides into this legal battle at great expense which must be borne by her, and by her alone, she fights our Nation's battle alone, no tax money, no tax-exempt privilege, no multimillion dollar gifts, no support.

But what of her opponents who attack the security program of our Nation? They march to battle with millions of dollars of tax-exempt funds, withheld to promote the general welfare.

Alice in Wonderland was never like this. What American could ever have dreamed that one day the United States would subsidize the destruction of those who would defend them?

In this unequal battle Bella Dodd could easily be crucified, alone and unaided. What magnificent courage prompted her to undertake it. May God help her and our country.

By consent, I am inserting the complaint against the Fund for the Republic in the RECORD, as follows:

SUPREME COURT OF THE STATE OF NEW YORK, COUNTY OF NEW YORK, BELLA V. DODD, PLAINTIFF, AGAINST HARPER & BROTHERS, CASS CANFIELD, FRANK S. MACGREGOR, JOHN FISCHER, RUSSELL LYNES, CATHARINE MEYER, THE FUND FOR THE REPUBLIC, INC., ROBERT M. HUTCHINS, PAUL G. HOFFMAN, DAVID F. FREEMAN, W. H. FERRY, AND RICHARD H. ROVERE, DEFENDANTS—COMPLAINT

The plaintiff, Bella V. Dodd, by her attorneys Dodd, Cardiello & Blair, alleges as follows:

1. That at all the times hereinafter mentioned the defendant, Harper & Brothers, was a corporation duly organized and existing under and by virtue of the laws of the State of New York.

2. That at all the times hereinafter mentioned the defendant, Harper & Brothers, was engaged in the publication of the magazine known as "Harper's Magazine," and that such magazine is published for circulation and was circulated throughout the United States, Canada, Great Britain, Mexico, and all countries participating in the International Copyright Convention and the Pan American Copyright Convention, and was read by the general public, including those who are active in the fields of politics, business, and labor.

3. That at all the times hereinafter mentioned the defendant, Frank S. MacGregor, was president of the defendant, Harper & Brothers, and actively participated in its business operations including the circulation of Harper's magazine.

4. That at all the times hereinafter mentioned the defendant, Cass Canfield, was chairman of the board of directors of Harper & Bros. corporation.

5. That at all the times hereinafter mentioned the defendant, John Fischer, was editor in chief of Harper's magazine, and the defendant, Catherine Meyer, was an editor of Harper's magazine, and were in direct charge of the preparation and publication of various articles published in Harper's magazine.

6. That at all the times hereinafter mentioned the defendant, Russell Lynes, was managing editor of Harper's magazine and in such capacity selected and determined what material and subject matters were to be printed and published in Harper's magazine for circulation to the general public.

7. That at all the times hereinafter mentioned the defendant, Richard H. Rovere, was and is a resident of the State of New York.

8. That at all the times hereinafter mentioned the defendant, the Fund for the Republic, Inc., was a corporation duly organized and existing under and by virtue of the laws of the State of New York.

9. That at all the times hereinafter mentioned the defendant, Robert M. Hutchins, was president of the defendant, the Fund for the Republic, Inc., and as such determined the projects and subject matter to be investigated by the Fund for the Republic, Inc.

10. That at all the times hereinafter mentioned the defendant, W. H. Ferry, was vice president and David F. Freeman, was secretary-treasurer of defendant, the Fund for the Republic, Inc., and on information and belief, participated in determining the program of the Fund for the Republic, Inc., and deciding on what subjects were to be investigated and what books, articles, and other literature were to be distributed.

11. That at all the times hereinafter mentioned the defendant, Paul G. Hoffman, was chairman of the board of directors of defendant, the Fund for the Republic, Inc., and participated in deciding the policy, what subjects were to be investigated, what books, articles and publications were to be distributed.

12. That upon information and belief the defendant, the Fund for the Republic, Inc., is a corporation having its principal office within the city of New York.

13. That upon information and belief the defendant, the Fund for the Republic, Inc., is exempt from tax under the revenue laws of the United States, and under applicable State taxing legislation and does not contribute financially for the support, maintenance, and defense of the United States of America.

14. That at all the times hereinafter mentioned and for sometime prior thereto, the defendant, Richard H. Rovere, was the author of the article entitled "The Kept Witnesses," published in the May 1955 issue of Harper's magazine, and upon information and belief had been engaged and employed by the defendant, Harper & Bros. Corp., agreed to and did pay a consideration to the said Richard H. Rovere.

15. That upon information and belief the defendant Richard H. Rovere, for and on behalf of and at the instance of the defendant, the Fund for the Republic, Inc., did write the article making specific references to the plaintiff as shall more particularly hereafter appear.

16. That in the May 1955 issue of a magazine known as Harper's magazine, defendant Harper & Bros. published the heretofore mentioned article under article under the title of "The Kept Witnesses."

17. That at all the times hereinafter mentioned the facts of the plaintiff's good reputation were known to, or should have been known to, or could readily be ascertained by defendants, Richard H. Rovere and Harper & Bros., and the Fund for the Republic, Inc.

18. That the aforementioned article entitled "The Kept Witnesses," published for general circulation in the May 1955 issue of Harper's magazine, did contain libelous statements and insinuations about and concerning the plaintiff, Bella V. Dodd.

19. That said libel did consist of libelous statements directly and indirectly reflecting upon plaintiff's character, honesty, truthfulness, integrity, professional practice, social, and economic standing.

20. That plaintiff was libelously attacked in that said article attempted to create a public impression in regard to plaintiff's character, honesty, truthfulness, integrity, professional practice, social and economic standing, by using a device popularly referred to as "guilt by association" or "libel by association," and that such article tended to hold plaintiff up to public scorn, ridicule, and hostility.

21. That among the persons mentioned in said article was one Whittaker Chambers, a former Communist, and that the defendant, Richard H. Rovere, inserted explanatory matter after the name of said Whittaker Chambers, which explanation stated that said Whittaker Chambers was not guilty of the same alleged crimes, sins, acts, and motivations as defendant, Richard H. Rovere, attributed to the other persons grouped or associated by said article.

22. That the defendant, Richard H. Rovere, owed plaintiff a duty, when he included her name in said article, to explain to the public that plaintiff was not guilty of the alleged crimes, sins, acts, and motivations defendant Rovere attributed to the other persons grouped or associated by said article.

23. That the defendant, Richard H. Rovere, by use of plaintiff's name in said article was purposely and with malice attempting to associate plaintiff with the alleged crimes, sins, acts, and motivations attributed by him to others through the said article, and to libel her by association and to create the impression that she was guilty by association, and to create in the public mind an attitude of scorn, ridicule, and hostility toward the plaintiff.

24. That upon information and belief, subsequent to publication of the said article in said magazine, defendant, the Fund for the Republic, Inc. distributed, through the mails and otherwise, at least 25,000 copies of said article.

25. That upon information and belief, such distribution of said article was made mainly to labor officials, business executives, Government personnel, and professional people.

26. That on or about May 31, 1955, the defendant, the Fund for the Republic, Inc. published and issued a report of the activities and financial condition of said defendant, the Fund for the Republic, Inc.

27. That upon information and belief, the officers and staff and the members of the board of directors of the defendant, the Fund for the Republic, Inc., are as follows:

Robert M. Hutchins, president, W. H. Ferry, vice president, David F. Freeman, secretary and treasurer, Hallock Hoffman, assistant to the president, Edward Reed, Joseph P. Lyford,

Thomas J. Gardner, assistant treasurer, Winifred G. Meskus, assistant secretary, Bethuel M. Webster, counsel, Paul G. Hoffman, chairman, George N. Shuster, vice chairman, Harry S. Ashmore, Chester Bowles, Charles W. Cole, Arthur H. Dean, Russell L. Dearmont, Erwin N. Griswold, William H. Joyce, Jr., Meyer Kestenbaum, M. Albert Linton, John Lord O'Brien, Jubal R. Parten, Elmo Roper, Mrs. Eleanor B. Stevenson, and James D. Zellerbach.

28. That said officers, staff, and directors of defendant, the Fund for the Republic, Inc., knew, could have known, should have known, and must be considered to know the contents of the said report of defendant, the Fund for the Republic, Inc.

29. That said report of defendant, the Fund for the Republic, Inc., in the appendix thereof, did set forth as an activity and accomplishment of defendant, the Fund for the Republic, Inc., a list of books, articles and other material distributed by the Fund for the Republic, Inc., by title, author, source, number of copies distributed, and main audience to which they were distributed.

30. That said list did include as an article distributed by said defendant, the Fund for the Republic, Inc., the aforementioned article The Kept Witnesses in these words—"The Kept Witnesses, by Richard H. Rovere. Article. Harper's, 25,000 copies. Labor officials, business executives."

31. That on the basis of the information contained in said list in said report only one other book, article or other material received a greater distribution.

32. That upon information and belief the officers and/or directors of defendant, the Fund for the Republic, Inc., did select the material that was so distributed.

33. That upon information and belief the officers and/or directors of defendant, the Fund for the Republic, Inc., did pass upon and approve of the distribution of material distributed by defendant, the Fund for the Republic, Inc.

34. That by selection of the books, articles, and other matter distributed by said defendant, the Fund for the Republic, Inc., said fund was acting with malice and intent to discredit, malign, intimidate, and otherwise persecute witnesses who cooperated with congressional or governmental investigating agencies, of whom plaintiff was one.

35. That said report of defendant, the Fund for the Republic, Inc., lists and sets forth the names of 17 books, articles, and other material distributed by said fund, among which is the said article, The Kept Witnesses.

36. That upon information and belief the said 17 books, articles, and other material distributed as set forth in the said report of the defendant, the Fund for the Republic, Inc., all deal with the general subject of communism and investigations into communism.

37. That upon information and belief at least seven of said books, articles, and other material distributed by defendant, the Fund for the Republic, Inc., dealt or were concerned with congressional or governmental investigations into communism.

38. That upon information and belief each one of the books, articles, or other material distributed by defendant, the Fund for the Republic, Inc., as recorded in said report of said defendant and dealing with the subject of congressional and governmental investigations, and witnesses testifying before such investigations, is part of a program designed to unfavorably influence public opinion in regard to the necessity of such investigations, and the character, honesty, truthfulness, integrity, professional status, social or economic standing of those witnesses who testified before and cooperated with such investigations, particularly former Communists, including the plaintiff.

39. That upon information and belief the above referred to books, articles, and other material all tend to and attempt to so present the subject matter referred to in the preceding paragraph as to influence public opinion in opposition to congressional and governmental investigations, and to vilify and hold up to contempt the witnesses testifying or cooperating with such investigations, including the plaintiff.

40. That upon information and belief the publication and distribution of said books, articles, and other material was part of a program designed to influence public opinion against the necessity, usefulness, and integrity of congressional or governmental investigations into communism, and to create in the mind of the public an attitude tending to hold up to scorn, contempt, ridicule, and hostility those witnesses who cooperated with congressional or governmental investigations, of whom plaintiff was one.

41. That such program was known to, or should have been known to the officers and directors of the defendant, the Fund for the Republic, Inc.

42. That upon information and belief the various books, articles, and other material above mentioned, and the writers, of the above-mentioned books, articles, and other material do quote from and mention in the various books, articles, and other material distributed by said defendant, the Fund for the Republic, Inc., the other books, articles, and other material distributed by said defendant in an attempt to create a general atmosphere of authority for the books, articles, and other material so quoted or referred to, and attempt to pyramid and compound the effect and impression that any one such book, article, and other material may have in the public mind, and to create the impression that any one book, article, and other material is a greater and more reliable authority in reference to the matter dealth with by any such book, article, and other material than is actually the case, or than such book, article, and other material would have were it not referred to or quoted in the various other books, articles, and other material distributed by defendant, the Fund for the Republic, Inc.

43. That since the original distribution of the aforesaid article, The Kept Witnesses, the defendant, the Fund for the Republic, Inc., has continued in the distribution of said article to the general public.

44. That upon information contained in the annual report of defendant, the Fund for the Republic, Inc., hereinbefore mentioned, every project planned by this defendant for the future deals with the general subject of communism and/or its investigation.

45. That upon information and belief the defendant, the Fund for the Republic, Inc., will continue to carry out with the distribution of articles and other means, its program to influence public opinion belittling the danger of communism and of the necessity, usefulness, and integrity of congressional or governmental investigations into communism, and to create in the mind of the public an attitude tending to hold up to scorn, contempt, ridicule and hostility those witnesses who cooperate with congressional or governmental investigations, of whom plaintiff has been, and may again be one.

46. That the distribution of said article, The Kept Witnesses, did tend and attempt to create and, in fact, did create in the minds of the general public an association between plaintiff and the other persons mentioned in said article, and did tend and attempt to and, in fact, did associate witnesses who cooperated with congressional and governmental investigations into communism and its infiltration into our social, political and economic life, with the same alleged crimes, sins, acts and motivations as were set forth in the said article, or implied in said article, of the plaintiff and the other persons named in said article.

47. That further distribution of said article, The Kept Witnesses, will increase in the minds of the public the scorn, ridicule and hostility and false, libelous impression of the plaintiff, and each such article distributed is a separate and distinct libel.

48. That distribution of books, articles or other material by the defendant, the Fund for the Republic, Inc., subsequent to distribution of the aforementioned article, The Kept Witnesses, and dealing with the same subject matter as dealt with in said article and distributed to those who received distribution of the aforementioned article, will tend to recall to mind, refresh the memory of, strngthen, lend weight to, increase the authority of, or otherwise increase, pyramid and compound the scorn, ridicule, and hostility which the aforementioned article, The Kept Witnesses, attempted to and did create in the minds of those who read said article affecting plaintiff particularly.

49. That upon information and belief the defendants have used the device of guilt by association in libeling the plaintiff, and there is indication that future actions of the defendants will result in a continuing publication of the original libel as well as the publication or distribution of other material that will tend to increase and compound the public scorn, ridicule, and hostility to plaintiff that was engendered by the original libel and libel by association.

50. That such future continuing publication or republication of the libelous article constitutes a continuing wrong against plaintiff.

51. That the past action complained of and the future plans of the defendant, The Fund for the Republic, Inc., as presented in the aforementioned report of said defendant indicates that there is reasonable probability that future action of said defendant will injure plaintiff by use of the device of libel by association with the plaintiff's clients, potential clients, and the general public.

52. That as a result plaintiff has suffered and is threatened with libel of a continuing and cumulative nature that has greatly injured and further endangers her professional standing and practice, her financial earning capacity, her social status, and her health.

53. That the libel and cumulative effect of past and future libel by association is a wrong against plaintiff that has caused and will in the future cause her irreparable harm.

54. That the libel and cumulative effect of past and future publication of said libel by association is a wrong against plaintiff that can result in a multiplicity of suits and for which plaintiff has no adequate remedy at law.

55. That a copy of the aforementioned article The Kept Witnesses is attached to and made a part of this complaint, and that said article does libel plaintiff.

56. That without being all inclusive, the following phrases and sentences from said article do libel plaintiff, falsely reflect upon her honesty, truthfulness, integrity, reputation and professional ethics, and do injure her professional standing and practice, her financial possibilities, and her economic and social status.

See page 34, column 2, top:

"No man, for example, has had any greater influence on the public view of the Communist problem than Louis F. Budenz. On the basis of his reputation as the Government's leading witness in Smith Act cases and before congressional committees, he has established an almost universal acceptance of himself as a high authority and of his books, articles, lectures, and television discourses as bearing some imagined seal of official approval. Elizabeth Bentley, J. B. Matthews, Benjamin Gitlow, Howard Rushmore, Bella Dodd, and Joseph Kornfeder run not very far behind. (Whittaker Chambers has also

been enormously influential, but of him it must be said that his writings lend more authority to his testimony than his testimony lends to his writings. He is not, therefore of this company.)"

See page 34, column 2, middle:

"Lesser witnesses have established lesser reputations on the strength of their endorsement by the Government. Moreover, they have had and are having a direct influence on policy and law—not through appeals to public opinion but through direct appeals to the governing powers. Paul Crouch tells the Senate what to do about Hawaii and how the Army should be run. Matthew Cvetic is called by the Senate Rules Committee to advise on the thorny question of rules for congressional investigations."

See page 27, column 2, paragraph 2:

"Whether the list is complete is not known. It was specified that the 83 named were all under contract to the Immigration and Naturalization Service of the Department."

See page 28, column 1, paragraph 1:

"At all odds, the Department of Justice had at least 83 kept witnesses in 1954."

See page 28, column 1, paragraph 2:

"Of the 83 persons retained by the Department in 1954, all were, by their own admission, former members of the Communist Party. Some, like Benjamin Gitlow, one of the first American Bolsheviks and once Communist candidate for Vice President, had been true blievers; others, like Matthew Cvetic."

See page 28, column 1, top:

"The people who receive them are carried on the books, not as kept witnesses but as 'expert consultants.' But kept witnesses is what in fact they are; such usefulness as they may be said to have derives from their ability and readiness to identify people as Communists, to describe Communist activities for the enlightenment of judges, juries, and security panels; and to interpret Communist doctrine in such a way as to bring it within the area proscribed by the Smith Act."

See page 29, column 1, middle paragraph 1:

"Hiring as expert consultants of the former Communists and police agents who make up the Department's corps of professional witnesses."

See page 29, column 2, middle of last paragraph:

"The Department of Justice is subsidizing testimony."

See page, 30, column 1, about one-third from top:

"But the professional witness up to now has made an appearance only as the creature of disreputable law firms and private detective agencies."

See page 30, column 2, paragraph 2:

"The cloak of suspicion is a garment that must be wrapped several times around the witnesses for whose services the Department of Justice has contracted. For one thing, their pecuniary interest assuming, for the moment, that $34 a day constitutes one—has the unusual character of a continuum."

See page 30, column 2, last paragraph:

"As Whittaker Chambers, who has given testimony but has never become a professional."

See page 31, column 1, paragraph 3:

"Louis Budenz, a former editor of the Daily Worker, who has testified that his income from all sources as an anti-Communist witness and publicist has exceeded $10,000 a year."

See page 32, column 2, bottom:

"A considerable number of the professional witnesses are disaffected Communists and clearly carry the stigma and disabilities along with the special insights, of their kind."

See page 27, column 1, paragraph 2, middle:

"And if it is a good racket for anyone, it is a racket for which the Government of the United States must bear the heaviest responsibility. For it is the Government of the United States—'that august conception,' as Samuel Taylor Coleridge once called it—that originated this racket and that continues to encourage and pay for it."

See page 27, column 1, middle last paragraph:

"The Government won't talk. It does not, because plainly it cannot, plead that the safety of the Nation would be imperiled if it revealed the number and the identity of those whom it hires to testify according to the wishes of its lawyers. It does not plead the right to withhold the names on the ground that these people are confidential informers."

See page 29, column 1, middle:

"It reflects not at all on their present condition of rectitude and probity to say that their pasts reek of subversion and sedition and that a number of them are convicted felons."

See page 29, column 1, bottom:

"And as witnesses in other proceedings, the professionals play a crucial role in determining many things. There is, indeed, no end to the number of places where they may turn up in the course of their service to the Department of Justice, and apparently in fulfillment of their agreement with it."

See page 29, column 2, middle:

"One of the most ubiquitous of the breed."

See page 29, column 2, bottom:

"It is a novel arrangement, this hiring of people to take a solemn oath and testify favorably to the Government."

See page 34, column 2, bottom:

"The kept witnesses have been given an opportunity to foul American due process and quite a bit else besides."

Wherefore, the plaintiff, Bella V. Dodd, demands judgment against the defendants, and each of them, jointly and severally, in the amount of $150,000, and that the defendants, Richard H. Rovere, Harper & Bros., and the Fund for the Republic, Inc., be enjoined from publishing or distributing said article or any book, article, or other material dealing with such persons as the aforementioned article, the Kept Witnesses, which mentions or alludes to plaintiff libelously, and that the defendants, Harper & Bros. and the Fund for the Republic, Inc., be compelled to give publication and distribution to an article approved by the plaintiff exonerating plaintiff from the implications and innuendoes contained in the aforementioned article, such corrective article to receive distribution and publication equal to the distribution and publication of the aforementioned article.

Immigration or Invasion

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1956

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address which I delivered at the 66th national congress, Sons of the American Revolution, on Memorial Day, May 30, 1956, at the Sagamore Hotel, Bolton Landing on Lake George, N. Y.

The address follows:

This year—like all election years—brings us that most bipartisan of all political games: The courting of the minorities. It is again played with great fervor by those candidates for elective office who believe that organized minority groups wield enough power to clinch the vote in so-called close districts and States.

There appears to be an irresistible fascination in the belief that when a certain congressional district or a State elects a Democrat one time and a Republican another by a small margin of ballots, the minority groups are responsible for the result.

Consequently, as predictably as night follows day, we are confronted again in this election year with the peculiarly American sport of claiming at political rallies, at fundraising banquets, and in political propaganda pronouncements that this country does not admit a sufficient number of immigrants of one or another nationality.

We do not admit enough Greeks, they say, or enough Chinese. Not enough Italians or Rumanians or Portuguese. We should admit more people from India, more from Indonesia, more from Pakistan, or from Iran.

If we ask how many we should admit, the answer is always the same cry—more. And if we ask more of whom, it turns out that the speaker always means more of the people of that national group which the immigration auctioneer is addressing at that particular moment.

All right then, 5,000, 50,000? No. Sixty thousand? Or that part of the number of immigrants which another nationality has not sent to this country? No. Still not enough; and around and around we go.

And now this quadrennial numbers lottery is on again. The irresponsible, lusty auction has started already this year, exactly as we heard it in 1952 and in 1948—just as we heard it earlier, and in between the presidential election years as well.

The auction is being conducted in the usual uninhibited manner by the presidential aspirants, by governors facing election, by Senators whose terms are about to expire, and by some of my colleagues in the House of Representatives. It is being carried on by all their assistants and helpers, and by all the professional immigrant-handlers who make a living as paid servitors of various social, religious and charitable agencies which have made a crude business out of the truly noble and humanitarian task of assisting the immigrant.

At the risk of losing some popularity contests within my own political party as well as in my congressional district, I have long ago refused to look upon immigration as a means of winning friends abroad and political support at home.

To me, immigration is first and foremost a matter of the national welfare and national security.

The volume and the type of immigrants coming to the United States must, in my opinion, be predicated solely on unbiased and impartial findings as to how many we should admit and whom we should admit. Findings that are scientific and not political.

The quantity and the quality are of equal importance, and the interest of the American people must be the sole and exclusive yardstick.

Immigrants entering the United States are entering into the bloodstream of the Nation. It is like an injection into the bloodstream of a human being. It can be beneficial to him, increasing his strength and his vitality. But, if the injection is one of improper quality or improper quantity—it could be fatal.

THE PAST

A comprehensive picture of our current problems cannot be presented without an outline of the historical background of American immigration.

From the first settlement of the North American colonies to the end of the Revolutionary War in 1783, immigration to the New World was regulated not by the colonists but by the governments of Europe. The interest of the European ruler was enhanced by the size of the population of his domain. The

more abundant the labor force, the greater his profits and the more gold that accumulated in the royal coffers. Consequently, all European rulers tried to prevent the exodus of their subjects, the peons, who were already then attracted by the magnificence of the wide open land and the opportunities beckoning from across the seas.

The new settlers on this side of the Atlantic deliberately encouraged immigration. Here, more people meant more producers, more consumers, and more wealth to be extracted from the newly acquired soil and—last but not least—more people meant increased safety of life and property.

It is estimated that in 1640, the population of the North American colonies numbered 25,000 people and by 1700, it had risen to 200,000. It took another 50 years to bring the population figure to the first million.

When the Articles of Confederation were adopted in 1777, the population of the Thirteen Colonies was well over 3 million, and the first census taken in 1790 put it at 4 million. About two-thirds of the white population were of English, Scotch, and Welsh origin; about one-third were Dutch, French, German, Scandinavian, Spanish, and Portuguese.

Except for a short-lived restrictive period created by the alien and sedition law of 1798, immigration flowed into the United States unfettered by any legislation. The vast growth of the new American economy, its progression to the limitless frontiers of the West and the ready acceptance of the newcomer by the thriving communities—already established—exerted an increasing attraction on poverty-stricken Europeans in the countries devastated by the Napoleonic wars. Recurring famines and the great industrial revolution resulted in increased population pressures and caused a gradual relaxation of the restrictive attitude of the European rulers who suddenly reversed themselves and began to encourage emigration. As a consequence, the first official record of arriving immigrants established in 1820 indicated that the population of the United States had jumped to almost 10 million persons.

By that time, public opinion, both in Europe and in America, became aroused by disturbing reports of appalling conditions on vessels carrying immigrants on their transatlantic journey. Thousands of them were crowded among the horrors of the dreaded steerage space where they died of hunger, thirst, and disease. In 1819, a law was enacted in the United States limiting the number of passengers that a ship could carry and prescribing the minimum amount of water and food that had to be aboard. The master of every ship reaching our shores had to report the number of passengers he had brought and their personal data, such as age, sex, occupation, and country of origin. Thus originated the first immigration statistics in the United States.

But, except for these efforts to humanize transportation of immigrants, no attempt at regulating immigration was made during the first part of the 19th century.

The first legislative enactment which may be considered as relating to the quality of immigrants was passed in 1863. It prohibited Americans from carrying on the trade in Chinese coolies. Later laws, still qualitative in nature, established rules for the exclusion of immoral persons, paupers, and criminals.

A tremendous influx of Chinese immigrants after the discovery of gold in California prompted the enactment of the first Chinese exclusion law in 1882. That trend of legislation continued, as witnessed by the enactment, in 1885, of a restrictive immigration measure aimed at prohibiting the importation of cheap labor from abroad.

A few years later, in 1891, the Congress excluded insane persons, persons likely to become public charges, felons, feebleminded persons, polygamists, persons convicted of crimes involving moral turpitude excepting, however, persons convicted of political offenses.

The ethnic pattern of our immigration began to change in the last two decades of the 19th century. Around the year 1890, there appeared for the first time an appreciable number of immigrants from eastern and southern Europe. They came from the Balkans, from Italy, and from Russia, where the czarist persecution of Jews began to drive them out in ever-increasing numbers.

These changes in the immigration pattern continued until after World War I: While in the decade of 1871 to 1880, almost 74 percent of the immigrants came from northern and western Europe, and only 7 percent hailed from southern and eastern Europe, in the decade of 1901 to 1910 only 22 percent of the immigrants came from northern and western Europe while immigrants originating in southern and eastern Europe contributed up to 71 percent of the new arrivals.

It was about that time that the Congress turned its attention from qualitative restrictions to quantitative restrictions. The first law establishing a ceiling on the number of immigrants—a quota—was enacted in 1921. The second quota law was passed in 1924 and remained in effect with very little change until the enactment of the present law in 1952. The 1924 act was the one that established the much discussed national origin system, a system based on the allocation to every national group of as many immigrants as that national group had contributed to the population of the United States as of 1920.

THE WALTER-M'CARRAN ACT

The 1952 law, commonly referred to as the Walter-McCarran Act, is a comprehensive codification of over 148 laws that were on our statute books when we first began a study of our immigration and naturalization problems in 1947.

We had before us then a hodge-podge of antiquated, and piecemeal immigration and naturalization laws. They had been often amended, but never codified. They were shot through with loopholes, inequities, ambiguities, and outright inconsistencies. There were discriminatory statutes excluding Japanese, Indonesians, Koreans, and other Orientals. There were laws prohibiting the naturalization of large groups of people permitted to remain in this country forever in an alien status. There were unreasonably strict rules under which no member of a subversive organization, however thoroughly reformed, could remain in this country and become a United States citizen. We were admitting alien wives of our citizens outside of the quotas but we were denying such privileges to the husbands of American girls. The wives of lawfully residing aliens were treated differently from the husbands of females who were admitted lawfully. There was no provision under which brothers and sisters of United States citizens could be placed in a preferential position under the immigration quota. There were no provisions under which even the most highly skilled alien technician, engineer, doctor, or nurse, could come even when urgently needed in this country.

We corrected all of those inequities in the Walter-McCarran Act. All countries of the entire globe were granted—without discrimination—immigration quotas under a formula equally applicable to all areas regardless of the color of the skin or the shape of the eyes of its inhabitants.

At the same time, the Walter-McCarran Act made it infinitely easier to rid this country of foreign-born subversives, criminals, racketeers, narcotic peddlers, professional gamblers, and aliens who have surreptitiously entered this country.

These—briefly—are the main achievements of the law about which there has been so much heat and so little light generated.

DISPLACED PERSONS AND REFUGEES

I am stating my views on immigration frankly and openly because I do not have to defend my record in this matter. During the last decade, since 1945, to be exact, immigration has been one of the major subjects of my activities nationally and internationally.

The guns had hardly stopped smoking when I moved with the American army of liberation into the infamous concentration camps in Europe which nazism had left as monuments of everlasting shame. I was one of the first Americans to see the wretched survivors of Nazi bestiality. I saw Hitler's victims anticipating with hope an opportunity to start a new life in a free land and I saw them committing suicide when forced to return to the lands where Hitler's former ally, Stalin, was busy continuing his program of enslavement and mass murder.

I am rather proud to point to my work on the laws which, since 1945, have brought to the United States almost half a million displaced persons who are now well integrated into our life, and who have caused but a few instances of disappointment.

Let us not forget that this country alone took one-third of all the displaced persons left in Europe by Hitler's reign of terror and Stalin's postwar, conquests. We took one-third; yet we have only 6 percent of the land area of the world. It was certainly a little more than what is referred to as "a fair share."

I believe that the record will bear me out when I say that the success of our own national resettlement effort undertaken under the displaced persons laws of 1948, and of 1950, is, in part, attributable to my own activities in Washington, in Germany, and in Geneva, Switzerland.
